My suspicion that the Youth Conservation Corps may be used as a device to give young people jobs normally performed by older construction workers was confirmed by a statement inserted in the Record on page 5663, April 4, 1963. That statement was entitled "Types and Descriptions of Conservation Work Which Youth Conservation Corps Enrollees Can Accomplish."

It was put into the Record by the distinguished senior Senator from Minnesota, a sponsor of S. 1.

I quote now from the statement described on types of work which Youth Conservation Corps enrollees can accomplish:

> Road and trail development: Maintenance, reconstruction and construction of roads and trails.

If there was ever any doubt that S. 1 might harm the construction trades, that doubt was removed by the statements of Governor Brown and the senior Senator from Minnesota.

Mr. MILLER. Mr. President, I wish to add to what the Senator from Vermont has stated by saying that the original thought on the amendment was to confine it to road construction.

On further study of the problem, however, it seemed to us that there might be some other type of construction work which people in the trades unions might be working on which also could conceivably be the subject of some work by Conservation Corps members.

Therefore we broadened the initial amendment to provide for construction, rather than merely road construction.

I understand that the senior Senator from Minnesota agrees fully with us in that observation. I hope the amendment will be adopted.

Mr. HUMPHREY. I would like to refer to the report at page 10. I will not read all of it, but I ask that the excerpt be printed in the Record at this point.

There being no objection, the excerpt from the report was ordered to be printed in the Record, as follows:

> The YCC groups will be employed in a great variety of tasks. Camps, picnic grounds, trails, boundary marking, forests, croplands, timber management, small bridge building and maintenance, fencing, range seeding, brush control, water management, plant control, weed eradication, building and levee maintenance, dam repairs, gully control, tree planting, seeding and sodding, historical and archeological projects and biological work on grasslands are some of the areas where useful employment can be provided.
>
> The work classifications would involve instruction in and operation of construction equipment, both hand and power, electrical wiring, masonry, plumbing, carpentry, truck-driving, automotive repairing, metalworking, photography, conservation and engineering, surveying, mapping, cooking, and clerical tasks.
>
> The Director will not assign enrollees of the Corps to direct construction work where historically such work is normally (and clearly more efficiently) performed by skilled mechanics and laborers employed by construction contractors under contract with the conservation agencies of the Federal Government.

Mr. HUMPHREY. Mr. President, I accept the amendment on behalf of the Senator in charge of the bill,, and as one of the sponsors of the bill. I thank the Senators for their thoughtfulness in bringing up the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the junior Senator from Vermont [Mr. Prouty], for himself and the junior Senator from Iowa [Mr. Miller], and the junior Senator from New York [Mr. Keating].

The amendment was agreed to.

Mr. MILLER. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 41, line 22, insert after the word "workers" the following: "or impair existing contracts for services".

Mr. MILLER. This is a very simple amendment, Mr. President. The bill seeks to protect employed workers from being displaced by certain activities called for under title II of the bill. I believe the intention, however, is not to confine itself merely to those workers who are employed by such agencies as these young people will be working for, but also to contracts for services provided by private organizations doing work for the city. I have in mind, for example, employment contracts for private janitorial services. Such contracts would not be impaired, either. I have discussed the amendment with the Senator from Pennsylvania. I understand he has no objection to it.

Mr. HUMPHREY. The Senator is correct. The amendment proposed by the Senator is very desirable. Speaking for the Senator from Pennsylvania and as a sponsor of the bill, I say to the Senate that the amendment is acceptable. We hope the Senate will vote in favor of it.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa [Mr. MILLER].

The amendment was agreed to.

Mr. NELSON. Mr. President, I have an amendment at the desk. I ask that it be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The LEGISLATIVE CLERK. On page 25, line 12, it is proposed to strike out through line 20 and substitute the following:

> (2) enter into agreements with Federal and State agencies (for the purposes of this title "State" shall include the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa) charged with the responsibility of conserving, developing, and managing the natural resources of the Nation, and of developing, managing, and protecting recreational areas, whereby the enrollees of the Corps may be utilized by such agencies in carrying out, under the immediate supervision of such agencies, programs planned and designed by such agencies to fulfill such responsibility. The Secretary may enter into such agreements with the State agency wherever he finds that such utilization of the Corps will best serve the purposes of this Act. Any such agreement with the State agency shall apply cost-sharing procedures prescribed by section 206(a) in title II.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. HUMPHREY. I assume the Senator will wish to make a statement with reference to his amendment. He knows that I have been one of his strong supporters on the amendment. I believe it is very desirable that there be the closest cooperation between Federal and State Governments with respect to activities that take place on State lands and in connection with State projects. The amendment would permit such close cooperation and permit these activities to take place. That would be very beneficial. Speaking for the Senator in charge of the bill, and as the principal sponsor of the bill, I am willing to accept the amendment.

Mr. NELSON. Mr. President, I have one observation to make about the amendment. At least, in many States this would be true. There might be a Federal project on Federal lands. If an important project of greater conservation significance on adjoining or nearby State park lands, or wet lands, or recreational lands needed some work, the amendment would authorize the Secretary, in his discretion, to evaluate the project. If he thought the work ought to be done on that land, he could arrange with the appropriate State authority, under the 75-25-percent sharing arrangement, to have the work done on such land. I believe that frequently, especially if the program continues, there will be high-priority projects on State lands, and it would seem rather ludicrous to have a group of men stationed on Federal lands unable, without an agreement with the Secretary, to do some constructive conservation work on the State lands. All that is needed is to provide discretion for the Secretary to act, if such action would further the purpose of the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Wisconsin.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. PROUTY. Mr. President, I call up my amendment No. 45 and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 32, line 3, it is proposed to insert after the period the following: "Only existing facilities may be utilized to furnish quarters for enrollees or applicants for enrollment, and the Secretary shall not have authority to construct or to cause to be constructed any new facilities for the purpose of providing quarters to enrollees or applicants for enrollment. Whenever necessary, existing facilities for such quarters may be repaired or renovated, but the cost of the repair or renovation of any facility shall not exceed an amount equal to one-third of the cost of the construction of a similar new facility."

Mr. PROUTY. Mr. President, the pending bill is a perfect example of the administration's approach to current domestic problems: "Legislate now; develop a program later." The Committee on Labor and Public Welfare conducted extensive hearings on this measure and the revelation of administration unpreparedness was astonishing. The language of the bill appears quite simple; its impact, however, could be severe.

The Secretary is authorized to build new camps for boys under this program. During the hearings on this bill he exhibited more than a ready willingness to construct new camp sites. His instant liberality with the taxpayers money is of great distress to me.

The Secretary testified, for example:

> Our present best estimates indicate a cost of $4,000 per enrollee for a 12-month period, as far as title I is concerned.

I asked the Secretary if this figure included any capital expenses. He replied:

> It perhaps includes where it should not. Capital expenditures for camps in working out these figures we have assumed we will have to build new camps and they will cost us $250,000 apiece, which we can amortize over a 20-year period.

The camps he referred to would house 50 boys. He then said:

> I think that $4,000 per enrollee for 12 months is an inflated figure. I think we can do it for less than that, substantially less.

To my way of thinking, a $250,000 camp for 50 boys should by itself cost $5,000 per boy, making the total cost per boy $8,735 instead of $3,985. But, the Secretary decided it would be a good idea to amortize that cost over a 20-year period bringing the cost down to $250 per boy per year. This amortization scheme might be meaningful if the youth program was to last for 20 years, but certainly such a poorly planned program could not be tolerated for that long. I will talk more about this amortization ruse in just a minute but first let us get the administration's figures straight.

The Secretary of Labor says that the construction of new 50-man camps will cost $250,000. I challenge the Secretary on that point. In 1961 a youth bill was before the Senate. At that time the Department of Agriculture and the Department of the Interior testified to construction costs for 50-man camps of $315,000. At the hearings on the present bill, the director of the bureau of youth services for Pennsylvania testified that the construction costs for 50-man camps presently being built in Pennsylvania were to run to $385,000. The Secretary explains this problem by saying that they have had some more time to do a little close costing. That would suggest to me that either the previous bill was developed and presented in great haste, something which the Secretary alludes to, or that the present bill was developed and presented in equally great haste but the figures made a little more palatable for our consumption. From the unpreparedness and lack of specific information on the projected program at the hearings, I am inclined to think that not much thought went into this piece of legislation.

For example, I asked the Secretary for a breakdown on the number of camps and campsites that he had earlier testified could be renovated rather than built from the ground up. In particular, I asked if he could tell me what camps the boys were going to be put in. He replied:

> In anticipation of the legislation, I cannot, sir.

I asked if he could give the committee the cost of renovation for these camps. He replied affirmatively, but never furnished me with a figure. I was heartened to note that the senior Senator from Minnesota read answers to these questions into the RECORD 1 month after the Secretary testified.

Given enough time, I feel the administration might develop some program, but at present they have no program; they are asking this Congress to vote them a blank check for a program they have not yet developed.

The fact that there are wide and irreconcilable conflicts in the testimony concerning this bill was dramatically brought home to me when the Secretary testified that there was a 10-man camp at Swanton, Vt. No such camp exists.

The amortization question is still another example of administration attempts to give this bill enough sweetening for easy swallowing. The committee was told that although new 50-man camps would cost $250,000, the cost would be amortized over 20 years because that was the life expectancy of the camps. Now, under our budgetary system, an appropriation is an appropriation for the year in which it is made. The full cost of the camps is to be paid out of contemporaneous appropriations. For a 50-man camp costing $250,000, the cost per man is $5,000. That $5,000 per man is the actual cost per man over the life of the youth program. If the program were to last for 5 years, the cost per man would be $1,000 per man per year.

But, the Secretary did not think this type of amortization reflected a suitable amortization schedule precisely because it made the cost for enrollees in the program too high, too unacceptable for a budget-conscious Congress. So, he steadfastly maintains that the true amortization period should be over the expected life of the buildings without reference whatsoever to the youth program for which these campsites would be built.

Admittedly, if the costs are amortized over 20 years instead of 5, the yearly cost per man is low, but it is my contention that the 20-year amortization period is a totally meaningless and misleading concept if these campsites are to lie fallow and unoccupied for 15 of those 20 years. Even a member of the majority staff of the Interior Committee recognized this type of "amortization" for what it is. In a memorandum to Senator CLARK which appears on page 548 of the hearings, Robert Wolf said:

> Amortization on camp costs is an interesting fiscal exercise, but since Federal funds are appropriated on an annual basis, amortization is not realistic.

It is my fear that if the Congress does not take a long hard look at what can be done under this bill, we shall face the day when once expensive campsites, vacant and deteriorating, dot the countryside as monuments to our imprecision on this piece of legislation.

Inasmuch as the bill as reported has no termination date it is conceivable that this costly and indefinite program of camp construction could be perpetuated merely by the same broad stroke of the legislative pen that might extend the program from year to year. We must demand of the Secretary that he spell out his program and list his costs realistically before we become a party to such imprecision.

The proponents of the bill say that under title I of the bill as many as 15,000 youths the first year can receive training in those skill areas craving employees. But, not only does this bill not spell out how those boys are to receive that training, it empowers the Secretary to spend all but a piddling sum on construction and virtually ignore training altogether.

This bill is not touted as a "youth housing bill" and it should not be permitted to have that effect. Even if housing were the objective, a $5,000 expenditure per boy is excessive; it exceeds the per person cost of a $12,000 home for a family of three; namely, $4,000 by a full $1,000. How do we explain that extravagance to the people at home?

I have been critical of this program because the administration cannot seem to juggle its figures consistently. I cannot understand why the youth program before us in 1961 was to cost up to $9,000 per boy while virtually the same program in 1963 is to cost $4,000 plus an average of $500 for work equipment and supplies per boy. But, my apprehension about the money aspects of this bill is even greater because of the failure of the administration to settle one simple point.

The Secretary of Labor and the senior Senator from Minnesota have both testified that there are in existence almost enough camps to take care of the first year's quota of 15,000. Assuming for the moment that they are correct why must there be any authority to build expensive new campsites under this bill until the existing facilities are utilized. If there is in fact to be any training for these boys under this bill there must be some appropriations left to support it. If new camps were constructed at $250,000 per camp there would be no money left for training for the first year enrollees and the program would be entirely valueless to them.

The distinguished senior Senator from Minnesota told the Senate on Thursday, April 4, that there were 156 year-round camps that would require about $15 million to renovate and that these 156 camps would house about 11,240. Now this is better economy because new camps to house these boys would cost over $56 million. But even the $15 million necessary for renovating the camps is disturbing because such renovation would in itself eat up one-fourth of the total authorization under title I for the first fiscal year.

When the administration cast its budget for title I it proposed that by amortizing construction over 20 years housing would constitute only one-sixteenth of the total cost per boy. But, if $15 million is spent for renovation out of a total authorization of $60 million the cost of housing then represents one-fourth of the total cost per boy.

If the cost estimates for compensation, subsistence, camp maintenance, clothing, medical, and dental care remain the same, the allowance for training may have to be eliminated; but at least there will be the chance of a training program that there would not otherwise be if new campsites were constructed. If the training program allowance is not reduced, the $45 million remaining after renovation will only support 10,000 boys at the $4,500 cost figure which includes equipment.

In conclusion, I must emphasize again how poorly planned the present youth bill is. As I have shown, unless presently existing campsites and facilities are used for this program and unless renovation of these camps is limited strictly to making them habitable, all the pious claims about youth training that have been bantered about by the bill's proponents will prove to be the volatile spirits that they are and will evaporate with the passage of this bill.

I therefore introduced an amendment which will remedy some of the evils of the present bill by limiting the quarters provided enrollees and applicants of the program to existing facilities and limiting the cost of renovation or repairing existing facilities to one-third of the cost of the construction of a similar new facility.

Mr. President, the amendment would restrict the program to the use of existing facilities in existing camps. In other words, no new camps could be established. The proponents have stated repeatedly throughout the debate that in a short period of time sufficient facilities could be obtained from existing camps, those which have been listed in the CONGRESSIONAL RECORD and in the record of the hearings. It seems to me that in the interest of economy, when the proponents say there are already sufficient facilities to take care of the needs, at least for this year, Congress should restrict the facilities to that number. To do so would not place a hardship on anyone.

As a result of the reduction in the amount of the authorization, which was approved yesterday, only about 8,200 boys would be able to enroll during the first year, in any event. It seems to me that this is a sound, constructive amendment, one which would save considerable money for the taxpayers.

Mr. HUMPHREY. Mr. President, the Senate has voted to retain title I, the Youth Conservation Corps proposal. That proposal would require, when the project was fully underway, some new construction. A number of camps could be rehabilitated, but many areas, in the East in particular, would be without any facilities.

This particular amendment would prejudice the bill in favor of certain sections of the country where existing facilities are now usable, but would prejudice the bill against other sections of the country where no such facilities exist. Kentucky and Vermont are 2 examples. I could mention others.

I hope the Senate will reject the amendment. I do not believe that it would serve the interests of the program.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Vermont [Mr. PROUTY].

The amendment was rejected.

Mr. COOPER. Mr. President, I shall support the bill. I intend to vote for it. I shall briefly state my reasons.

The PRESIDING OFFICER. Is the Senator from Kentucky speaking on the bill?

Mr. COOPER. I am speaking on the bill—not on any amendment.

Mr. HUMPHREY. Mr. President, I yield as much time on the bill as the Senator from Kentucky may desire.

Mr. COOPER. I thank the Senator from Minnesota.

In considering whether I should vote for the bill, I was doubtful for a time that I would do so. I was moved very much by the arguments made by the distinguished Senator from Vermont [Mr. PROUTY] during the course of the hearings; and his questioning of witnesses raised several important questions. He has ably raised the same issues during the debate. A most important question is whether the program would be conducive to equipping young men and women in the programs to secure employment after their period of enrollment had ended. Perhaps it would have been better had a more comprehensive program of vocational training or education been provided for the enrollees in the program. This I know that our colleagues Senator JAVITS and Senator PROUTY insisted on, and the bill was improved. Yet I know it to be true that many young people do not have an education or a skill which would enable them to immediately undertake vocational training of even an elementary character. For them, and there are thousands, there must be some kind of pretraining, such as that offered in the bill, before they can learn vocational skills or obtain the elementary education which they need to get a job. This is not a speculation.

I have talked to the directors of vocational schools in my State. They have told me that a number of boys and girls who apply for vocational training do not have the elementary education to undertake vocational training.

With reference to this personal experience and knowledge, I was impressed by the argument of the Senator from Minnesota [Mr. HUMPHREY] that the two programs would provide work discipline and a set of work habits for young men and women to prepare them for further training necessary for employment. And the bill provides that appropriate vocational training and schooling will be a part of the program.

My second concern—and I know it is the concern of many—is the question of cost. Today, on every side we hear the insistence of the people and the insistence of Members of Congress that the budget be reduced and that expenditures be placed at a lower level. I agree with this position. Reductions in the budget can be made—I believe on the order of $3 to $4 billion. But we must face the question—and I as a Member of Congress must face it: Where shall reductions be made? If there should be a tax cut, and I favor a tax cut, we would agree that its main purpose was to stimulate the economy, and to relieve unemployment.

But while the process—tax cut, increased consumption, and greater investment—is taking place, thousands of men and women will remain out of work. As shown by the record of hearings, 800,000 boys and girls between the ages of 16 and 22 are out of work and out of school. It is not right to cast them aside and leave them without consideration in this process of stimulating the economy—by cutting taxes, and of reducing expenditures.

Last night I viewed a television program entitled, as I recall, "The Lament of the Miner." It was a documentary of conditions in my own State of Kentucky. It showed, as I have seen in that section, men out of work, young men out of work, with very little possibility of obtaining employment.

This question is raised by my constituents; it is raised by Members of Congress; it is raised by my party: Shall a Member of Congress hew precisely to a doctrinaire line, and refuse to vote for new or additional expenditures even though needed?

I wish to express my own feeling in connection with this question. I intend to vote for reductions in the appropriation bills which will come before the Senate; but I do not intend to vote against this bill, or against others which would penalize those who are out of employment and who have little opportunity to obtain employment.

This is the chief reason why I shall vote tonight for the pending bill, although it offers no permanent solution, I shall vote for it because it would provide work, training, and some basic education for at least 75,000 of our young people this year. It will give them some training, and it will inculcate disciplines and habits which can lead to employment, make them better citizens, and give them hope for the future.

I intend to vote to reduce appropriations during this session, but I will also vote for bills which will give some help and hope to the young people of our country, to the unemployed, whether in or out of school, and to the older men and women of our Nation who are out of work through no fault of their own.

I pay my respects to my colleagues on this side of the aisle for their effective work on the bill, and, among others, to its chief sponsor, the Senator from Minnesota [Mr. HUMPHREY], the Senator from Pennsylvania [Mr. CLARK], and my neighbor from West Virginia, and fighter to relieve unemployment, Senator RANDOLPH.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. PROUTY. On behalf of the senior Senator from South Dakota [Mr. MUNDT] and myself, I call up my substitute amendment No. 46.

The PRESIDING OFFICER. The amendment will be read.

Mr. MANSFIELD. Mr. President, before the amendment is read, if I may have the attention of the Senate, I wish to state that the minority leader and I have discussed this possibility with the distinguished Senator from Vermont [Mr. PROUTY], whose substitute amendment is about to be read, and also with the assistant minority leader and with the Senator from Pennsylvania.

On behalf of the minority leader and myself, I ask unanimous consent that 30 minutes be allocated on the substitute amendment, with 25 minutes to be in charge of the Senator from Vermont [Mr. PROUTY] and 5 minutes to be in charge of the Senator from Minnesota [Mr. HUMPHREY]; and that at the conclusion of that half hour, a yea-and-nay vote be taken on the question of agreeing to the substitute amendment which will be pending at that time.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. MANSFIELD. Now, Mr. President, on the question of agreeing to this amendment, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MANSFIELD. Mr. President, I thank the Senator from Vermont for yielding.

The PRESIDING OFFICER. Does the Senator from Vermont wish to have the amendment printed in the RECORD without being read?

Mr. PROUTY. Yes, Mr. President; I ask unanimous consent that that be done.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment submitted by Mr. PROUTY, on behalf of himself and Mr. MUNDT, is to strike out all after the enacting clause and insert in lieu thereof the following:

SHORT TITLE

SECTION 1. This Act may be cited as the "Youth Training and Employment Opportunities Act of 1963".

STATEMENT OF PURPOSE

SEC. 2. The purpose of this Act is (1) to develop methods for promoting the most effective utilization of the production potential of untrained and inexperienced youths; (2) to provide useful work experience and training opportunities for a limited number of youths through the use of programs authorizing projects for on-the-job and other appropriate training and local public service employment; (3) to determine the effectiveness of different types of such programs for the training and useful employment of youth to meet current and future technological requirements of an expanding labor market; and (4) by means of the foregoing, to provide the Nation with tested and proven training and work experience programs for school dropouts and other youths who will be seeking work in increasing numbers during this decade.

TITLE I—AMENDMENTS TO THE MANPOWER DEVELOPMENT AND TRAINING ACT OF 1962

SEC. 101. (a) Subsection (c) of section 203 of the Manpower Development and Training Act of 1962 is amended by striking out "1954" and all that follows and inserting in lieu thereof "1954."

(b) Section 203 of such Act is further amended by adding at the end thereof the following new subsection:

"(k) The Secretary of Labor may pay training allowances at a rate not exceeding $20 a week to youths over sixteen but under twenty-two years of age where such allowances are necessary to provide them occupational training except that—

"(1) no such allowance shall be paid to any youth who has not finished high school unless such youth has absented himself from school classes for a continuous period of not less than six months immediately prior to the date he begins to receive occupational training under this Act;

"(2) during the fiscal year ending June 30, 1964, such allowances shall not be paid to more than forty-five thousand of such youths; and

"(3) during each of the two fiscal years immediately following such fiscal year, not more than 20 per centum of the estimated total training allowances paid annually under this section may be paid to such youths."

(c) Section 304 of such Act is amended by adding at the end thereof the following new subsection:

"(e) For the purpose of carrying out the provisions of title II with respect to youths over sixteen but under twenty-two years of age, there are hereby authorized to be appropriated $45,000,000 for the fiscal year ending June 30, 1964, and for each of the four succeeding fiscal years such sums as the Congress may determine to be necessary."

TITLE II—STATE AND COMMUNITY YOUTH EMPLOYMENT PROGRAM

Development of State and community employment programs

SEC. 201. (a) In order to carry out the purposes of this title, the Secretary of Labor (hereinafter referred to as the "Secretary") shall assist and cooperate with the agencies of State (which for the purposes of this title shall include the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa), county and local governments and private nonprofit agencies in developing programs for the employment of young people in State and community service activities, hereinafter authorized, including programs in health, education, and the field of conservation, development, and management of the natural resources of the State and the community and the development, management, and protection of recreational areas within the State and the community, which shall be coordinated with a program of training and education provided by local educational authorities, or a program carried out pursuant to the Manpower Development and Training Act of 1962, as amended by title I of this Act. In those States where the public landholdings of the Federal Government are less than 5 per centum of the land area within the State, the Secretary when requested, may offer such additional assistance as may be required in the development of programs of conservation and recreation. The Secretary shall advise such State and local governments as to the number and availability of unemployed young people, their skills and qualifications for various types of work, and shall provide, in cooperation with local school authorities, for the orderly selection and referral of youths for enrollment in such programs.

(b) For purposes of this title, the term "private nonprofit agency" means an organization which (1) is exempted from taxation under section 501(a) of the Internal Revenue Code of 1954, and (2) no part of the net earnings of which inures or may inure to the benefit of any private stockholder or individual.

Approval of programs

SEC. 202. (a) The Secretary is authorized to approve for assistance under this title any State, county, municipal, or local programs submitted hereunder if he determines, in accordance with such regulations as he may prescribe, that—

(1) enrollees in the program will be employed either (A) on publicly owned and operated facilities or projects, or (B) on local projects, sponsored by private nonprofit agencies approved by the appropriate State agency;

(2) the program will increase the employability of the enrollees, or will enable student enrollees to resume or to maintain school attendance;

(3) the program will permit or contribute to an undertaking or service in the public interest which will not otherwise be provided, or will contribute to health and education programs of the community or to the conservation, development, and management of the natural resources of the State or community or to the development, management, or protection of State or community recreation areas;

(4) the program will not result in the displacement of regular workers;

(5) the rates of pay and other conditions of employment are appropriate and reasonably consistent with the rates and conditions applicable with respect to comparable work in the locality; and

(6) the program includes standards and procedures for the selection of applicants including provisions assuring full coordination and cooperation with local and other authorities to encourage students to maintain or resume school attendance.

(b) In approving projects under this title, the Secretary shall give priority to projects with high training potential.

Enrollees in programs

SEC. 203. (a) Enrollment in programs under this title shall be limited to young men and women who are permanent residents of the United States, who have attained age sixteen but have not attained age twenty-two, and whose participation in such programs will be consistent with the purposes of this title.

(b) Enrollees shall not be subject to the provisions of any other Federal law relating to Federal employment including hours of work, rates of compensation, or employee benefits.

(c) The number of enrollees in programs under this title shall not exceed at any one time the equivalent of fifteen thousand full-time enrollees during the fiscal year ending June 30, 1964, and during the next four fiscal years such numbers as may be maintained within the appropriations made therefor by the Congress.

(d) The Secretary shall provide for testing, counseling, job development, and job referral services through either governmental or private nonprofit agencies to youth in order to carry out the purposes of this title.

Federal share of program costs

SEC. 204. (a) Whenever a State, county, municipal or local youth employment program is determined under section 202 to be appropriate, the Secretary may enter into an agreement with the State, county, or municipal government, or agency or political subdivision thereof, or a private nonprofit agency. Under any such agreement such government or political subdivision thereof or agency shall pay 50 per centum of all costs of the program, including those of administration. The contributions by such government, or political subdivision thereof, or agency, pursuant to such agreements may be in cash or in kind, fairly evaluated, including but not limited to plant, equipment, and services. Such agreements shall further provide that the Secretary will pay grants to such governments or political subdivisions thereof or agencies covering the balance of all costs of such programs, including those of administration.

(b) Funds available for grants in any fiscal year under agreements authorized by subsection (a) shall be allocated among the States on the basis of the ratio that the number of persons who are unemployed in the age group of sixteen years to twenty-one years, both inclusive, in each State bear to the number of persons in such age group in all States.

Authority of Secretary

SEC. 205. (a) In carrying out this title, the Secretary is authorized to—

(1) delegate to the heads of other departments and agencies of the Federal Government any of his functions, powers, or duties under this title as he deems appropriate, and to authorize the redelegation thereof by the heads of such departments and agencies.

(2) utilize with their consent the services and facilities of Federal agencies and, with the consent of any State accept and utilize the services and facilities of the agencies of such government or of any county or municipal subdivision thereof; to establish State and local advisory committees; and to utilize such voluntary and uncompensated services as may from time to time be needed.

(3) make such contracts or agreements, establish such procedures, and make such payments, either in advance or by way of reimbursement as he may deem necessary to carry out the provisions of this title.

(4) encourage the enrollees to participate in a systematic program of training and education provided by State and local educational authorities, or by a program carried out pursuant to the provisions of the Manpower Development and Training Act of 1962 as amended by title I of this Act.

(5) prescribe such rules and regulations as he may deem necessary to carry out the provisions of this title.

(b) Any agreement under this title shall contain such provisions as may be necessary to promote effective administration, protect the United States against loss, and insure the application of funds in a manner consistent with the provisions and purposes of this title and the terms of such agreement.

National Advisory Council on State and Community Youth Employment Programs

SEC. 206. (a) There is hereby established in the Department of Labor a National Advisory Council on Youth Employment Programs (hereinafter referred to as the "Council"). The Council shall be composed of the Secretary or his designee, who shall be Chairman, and nine members, at least four of which shall be members of the minority party, appointed by the Secretary without regard to the civil service laws. The appointed members of the Council shall be persons (including persons from public and voluntary organizations) who are recognized authorities in professional or technical fields related to the employment of youth or who represent the fields of conservation, agriculture, education, training, labor, management, and urban development or persons representative of the general public who are leaders in programs concerned with employment of youth. The Council shall advise the Secretary on the administration of this title. The Council shall also include, whenever appropriate, the various agency heads designated in section 207 of this title.

(b) Upon request of the Secretary, the Council shall review the operation of this title in general and shall from time to time make recommendations to the Secretary relative to the execution of his responsibilities under this title. The Council may also make recommendations to the Secretary on projects referred to it by the Secretary. The Council shall meet at least twice each year and at such other times as the Secretary may request. The Secretary is authorized to utilize the services of any member or members of the Council in connection with matters relating to this title for such periods, in addition to conference periods, as he may determine.

(c) Appointed members of the Council, while attending meetings of the Council or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at a rate to be fixed by the Secretary, but not exceeding $75 per diem, including travel time, and while away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. Notwithstanding the foregoing or any other provision of law, the Secretary may accept the services of appointed members under this section without the payment of compensation therefor (and with or without payment of travel expenses or per diem in lieu of subsistence).

Interagency consultation

SEC. 207. In the administration of this title, the Secretary shall seek the advice and assistance of the Secretaries of the Departments of Health, Education, and Welfare, Agriculture, and Interior, of the Attorney General, the Administrator of the Housing and Home Finance Agency, and of such other agency heads as the Secretary deems appropriate.

Appropriations authorized

SEC. 208. (a) For the purpose of carrying out the provisions of this title, there is authorized to be appropriated for the fiscal year commencing July 1, 1963, the sum of $15,000,000 and for each of the four succeeding fiscal years thereafter such amounts as the Congress may determine to be necessary to carry out the provisions of this title.

(b) Funds authorized to be appropriated under this title may be transferred between departments and agencies of the Government for use for the purpose for which they are specifically authorized and appropriated and may also be granted to State and local governments for the purpose provided in this title.

Report by the Secretary

SEC. 209. Not later than one hundred and twenty days after the close of each fiscal year, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report on the activities and programs authorized by this title during such year; and not later than January 1, 1966, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report evaluating the activities and programs authorized by this title from its inception together with such recommendations as he may deem desirable.

Mr. PROUTY. Mr. President, first, I yield 3 minutes to the distinguished junior Senator from Virginia [Mr. ROBERTSON].

The PRESIDING OFFICER. The Senator from Virginia is recognized for 3 minutes.

Mr. ROBERTSON. Mr. President, I warmly commend the Senator from Vermont [Mr. PROUTY] for the fight he has been making to protect the taxpayers from a new and needless spending program.

While the $60 million proposed in the pending bill to start a replica of the CCC camps of the depression 1930's is apparently a very modest undertaking, no one should delude himself into believing that if a program of this character is started, it can be any more easily stopped than the program of 1934, which ran for 8½ years, and was not ended until war spending and the draft forced Congress to abandon it. Instead of the new conservation camp program's being less expensive than the CCC program was during the great depression, my personal belief is that it could easily be three times as expensive. For instance, both the Census Bureau and the Army are agreed that the current cost of building a barracks is 300 percent higher than it was during the depression years; and the pending bill recognizes the inflation that has occurred, when it provides a starting salary of $20,000 a year for the Director of the YCC, as against $10,000 for the Director of the CCC in the bill of 1937.

I have previously pointed out that even to house the 15,000 men contemplated by title I of the bill would cost not less than $75 million. My colleagues may be interested to know what was spent on barracks for the old CCC camps. The General Accounting Office informs me that the total under the general heading of "Shelter" was $69,877,649.13. And if to that is added what, of course, will have to be added to the new camps, if established—equipment, supplies and materials, structures and parts, and land—the total for what might be termed capital outlays for the old CCC program was $402,220,869.06. When we add to that the money paid to the enrollees and the contributions made to their dependents, we find that in 8½ years the Government spent on the old CCC camps $2,328 million.

Therefore, I feel safe in asserting that if we start this program—and Government witnesses have testified that they are figuring the per-man cost on the basis of amortizing the capital outlay over a period of 20 years—it may ultimately cost over $6 billion.

So far as character building in the CCC camps is concerned, the answer lies in the fact that 500,000 members of those camps either deserted or were discharged for misconduct. Between the years 1934 and 1943, inclusive, the total amount spent in aids to youths in the CCC and the Youth Administration was $3,229 million; and now we are asked to duplicate that failure, but at a much greater cost.

Mr. PROUTY. Mr. President, my explanation of the substitute amendment will be brief.

Title I of the amendment provides, for the first year, an authorization of $45 million to expand the Manpower Training Act programs. This expansion would give unemployed youths skills needed in the labor market.

For the fiscal years 1965, 1966, 1967, and 1968, this title authorizes the appropriation of such sums as Congress may determine to be necessary.

Forty-five thousand youths would receive the training.

Let me point out that they will be receiving actual training—either on the job or otherwise—and will become qualified, sooner or later, to assume their places in society and to be self-supporting.

Up to 45,000 youths between the ages of 16 and 22 may receive training allowances during the fiscal year 1964. The allowance paid to such youths will be not more than $20 a week.

For the fiscal years 1965, 1966, 1967, and 1968, not more than 20 per cent of the total amount of money used for training allowances may be paid to young people in the 16 to 21 age group.

I am told that under existing law not more than 5 percent of such allowances may be paid to young people.

Title II of my substitute amendment follows very closely the provisions of title II of Senate bill 1, and is supposed to stimulate State and local community service activities by public and nonprofit agencies to increase job opportunities and the employability of young people. The community service activities authorized under this program might include employment in schools, hospitals, welfare agencies, and on natural resources projects.

The Federal share of the program would be on a 50–50 matching-grant basis.

The eligibility requirements for community service programs would be as follows: These programs must first, increase the employability of enrollees; second, contribute extra public service, or must contribute to health and education programs or to the conservation of natural resources; third, not displace regular workers; and fourth, provide wages and working conditions consistent with those applicable to comparable work in the locality.

In other words, we would be providing real opportunities for approximately 60,000 of our young people, at a cost which would be $40 million less than that under the program provided in Senate bill 1.

It seems to me that my proposal is a logical and realistic approach. It certainly belies any statements that some of us who are opposed to S. 1 are without a workable program as a substitute. It seems to me that the proposal is to some extent a palliative. It is not the ultimate answer to the problem of school dropouts. But, in my judgment, it would help to take care of some of the young people who are now unemployed and unemployable.

I am now very happy to yield 10 minutes to my distinguished friend the Senator from South Dakota [Mr. MUNDT].

Mr. MUNDT. I thank the Senator.

Mr. President, first I congratulate the distinguished Senator from Vermont for having come forward with a constructive, useful, and productive program. His substitute would eliminate the two glaring deficiencies which I find in the committee bill.

The first great weakness of the committee proposal is that, given its best look, it would provide a bonus for dropouts of schools. It would place a premium on the individual who has dropped out of school, and would apply pressure on others to drop out, because they would then have the opportunity to enjoy the glamor and adventure of a few months or a couple of years in the open at public expense. We should be trying to hold young people in our schools and not providing new magnets to pull them out.

The second great deficiency in the committee bill is that it would do nothing constructive and useful from the standpoint of its participants to equip them the better to lead a useful life and to contribute to the economy of the country. Instead, we have merely tried to take some old ideas from the 1930's and apply them to the new problems of the 1960's. Instead, we should be applying some new ideas to the old problems of school dropouts and juvenile delinquency which have existed for a long time. I do not envision that in peacetime and prosperity we can correct any better the problems with which we dealt in the days of the depression 30 years ago than we could at that time.

I like the proposal originated by the Senator from Vermont because it provides a ladder by which young people who are out of work can climb to higher goals of achievement, instead of providing what I submit the committee bill does, and that is a $100 million revolving door through which they would pass and, 6 months, a year, or 2 years afterward, come back exactly to where they were before, no better trained.

If we are to spend a substantial sum of money to try to do something for young people—and I should like to do something to meet the challenge of delinquency, and to eliminate the problems of youthful employment—let us do it by providing them with training which will equip them with skills and the necessary know-how so that they can earn a useful living.

In my opinion, if we would do that, the expenditure of the $60 million recommended by the substitute proposal would not be an expense. It would be an investment that would be reimbursed to the Government, because we would have increased the earning power, and thereby the taxpaying capacity, of the trained young people who have had an opportunity to develop vocational skills as against those who otherwise would spend some happy days in the out of doors for $60 a month, and would return perhaps a little healthier, but no wiser, no better trained, no better equipped and, conceivably, even more maladjusted to the city life to which they would be compelled to return after they had had such an experience.

During the entire discussion, the problem has been stated that unemployment rates for youth stand at a higher percentage even than the inordinately large rate of unemployment of our total work force. Against that background of information it would seem that the Senate should devote itself to trying to develop a plan to train young people, to give them skills, and to give them the equipment needed to meet the challenges of the 1960's. Thirty years ago it was easier for an untrained worker to get a job than it is in 1962. Thirty years ago there was more plausibility to the argument that if a young man is kept out of doors for 6 months, a year, or 2 years, he will at least come back a healthier individual and can then use his brawn and muscle to earn a living.

Today the areas in which brawn and muscle enable a young man to earn a decent living have been sharply reduced. He now needs training, skills, procedures, techniques, and background, which he could get under the program proposed by the Senator from Vermont [Mr. PROUTY] and myself, with the spending of available money to train young people and to equip them better to serve society and better to serve themselves.

We will wrestle with less than 10 percent of the youthful unemployed in our country. Under such a program it seems to me that for those 10 percent, at least, we should be desirous primarily to make sure that they can get the kind of jobs to which they are entitled.

As presented, the measure is a costly program because, we were told in the hearings, it would cost anywhere from $150 to $1,000 per enrollee merely for the materials, equipment, and plant. It would cost about $15 million for the 15,000 enrollees, in addition to the very expensive costs involved in managing, transporting, housing, and supervising the enrollees. We are told that the cost would probably run about $3,985 per individual. By spending a smaller amount of money per individual and by helping to develop training facilities and vocational areas, in my opinion we would get much more for the dollar invested than we would on a program designed primarily to let young men develop another year or two of age without correspondingly equipping them with another year or two of knowledge, practical training, and know-how in that area.

I used to serve as superintendent of schools in a typical small American community. I know how hard it is, even in a rural community, to hold young people in high school. I am sure that if someone had come down the streets in the little town in which I served as superintendent of schools offering to high school sophomores and juniors an opportunity to go out into the woods and enjoy fishing, scenery, and adventure at $60 a month, I would have been unable to persuade them to remain until they graduated from high school.

If that kind of attraction, opportunity, and substitute activity were offered to youngsters in the city, it would have an even greater appeal.

Why in the world the Congress, dedicated as it presumably is to trying to develop better educational facilities and programs for American children, should, on the one hand, devote itself in that direction, and, on the other hand, provide a premium to those who have dropped out by giving them an excursion into the wilderness at $60 a month, I do not know. In my opinion, those are very inconsistent approaches.

I like much better the approach which would continue to keep the goal of educating and training young Americans before us, as we propose in the substitute training program.

I regret that the proposed legislation would not train our youth with the skills to meet the future. Dr. William B. Logan, a member of the President's Panel of Consultants on Vocational Education, has said that there are 4 to 6 million unemployed and at the same time there is a like number of job openings. He said the difference is skills. The difference is lack of training. The difference is too many people who would be like the young Conservation Corps men—able to work, probably willing to work, but unable to turn their hand to productive enterprises because they lack the vocational training necessary. They lack the apprenticeship. They lack experience. They lack know-how.

I invite the attention of Senators to an interesting article in the January issue of Reader's Digest by Lester Velie entitled "Why Johnny Can't Get a Job."

Mr. Velie points out clearly that one reason so many teenagers are out of work is because their schooling has failed them.

Regarding the curious national problem of acute shortages of skilled workers and rising unemployment, especially among our young workers, Mr. Velie says:

> Last year approximately a million teenagers ended their schooling and looked for work. Not long ago, these youths could be absorbed in industry or on the farm. But galloping automation has wiped out 2 million blue-collar jobs in the last 5 years. (In farming alone, 800,000 jobs have vanished since 1957.) True, automation has created 3,500,000 new jobs in service industries—in stores, garages, banks, real estate offices. But these jobs require training. And so many of our young people lack the needed training that 1 boy out of every 5 between 16 and 19 fails to land a job. Automation, then, like a huge searchlight, makes painfully visible a giant flaw in our educational system; our schools are flunking the job of preparing our young for the workday world.

As Mr. Velie points out, this is an indictment of our educational system, because, on the one hand, we have failed to provide, training for those who are in school, in vocational areas, adjusted to their mentalities and capabilities; and, on the other hand, in some areas we have failed to provide the training schools themselves.

The PRESIDING OFFICER. The time yielded the Senator from South Dakota has expired.

Mr. PROUTY. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. The Senator has 9 minutes remaining.

Mr. PROUTY. I yield 2 more minutes to the Senator from South Dakota.

The PRESIDING OFFICER. The Senator from South Dakota may proceed for 2 minutes.

Mr. MUNDT. Mr. President, in summary I wish to say that I think the Congress of the United States and the taxpayers, who must attempt to provide funds under these trying circumstances, should be interested not only in developing some Americans who are good but also in developing some Americans who are good for something, who are trained for something, who are equipped for something, who are able to do something in this great economic area in which we find ourselves, so that when all the expenditures are made, at the end of the road, we shall not merely have added a couple of years of maturity to young people, but shall have added even more to their capabilities and abilities.

The program which was proposed as a substitute would cost less and would produce more. It is not likely to be expanded as rapidly, because it would be limited automatically to the areas in which there can be provided vocational training, and by the capacity of vocational training institutions and schools to absorb additional students. It would be limited to the capacity of industry and unions to absorb young people who come in to get assistance while developing apprenticeship skills.

I plead, in conclusion, for a program which would not return to the thirties, but which would look forward to the sixties, the seventies, and the eighties. This program, in my opinion, would do exactly that.

Mr. PROUTY. Mr. President, I yield 2 minutes to the distinguished senior Senator from Oklahoma.

The **PRESIDING OFFICER.** The Senator from Oklahoma may proceed for 2 minutes.

Mr. MONRONEY. Mr. President, I intend to vote for the Prouty amendment. I regret that many of my very best friends, with whom I have served many years in the Senate, will be on the other side.

My mind goes back to the days when I first came to Congress, in 1938. At that time there were six or seven CCC camps in my congressional district. They were good camps. They were good camps established to take boys off the road—boys who were "bumming" back and forth on the railroad trains, on the freight cars, and hitchhiking across country. Mainly they were hitchhiking because the families of those boys did not have sufficient food to keep them at home, and it was necessary to have some place to tuck them away. They were good boys, but they were being taught the skills of building log fences, planting trees, building sidewalks, and so on—none of the great and adventurous things, in my State, which have been attributed to some of the works of the Civilian Conservation Corps.

Those boys were kept out of trouble, because they were well fed, well clothed, and well supervised. For each 100, as I seem to recall, there were some 10 or 15 rather well paying jobs, to supervise these boys who helped to absorb our unemployment.

Today, some 25 years later, the great DC-3's, then a super plane, have given way to the 707's and the DC-8's. The skills needed today for these boys, to make them useful in America, are not the skills of building sidewalks or building fences or doing such things as that, no matter how pleasurable they may be in a recreation area in the woods. It is important that they be equipped for the aeronautical and space age.

The **PRESIDING OFFICER.** The time of the Senator from Oklahoma has expired.

Mr. PROUTY. Mr. President, I yield the Senator 1 additional minute.

Mr. MONRONEY. Mr. President, I feel that it is desirable to meet the problem of unemployment and of dropouts from our schools, for the boys of this age who cannot find employment. We must give them something worthy of the challenge of America. In my State there are many great vocational schools and other great educational institutions. Every vocational school class is filled. The boys are going to school, to be equipped for employment in the context of the opportunities of modern technology, as fast as they can graduate.

For that reason I intend to vote for a more realistic program, which will help these boys not to stay on the Government, not to stay in the backwoods tucked away from sight, but will send them to schools to be trained in the kinds of skills modern America needs and wants, for which jobs can be found which they can fill. This is the best way to invest our money, if we are to reach the level of employment and the level of industrial production for which the President cries.

I do not think we should find that by educating some 60,000 or even 160,000 young men in woodsmanship, no matter how pleasurable that might be.

Mr. PROUTY. Mr. President, how much time have I remaining?

The **PRESIDING OFFICER.** The Senator has 4 minutes remaining.

Mr. PROUTY. Mr. President, I commend very sincerely the statements made by the distinguished senior Senator from South Dakota [Mr. MUNDT], a cosponsor of the substitute amendment, and the distinguished senior Senator from Oklahoma [Mr. MONRONEY]. I think they have figuratively hit the nail on the head. They recognize that the substitute would provide a realistic program, which would be helpful to the unemployed young men and women of this country. It would get results immediately.

Mr. President, I now yield 3 minutes to the distinguished junior Senator from Iowa [Mr. MILLER].

Mr. MILLER. Mr. President, I thank my colleague from Vermont.

I wish to join in the favorable expressions which have been made about the Prouty-Mundt substitute, and to indicate that I intend to support this amendment. If it does not prevail, I shall be constrained to vote against passage of the bill, much as I recognize that there is a serious problem which we are attempting to solve.

The bill as it now stands is pointed in the wrong direction. The failure of the Senate—by a very close vote, I point out—to delete title I from the bill pretty well removed any inclination I might have felt to support the bill.

I note that title I would not provide anything more than a scratching of the surface of the problem, and this at a very large cost per enrollee.

In this connection it is well to point out what was said recently in a lead editorial of the Washington Post and Times Herald, on March 26, entitled "Growth and Jobs."

This editorial points out the serious unemployment situation and also recognizes the unemployment problem facing our younger generation. The editorial states:

> Such benefits as those contemplated in the bill to set up a Youth Conservation Corps and a Home Town Youth Corps for example are only patches on the main problem. Last year there were 700,000 youths from 16 to 21 out of work. Some 3.8 million youths will become 16 in 1963. The sponsors of the Youth Conservation Corps are talking about 15,000 youths in the first year and 60,000 a year in the first 4 years. The backers of the Home Town Youth Corps are talking about 45,000 in the first year. Such proposals, whatever other merit they have, are no solution to the over-all problem of the youth coming into the labor market. These two projects with their maximum of some 100,000 jobs will not soak up an inundating flood of nearly 4 million young workers a year.

This is the main thrust of the editorial:

> What is needed is not made work or stopgap jobs for a few disadvantaged youths but full-time jobs with a future for the whole mass of new workers who are moving into the ranks of the employable.

Mr. President, the substitute that is offered is pointed in the right direction, because it is calculated to provide the skills that these unfortunate young people must have if they are going to build a future for themselves.

I hope the amendment will be adopted.

I yield back my 3 minutes to the Senator from Vermont.

Mr. RANDOLPH. Mr. President, the amendment in the nature of a substitute which is offered by the Senator from Vermont brings into focus again the fact that already, by a rollcall of 47 to 40, the Senate has endorsed title I. Senators have been recorded on this matter. It has done so, in principle, because this attempt, the Prouty amendment, goes to title I.

In lieu of the Youth Conservation Corps, the Senator from Vermont [Mr. PROUTY] would increase the size of the youth training features of the Manpower Development and Training Act of 1962. He would raise additional funds in the amount of $45 million for that program.

I remind my colleagues that we are concerned here with youths who have dropped out of school, who have left the instructional programs in which they have been participants.

It is important, I feel, to stress the fact that we are not attempting to bring a substitute plan into being for the Manpower Training and Development Act. We are supplementing that program.

I take only 2 minutes to read what the report of the majority states in reference to the matter based on the testimony of the Secretary of Labor, Willard Wirtz. He set forth that the youngsters within this group "will be better prepared," to quote him, "for entry into the work force" by direct training under one of the programs to be established under S. 1. That effort at discipline and learning is, of course, embraced in title I.

By direct training, the Secretary indicates the group we have been talking about would be helped. The Secretary continues to state that this is the best approach to the job potential for a practical work force.

We agree with Mr. Wirtz. The whole purpose of the administration of the YCC program would be to qualify each individual for the highest degree of realization of whatever potential that enrollee possessed.

The Secretary went on to further designate the program envisaged under S. 1 as a method of integrating the various approaches to the problems of this particular work group, in which vocational education is a valuable part.

Then he noted that the program would be administered with the thought in mind of making it, as I outlined earlier, a supplement to the education program and increasing the amount of education these enrollees would receive.

Mr. President, this body has already given its verdict in reference to this question; in fact almost directly on the subject matter set forth in the amendment of the Senator [Mr. PROUTY]. Now our colleague from Vermont comes again with his plan of defeat for this meritorious measure by offering a substitute. I believe we will not approve his proposal.

Mr. HUMPHREY. Mr. President, a parliamentary inquiry.

The **PRESIDING OFFICER** (Mr. NELSON in the chair). The Senator will state it.

Mr. HUMPHREY. Is there any time remaining on the amendment?

Mr. PROUTY. Mr. President, have I any time left?

The **PRESIDING OFFICER.** The Senator from Minnesota has 1 minute remaining.

Mr. HUMPHREY. I will yield back my time.

Mr. PROUTY. Mr. President, will the Senator yield me half a minute?

Mr. HUMPHREY. I yield my time to the Senator from Vermont.

Mr. PROUTY. Mr. President, I ask unanimous consent to have printed in the RECORD, just prior to the vote which will be taken shortly, several memorandums.

There being no objection, the memorandums were ordered to be printed in the RECORD, as follows:

Explanation of Prouty Substitute for S. 1, the Youth Employment Bill

Total cost of substitute, $60 million for fiscal 1964.

TITLE I—TRAINING PROGRAM FOR YOUTHS

Cost and purpose of title I

The first year: Authorizes $45 million to expand Manpower Development Training Act programs. The expansion will give unemployed youths skills needed in the labor market.

For fiscal years 1965, 1966, 1967, and 1968: Such sums as Congress may determine to be necessary.

Number of youths who will receive training

Forty-five thousand.

Number and description of training allowances

Up to 45,000 youths between 16 and 22 years of age, may receive training allowances during fiscal year 1964.

The allowance paid for such youths will be no more than $20 a week.

For the fiscal years 1965, 1966, 1967, and 1968, not more than 20 percent of the total amount of money used for training allowances may be paid to young people in the 16 to 21 age group.

(NOTE: Under present law not more than 5 percent of such allowances may be paid to youths.)

TITLE II—STATE AND COMMUNITY YOUTH EMPLOYMENT PROGRAM

Cost of title II

First year: $15 million.

For following 4 fiscal years: Whatever Congress determines to be necessary.

Number and description of enrollees in the program

First year: 15,000 full-time enrollees (male or female, age 16 or more but not yet 22).

Following 4 fiscal years: Whatever numbers Congress may determine.

What the program does

Stimulates State and local community service activities by public and nonprofit agencies to increase job opportunities and employability of young people.

Community service activities authorized under this program might include employment in schools, hospitals, welfare agencies, and on natural resources projects.

Federal share of program costs

Fifty-fifty matching grants will be made to public and nonprofit agencies.

Eligibility requirements for community service programs

These programs must:

1. increase employability of enrollees;
2. contribute extra public service or must contribute to health and education programs or to the conservation of natural resources;
3. not displace regular workers;
4. provide wages and working conditions consistent with those applicable to comparable work in the locality.

A Comparison of S. 1 and the Prouty Substitute

S. 1

1. Authorizes $50 million to build and operate facilities similar to the CCC camps of the thirties. Few, if any skills will be acquired by enrollees.[1]

Authorizes $50 million for youth employment programs with emphasis on conservation and "work experience" in unskilled jobs.

2. The YCC offers only work to boys with little or no training.

3. Permits the Secretary to allocate funds to the States largely at his discretion.

4. Sets up a 10-man Advisory Council on Youth Employment Problems.

PROUTY SUBSTITUTE

Authorizes $45 million to expand programs for unemployed youth designed to provide skills needed in the labor market.

Authorizes $15 million for "work experience" but with more emphasis on educational and health programs.

Provides needed training to boys and girls through expansion of training programs in progress under Manpower Development and Training Act.

Requires funds to be allocated to the States according to number of unemployed youth and school dropouts of each State as related to all States.

Requires the Council to be bipartisan in nature.

How the Manpower Development and Training Act Works With Respect to Young People

1. They may receive occupational training under it.

2. They may receive training allowances equal to the amount of the average weekly unemployment compensation payment if: (a) they have 3 years of employment experience and are heads of families or heads of households.

3. If they do not have such experience and do not head a family they may, at the discretion of the Secretary of Labor, receive training allowances not exceeding $20 a week—but they must be 19 years of age or more to get the smaller allowance.

4. Youths are further limited by the Manpower Act in that they may not receive more than 5 percent of the estimated total of all training allowances.

CHANGES IN THE MANPOWER DEVELOPMENT AND TRAINING ACT MADE BY THE PROUTY SUBSTITUTE

1. For the first year the Secretary may pay training allowances to not more than 45,000 youths at a rate not exceeding $20 a week to youths who are 16 but under 22 years of age.

2. Beginning with fiscal year 1965, youths could receive up to 20 percent of the total amount of training allowances paid under the Manpower Act.

3. Youths who now qualify for the higher training allowance which equals unemployment compensation because they are heads of families and have 3 years' work experience will still qualify for such higher allowances.

4. The Prouty substitute adds an authorization of $45 million to the Manpower Development and Training Act to take care of the costs of training and compensating 45,000 additional young persons during the next fiscal year.

Outline of Memorandum on YCC Costs

I. Introduction.

II. Errors in estimating new camp construction: (a) Previous estimates of administration—$315,000; (b) current estimate by Director of Bureau of Youth Services, Pennsylvania, $385,000; (c) construction costs may rise by time of construction—no account taken of this factor; (d) proponents say figures are maximized, but no evidence of this.

III. Deception in failing to state work equipment costs: (a) The $500 average equipment cost should have been added directly to the $3,985 to realistically reflect cost per boy of at least $4,500.

IV. Error in amortization of construction costs: (a) Amortization of expenditures of Federal Government not the budgetary practice; (b) amortization over 20-year period entirely unrelated to life of youth program which might be 1 year or perhaps 5 years; (c) elimination of amortization puts costs of program in proper perspective. Cost per boy $9,000 instead of $4,000; (d) alternate amortization over 1–5 years would be better, but no cure-all.

V. Renovation of existing campsites puts cost errors in true perspective: (a) Renovation costs of 156 camps for 11,240 boys—$15 million; (b) only $45 million left to fulfill program objectives; (c) but would require $63,750,000 for objectives, exclusive of housing, and total of $78 million with housing when considering the $500 added for work equipment costs. (d) Still need for 3,000 additional spaces; with construction of 60 new 50-man camps at $250,000, need another $15 million. Total to be spent on housing for first 15,000 boys—$30 million. (e) Leaves only $30 million for a program costing $63,750,000. Can only use half the boys or 7,500, maybe less.

VI. There will be little or no financial return under this program: (a) Because so much money is needed for housing, little money left to support any work program. No money for training; (b) work program conducted by only 7,500 boys instead of 15,000 because housing funds ate up money for other programs; had to reduce participants; (c) if 15,000 boys to be enrolled appropriation must be doubled and what financial return is produced is far offset and exceeded by additional appropriation necessary.

THE COSTS ESTIMATES OF THE YOUTH EMPLOYMENT BILL ARE UNREALISTIC AND REPLETE WITH ERROR

The senior Senator from Minnesota chastised opponents of his youth employment bill because of their attack on the bill's cost. He said that critics of the program's cost erred by citing cost data directly contradictory to the cost data presented at the current hearings and by failing to take into consideration the substantial financial returns that would accrue from projects undertaken by the YCC.

The senior Senator from Minnesota erred on the question of costs by presenting figures and data directly contradictory to previous testimony before the committee.

For example, the cost data supplied the committee erred on the two critical areas of new camp construction and renovation of existing camps.

---

[1] Prouty substitute trains 60,000 boys and girls which equals the administration estimate of 50,000 to 65,000 youths (mostly boys). The Prouty substitute costs slightly more than half the cost of S. 1.

ERRORS IN ESTIMATING NEW CAMP CONSTRUCTION COSTS

In the hearings held before the Committee on Labor and Public Welfare in 1961 the Departments of Agriculture and Interior supplied charts projecting the cost of construction of 50-man youth camps at $315,000. In testimony before the committee in the current hearings the Director of the Bureau of Youth Services for Pennsylvania estimated that current construction costs for 50-man camps being construction in Pennsylvania were $385,000. If the legislation is passed in its present form it is unlikely that any construction would or could be undertaken until some time in 1964; construction costs may rise in the intervening period. But, even in the face of such strong evidence that construction of 50-man camps would exceed $300,000 per camp the senior Senator from Minnesota, at the signal from the Secretary of Labor, continues to contend that the camps will cost less than $250,000. They have said, time and time again that $250,000 is a maximum figure, that all expenses are maximized and that every expenditure can be substantially reduced under its projected cost.

In the hearings at page 495 the Secretary said: "I do want to make it clear that the basis on which these figures have been prepared is a basis which in my judgment is conservative, in the sense that we have erred, if at all, on the high side."

Yet, on not one occasion has any one of the bill's proponents demonstrated where any single expenditure could be reduced; the evidence indicates that practically every cited cost figure is in reality far too low."

DECEPTION IN FAILING TO STATE WORK EQUIPMENT COSTS

Secretary Wirtz and the senior Senator from Minnesota have both concluded that the projected cost of the Youth Conservation Corps, which is title I of the bill, on a boy-per-boy basis is only $3,985. To arrive at this figure they have performed some neat bookkeeping gymnastics. They did not include the cost of equipment, material and supplies necessary to set up work programs but made a footnote to their cost estimates indicating that the cost range for such equipment would range from $150 to $1,000, depending upon the work the particular enrollee was going to perform. They did estimate that the average cost of equipment would be about $500. To be more realistic they should have stated that the cost per boy was about $4,500.

ERROR IN AMORTIZATION OF CONSTRUCTION COSTS

The figure of $3,985 settled upon by the bill's proponents as the cost per boy for the total program consisted of a figure of $250 for housing or quarters. This $250 was arrived at by taking the cost of construction for new 50-man camps of $250,000 dividing it by the number of boys, 50, and amortizing the resultant figure over 20 years. The use of the amortization technique is deceptive and misleading.

As one of the majority staff members of the Committee said in a memorandum to Senator CLARK on page 548 of the hearings: "Amortization on camp costs is an interesting fiscal exercise, but since Federal funds are appropriated on an annual basis, amortization is not realistic."

But amortization as resorted to here is more than unrealistic; it is exceedingly deceptive and misleading. The proponents propose that the Secretary of Labor be empowered to construct new camps for 50 boys. These camps would require a Federal expenditure of $250,000 in the year that they are built. The bill only provides certainty that the youth program will last for one year although there is some authority for continuing its functions for a total of five fiscal years, providing that the Congress makes subsequent appropriations for operation of the program. Should Congress deem it to be not in the public interest to make subsequent appropriations to the youth program, the program would last for only one year. Over that period the cost of the new camp construction alone would be $5,000 instead of the $250 figure relied upon by the bill's supporters. If the Congress made appropriations for the four following years the cost per boy per year would be reduced to $1,000 for new camp construction alone. Five years was the maximum term contemplated for this program by the bill's sponsors. But the Secretary of Labor and the senior Senator from Minnesota maintain that the way to justify the cost of the new camp construction is to amortize the cost over 20 years. What they are in effect saying is this:

1. Two-hundred and fifty thousand dollars will be paid from the U.S. Treasury for single camps housing 50 boys at the time those camps are built.

2. But, this is a sham transaction because it is really as though only $12,500 is spent per year for 20 years.

Such a contention is an absurdity because the $250,000 is actually paid out of the Treasury at the time of construction. And even if the cost could be prorated, the maximum conceivable term for the amortization should be the life of the program which might be 5 years and possibly only 1 year. To say that the proper amortization period for the camps is 20 years is to maintain that the camps are valuable assets for the betterment of youth for the 15–19 years that they may lie vacant and deteriorating. This is the type of fiscal logic that drives the taxpayers to distraction.

When the cost of new camp construction is not amortized the cost of the total program per boy on the basis of the 50-man camps becomes about $9,000 per boy. The cost per boy will decline over the life of the plan as more and more useful life is derived from the camps and the work equipment, but the rate of declining cost is very slow and the program would have to continue for many, many years before it ever approached the $4,000 figure estimated by the administration.

RENOVATION OF EXISTING CAMPSITES PUTS THE COST ERRORS IN TRUE PERSPECTIVE

Both the Secretary and the senior Senator from Minnesota have indicated that the Congress should not be too concerned about the construction of new camp facilities because there are almost enough campsites presently in existence to take care of the 15,000 boys under the program for the first year. There are two fallacies in this argument.

First, the senior Senator from Minnesota told us on Thursday, April 4, that the cost of renovating the 156 year-round camps that would house 11,240 boys would cost $14,667, or close to $15 million. The bill authorizes a total appropriation of $60 million for the first year. After renovation of the existing camp facilities for these 11,240 boys there would only be $45 million left. At the Senator's adjusted estimated of $4,500 per boy less the housing allowance of $250 which the Senator said would be necessary if new camps were constructed, but which is eliminated by the renovation of existing facilities, or a cost per boy of $4,250, the total appropriation necessary to furnish the 15,000 boys with the necessities to carry out this program over and above housing would alone be $63,750.000. The total cost for renovating existing facilities and furnishing all the other items promised by the proponents under this bill would be about $78 million. And yet the proponents prepared themselves so well on this bill that they only asked for $60 million. This wide disparity reflects extremely sloppy planning.

Secondly, they have sometimes argued that there are almost enough existing campsites for 15,000 boys. I have seen no higher estimate than 12,000. On last Thursday the senior Senator from Minnesota admitted there were only 12,000. This means that new camps for 3,000 boys will need to be built. At $250,000 for a 50-man camp, with 60 new camps needed, the allotment for new camp construction alone would have to be $15 million. The total cost for renovation and new camp construction for the first year alone would be $30 million meaning that the Secretary would have to limit the program to far fewer than the 15,000 boys planned or entirely limit what few beneficial programs the plan might have. The cost estimating of the youth employment bill was so poorly planned that few if any of its objectives are obtainable.

THERE WILL BE LITTLE OR NO FINANCIAL RETURN UNDER THIS PROGRAM

The senior Senator from Minnesota said last Thursday: "In order to assess the true costs of the YCC it is absolutely essential to move beyond the shortrun cash outlay for annual operating costs and examine the financial returns that will be eventually created by this annual outlay."

The emphasis should be on the word "eventual" and it should be construed to read "eventual if ever." If all the appropriations under this bill must go to new camp construction or the renovation of existing facilities, there will be no funds to support any conservation work. If the number of boys under the program is reduced to come within the budget, which must of necessity be revised after the actual costs have made their full presence known to the proponents, there will be so few boys working under the program that any benefits of their work will be lost by the insignificance of their numbers. If all the boys do all the work projected by the proponents then the authorizations and appropriations will have to be doubled, thereby far offsetting and exceeding any financial returns.

MEMORANDUM

The record shows very little provision is made for training facilities in the camps.

The administration plan in 1961 provided for a total of one man to serve each camp in an "education and recreation" capacity. This was true in both 500 and 100 men camps. It was also true in 200 men camps.

In the hearings (page 492) Senator PROUTY inquired about educational and training facilities at the camps. The Labor Department's reply (page 531) was as follows: "The information requested under this heading is available only in such small quantity that it would be purposeless to describe it. In saying as much the Department's task force which has been studying the program believes that this item should be left until the size of the program and its authorization was determined by the Congress."

This seems to suggest that any little amount of training or education contemplated would be among the first areas of the programs to be deleted should appropriations be reduced.

The cost figures of the administration to support the YCC, deliberately omitted cost of materials and equipment for training of the enrollees. The administration tentatively suggests the cost to range between $100 and $1,000 per man. It would seem that not much training or education was considered specifically in the planning of the camps.

Senator HUMPHREY envisioned the following kinds of skills to be learned in the camps: automotive repairing, carpentry, baking, clerical, construction equipment operation, cooking, conservation and engineering aid, electrical wiring, masonry, metalworking, photography, plumbing, sign painting, surveying and mapping, and truck driving.

Just a listing of this "vision" would seem to indicate the impossibility of any usable training benefiting the enrollees.

The Requisites of a "Good" Youth Conservation Corps Program

The testimony of Commissoner Charles Foster of the Massachusetts Department of Natural Resources listed the following requirements for a "worthwhile" YCC program (page 396, hearings): (1) A good skill-training program; (2) Quality leadership; (3) Remedial schooling; (4) Counseling service; and (5) An active job placement program.

Such a worthwhile program is virtually impossible for one man responsible for education and recreation; or even for two men in a hundred or two hundred-man camp.

Neither is such a program possible on the administration figure of $300 per man for education and training.

Memorandum

The provisions of title I, Senate 1 are lacking in training for enrollees—Two comments by Secretary Wirtz on the training aspects of YCC camps:

"I call attention to this: First, there is no suggestion that this training program will qualify one of the enrollees for a skilled occupation. That we should dismiss completely."

"The largest shortages ahead, or the enlargement of the shortage for the future, as part of the technological development which we call automation, are going to be principally in the skill jobs. Those are where the shortages would develop during the next 10 years.

"And consistently with my answer to an earlier question, it would not be thought that there would be any high percentage of qualification as a result of these programs for the complete satisfaction of any skilled or even semiskilled or semiprofessional jobs. They would not do that."

Mrs. Agnes Meyer who is certainly socially conscious of problems affecting youth has the following to say: "No matter how much a young man may profit from the training and helpful influences of the Youth Conservation Corps, he will eventually have to return to the home from which he came and be again subjected to the detrimental influences from which he has temporarily escaped. This proved to be a great difficulty to many of the CCC graduates."

If, as Secretary Wirtz says there will be little or no training to prepare a young man for increased skills in the labor market, his lack of training together with Mrs. Meyer's concern over his return home will actually put him in a worse position jobwise than before he entered camp.

Mr. Richard G. Farrow, Director of the Bureau of Youth Services of the Pennsylvania Deparment of Public Welfare who has considerable experience in running camps similar to YCC, and who was a witness on this program had this to say in response to Senator Prouty's question about the skills boys would learn in the camps (page 401, hearings): "I would not say that many of them develop a great deal of skill in a trade that they can apply outside * * *"

When Senator Prouty asked if they were unskilled when they leave the camp: "By and large, yes. A few of them, who might work as unskilled workers might get what would be called beginning skills."

In commenting on the question of lack of training in YCC camps Mr. Farrow said: "Even if employment can be provided through projects in some areas, it should be the type of work that involves training, which in turn can lead to industrial, commercial, or other employment. Anything less than this, I fear, may become another dead end activity for young people, with consequent loss of self-respect and community standing."

Subjects Which Can Be Taught in Youth Conservation Corps Camps

The Department of the Interior lists a total of some 60-odd courses ranging from jewelry making and poultry raising to diesel engines and mechanical engineering. All of these courses would be learned through correspondence with the Armed Forces Institute (p. 542, hearings).

It is a highly unnecessary waste to spend $60 million to put 15,000 men in a camp just to provide them with a place to read correspondence books. If this is the greater part of their training, which it probably will be, they can take such courses any place in the world.

Mr. HUMPHREY. Mr. President, have the yeas and nays been ordered?

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. HUMPHREY. The issue is on the Prouty amendment in the nature of a substitute. Is that correct?

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Vermont [Mr. Prouty].

The yeas and nays having been ordered, the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. Edmondson], the Senator from Louisiana [Mr. Ellender], the Senator from Arizona [Mr. Hayden], the Senator from Florida [Mr. Holland], the Senator from Missouri [Mr. Long], the Senator from Florida [Mr. Smathers], and the Senator from Ohio [Mr. Young] are absent on official business.

On this vote the Senator from Louisiana [Mr. Ellender] is paired with the Senator from Florida [Mr. Holland]. If present and voting, the Senator from Louisiana would vote "yea" and the Senator from Florida would vote "nay."

I further announce that, if present and voting, the Senator from Arizona [Mr. Hayden], the Senator from Missouri [Mr. Long], the Senator from Florida [Mr. Smathers], and the Senator from Ohio [Mr. Young] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. Allott] is absent because of the death of his mother.

The Senator from Wyoming [Mr. Simpson] is absent on official business.

The Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

The Senator from Massachusetts [Mr. Saltonstall] is detained on official business.

If present and voting, the Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], the Senator from Massachusetts [Mr. Saltonstall], the Senator from Wyoming [Mr. Simpson], the Senator from Colorado [Mr. Allott], and the Senator from Pennsylvania [Mr. Scott] would each vote "yea."

The result was announced—yeas 37, nays 50, as follows:

[Leg. No. 54]

So Mr. Prouty's amendment in the nature of a substitute was rejected.

Mr. CLARK. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended.

The committee amendment as amended was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and was read the third time.

Mr. MILLER. Mr. President, I shall reluctantly vote against the pending bill. I say reluctantly because I believe that the Senate has missed a great opportunity to come up with some genuinely constructive legislation to meet a real need of our society.

There can be no question but what the employment opportunities for a large number of our young people are discouraging. The reason is that they do not possess the skills needed by industry. The skills are not being provided because we do not have enough technical and trade schools to accommodate them. Moreover, some of the schools we already have are not geared to the needs of our economy.

But the bill does not meet the needs. Any inclination I might have felt to support the bill was removed when the Senate, by a close vote of 47 to 40, defeated the amendment by Senator Prouty, of

Vermont, which would have deleted title I of the bill, establishing the Youth Conservation Corps of 15,000. Under this title, Iowa will be entitled to less than 100 enrollees, so it is evident that the program will only scratch the surface. Moreover, the cost of the program will amount to between $4,000 and $5,000 per enrollee—an amount which a good many families do not receive in their annual income. In short, the program is extravagant, reaches only a few people, and does not give promise of providing the skills needed.

It would be far better to take the $100 million authorized for the Youth Employment Act and use it to establish technical trade schools which would equip a greater number of young people with skills on which they could build a future.

In this connection, I invite attention to the lead editorial in the Washington Post of March 26, entitled "Growth and Jobs," which points out that the Youth Employment bill represents only a "patch" on the main problem of unemployment. The editorial shows that the maximum of 100,000 temporary jobs for young people which this bill, when fully implemented, will provide represent only a fraction of an inundating flood of nearly 4 million young workers a year. Most important, the editorial wisely says that what is needed is not made work or stopgap jobs for a few disadvantaged youth but full-time jobs with a future for the whole mass of new workers who are moving into the ranks of the employable; that the country primarily needs more jobs—not just more numerous and more varied kinds of relief and special panaceas.

I ask unanimous consent that this editorial be printed in the Record.

Another excellent editorial from the Post appeared on April 1. It is entitled "Combating Unemployment," and while it does not directly treat the Youth Employment bill, it does provide some interesting statistics on the unemployment figures for our country during the 20th century. These will provide a greater understanding of the underlying issues relating to unemployment which is needed if Congress and the administration are to successfully meet this great national problem.

I ask unanimous consent that this editorial be printed in the Record.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Washington (D.C.) Post, Mar. 26, 1963]

Growth and Jobs

President Kennedy's warning that we face a 7-percent unemployment rate even without a recession unless we step up our rate of economic growth ought to awaken the whole country to the importance of a reduction now in the war-born tax rates that are dragging down the national economy.

The consequences of a slow rate of growth become more understandable when stated in human terms of rising unemployment. As the President pointed out, an economy expanding at the rate of 3 percent is producing jobs at the rate of 10 million in 15 years while the civilian labor force is growing at the rate of 12 million in 15 years. Even with relative prosperity, the result is going to be rising unemployment. The country lost as much by the idleness of those willing but unable to find work in 1962, the President told an audience in Chicago last Saturday, as it would lose from shuting down the whole country and suspending all production, services and pay for 3 weeks. This is an intolerable waste which a civilized state cannot countenance.

The idle come from many places—from farms where employment is declining at the rate of 200,000 jobs a year, from the schools which will put 26 million new young workers on the labor market in the sixties, from automation which is enabling 800,000 fewer workers to produce 20 percent more manufactured goods.

There are many specific projects required to take care of the particular needs of different pools of labor, but none of these narrow approaches will have the total effect on employment that could be achieved by a tax cut of $10 billion which the President has recommended. To attack separately the problem of each idle group, in the long run, will be as ineffective as meeting the problems of a leaky roof with a bucket for each drip. Some of this may have to be done, in areas and age groups and labor elements with special and peculiar problems that even relatively full employment will not solve. But this is a cleanup job, a mopping-up operation, a bit of social tidying up to be done in addition to raising general employment to acceptable levels.

Such benefits as those contemplated in the bill to set up a Youth Conservation Corps and a Home Town Youth Corps for example are only patches on the main problem. Last year there were 700,000 youths from 16 to 21 out of work. Some 3.8 million youths will become 16 in 1963. The sponsors of the Youth Conservation Corps are talking about 15,000 youths in the first year and 60,000 a year in the first 4 years. The backers of the Home Town Youth Corps are talking about 45,000 in the first year. Such proposals, whatever other merit they have, are no solution to the overall problem of the youth coming into the labor market. These two projects with their maximum of some 100,000 jobs will not soak up an inundating flood of nearly 4 million young workers a year.

What is needed is not make-work or stopgap jobs for a few disadvantaged youth but full-time jobs with a future for the whole mass of new workers who are moving into the ranks of the employable. The specialized solutions offer a retail answer to a wholesale question. The country primarily needs more jobs—not just more numerous and more varied kinds of relief and special panaceas. A more rapidly expanding economy will produce those jobs. A swift and substantial reduction in the taxes that are restricting growth will produce an expanding economy.

[From the Washington (D.C.) Post, Apr. 1, 1963]

Combating Unemployment

In his first "Manpower Report" President Kennedy declared:

"The ideal of full employment, in the large sense that each individual shall be all that he is capable of becoming, and shall contribute fully to the well-being of the Nation even as fully as he shares in that well-being, is at the heart of our democratic belief. If we have never achieved that ideal, neither have we ever for long been content to fall short of it. We have measured ourselves by the persistence of our efforts to meet the standard of full employment and the use of our human resources. As we still fall short of that standard, we are still not satisfied."

Although this eloquent statement ends on a note of hopeful determination, it summarizes a record of past failures which underscores the problems which must be surmounted before the rate of unemployment can be drastically reduced.

A historical perspective on the unemployment problem in the United States can be gained from the series on unemployment as a percentage of the labor forces, beginning in 1900, which appears in "Historical Statistics of the United States," a volume prepared by the Bureau of the Census. The average rate of unemployment for the 63-year period, 1900–62, is 18.9 percent, but that figure is distorted by the great depression in which unemployment reached an all-time high of 24.9 percent in 1933 and remained above 14.5 percent until 1941. A more meaningful appraisal of the unemployment record can be made by considering the number of years in which unemployment was below 4 percent, a level adopted by the Council of Economic Advisers as an "interim" full-employment goal. Unemployment ranged below 4 percent in only 23 of the 63 years, and if the war years are excluded, the number drops to 15.

It should not be inferred that higher rates of unemployment are historically inevitable. What the long record of unemployment levels does indicate is that the problem is not likely to be solved without a massive effort on the part of Government, private industry, and the labor movement.

For the past 5 years the rate of unemployment has exceeded 5.5 percent, and while this is a far cry from the catastrophic levels of the 1930's, it represents a degree of economic waste and social degradation which should not be tolerated in a democratic society. Much of the current unemployment can be ascribed to the unsatisfactory rate of economic growth, but it would be naive to assume that the persistent problems of unemployment will vanish if, by enlightened fiscal and monetary policies, the overall rate of economic growth is increased to 4.5 or even 5 percent. There would still be economically depressed areas with industries rendered obsolete by the dizzy pace of technological change; hordes of school dropouts destined for lives of idleness, because they lack the requisite technical skills; and those victims of racial discrimination or generations of poverty who are patently lacking in the motivation to seek gainful employment.

The job-retraining provisions of the Area Redevelopment Act of 1961 and the Manpower Development and Training Act of 1962 mark the beginnings of a long-delayed assault on these problems, but they are only beginnings. Congress should carefully consider the intelligent recommendations set forth by the minority members in the report of the Joint Economic Committee. They include measures which would provide tax relief for individuals enrolled in technical training programs on the posthigh school level and for expenses involved in moving to new jobs; encourage States to permit persons undergoing retraining to receive normal unemployment compensation; disqualify from unemployment compensation benefits those workers who refuse to enroll in retraining programs without good cause.

The hard core of persistent unemployment can be drastically reduced if not eliminated, but the task will never be accomplished by sentimentalists who hold that all the unemployed are innocent victims of society or the sanctimonious souls who are equally convinced that all idleness is voluntary. What is required is a greater understanding of the underlying issues and willingness to experiment with a variety of imaginative programs.

LET US CONSERVE OUR MOST PRECIOUS RESOURCE—OUR YOUTH

Mr. McGOVERN. Mr. President, the pending bill would provide for a Youth

Conservation Corps composed of 15,000 youths between the ages of 16 and 21 who would work on useful outdoor projects in our national forests and parks. The measure envisions employment, educational and social discipline designed to strengthen our youth. It seeks to put idle hands into service on useful public projects.

The second section of the bill would provide useful work experiences for 61,000 youths in State or local parks, recreation areas, hospitals, libraries, and other public facilities. I feel strongly that no action we take in this session will reflect more faithfully the quality and concerns of our American civilization in the second half of the 20th century than our action on the bill before the Senate.

It was not idle rhetoric that caused the President to recall Disraeli's words that "the youth of a nation are the trustees of posterity," when he delivered his message on youth to the Congress. For it is true that no resource of this Nation is more precious than our young people, and no problem affecting them more urgent than that of continued unemployment. The conservation of our youth must have the highest priority if we are to remain true to our trust as parents and Americans, as well as legislators. No motive of political advantage, or false economy, or loyalty to a particular ideology, should obscure any Senator's vision of the seriousness of the crisis we face.

The crisis is here—now. Already out-of-school youths between the ages of 16 and 21, who comprise 7 percent of the labor force, make up 18 percent of the jobless. We are rapidly approaching the time when a million young men and women in this age category will be out of school and out of work. Joblessness among young workers is today 2½ times the national average. It is even higher among the nonwhite population. It will grow still more serious if present trends continue.

Think for a moment what this means to a young man in the midst of the wealthiest civilization in all human history: his daily lot is one of idleness or the discouraging search for a job commensurate with his meager talents and abilities. In one of our largest cities, Dr. James B. Conant, an educator and public servant of world renown, found that 59 percent of the male youth between the ages of 16 and 21 were out of school and unemployed.

> They were roaming the streets. Of the boys who graduated from high school, 48 percent were unemployed, in contrast to 63 percent of the boys who had dropped out of school. In short, two-thirds of the male dropouts did not have jobs, and about half of the high school graduates did not have jobs.

Said Dr. Conant.

Small wonder that so many of these frustrated young people become criminals and delinquents. In a world growing constantly more specialized, they have no special skills. In a society geared to lavish consumption and high standards of living, they know the demeaning pressures of want. As the Attorney General so well expressed it, we are "racing the clock against disaster." Many of them feel, he said "that the wheel of fortune is rigged against them. They are falling farther and farther behind in the race for the good things of life. Is it any wonder that more and more of these young people are turning to crime in a hopeless effort to catch up?"

According to the somber estimates of the Department of Health, Education, and Welfare, we can conservatively estimate that, at current delinquency rates, nearly 4 million children will come to the attention of the courts in the next decade, for delinquency charges other than traffic offenses.

Mr. President, it was said on the Senate floor earlier today that it would be cheaper to put a boy in Harvard University than to enroll him in the Youth Conservation Corps. But the choice before many of our idle youths is not the Youth Conservation Corps or Harvard; rather it is, for many of them, a chance between the Youth Corps and continued idleness and possibly crime.

The youth employment opportunities bill is an attempt to defuse one segment of this social dynamite. We already know that one of the best ways to combat juvenile crime is to provide jobs for potential delinquents. The cost is modest in comparison with the cost of treating a case of delinquency. According to the best estimates that have been made, it will cost $3,985 for a year's training in the Youth Conservation Corps. In contrast, $25,000 is the estimated cost to the taxpayer for every juvenile delinquent who travels the police courts-reformatory road.

It is not only in the cities that concern is mounting over the growing crisis in juvenile unemployment, idleness, and delinquency. We in South Dakota are especially concerned about the problem of dwindling opportunities for our youth. Almost 10,000 South Dakotans are leaving our State each year and the great majority of them are young people. In our State are State and National parks, reservoirs, forests, and potential recreational centers where our young people might be given suitable work. In South Dakota are located more than 2 million acres of federally owned land, including the Black Hills National Forest, and in these healthful surroundings hundreds of young Americans, including South Dakotans, might find employment during the difficult interlude between leaving school and finding their life's work.

Behind us, too, is the successful decade of experience with the Civilian Conservation Corps, which provided work and hope for 2½ million young men in every State of the Nation during the dark days of the great depression. No program of this period gained more universal approval; none inspired more hope in the hearts of youngsters in whom the flicker of hope had burned dangerously low. During the 1959 hearings on S. 812—similar to S. 1—the beloved Senator James E. Murray summed up his impressions of the experience with the CCC:

> Of all the programs tried under the conservation administration of Franklin D. Roosevelt, I know of none which achieved as great a reputation for success and value as the Civilian Conservation Corps. Recalling the experience we had in Montana, the establishment of these camps brought boys together from all over the country and in the process helped acquaint them with their country and with the knowledge that they were all Americans. In addition, a tremendous amount of effective conservation stems from the experience many of our people had in the CCC program.

No social program of the 20th century has done more than the CCC to inspire Americans with a sense of confidence in the creative possibilities of government acting imaginatively to relieve human problems.

Finally, let me repeat the conclusion of the Outdoor Recreation Resources Review Commission on the great benefits to the boys and the Nation of the kind of healthful outdoor experience provided in this bill:

> The outdoors lies deep in American tradition. It has had immeasurable impact on the Nation's character and on those who made its history. When an American looks for the meaning of his past, he seeks it not in ancient ruins, but more likely in mountains and forests, by a river, or at the edge of the sea. Today's challenge is to assure all Americans permanent access to their outdoor heritage.

Our vote on this bill is a vote of confidence in our heritage and in our young people. In approving it, we are saying to our young people and to the world that we have faith in them, that we remember our heritage—particularly the democratizing and life-giving effects of the CCC—that we believe in the possibility of self-help and regeneration, and that we still believe, in the complex and impersonal world of 1963, that government can act with a heart.

Mr. DODD. Mr. President, as chairman of the Senate Juvenile Delinquency Subcommittee, I would like to express my strong support of the bill before us to establish a Youth Conservation Corps and local youth employment programs.

My interest in this problem of unemployed youth goes back almost 30 years, to the time when President Roosevelt established the National Youth Administration. I was fortunate enough to become the first Director of that program in the State of Connecticut.

We worked with thousands of young boys and girls whose lives had been uprooted by the depression. We tried to see to it that they learned a skill or that they were provided with part-time employment that would enable them to continue their education. We provided on-the-job training. This program helped to bridge over what would otherwise have been a very destructive period in the lives of these young people.

Thirty years later, wherever I travel in Connecticut, I encounter people who have had productive, fruitful lives, people who have made a contribution to their community and to their country which would not nave been possible had they not been helped to attain the skills and the education which made it possible for them to play a productive role in our society.

Of the various posts I have held in my lifetime, there is none which has given me so much satisfaction as my work in the National Youth Administration. I am immensely pleased to have this opportunity to vote for a bill which in some ways revives and carries on this sort of program for the people of a new generation.

In the daily work of the Subcommittee to Investigate Juvenile Delinquency, we constantly see the dismal results of idleness and unemployment among our youth, the tragedy of empty lives, the hopelessness and desperation of young people whom we have told in so many words, "We don't need you, there is nothing for you to do in this great land of ours."

A million such young boys and girls walk the streets of American towns and cities and their number is bound to increase as an expected 25 million additional young people attempt to enter the labor force during the present decade.

But even now the unemployment rate for the age group between 16 and 20 is twice as high as that for any other segment of the population in the labor market.

We cannot allow this trend to continue. We cannot shut out from our Nation's economic life thousands of young men and women in the first years of adulthood, because if we do we will be forced to shut some of them up in jails, in penitentiaries, in reformatories, and in mental institutions.

It is imperative that we decide here in these halls of Congress what this country wants for its money. Will it be well-kept forests and parks where tourists can marvel at the beauty of their land, or will it be asphalt jungles in our cities where policemen walk in pairs with dogs in tow?

Will it be national gain from youth work in public service, or will it be national loss in idle youth on public welfare, in public institutions, in courts and in reformatories?

But, even beyond the material considerations, the question is moral in nature.

Do we as a people have the foresight, the will, and the confidence to invest in our youth, to give them a future, or must they grow old in age only in the city streets, in the dark alleys, and in the cell blocks of prisons that stand as so many monuments, not only to the failure of the men within, but to the failure of the society without.

I do not propose to say that all delinquency, all idleness, all crime, and all employment will be wiped out by the legislative proposal before us here today, but I am confident that the Youth Conservation Corps and the youth employment programs set up by this measure will do a great deal to reduce the problem we face today and the even greater problem that will face us tomorrow.

Last year my staff and I undertook to study the extent of the youth unemployment throughout the Nation. We studied the relationship it has to juvenile delinquency and we studied the programs available on the local, State, and Federal levels for helping boys and girls who leave school to find an appropriate occupation.

The findings were less than encouraging. We discovered that virtually no State, no municipality, had adequate programs in this area. We discovered that although a number of both private and public organizations, agencies, or governmental offices are concerned with the problem, their success is unimpressive. We discovered that not only must the economic problem, the general unemployment problem be overcome, but that young people looking for work are often met with discrimination and prejudice.

Automation, requirements of more specialized skills, of better education and comparatively fewer openings have blocked the younger generation from the opportunities it should have. In addition to these conditions, the evil forces of discrimination and prejudice have put further obstacles in the way of young people from minority groups.

Unless we in the Congress open the door for them, hundreds of thousands of boys and girls are permanently trapped between poverty and ignorance and, between the impersonal forces of economic competition on the one side, and the callousness and prejudices of men on the other side.

Again, I want to reemphasize that these are problems that cannot be solved by any one measure, by any one law, by any one administrative decree. These are circumstances, rather, which will only be disentangled by many approaches and by new laws.

By this time the administration, the Federal Government, and the State and local governments are becoming aware of what the Juvenile Delinquency Subcommittee has stated in its reports for several years, that unemployment, poor educational opportunities and discrimination are among the basic factors contributing to delinquency.

Last month I introduced legislation to abolish discrimination in employment in the District of Columbia. This is the kind of measure that I think will help considerably. It is a measure that would give some young people a chance, if nothing else, to compete with others for a job, for trade training, for a constructive way of life. But we must accomplish this purpose on a wider scope, on a national scale.

Today, many young men and women do not even have the chance to take a chance. They are categorically barred from certain economic opportunities because of lack of resources, lack of education or experience, because of their color and because of the racial or ethnic background of their parents.

Lastly, it is important to realize that this question of youth employment is related to still another problem area. It is related to the cultural and the educational sphere as well as to the economic. Why do we have a large number of school dropouts every year? What must be changed in the educational programs of the elementary and secondary schools to retain more pupils? What can be done to spur them on to higher education and thus keep a larger number of boys and girls from overflooding the labor market? These are questions that the staff of the Juvenile Delinquency Subcommittee and I plan to study this year. The answers we hope to get will be answers to the question of how we can keep boys and girls out of courts, out of training schools, and ultimately out of adult penitentiaries.

But before we can find all the answers, before we can reformulate our educational programs, before we can adjust our economy to absorb all of these young people, we cannot leave them hanging in the air. We must give them constructive activities lest they find destructive ones instead. We must and can give them some training, some experience and some preparation for eventual entrance into the occupational world and into adult life and responsibilities. And the more we help our youth along these lines, the less crime and delinquency we will have.

It is because of my concern with youth, crime, and delinquency that I strongly support the measure before us today. Although this bill may not eliminate all delinquency, it contains partial solutions to each of the problems I have outlined in my brief remarks.

It will afford constructive work opportunities for young people of all classes, of all minority groups, and of all ethnic backgrounds. It will give these young people the training they did not or could not obtain in school, and it will place many young people in public service, in jobs some of them could not obtain on their own. But more important, the law will broaden the horizons of these future adult citizens of our land. Many who have never been 10 blocks from their home will find a new world, new interests, new inspirations, and new freedoms. Any honest work is better than no work at all. Any constructive activity is better than breaking the law.

I would like to commend the President and the administration for taking an interest in this measure. I also want to commend Senator HUMPHREY and the several other Senators who have put forth relentless efforts to get this legislation passed.

Mr. President, I express the hope that both Houses of Congress will consider favorably this effort to help American youth.

Mr. PELL. Mr. President, during the past debate on S. 1, I have heard many arguments as to why this legislation should not be enacted. These arguments range from the dilatory "there is no need to pass this bill before the Easter recess" to the quasi-cost-conscious declarations that it is too much money to expend. With all due respects to my colleagues who are in opposition, I can only say that there appears to be little substance to their arguments.

Here is a program that is practical, useful, and certainly worthy of attempt. These are not the days when we can afford merely to deplore the pitiable situations and problems facing the youth of this Nation. We are confronted with hard facts—rising school dropouts, increasing unemployment of our young people, juvenile delinquency. These are facts, and I find no one who disputes them.

I do not say that the enactment of this legislation will cure all the ills that beset our youth. I do say that it is a positive program which can help to alleviate some of these problems. And positive programs are what we need if we are to progress.

The establishment of a Youth Conservation Corps and a Hometown Conservation Corps is surely a step forward. I would hope that all my colleagues will grant this recognition, and will join the Senator from Minnesota who has labored so long for this bill's passage.

Mr. DIRKSEN. Mr. President, on the passage of the bill I ask for the yeas and nays.

The yeas and nays were ordered.

ADJOURNMENT OF HOUSE OF REPRESENTATIVES UNTIL MONDAY, APRIL 22, 1963—CONCURRENT RESOLUTION

Mr. MANSFIELD. Mr. President, I send to the desk House Concurrent Resolution 134 and ask for its immediate consideration.

The PRESIDING OFFICER. The concurrent resolution will be stated.

The legislative clerk read as follows:

> *Resolved by the House of Representatives (the Senate concurring)*, That when the House adjourns on Thursday, April 11, 1963, it stand adjourned until 12 o'clock meridian, Monday, April 22, 1963.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution (H. Con. Res. 134) was considered and agreed to.

YOUTH CONSERVATION CORPS

The Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

Mr. MANSFIELD. Mr. President, the Senate is about to vote on the Youth Conservation Corps measure, which has been before the Senate for the past 2 days. I commend and compliment the distinguished senior Senator from Pennsylvania [Mr. CLARK], who is in charge of the bill and who has conducted himself with circumspection and dignity. I also compliment the author of the bill, the assistant majority leader, the distinguished senior Senator from Minnesota [Mr. HUMPHREY].

Also, I express thanks to the distinguished junior Senator from Vermont [Mr. PROUTY], who battled hard and valiantly for a cause in which he believed, and who accepted the results of the votes which were taken.

I also commend and compliment the Senate as a whole upon the high level of debate and the good sense it showed during the course of the proceedings.

Mr. DIRKSEN. Mr. President, will the distinguished majority leader yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Considering the time devoted to the bill, probably less time was devoted to external and extrinsic matters than at any other time on any other measure that I am aware of in several years. I join with the majority leader in the compliments he has paid Senators who were in charge of the bill.

I pay especial tribute to the distinguished Senator from Vermont [Mr. PROUTY], who did his homework so well, who had a deep conviction about the bill, who thought the country ought to be better informed, and who was willing, against, shall I say, carrot-and-stick overtures and proposals that might have been made, to forfeit an Easter vacation, if necessary, and even to impose that kind of restriction on other Senators, in the interest of his convictions. For that, I salute him as a great Senator.

Mr. GOLDWATER. Mr. President, will the Senator from Illinois yield?

Mr. DIRKSEN. I yield.

Mr. GOLDWATER. When we characterize Senators as heroes of particular campaigns, we should include not only the Senator from Vermont [Mr. PROUTY] but also the Senator from Texas [Mr. TOWER]. He finally brought the issue out: Who are the phonies on civil rights? His question has been answered without a doubt.

Mr. HUMPHREY. Mr. President, I believe the majority leader and the minority leader will join with me in a warm expression of commendation of the distinguished senior Senator from West Virginia [Mr. RANDOLPH] for the fine work he has done. He was effective not only on the bill now before the Senate, but on the YCC legislation which he handled in 1959, as Senators will recall. In that year he conducted the hearings and was the floor manager of that bill, which passed the Senate. In 1961 he was again an ardent advocate in committee and when another bill for our young people was reported to the Senate. I commend him for his steadfastness and his knowledge concerning the present measure. He was an original CCC sponsor and supporter, when serving in the House in the thirties. Without his help I am sure that this legislation would not have succeeded this time.

Mr. MANSFIELD. I am in wholehearted accord with the statement of the distinguished Senator from Minnesota. I willingly give full credit to the distinguished Senator from West Virginia for the continuous and outstanding work which he has done on this measure.

ORDER FOR ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the business for today has been concluded, the Senate adjourn until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, is the Senate ready to vote?

Mr. DIRKSEN. Mr. President, before the Senate votes, I should like to query the majority leader as to what the order of business will be for the remainder of the day—whatever is left of it—and what the order of business will be tomorrow.

Mr. MANSFIELD. It is the intention of the leadership to call up a few measures on the calendar to which there is no objection. The distinguished minority leader and I have discussed them, and they will be brought up following the vote on the passage of the Youth Conservation Corps bill.

Mr. RUSSELL. Will the Senator state the bills which are involved?

Mr. MANSFIELD. They are Calendar No. 96, S. 22, to release the right, title, or interest, if any, of the United States in certain streets in the village of Hayburn, Idaho, and to repeal the reverter in patent for public reserve; and Calendar No. 97, S. 873, to direct the Secretary of the Interior to convey certain public lands in the State of Nevada to the county of Lincoln, State of Nevada.

It is the intention of the leadership to lay before the Senate Calendar No. 105, H.R. 2440, the so-called military procurement authorization bill. No action will be taken on that bill tonight; it will be the pending business for consideration following the morning hour tomorrow.

Also, it is proposed to have the Senate consider this evening Calendar No. 93, S. 388, if the Senator from Oregon will give his consent. That is the bill to consolidate Vicksburg National Military Park and to provide for certain adjustments necessitated by the installation of a park tour road, and for other purposes.

Mr. MORSE. I would be more inclined to give consent tomorrow morning.

Mr. MANSFIELD. It is said to be a noncontroversial bill. Other measures will be brought up tomorrow.

Mr. SYMINGTON. Mr. President, do I correctly understand that following the morning hour tomorrow the military procurement authorization bill will be the pending business?

Mr. MANSFIELD. That is correct. It is my understanding that tomorrow, when the military procurement authorization bill is made the pending business, the distinguished junior Senator from South Carolina [Mr. THURMOND] intends to move that the Senate consider the bill in executive session. I must admit that this will be a new experience for me, because I was not a Member of the Senate when a formal executive session was held.

It is my understanding that under rule XXXV it is the right of any Senator to make such a motion, and that only a second to the motion is necessary to have the request agreed to. Therefore, in view of the fact that such a motion may be made tomorrow, I should like, in an effort to keep the business of the Senate under control and to expedite it to a degree, to propound a unanimous-consent agreement to the effect that there be a limitation of debate of 1 hour on each amendment offered to the bill, 30 minutes to a side, the time to be under the control of the Senator from Georgia [Mr. RUSSELL] and the offerer of the amendment, whoever he or she may be.

Mr. LONG of Louisiana. Mr. President, I object.

Mr. MANSFIELD. Mr. President, I modify my request. I suggest that the debate be limited to 2 hours, 1 hour to a side.

Mr. LONG of Louisiana. Mr. President, I object. I do not know what part I shall take in the debate tomorrow. I do not feel prepared to agree to a unanimous-consent request to limit debate on the bill. I have no desire to be dilatory, but I do not desire at this time to enter into a unanimous-consent agreement.

Mr. MANSFIELD. So far as I am concerned, it is immaterial whether action on the bill be finished tomorrow or on Monday, Tuesday, Wednesday, Thursday, or Friday of next week. I am thinking of the many Senators who have made commitments. We ought to give them every consideration. That was why I made the request. But any Senator may object; and when objection is heard, that is all there is to it.

Mr. DIRKSEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. My understanding of rule XXXV is that it requires only a motion and a second in order to close the doors. Such action requires the Chair to clear all the galleries, so that only Members of the Senate will be on the floor of the Senate. Is my understanding correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. DIRKSEN. Mr. President, a further parliamentary inquiry, the answer to which might be elicited from the Parliamentarian. When was the last time the Senate had an executive session when the doors were closed?

The PRESIDING OFFICER. The Chair is informed by the Parliamentarian that it is his belief that it was in 1943, during the war.

Mr. DIRKSEN. So there has not been a closed-doors session of the Senate in the past 20 years.

Mr. RUSSELL. Mr. President, it so happens that I was a participant in the executive session in 1943. Certainly it failed of its purpose; for what we thought would be taken in executive session and would remain in the bosom of the Senate was all over the country and was disseminated through the press even before the executive session concluded.

I have no objection to having an executive session held; but, of course, any yea-and-nay vote taken then would be recorded just as if it were taken in open session.

I have no objection whatever to having an executive session held; and it may be wise to have one held. I am of the opinion the issues could be discussed in open session if we exercise a little care. However, I shall not oppose the holding of an executive session.

Mr. MORSE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Oregon will state it.

Mr. MORSE. If an executive session were held, would a transcript of the proceedings be made?

Mr. GOLDWATER. Mr. President, will the Senator from Oregon speak louder, please?

The PRESIDING OFFICER. The Senator from Oregon has asked whether a transcript of the proceedings would be made, in the event an executive session were held.

The Chair is informed by the Parliamentarian that the answer to the question of the Senator from Oregon is in the affirmative, and that if the matter related to nominations or treaties, the record would be kept by the executive clerk; if it were legislative business, then by the Journal clerk of the Senate.

Mr. MORSE. Could the Senate thereafter remove the injunction of secrecy?

The PRESIDING OFFICER. By majority vote, the injunction of secrecy could be removed.

Mr. RUSSELL. Mr. President, I did not understand the parliamentary inquiry.

The PRESIDING OFFICER. The parliamentary inquiry of the Senator from Oregon was whether, after an executive session, the injunction of secrecy could be removed. The Parliamentarian informs the Chair that by majority vote that could be done.

Mr. RUSSELL. Yes; but any vote taken in executive session is carried on the Journal of the Senate, just as any other vote is.

The PRESIDING OFFICER. The Chair so understands.

Mr. DODD. Mr. President, will the majority leader yield to me?

Mr. MANSFIELD. Mr. President, I yield to the Senator from Connecticut, who has been very patient.

Mr. DODD. Most of the questions I had in mind have recently been answered by the Senator from Oregon and the Senator from Georgia or by the answers the Chair gave to the questions they asked.

Let me ask whether there would be special notice as to when the executive session would begin.

Mr. MANSFIELD. No. I presume there would be a short morning hour, tomorrow—at least a morning hour.

Mr. RUSSELL. Mr. President, I hope the majority leader will not insist on having a morning hour tomorrow. I say this, not on behalf of myself, but on behalf of a number of Senators who, I know, are very desirous of getting away during the afternoon; and we are hoping that it may be possible for the Senate to vote before 3 o'clock tomorrow on the two or three very important issues involved in this measure, so that Members who desire to do so may leave early in the afternoon. However, if the Senate became involved in a morning hour, there would be no telling when the vote would be taken.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that tomorrow there not be a morning hour at the beginning of the session, but that a morning hour be held at the conclusion of consideration of the military procurement bill.

The PRESIDING OFFICER. Is there objection?

Mr. JAVITS. Mr. President——

Mr. MANSFIELD. Of course, Senators know that I could accomplish that by having the Senate take a recess tonight.

Mr. JAVITS. I was about to make a suggestion to the Senator from Montana. He knows that I do not cross him if I can avoid doing so.

I suggest that there be included in the request a provision that Senators who wish to introduce bills may do so and may have their statements on the bills printed in the RECORD as if a morning hour had been held.

Mr. MANSFIELD. That is an excellent suggestion; and I add it to my request.

The PRESIDING OFFICER. Without objection——

Mr. RUSSELL. Mr. President, I ask that the amended request be stated.

The PRESIDING OFFICER. The Senator from Montana has requested that at the session tomorrow, following the conclusion of the proceedings in connection with consideration of the military procurement bill, there be a morning hour; and it was also suggested that Senators who wish to introduce bills during the session be allowed to do so and be allowed to have their statements in connection with the bills printed in the RECORD as if they had been made during the morning hour.

Mr. RUSSELL. Very well.

The PRESIDING OFFICER. Is there objection to the request? The Chair hears none, and it is so ordered.

Mr. RUSSELL. Mr. President, I did not clearly understand the statement made by the Chair in regard to the record to be made of votes taken during the executive session.

The PRESIDING OFFICER. The Chair stated that a majority of the Senators present could, by majority vote, remove the injunction of secrecy in connection with the proceedings.

Mr. RUSSELL. Mr. President, I ask unanimous consent that any vote taken during the executive session appear in the Journal and in the RECORD of the Senate. Certainly that could not affect the status of any classified material; and I do not approve of the suggestion that any votes taken in executive session not be made public to all the people of the United States.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Georgia? The Chair hears none; and it is so ordered.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Illinois will state it.

Mr. MANSFIELD. Mr. President, if the Senator from Illinois will permit me to make a request at this time, let me ask whether the request of the Senator from Georgia was granted.

The PRESIDING OFFICER. Yes, it was.

Mr. DIRKSEN. Mr. President, I understand that when a motion for an executive session is made and is seconded, at that point it is mandatory that the Chair have the galleries cleared and have the floor of the Senate cleared of all attendants, and that the executive session will become effective at once.

The PRESIDING OFFICER. That is correct.

Mr. ANDERSON. Mr. President, will the majority leader yield to me?

Mr. MANSFIELD. I yield to the Senator from New Mexico.

Mr. ANDERSON. I was present at one time when the Senate tried to have an executive session, but the attempt failed. Is it not true that there would be no great point in holding one, because immediately upon the conclusion of the executive session, the Senate could, by a majority vote, require that every word spoken in executive session be made public, just as the votes would be made public, as the Senator from Georgia has proposed—in which suggestion I heartily concur.

The PRESIDING OFFICER. The Parliamentarian informs the Chair that no reporters would be present during the executive session, and there would be no recording of the remarks made at that time.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Montana will state it.

Mr. MANSFIELD. If no reporter were present, how could Senators be sure in their own minds about exactly what happened during the executive session? After all, it could be that some of what was said would "leak out"; and the result perhaps could be that there would be 100 different stories or versions of what occurred, and there would be no record to back them up.

Mr. ANDERSON. The Senator from Georgia has asked—and his request has been agreed to by the Senate—that the votes taken be made public. But if no reporter were present——

The PRESIDING OFFICER. The Chair is informed by the Parliamentarian that during an executive session, one of the clerks reports the minutes of the proceedings, but not the actual remarks which are made.

Mr. DODD. In the absence of a reporter, how could a vote be recorded?

Mr. MANSFIELD. Mr. President, in the interest of accuracy, and for the benefit of having a clear record, I ask unanimous consent that at least one reporter be on the floor during the Senate session tomorrow, if it is an executive session.

The PRESIDING OFFICER. Is there objection?

Mr. DIRKSEN. Mr. President, will the majority leader——

Mr. DODD. Mr. President, I should like to make an inquiry. I am not sure what the executive session is to be about, but I have an idea; and I think it might involve the security of the country. If so, and if the matter is a vital one, I believe we should be very careful about it. I really do not know as to this; and the Senator from South Carolina knows that I do not know.

Mr. THURMOND. Mr. President, will the Senator from Connecticut yield?

Mr. DODD. Of course I yield.

Mr. THURMOND. Mr. President, the information I expect to present to the Senate is highly classified information. Therefore, it would be necessary to close the doors. I do not like to have that done, because I always wish to have the people informed. But I agree with the Senator from Georgia that the vote on the issue can be recorded; that would not interfere with keeping the material secret. But the material to be brought out on the floor is highly classified, and therefore I think it would be necessary to close the doors, and not to have that information go into the RECORD.

Mr. MANSFIELD. It is my understanding that in previous executive sessions, permission has been granted to have reporters on the floor, and to keep a record of the proceedings. I think it is in the best interests of the Senate that that be done; and if unanimous consent for that to be done is not granted, I am prepared to move that it be done.

Mr. DODD. Mr. President, I do not wish to be misunderstood——

Mr. MANSFIELD. I do not misunderstand the Senator from Connecticut.

Mr. DODD. I do not know enough about this matter; but I and other Senators have been involved——

Mr. MUNDT. Mr. President——

The PRESIDING OFFICER. The Senator from South Dakota.

Mr. MUNDT. Mr. President, reserving the right to object, I suggest to the majority leader that if he is to control——

The PRESIDING OFFICER. The Senator from Connecticut has the floor.

Mr. DODD. Mr. President——

Mr. MANSFIELD. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. MUNDT. Mr. President, I was recognized by the Chair; and I do not know how I lost the floor. The Chair recognized me; and I was about to make a suggestion to the majority leader.

Mr. DODD. Mr. President, I am glad to wait.

Mr. MUNDT. The Chair recognized me. I was about to propound a suggestion to the majority leader. I suggest to the majority leader that in addition to his unanimous-consent request that one reporter be present to report the statements made, to which I agreed, the majority leader also include in his request that, insofar as the transcription is concerned, no majority vote of the Senate subsequently can make a transcript public. Otherwise we would vitiate the whole sense of the executive session. The Senator from South Carolina has something which is classified information. The rest of us should not vote to strip him of his right to talk to us in secret. I am asking to have it one way or the other.

Mr. MANSFIELD. I should like to reply to the Senator from South Carolina.

Mr. President, in response to the question raised by the distinguished Senator from South Dakota, while his suggestion has merit, I would leave the final decision to the good sense of a majority of the Senate as to whether or not that should or should not be done.

Mr. MAGNUSON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MAGNUSON. Has a motion been made that the Senate go into executive session?

The PRESIDING OFFICER. No such motion has been made.

Mr. MAGNUSON. Then I suggest that the Senate vote on the pending bill. If a Senator then makes a motion that the Senate go into executive session, we can discuss it at that time.

YOUTH CONSERVATION CORPS

The Senate resumed the consideration of the bill (S. 1) to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs.

The ACTING PRESIDENT pro tempore. The bill having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. McINTYRE (when his name was called). On this vote I have a pair with the senior Senator from Florida [Mr. HOLLAND]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

Mr. SPARKMAN (when his name was called). On this vote I have a pair with the junior Senator from Florida [Mr. SMATHERS]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I therefore withhold my vote.

Mr. YOUNG of North Dakota (when his name was called). On this vote I have a pair with the junior Senator from Missouri [Mr. LONG]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I therefore withhold my vote.

The rollcall was concluded.

Mr. MANSFIELD (after having voted in the affirmative). On this vote I have a pair with the Senator from Louisiana [Mr. ELLENDER]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withdraw my vote.

Mr. HUMPHREY: I announce that the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Louisiana [Mr. ELLENDER], the Senator from Arizona [Mr. HAYDEN], the Senator from Florida [Mr. HOLLAND], the Senator from Missouri [Mr. LONG], the Senator from Florida [Mr. SMATHERS], and the Senator from Ohio [Mr. YOUNG], are absent on official business.

On this vote, the Senator from Arizona [Mr. HAYDEN] is paired with the Senator from Colorado [Mr. ALLOTT]. If present and voting, the Senator from Arizona would vote "yea," and the Senator from Colorado would vote "nay."

On this vote, the Senator from Ohio [Mr. YOUNG] is paired with the Senator from Utah [Mr. BENNETT]. If present and voting, the Senator from Ohio would vote "yea," and the Senator from Utah would vote "nay."

Mr. KUCHEL: I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Wyoming [Mr. Simpson] is absent on official business.

The Senator from Utah [Mr. Bennett], the Senator from Kentucky [Mr. Morton], and the Senator from Pennsylvania [Mr. Scott] are necessarily absent.

If present and voting, the Senator from Kentucky [Mr. Morton] would vote "nay."

On this vote, the Senator from Pennsylvania [Mr. Scott] is paired with the Senator from Wyoming [Mr. Simpson]. If present and voting, the Senator from Pennsylvania would vote "yea," and the Senator from Wyoming would vote "nay."

On this vote, the Senator from Colorado [Mr. Allott] is paired with the Senator from Arizona [Mr. Hayden]. If present and voting, the Senator from Colorado would vote "nay," and the Senator from Arizona would vote "yea."

On this vote, the Senator from Utah [Mr. Bennett] is paired with the Senator from Ohio [Mr. Young]. If present and voting, the Senator from Utah would vote "nay," and the Senator from Ohio would vote "yea."

The result was announced—yeas 50, nays 34, as follows:

So the bill (S. 1) was passed.

Mr. **CLARK**. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. **HUMPHREY**. Mr. President, I move to lay that motion on the table.

The **ACTING PRESIDENT** pro tempore. The question is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. **HUMPHREY**. Mr. President, I ask unanimous consent that the bill be printed as passed.

The **ACTING PRESIDENT** pro tempore. Without objection, it is so ordered.

The bill (S. 1), as passed, follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Section 1. This Act may be cited as the "Youth Employment Act".

TITLE I—YOUTH CONSERVATION CORPS

Short title

Sec. 101. This title may be cited as the "Youth Conservation Corps Act".

Statement of purpose

Sec. 102. The purpose of this title is (1) to provide useful work experience opportunities for unemployed youths so that their employability may be increased through participation in such programs of conservation planned and designed by, and under the immediate supervision of, the various Federal agencies charged with the responsibility of planning and carrying out such programs; and (2) to enable the Federal agencies charged with the responsibility of conserving and developing natural resources and recreational areas to accelerate programs planned by such agencies to fulfill such responsibility.

Establishment of a Youth Conservation Corps

Sec. 103. In order to carry out the purposes of this title, there is hereby established within the Department of Labor a Youth Conservation Corps (hereinafter referred to as the "Corps"). There shall be a Director of the Corps who shall be appointed by the President, by and with the advice and consent of the Senate, and whose annual salary shall be $20,000. The Director shall perform such functions in connection with the Corps as may be prescribed by the Secretary of Labor (hereinafter referred to as the "Secretary").

Authority of Secretary

Sec. 104. The Secretary shall have authority to—

(1) establish adequate standards of safety, health, and conduct for enrollees of the Corps, and enter into agreements with the Secretary of Health, Education, and Welfare, for the provision, by the latter, of medical, dental, hospital, and other health services to enrollees, either directly or through other public or nonpublic facilities and personnel;

(2) enter into agreements with Federal and State agencies charged with the responsibility of conserving, developing, and managing the natural resources of the Nation, and of developing, managing, and protecting recreational areas, whereby the enrollees of the Corps may be utilized by such agencies in carrying out, under the immediate supervision of such agencies, programs planned and designed by such agencies to fulfill such responsibility. The Secretary may enter into such agreements with the State agency wherever he finds that such utilization of the Corps will best serve the purposes of this title. Any such agreement with the State agency shall apply cost-sharing procedures prescribed by section 206(a) in title II;

(3) utilize, with their consent, the services and facilities of Federal agencies and, with the consent of any State, accept and utilize the services and facilities of the agencies of such government or of any county or municipal subdivision thereof; and to utilize such voluntary and uncompensated services as may from time to time be needed;

(4) insure the provision of a system of training and educational services consisting of at least ten hours of vocational training per week per enrollee in subjects, other than those connected with conservation, to enrollees of the Corps, in addition to the regular program of work and on-the-job training: *Provided*, That to the maximum extent practicable such programs shall be provided by State and local educational authorities under agreement with the Secretary of Health, Education, and Welfare;

(5) expend such amounts as he deems necessary within available appropriations for supplies, materials, and equipment for enrollees to be used in connection with their work, instruction, recreation, health, or welfare;

(6) prescribe such rules and regulations, establish such procedures, enter into such contracts and agreements, and generally perform such functions as he may deem to be necessary to carry out the provisions of this title; and

(7) authorize the performance by the Director of any functions of the Secretary under this title.

Interdepartmental Committee on the Youth Conservation Corps

Sec. 105. (a) There is established a committee to be known as the Interdepartmental Committee on the Youth Conservation Corps (hereinafter referred to as the "Committee"). The Committee shall be composed of four members as follows: The Secretary of Labor (or his designee) who shall be Chairman, and a representative of the Department of Health, Education, and Welfare, a representative of the Department of Agriculture, and a representative of the Department of the Interior, each of whom shall be appointed by the Secretary of the Department of which he is a representative.

(b) The Committee shall consult with and advise the Secretary with respect to all phases of the operation of the Corps.

(c) Each member of the Committee shall act in a liaison capacity between the agencies of the Federal Department represented by him and the Corps in carrying out any agreement between such agency and the Corps.

National Advisory Council on the Youth Conservation Corps

Sec. 106. (a) There is hereby established in the Department of Labor a National Advisory Council on the Youth Conservation Corps (hereinafter referred to as the "Council"). The Council shall be composed of the Secretary or his designee, who shall be Chairman, and not more than fourteen additional members appointed by the Secretary without regard to the civil service laws. The appointed members of the Council shall be persons (including persons from public and voluntary organizations) representing the fields of conservation, agriculture, education, training, youth employment, labor, management, and the public in general. Upon request of the Secretary, the Council shall review the operations of the Corps in general, the kind of work performed and the training provided and shall from time to time make recommendations to the Secretary relative to the execution of his responsibilities under this title. The Council shall meet at least twice each year and at such other times as the Secretary may request.

(b) Appointed members of the Council, while attending meetings of the Council or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at a rate to be fixed by the Secretary, but not exceeding $75 per diem, including travel time, and while away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. Notwithstanding the foregoing or any other provision of law, the Secretary may accept the services of appointed members under this section without the payment of compensation therefor (and with or without payment of travel expenses or per diem in lieu of subsistence).

Composition of the Corps

SEC. 107. (a) The Corps shall be composed of male individuals of good character who are permanent residents of the United States, who have attained age sixteen but have not attained age twenty-two at the time of enrollment. Enrollment or participation in the Corps shall not be grounds or a legitimate reason for deferment or rejection under the Selective Service Act. The number of enrollees shall not exceed at any one time fifteen thousand during the first fiscal year of its operation and during the next four fiscal years such numbers as may be maintained within the appropriations made therefor by the Congress.

(b) In order to enroll as a member of the Corps, an individual must agree to comply with rules and regulations promulgated by the Secretary for the government of the Corps: *Provided*, That the Director may exclude from enrollment such individuals as he may consider detrimental to the well-being or welfare of the Corps except that no person shall be excluded on account of race, color, or creed.

(c) Enrollment in the Corps shall be for a period of not less than six months; if permitted by the Secretary, an individual may reenroll, but his total enrollment shall not exceed two years.

(d) For purposes of accepting enrollment in the Corps in any year, (A) 50 per centum of the total number of the authorized enrollment of the Corps for such year shall be allocated to the various States on the basis of the ratio that the total male population of each State within the age group referred to in subsection (a) bears to the total male population of the United States within such age group, (B) 50 per centum of the total number of the authorized enrollment of the Corps for such year shall be allocated by the Secretary to the various States, determined each year in accordance with (1) the ratio that the total unemployment of each State bears to the total unemployment in the United States, using in both cases the previous year's annual average following its publication; and (2) the extent of additional allocation which should be made to any State in order to compensate for benefits accruing to other States from the placement within such States of camps established or maintained under this title; and (C) allocations not utilized in (A) shall be reallocated under (B). The population categories and the other relevant factors referred to above shall be determined in accordance with the most recent statistics available from the Bureau of the Census and the Department of Labor.

(e) Notwithstanding any other provision of this title construction which has traditionally been performed by construction trades workers shall continue to be contracted out for construction by such workers.

Compensation of enrollees

SEC. 108. (a)(1) The base compensation of enrollees shall be $60 per month for the first enrollment and an additional $5 per month for each subsequent enrollment. Up to an additional $10 per month may be paid on the basis of assigned leadership responsibilities, or special skills.

(2) The Secretary shall establish procedures whereby each enrollee may make an allotment to his parent, dependent, legal guardian, or any fund established for his benefit, of part of the periodic compensation to which he is entitled under this title, and such allotment shall be paid directly to the person or fund in favor of which it is made.

(b) Enrollees as well as applicants for enrollment may be furnished with such quarters, subsistence, transportation (including travel from and to the place of enrollment), equipment, clothing, training, educational and recreational services, medical, dental, hospital and other health services, and such other expenses (including funeral and burial expenses) as the Secretary may deem necessary or appropriate for their needs.

(c) In the case of any individual who is an enrollee within the meaning of this title, the value of items furnished shall be exempt from income tax under subtitle A of the Internal Revenue Code of 1954, except to the extent that the Secretary, in consultation with the Secretary of the Treasury or his delegate, determines any portion thereof to be additional base compensation.

Application of provisions of Federal law

SEC. 109. (a) Except as otherwise specifically provided in this title, an enrollee is deemed not to be a Federal employee and shall not be subject to the provisions of Federal laws relating to Federal employment including those relating to hours of work, rates of compensation, leave, unemployment compensation, and Federal employee benefits such as retirement, life insurance, and health benefits.

(b)(1) Section 210 of the Social Security Act (42 U.S.C. 410) is amended by adding at the end thereof the following new subsection:

"SERVICE AS ENROLLEE IN YOUTH CONSERVATION CORPS

"(p) The term 'employment' shall, notwithstanding the provisions of subsection (a), include service performed by an individual as an enrollee in the Youth Conservation Corps established by title I of the Youth Employment Act and all such service shall be deemed to have been performed by such individual as an employee of the United States."

(2) Section 209 of such Act (42 U.S.C. 409) is amended by adding at the end thereof the following new paragraph:

"For purposes of this title, in the case of an individual performing service to which the provisions of section 210(p) apply, his 'wages' for such service, shall, subject to the provisions of subsection (a) of this section, be deemed to be $150 for each calendar month during all of which he is an enrollee within the meaning of title I of the Youth Employment Act, or $5 per day for any calendar month during part (but not all) of which he is such an enrollee."

(3) The first sentence of section 205(p)(1) of such Act (42 U.S.C. 405(p)(1)) is amended by striking out "and including service," and inserting in lieu thereof "service," and by inserting "and service, performed as an enrollee within the meaning of title I of the Youth Employment Act, to which the provisions of section 210(p) are applicable," after "to which the provisions of section 210(o) are applicable,".

(c)(1) Section 3121 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsection:

"(q) SERVICE AS ENROLLEE IN YOUTH CONSERVATION CORPS.—For purposes of this chapter, the term 'employment' shall, notwithstanding the provisions of subsection (b) of this section, include service performed by an individual as an enrollee in the Youth Conservation Corps established by title I of the Youth Employment Act, and all such service shall be deemed to have been performed by such individual as an employee of the United States."

(2) Subsection (i) of such section is amended by adding at the end thereof the following new paragraph:

"(4) SERVICE IN THE YOUTH CONSERVATION CORPS.—For purposes of this chapter, in the case of an individual performing service to which the provisions of subsection (q) apply, his 'wages' shall, subject to the provisions of subsection (a)(1) of this section, be deemed to be $150 for each calendar month during all of which he is an enrollee within the meaning of title I of the Youth Employment Act, or $5 per day for any calendar month during part (but not all) of which he is such an enrollee."

(3) The first sentence of section 3122 of such Code (relating to Federal service) is amended by striking out "and including service," and inserting in lieu thereof "service," and by inserting "and service, performed as an enrollee within the meaning of title I of the Youth Employment Act, to which the provisions of section 3121(q) are applicable," after "section 3121(p) are applicable,".

(4) Section 6051(a) of such Code is amended by adding at the end thereof the following new sentence: "In the case of compensation for service as an enrollee in the Youth Conservation Corps, the statement shall show, in lieu of the amount required to be shown by paragraph (5), the total amount of wages as defined in section 3121(a), computed in accordance with such section and section 3121(i)(4)."

(5) Section 3401(a) of such Code (relating to the definition of wages for purposes of the collection of income tax at source on wages) is amended by striking out ", or" at the end of paragraph (6) and inserting in lieu thereof "; or", by striking out the period at end of paragraph (12) and inserting in lieu thereof "; or", and by striking out the period at the end of paragraph (13) and inserting in lieu thereof "; or", and by adding at the end thereof the following new paragraph:

"(14) pursuant to section 108(b) of title I of the Youth Employment Act, other than any portion determined thereunder to be additional base compensation, for service performed as an enrollee within the meaning of such title."

(6) Section 121(a) of such Code is amended by striking out the period at the end of paragraph (18) and inserting in lieu thereof ";", and by adding at the end thereof the following new paragraph:

"(19) Amounts received by enrollees under section 108 of title I of the Youth Employment Act, see such section 108(c)."

(d) The amendments made by subsection (b) of this section and by paragraphs (1), (2), (3), and (4) of subsection (c) of this section shall apply with respect to service performed after the date of the enactment of this Act. The amendment made by paragraph (5) of subsection (c) of this section shall apply with respect to remuneration paid after the date of the enactment of this Act.

(e)(1) Enrollees under this title shall, for the purpose of the administration of the Federal Employees' Compensation Act (39 Stat. 742, as amended), be deemed to be civil employees of the United States within the meaning of the term "employee" as defined in section 40 of such Act and the provisions thereof shall apply except as hereinafter provided.

(2) For purposes of this section—

(A) The term "performance of duty" in the Federal Employees' Compensation Act shall not include any act of an enrollee—

(i) while he is on authorized leave or pass; or

(ii) while he is absent from his assigned post of duty, except while participating in an activity authorized by or under the direction or supervision of the Corps.

(B) In computing compensation benefits for disability or death under the Federal Employees' Compensation Act, the monthly pay of an enrollee shall be deemed to be $150 a month, except that with respect to compensation for disability accruing after the individual concerned reaches the age of 21, such monthly pay shall be deemed to be that received under the entrance salary for GS-2 under the Classification Act of 1949, as amended.

(C) The term "injury" as defined in section 40 of the Federal Employees' Compensation Act shall include disease, illness, or injury if it arises out of service in the Corps.

(D) Compensation for disability, including medical care, shall not begin to accrue until the day following the date on which the injured enrollee is discharged from the Corps.

Appropriations authorized

SEC. 110. (a) For the purpose of carrying out the provisions of this title, there is authorized to be appropriated for the fiscal year commencing July 1, 1963, the sum of $50,000,000, and for each of the four succeeding fiscal years thereafter such amounts as the Congress may determine to be necessary to carry out the provisions of this title.

(b) Funds authorized to be appropriated under this title may be transferred between departments and agencies of the Government for use for the purpose for which they are specifically authorized and appropriated and may also be transferred to State governments for the purposes provided in this title.

Reports

SEC. 111. Not later than one hundred and twenty days after the close of each fiscal year, the Secretary shall prepare and submit to the President for transmittal to the Congress during such year, and not later than January 1, 1966, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report evaluating the activities of the Corps from its inception, together with such recommendations as he may deem desirable.

TITLE II—STATE AND COMMUNITY YOUTH EMPLOYMENT PROGRAM

Short title

SEC. 201. This title may be cited as the "State and Community Youth Employment Act".

Statement of purpose

SEC. 202. The purpose of this title is to provide useful work experience opportunities for unemployed youths so that their employability may be increased through participation in State and community youth employment programs thereby enabling the agencies of the State, county, or municipality or political subdivision thereof to carry out programs in the field of conservation and development of natural resources and recreational areas, or various other programs which will permit or contribute to an undertaking or service in the public interest which will otherwise not be provided.

Development of State and community employment programs

SEC. 203. In order to carry out the purposes of this title the Secretary of Labor (hereinafter referred to as the "Secretary") shall assist and cooperate with the agencies of State (which for the purposes of this title shall include the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa) county and local governments and private nonprofit agencies in developing programs for the employment of young people in State and community service activities, hereinafter authorized, including the conservation, development and management of the natural resources of the State and the community and the development, management and protection of recreational areas within the State and the community, which, whenever appropriate, shall be coordinated with a program of training and education provided by local educational authorities. In those States where the public land holdings of the Federal Government are less than 5 per centum of the land area within the State, the Secretary when requested, may offer such additional assistance as may be required in the development of programs of conservation and recreation. The Secretary shall advise such State and local governments as to the number and availability of unemployed young people, their skills and qualifications for various types of work, and shall provide in cooperation with local school authorities for the orderly selection and referral of youths for enrollment in such programs.

Approval of programs

SEC. 204. (a) The Secretary is authorized to approve for assistance under this title any State, county, municipal, or local programs submitted hereunder if he determines, in accordance with such regulations as he may prescribe, that—

(1) enrollees in the program will be employed either (A) on publicly owned and operated facilities or projects, or (B) on local projects, sponsored by private nonprofit agencies approved by the appropriate State agency;

(2) the program will increase the employability of the enrollees by providing work experience and training in occupational skills or pursuits in classifications in which the Secretary of Labor finds there is reasonable expectation of employment, or will enable student enrollees to resume or to maintain school attendance;

(3) the program will permit or contribute to an undertaking or service in the public interest which will not otherwise be provided, or will contribute to the conservation, development, and management of the natural resources of the State or community or to the development, management, or protection of State or community recreation areas;

(4) the program will not result in the displacement of employed workers or impair existing contracts for services;

(5) the rates of pay and other conditions of employment are appropriate and reasonably consistent with the rates and conditions applicable with respect to comparable work in the locality;

(6) to the maximum extent feasible, the program will be coordinated with vocational training and educational services adapted to the special needs of enrollees in such program and sponsored by State, county, or local school authorities: *Provided*, That where such services are inadequate or unavailable, the program may make provision for the enlargement, improvement, development, and coordination of such services with the cooperation of, or where appropriate pursuant to agreement with, the Secretary of Health, Education, and Welfare; and

(7) the program includes standards and procedures for the selection of applicants including provisions assuring full coordination and cooperation with local and other authorities to encourage students to maintain or resume school attendance.

(b) In approving projects under this title, the Secretary shall give priority to projects with high training potential.

Requirements and limitations with respect to grants to private nonprofit agencies

SEC. 205. (a) The Secretary shall, immediately after making any grant under this title, or otherwise making available (directly or indirectly) funds appropriated for carrying out the purposes of this title, to any private nonprofit agency, submit to the Congress a full and complete report concerning—

(1) such private nonprofit agency, including (but not limited to) (A) the number, identity, and salary, of its officers, directors, and principal employees, (B) when, by whom, and for what purposes such agency was organized, and (C) other relevant data with respect to the organization, its functions, purposes, and methods of operation, and

(2) the amount of such grant or of such funds, the purposes for which such grant was made or such funds were made available, and any conditions or limitations imposed with respect to such grant or to such funds by the Secretary.

(b) Any audit reports made by or to any instrumentality of the Federal Government on the expenditures of any such agency which has received any funds appropriated to carry out the purposes of this title shall be available to any Member of Congress upon request of such Member.

(c) (1) No private nonprofit agency which is organized or incorporated after the date of enactment of this Act shall be eligible to receive (directly or indirectly) any funds appropriated to carry out the provisions of this title if any of the incorporators or individuals who organized such agency is, at the time such agency applies for any such funds, a Member of Congress or an officer of the Executive Branch of the Government who is required to be appointed by the President, by and with the advice and consent of the Senate.

(2) No nonprofit agency shall be eligible to receive directly or indirectly, any funds appropriated to carry out the purposes of this title, if at the time such agency applies for such funds, or at any time thereafter, any of the officers, directors, or principal employees of such agency is a Member of Congress or an officer of the executive branch of the Government who is required to be appointed by the President, by and with the advice and consent of the Senate.

Enrollees in programs

SEC. 206. (a) Enrollment in programs under this title shall be limited to young men and women who are permanent residents of the United States, who have attained age sixteen but have not attained age twenty-two, and whose participation in such programs will be consistent with the purposes of this title. Enrollment or participation in such programs shall not be grounds or a legitimate reason for deferment or rejection under the Selective Service Act: *Provided*, That the Secretary may exclude from enrollment such individuals as he may consider detrimental to the well-being or welfare of the Corps except that no person shall be excluded on account of race, color, or creed.

(b) Enrollees shall not be subject to the provisions of any other Federal law relating to Federal employment including hours of work, rates of compensation, or employee benefits.

(c) The number of enrollees in programs under this title shall not exceed at any one time the equivalent of 60,000 full-time enrollees during the fiscal year ending June 30, 1964, and during the next four fiscal years such numbers as may be maintained within the appropriations made therefor by the Congress.

(d) The Secretary shall provide for testing, counseling, job development, and job referral services through either governmental or private nonprofit agencies to youths in order to carry out the purposes of this title.

Federal share of program costs

SEC. 207. (a) Whenever a State, county, municipal or local youth employment program is determined under section 204 to be appropriate, the Secretary may enter into an agreement with the State, county, or municipal government, or agency or political subdivision thereof, or a private nonprofit agency, under which such government or political subdivision thereof or agency shall pay not more than 50 per centum and not less than 25 per centum of all costs of the program, including those of administration, in such proportion as may be determined by the Secretary, considering among other relevant factors (1) the severity of the rates of unemployment and underemployment in the area and the duration of such unemployment and underemployment, and (2) the income levels of families in such area. The contributions by such government, or political subdivision thereof, or agency, pursuant to such agreements may be in cash or in kind, fairly evaluated, including but not limited to plant, equipment, and services. Such agreements shall further provide that the Secretary will pay grants to such goverments or political subdivisions thereof or agencies covering the balance of all costs of such programs, including those of administration.

(b) Funds available for grants under agreements authorized by subsection (a) shall be allocated among the States in the following manner: (A) 50 per centum of such funds in any fiscal year shall be allocated among the States on the basis of the ratio that the total population of each State within the age group referred to in subsection 205(a) bears to the total population of the United States within such age group, and (B) 50 per centum of such funds in any fiscal year shall be allocated by the Secretary in accordance with the ratio that the total unemployment of each State bears to the total unemployment in the United States, using in both cases the previous year's annual average following its publication, and (C) allocations not utilized in (A) shall be reallocated under (B). The population categories and the other relevant factors referred to above shall be determined in accordance with the most recent statistics available from the Bureau of the Census and the Department of Labor.

Authority of Secretary

SEC. 208. (a) In carrying out this title, the Secretary is authorized to—

(1) delegate to the heads of other departments and agencies of the Federal Government any of his functions, powers, or duties under this title as he deems appropriate, and to authorize the redelegation thereof by the heads of such departments and agencies.

(2) utilize with their consent the services and facilities of Federal agencies and, with the consent of any State accept and utilize the services and facilities of the agencies of such government or of any county or municipal subdivision thereof; to establish State and local advisory committees; and to utilize such voluntary and uncompensated services as may from time to time be needed.

(3) make such contracts or agreements, establish such procedures, and make such payments, either in advance or by way of reimbursement as he may deem necessary to carry out the provisions of this title.

(4) encourage the enrollees to participate in a systematic program of training and education provided by State and local educational authorities.

(5) prescribe such rules and regulations as he may deem necessary to carry out the provisions of this title.

(b) Any agreement under this title shall contain such provisions as may be necessary to promote effective administration, protect the United States against loss, and insure the application of funds in a manner consistent with the provisions and purposes of this title and the terms of such agreement.

National Advisory Council on State and Community Youth Employment Programs

SEC. 209. (a) There is hereby established in the Department of Labor a National Advisory Council on State and Community Youth Employment Programs (hereinafter referred to as the "Council"). The Council shall be composed of the Secretary or his designee, who shall be Chairman, and nine members appointed by the Secretary without regard to the civil service laws. The appointed members of the Council shall be persons (including persons from public and voluntary organizations) who are recognized authorities in professional or technical fields related to the employment of youth or who represent the fields of conservation, agriculture, education, training, labor, management, and urban development, or persons representative of the general public who are leaders in programs concerned with employment of youth. The Council shall advise the Secretary on the administration of this title. The Council shall also include, whenever appropriate, the various agency heads designated in section 210 of this title.

(b) Upon request of the Secretary, the Council shall review the operation of this title in general and shall from time to time make recommendations to the Secretary relative to the execution of his responsibilities under this title. The Council may also make recommendations to the Secretary on projects referred to it by the Secretary. The Council shall meet at least twice each year and at such other times as the Secretary may request. The Secretary is authorized to utilize the services of any member or members of the Council in connection with matters relating to this title for such periods, in addition to conference periods, as he may determine.

(c) Appointed members of the Council, while attending meetings of the Council or otherwise serving at the request of the Secretary, shall be entitled to receive compensation at a rate to be fixed by the Secretary, but not exceeding $75 per diem, including travel time, and while away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. Notwithstanding the foregoing or any other provision of law, the Secretary may accept the services of appointed members under this section without the payment of compensation therefor (and with or without payment of travel expenses or per diem in lieu of subsistence).

Interagency consultation

SEC. 210. In the administration of this title, the Secretary shall seek the advice and assistance of the Secretaries of the Departments of Health, Education, and Welfare, Agriculture, and Interior, of the Attorney General, the Administrator of the Housing and Home Finance Agency, and of such other agency heads as the Secretary deems appropriate.

Appropriations authorized

SEC. 211. (a) For the purpose of carrying out the provisions of this title, there is authorized to be appropriated for the fiscal year commencing July 1, 1963, the sum of $50,000,000 and for each of the four succeeding fiscal years thereafter such amounts as the Congress may determine to be necessary to carry out the provisions of this title.

(b) Funds authorized to be appropriated under this title may be transferred between departments and agencies of the Government for use for the purpose for which they are specifically authorized and appropriated and may also be granted to State and local governments for the purpose provided in this title.

Report by the Secretary

SEC. 212. Not later than one hundred and twenty days after the close of each fiscal year, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report on the activities and programs authorized by this title during such year; and not later than January 1, 1966, the Secretary shall prepare and submit to the President for transmittal to the Congress a full and complete report evaluating the activities and programs authorized by this title from its inception together with such recommendations as he may deem desirable.

TITLE III—MISCELLANEOUS

SEC. 301. The term "State" as defined in this Act shall include the District of Columbia, Puerto Rico, Virgin Islands, Guam, and American Samoa. To the extent there are qualified applicants, programs, and appropriations, each State as defined herein shall be assured of not less than fifty enrollees under title I and fifty enrollees under title II.

Mr. ELLENDER subsequently said: Mr. President, I regret that I missed the vote by 2 minutes, but I am very grateful to the Senator from Montana, the distinguished majority leader, for giving me a live pair. I was detained necessarily and could not get to the Chamber in time.

TRIBUTE TO STAFF MEMBERS

Mr. HUMPHREY. Mr. President, before leaving this item, I wish to express, on behalf of the committee and the sponsors of the bill, our thanks to the staff members who have worked so diligently on this measure—Edward D. Friedman, Robert E. Wolf, Ralph Widner, John G. Stewart, Stewart E. McClure, Kathryn Fletcher, and Margaret Porcher—and who gave their time so fully. We are very indebted to the staff members, and we wish to express our thanks and appreciation for their extraordinarily competent and able assistance.

VICKSBURG NATIONAL MILITARY PARK

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 93, S. 386.

The **ACTING PRESIDENT** pro tempore. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (S. 386) to consolidate Vicksburg National Military Park and to provide for certain adjustments necessitated by the installation of a park tour road, and for other purposes.

The **ACTING PRESIDENT** pro tempore. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with an amendment, on page 2, line 13, after the word "Fort", to strike out "Garret" and insert "Garrott", and on page 4, line 13, after the word "Fort", to strike out "Garret" and insert "Garrott"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to preserve and protect the essential historical features of Vicksburg National Military Park in the State of Mississippi and to enhance visitor enjoyment and safety by means of a park tour road and through the consolidation of park lands, the Secretary of the Interior is authorized, in his discretion, and under such terms and conditions as he determines are in the public interest—

(a) to quitclaim to the city of Vicksburg, Mississippi, approximately one hundred and fifty-four acres of land, including the roads thereon and the park land abutting said roads, in exchange for the city's agreeing to place the roads in its road system and thereby assume jurisdiction and maintenance thereof, and upon the further agreement of the city to maintain the parklike character of so much of the park land conveyed to it and abutting the road as the Secretary may precribe, said land being generally that part of Vicksburg National Military Park lying south of Fort Garrott with the exception of Navy Circle, South Fort, and Louisiana Circle: *Provided,* That title to so much of said abutting park land prescribed by the Secretary and covered by said agreement of the city to maintain the parklike character thereof shall revert to the United States if its parklike character is not maintained; to quitclaim to Warren County, Mississippi, upon like terms and conditions approximately twenty-four acres of land, including the road and abutting park land, being known as Sherman Avenue and the Sherman Avenue spur; to release or quitclaim to Warren County or any other appropriate political subdivision of the State all interest which the United States of America has, if any, in those portions of any public road located on park land which are no longer required for park purposes: *Provided*, That the United States shall reserve from the conveyance or conveyances made pursuant to this subsection title to all historical monuments, means of access thereto, and such other easements as the Secretary determines are required for the continued administration of said monuments as a part of Vicksburg National Military Park; and

(b) to acquire not in excess of five hundred and forty-four acres of land, or interests in land, for addition to Vicksburg National Military Park, such authority to include purchase and condemnation with appropriated funds but not to constitute a limitation upon existing authority to accept donations; and

(c) to enter into agreements with duly authorized officials of the city of Vicksburg and Warren County relative to the effect which the installation of a one-way park tour road with controlled access will have upon the existing local road systems; subject to the availability of funds, to obligate the United States to make provision for such alterations, relocations, and construction of local roads, including procurement of rights-of-way therefor and the subsequent transfer thereof to the State or its appropriate political subdivisions which shall thereupon assume jurisdiction and maintenance, as the Secretary and said officials agree are directly attributable to the installation of the park tour road; and to transfer to the city or county jurisdiction and maintenance of service roads which the Secretary constructs on park lands to properties that otherwise would be denied access because of the installation of the park tour road.

The Secretary of the Interior shall not, without first obtaining the consent of the city and county officials referred to in subsection (c), convert the portion of the existing road known as Confederate Avenue lying between Graveyard Road and Fort Garrott into a one-way park tour road with controlled access, or otherwise limit the use of such portion by local traffic, until the United States has provided for such alterations, relocations, and construction of local roads (including procurement of rights-of-way) as the Secretary and said officials agree are directly attributable to the installation of such park tour road.

SEC. 2. Upon the delivery and acceptance of the conveyances herein authorized, any jurisdiction heretofore ceded to the United States by the State of Mississippi over the lands and roads transferred shall thereby cease and thereafter vest in the State of Mississippi.

SEC. 3. Funds required for the purposes of this Act are hereby authorized to be appropriated.

Mr. MORSE. Mr. President, the bill, S. 386, contains two main provisions. First, it authorizes the gratuitous conveyance to the city of Vicksburg, Miss., of 154 acres of land and to Warren County, Miss., of 24 acres of land.

Second, the bill authorizes the Secretary of the Interior to acquire not in excess of 544 acres of land for addition to Vicksburg National Military Park. This particular aspect of the bill does not, in any way, involve the Morse formula because the land to be acquired would become part of a military park owned by the United States.

I take these few minutes to comment on the bill, so that in the future no one will misunderstand the fact that the bill did not in fact violate the Morse formula. As the Presiding Officer knows, I have tried to be very careful over the years to see to it that when there was any question raised, or any doubt created, as to whether a given transfer of property would violate the Morse formula, I would make a statement of explanation for the record for future reference. That is why I make this statement today.

There are two principal reasons why the conveyance of the 154 and 24 acres of land to Vicksburg and Warren County, Miss., respectively, does not violate the Morse formula. In the first place, the terms of the bill itself and the comments contained in Senate Report No. 115 make it clear that the gratuitous conveyance of land to Vicksburg and Warren County, respectively, will consolidate the Vicksburg National Military Park area and will preserve the parklike characteristics of the lands conveyed. Thus, it is clear that the conveyance will enhance a national military park and the Morse formula is never applied in such a manner as to prevent such enhancement.

A second reason why the Morse formula is not violated in this instance is one which relates to the fiscal aspects of the transaction. At page 5 of Senate Report No. 115, it is stated:

> The land which will be conveyed by the United States to the City of Vicksburg and Warren County has a value of approximately $25,130.

At page 4 of the report appears the statement that the transfer of the South Confederate Avenue area would result in savings to the Federal Government in maintenance costs estimated at about $4,000 per year. The report adds "moreover, if this land is retained as a part of the military park, erosion control must be undertaken at the estimated cost of $250,000."

Mr. President, the gratuitous transfers involved in this case will result in an initial savings to the Federal Government of $250,000. In just a little over 6 years, the savings and maintenance costs resulting from the transfer of the South Confederate Avenue area will equal the value of all the land conveyed by the Federal Government.

Furthermore, Mr. President, I think there is a very important national interest involved in this field, for it is very important that historic spots such as this be preserved for future generations of American boys and girls to enjoy, and as a lesson to them of the great struggles which brought this country into being and preserved this country as a result of the great War Between the States.

I close by expressing my appreciation to the Senator from Mississippi [Mr. STENNIS] for the cooperation and courtesy he extended to the senior Senator from Oregon in our discussion of this subject, and in giving the senior Senator from Oregon adequate time to make the analysis he has just presented tonight.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. MORSE. I yield.

Mr. STENNIS. I thank the Senator from Oregon for his consideration of this bill, and his fairness and objective approach to it. I am glad of his conclusion that this is a historical site. I thank the committee for their consideration of the bill and favorable report on it.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that a portion of the committee report on the bill be printed in the RECORD at this point.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BACKGROUND

The city of Vicksburg, Miss., besieged during the Civil War in a Union effort to control the Mississippi River, is still encircled and restricted by the Confederate and Union lines.

Following the Civil War, the War Department acquired a relatively narrow semicircle of land around the north, east, and south of the city incorporating the ridge on which was located the Confederate defense positions and the paralleling line of the Union forces. The property was transferred to the Interior Department for administration as a national military park in 1899. Together with the Mississippi on the west, the park completely encircles the city.

When the Federal lands were acquired, Vicksburg had 14,000 population, and there was much land within the crescent for growth. Today, residences, filling stations, hamburger stands, and other establishments crowd against the 600 monuments, statues, plaques, and memorials erected within the narrow, irregular park area to memorialize participants in the siege. Some have spilled over beyond the park. City traffic jams Confederate Avenue, the relatively narrow north-south roadway acquired with the property by the Federal Government and now the main park tour road.

Park visitors—there were more than a million exclusive of the city commuters in 1961—interfere with this city traffic as they peer from slow moving cars at the memorials along the road. They are in turn endangered by the large volume of nonpark traffic using the roadway as a street to and from their homes and businesses.

There are 75 access roads onto Confederate Highway within the park, leading to and from everything from single residences to subdivisions.

The ridge on which Confederate Avenue is located is the only natural, traversable north-south highway location available to Vicksburg. High ridges separated by deep ravines run into the city itself from the old defense and assault lines, making difficult and expensive the construction of an alternative north-south street within the city.

As matters stand, the city's growth is being retarded by inadequate traffic lanes across the park property to the north, east, and south. Park visitors are being endangered by the city traffic on the park road, and the Park Service is unable to establish an even reasonably adequate presentation of the significance and features of the park for its visitors. It cannot establish a proper park tour road unless the city traffic is eliminated.

Because of the pressing nature of the problem, the city employed planning engineers and, in cooperation with the Park Service, has developed what the committee feels is a wise and equitable solution to the problems of both Vicksburg and the Park Service.

The plan involves transfer of the southern one-third of the park's total length, comprising 154 acres, to the city of Vicksburg on the agreement of the city to maintain the statues and memorials involved and the parklike character of the siege-line strip. If this is not done, the lands revert to the Federal Government. The city will construct at least two traffic crossings to the south in this stretch of the present park area.

It is proposed that the Federal Government construct three crossings to the north and east, which are to be over or under park roads at points where they will not interfere with the character or features of the park.

The city, aided by the Federal Government, will construct a new north-south street west of the park to take city traffic off of Confederate Avenue within the park. The National Park Service can then develop a one-way park road loop within the park on Confederate Avenue and Union Avenue, giving park visitors an opportunity to view the area in safety and have it interpreted to them so it can be understood.

It is proposed to acquire 544 acres to fill out the portion of the park retained by the Federal Government, eliminate inholdings, and permit the Park Service to control erosion of gullies, now just outside the park boundaries, which threaten important features within either, by dumping silt into the park or by eating their way into the parks' perimeter. At some points the safety of park roads is involved.

Washington hearings on S. 765, a similar bill in the last Congress, were held in 1961 and final action withheld until a subcommittee could conduct hearings in the area. This was done August 25, 1962, and an excellent presentation of the cooperative plan of the city and Park Service was made by the park superintendent, both in his testimony and during an inspection of the park, and by city officials, their planning advisers, and citizens.

AMENDMENT

Page 2, line 10, and on page 4, line 9, correct the spelling of the proper name from "Garret" to "Garrott."

COST

The National Park Service estimates that land which will be conveyed to the city of Vicksburg, and Warren County, Miss., have an approximate value of $25,000. Land to be acquired has an estimated value of $534,000. Road construction authorized is estimated to cost $1,515,200.

CONCLUSION

The Vicksburg Park is one of the Nation's most important military parks. It has great historic significance and interest. In the South, its importance rivals Gettysburg in the North. It contains most of the original entrenchments, gun placements, and features of the siege period. It is the battlefield where brother fought brother in a war which precluded the possibility of secession or breakup of the States of the Union. It contains perpetual memorials to patriots of both the North and the South from nearly every State in the Nation.

The committee feels that delay in making the needed adjustments at Vicksburg will probably mean increased cost, and that S. 386 should pass promptly.

AUTHORIZATION FOR MILITARY PROCUREMENT

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 105, House bill 2440, the military procurement bill.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 2440) to authorize appropriations, during fiscal year 1964 for procurement, research, development, test and evaluation of aircraft, missiles, and naval vessels for the Armed Forces, and for other purposes.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Armed Services with an amendment.

CERTAIN STREETS IN VILLAGE OF HEYBURN, IDAHO

Mr. MORSE. Mr. President, the majority leader asked me, a few minutes ago, whether or not I had had an opportunity to study Calendar No. 96, Senate bill 22, to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve.

Since then I have studied the committee report on S. 22. I am satisfied it does not in any way violate the Morse formula.

I want to say good-naturedly that what was needed by the Department of the Interior when they first made this transfer, was a little better legal work, because if there ever was a transfer of property that was confused legally, it was this transfer in Heyburn, Idaho.

What is involved is a transfer by the Department of a dedicated townsite which at one time was really a reclamation project. The streets were all balled up. The Department kept the reversionary right to the streets and sought to transfer the lots, and then seemed to be a little surprised when the title insurance company found it impossible, or refused, to give title insurance to the lots. Who could blame them for that? It could not very well give clear title.

I am satisfied there is no oil or gold or silver or copper or other precious metal under these streets. In fact, there was no good reason for keeping the reversionary interest in a dedicated townsite that was a part of a reclamation project.

Ordinarily the street would be transferred to the municipality, and it would have the right to the streets in that municipality if there was to be a dedicated townsite.

I see no violation of the Morse formula in this transfer, because there was confusion, and there was bound to be confusion in an attempt to hold the reversionary interest in the streets.

Furthermore, it would be more costly to the Federal Government to hold the reversionary interest than to get rid of it.

Therefore, I see no objection to the bill.

Mr. MANSFIELD. Mr. President, I thank the distinguished Senator from Oregon and to compliment him on his memory, because he had to do a bit of back thinking in a hurry. As he explained what happened last year, my mind went back to the arguments which he brought forth at that time.

I am delighted that he is once again in support of this bill, after giving it his most serious consideration.

So, Mr. President, on the basis of the remarks made and the approval given by the senior Senator from Oregon, I ask unanimous consent that the pending business be laid aside temporarily, and that the Senate proceed to the consideration of Calendar No. 96, Senate bill 22.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The CHIEF CLERK. A bill (S. 22) to release the right, title, or interest, if any, of the United States in certain streets in the village of Hayburn, Idaho, and to repeal the reverter in patent for public reserve.

The ACTING PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 1, line 7, after the word "that", to strike out "adjoint" and insert "adjoin"; on page 2, line 1, after the word "hereby", to strike out "released and quitclaimed to the adjoining owners by the United States" and insert "released"; and in line 6, after the word "hereby", to strike out "repealed, and any right, title, or interest of the United States in and to Lincoln Boulevard or any street hereafter to be vacated within said townsite adjoining the lands described in said patent is hereby released" and insert "repealed"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any right, title, or interest of the United States in and to streets that were dedicated upon the filing of the townsite plat for Heyburn, Idaho, a reclamation townsite established pursuant to the Act of April 16, 1906 (34 Stat. 116), as amended, and that adjoin lands which have been sold, which streets have been vacated, or any street that may hereafter be vacated within the original townsite of Heyburn, Idaho, is hereby released.

SEC. 2. The clause included in patent numbered 1048499 issued by the United States to the village of Heyburn on July 27, 1931, providing for reversion of title to the United States is hereby repealed.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

AMERICAN ATTITUDES TOWARD CUBA

Mr. MORSE. Mr. President, the March 31 issue of the Register-Guard of Eugene, Oreg., contained a very useful and favorable editorial about the speech given recently by our colleague from South Dakota [Mr. MCGOVERN] on American attitudes toward Cuba.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXAMINING AN UNWORTHY FIXATION

GEORGE MCGOVERN, the new Senator from South Dakota, arose in the Senate the other day and said he felt "constrained to speak out against what seems to me to be a dangerous fixation that is not worthy of this great Nation." The fixation, he said, is this country's apparent preoccupation over Castro as such. A greater problem, he suggested, is the long-range interest of this country as it relates to all of Latin America. He is afraid that the combing of old ashes as we review such events as those at the Bay of Pigs will focus attention on the wrong thing—on the man Castro instead of the meaning of Castro.

The "real bombshells" in Latin America, he argued, are these: 1, 2 percent of the people own more than half the wealth; 2, 80 percent dwell in squalor; 3, more than half are illiterate; 4, one-crop economies are so subject to ruin in case of price fluctuation; 5, archaic tax structures coupled with heavy military budgets; 6, a rate of population growth that is fastest in the world. (At the present growth rate, the 12 million who live today in the six tiny Central American countries will increase to 416 million by 2063).

Senator MCGOVERN speaks from a special background. Early in the Kennedy years he was Director of the food-for-peace program. In this, his major concern was hungry people, most of whom have never known anything but hunger all their lives. Such people, he knows, are likely desperate, willing to try the strongest medicine in the chest. In Cuba that medicine was Castro.

But back to this country's fixation. Too many people who ought to know better speak as if Castro sprang fully armed from Moscow, like Minerva from the head of Jupiter, crying "Cuba Si, Yanqui No." This is patently false. He and his backers were carefully nurtured in the poisoned soil of Cuba. They were nurtured not by Moscow, but by Batista and what he represented.

Cuba is far worse off today than it was 5 years ago. But such is often the case with those who take the strongest medicine on the shelf. The symptoms, some of which might be eventually fatal to the Castro regime, include food consumption that is down 15 percent, a gross national product down 25 percent, the loss of a quarter-million people, most of them skilled or professional people, and the second smallest sugar crop since the end of World War II.

There is nothing short of war (which a decreasing number of Americans, even among the war-whoopers, seem to want) that we can do directly at this point to oust Castro. We can, of course, continue trying to isolate him economically and politically. This we have done with some success, to the point that it now costs the Russians $1 million a day to keep the Cuban economy breathing at all. Our only practical hope of getting rid of Castro is our hope that he will fall victim to the power struggle within his own country.

Meanwhile, however, we must not let the Castro "fixation" divert us from the more important goal of seeing to it that the soil in other Latin American countries is not the kind that nurtured Castro. This, not anguished screaming, is the long-range answer to the Castro problem.

THE WORLD FOOD SUPPLY

Mr. MORSE. Mr. President, a very sobering article appeared in the March-April, 1963, edition of Corn, published by the Corn Industries Research Foundation, Inc., of Washington, D.C. The short article previews the proceedings of the World Food Congress which will be held here on June 4 to 18.

The purpose of the World Food Congress is, in effect, to bring to public attention the magnitude of the problem of bridging the gap between available food supplies and those needed for the nourishment of the world's peoples.

One paragraph alone in this article contains statistics which are shocking in their implications. The paragraph reads:

> Between one-third and one-half of the world's 3 billion people suffer from hunger and/or malnutrition. On top of this, the population is expected to double in the next 35 years. To bring about a moderate improvement in the level of nutrition it has been estimated that the world's food supply will have to be doubled by 1980 and tripled by the turn of the century.

Because of the magnitude and importance of the problem portrayed, I ask unanimous consent that the article be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD FOOD CONGRESS

An estimated 1,200 delegates from more than 100 countries will attend a World Food Congress to be held in Washington, D.C., June 4–18. The event comes at the midway point of the International Freedom from Hunger Campaign, a 5-year program launched in 1960 by the Food and Agriculture Organization (FAO) of the United Nations.

The World Food Congress is an effort to make the world conscious of the related population and hunger problem and its magnitude. Primary emphasis will be placed upon helping the countries in need to help themselves in bridging the gap between available and adequate food supplies. The Congress is not the kind of event where a once-and-for-all solution will be found, but it may make a substantial contribution toward a world of self-reliant nations no longer plagued by such things as hunger, ill health, and poverty.

FOOD AND POPULATION

Between one-third and one-half of the world's 3 billion people suffer from hunger and/or malnutrition. On top of this, the population is expected to double in the next 35 years. To bring about a moderate improvement in the level of nutrition it has been estimated that the world's food supply will have to be doubled by 1980 and tripled by the turn of the century.

Behind the rapid population increase are certain arresting features. In the first place, the rate of increase in the less developed regions, where hunger is most prevalent, is greater than in the more developed ones. Secondly, because of advances in medical science people are now able to live longer under worse conditions or without a rise in their standard of living. The result of these two features is that the population of the less developed areas is becoming an ever-larger proportion of the world population.

Participants at last year's World Food Forum, which was also held in Washington, dispelled the notion that agricultural surpluses in one part of the world can alleviate hunger in any substantive, lasting way in another part. A repeated theme was that the developing nations must, for a variety of reasons, depend primarily on a substantial expansion of agricultural production at home. In Asia alone (excluding Red China) the projected need is for an increase of some 90 million tons of food grains by 1980. Commercial or noncommercial trade is simply not feasible to supply grains of such magnitude. Today only 10 percent of world food production goes into export. The bulk of our country's agricultural exports through the food-for-peace program has been to relieve hunger in emergency situations.

MEANS ARE AVAILABLE

There seems to be general agreement that science today has the solution to abundant food supplies in terms of modern technology—increased use of fertilizer, the killing of pests, irrigation and drainage, genetics of plant improvement, the cultivation of more arable land, and so on. But effectuating such changes requires the resolution of a host of politico-socio-economic questions for the countries involved. Social values and public opinion must be changed to overcome certain static situations and create climates conducive to the acceptance of modern technology. Dissemination of agricultural know-how requires that people be educated enough to receive the help offered; thus the pervasive problem of illiteracy is directly caught up in the agricultural struggle. One educational institution the United States is fostering is the organization of rural youth clubs patterned after the 4–H Clubs.

Of particular interest to the visiting delegates will be the successful example of a handful of countries that have succeeded in increasing agricultural production substantially above the population growth rate. This has been true in the past 10 years of such countries as Israel, Mexico, Yugoslavia, Greece, Japan, and Austria. From these experiences the developing nations should learn much that will enable them to become more self-reliant. In addition, of course, the United States, a land where agricultural abundance is consistently attained, will be the center of much attention.

The visiting participants will be asking why it is that American farmers are, say, about five times as efficient as Russian farmers. In other words, what are the conditions that lead to agricultural abundance. If any conclusion is reached on this question it will most likely be that success can only be attributed to a combination of factors—good climate, adequate capital, free incentive, sound technological background, and an effective farm communications system, among others. In its development, however, the American experience did not have to cope with an impatient population. Today people of the developing countries know there is a better life and are determined to achieve it in their own lifetime.

Efforts to increase food production have been concerned traditionally with agrarian reform, or who shall own the land. It is here that American agriculture may convincingly cite its own experience in calling for individual ownership of the land by those who cultivate it: no method of ownership—collective, plantation, feudal, or state-owned—has ever achieved the efficient productivity of the American family farm.

ROLE OF UNITED STATES

Last fall Congress authorized the United States to serve as host country for the World Food Congress. Leadership for our participation is being furnished by the American Freedom From Hunger Foundation through designation of its trustees as Citizens' Host Committee for the World Food Congress. In addition, President Kennedy appointed a Government Committee to work in association with the freedom-from-hunger campaign. Freedom From Hunger Week, observed this March 17–23 in this and many other countries, is one of the events of the campaign.

All reports indicate that the response of the American people to the coming World Food Congress has been especially warm. A subcommittee charged with arranging tours of various area farms and food industries reports that firms and individuals are generously offering their help. These tours will provide the visitors a means of seeing firsthand how our food is produced and processed.

Designed to be a "people-to-people" rather than a "government-to-government" event, the World Food Congress will include participants from all walks of life. Some 300 to 400 persons from the United States are expected to attend. The June 4 opening date was designed to coincide with the 20th anniversary of the Hot Springs, Va., conference called by President Roosevelt. This conference laid the foundations for the FAO, which became a part of the United Nations 2 years later in 1945. Common to both the conference 20 years ago and the coming World Food Congress is a recognition that food and agriculture transcend national boundaries, that only a joint effort can solve the problems of world hunger.

NATIONAL COMMITTEE FOR SUPPORT OF THE PUBLIC SCHOOLS

Mr. MORSE. Mr. President, I have on previous occasions brought to the attention of the Senate the helpful information contained in the publication of the National Committee for Support of the Public Schools entitled "Changing Demands on Education and Their Fiscal Implications." There remains but one chapter of the study to which this morning I wish to devote my attention. This is the chapter entitled "Findings and Conclusions."

I ask unanimous consent that this chapter be printed in the RECORD.

There being no objection, the chapter was ordered to be printed in the RECORD, as follows:

FINDINGS AND CONCLUSIONS

Basic research, application of new knowledge to industrial processes, and automation are remaking the economy of the United States. The depth and speed of economic change are having heavy impacts on the labor force and on education.

IMPACTS ON THE LABOR FORCE

Our population as a whole must have more and better general education. This is essential if the labor force is to have the educational background and flexibility of mind required to respond to rapid occupational change. Some old occupations decline in numbers, and some disappear. New ones arise. Retraining and even lifetime learning are becoming the price of employment.

A larger percentage of the labor force must have advanced technical and professional education. There is also a rising demand for skilled and semiskilled workers. But the opportunities for employment of unskilled workers and laborers are declining and will continue to do so.

The insistent calls for more and more highly trained and skilled workers and the declining demand for unskilled workers are bringing about major changes in the composition of the labor force of the United States. In 1956, for the first time in our history, the majority of the employed population were classified as white-collar workers. It is estimated that by 1970 white-collar workers will far outnumber blue-collar workers.

IMPACTS ON EDUCATION

Occupational changes hold many implications for public education. The schools and colleges must provide more and better basic and general education. These institutions must provide more personnel with advanced technical and professional education. They must provide alone, or in cooperation with various public and private agencies, a labor force with a growing percentage of skilled and semiskilled workers.

The rising demands of our technological economy for trained manpower are being met to a degree by our educational institutions. The level of schooling of our population is rising. A larger percentage of highly educated, professional, technical, and skilled personnel is being supplied. The professions and industry readily absorb the increased flow of the more highly trained.

Technological progress and automation increase productivity, but they also breed serious problems for many individuals. There is an insidious growth of unemployment in a number of occupational fields and especially in agriculture. When the jobs of older workers disappear, they find it difficult to prepare for and find new ones. Unemployment among dropouts from the schools is much higher than in the labor force as a whole.

As hundreds of thousands of jobs are wiped out, new ones appear. But many who lose their jobs cannot qualify for them. They lack the training required.

Many proposals are being made to correct the imbalance between the training demanded and that possessed by our manpower. There is no general agreement as to how the needed training and retraining can be accomplished. However, all proposals include needed improvements in the offerings of the public schools. These range from action to eliminate illiteracy and to step up the level of general education of our whole population, to the provision of much more effective programs of technical and subprofessional training.

Such educational improvements will require substantial additional expenditures. Can the cost be met? The answer depends in large degree upon the public's conception of the economic significance of education.

EDUCATION AS INVESTMENT

Economic research is leading toward the conclusion that expenditures for education are more than a tax levy against the economy. Educational expenditures are a productive investment.

INDIVIDUAL RETURNS

It has long been known that persons with larger amounts of education earn larger incomes. Research is beginning to disentangle the various factors, including schooling, which result in increased individual earnings. It appears that the direct returns to individuals, solely from investment in schooling, are at least as high as other forms of investment. Even though the general level of schooling has continued to rise during the past generation, the substantial differentials in the average earnings of those with less schooling and those with more schooling have continued to hold.

INCREASED NATIONAL PRODUCTIVITY

Probably more important than the economic research that has revealed the benefits to individuals from investment in education are studies that take account of the diffused, indirect benefits that increase national productivity. Some economists are suggesting that investment in human capital, in such forms as education and health services, deserves to rank with investment in physical capital as a factor in economic progress.

The rapid growth in the productivity of agriculture in the United States is of special significance. Agricultural output has continued to mount, although the acreage under cultivation and the number of agricultural workers both continue to decline. Some economists claim that the agricultural revolution in the United States is in large degree the outcome of the comprehensive program of educational investment in agriculture which has been developed during the past century. The farmers in the United States are the only occupational group that has enjoyed substantial public investment in general education, in specialized instruction at both the secondary and higher education levels, in research and experimentation, and in an extension program providing for the rapid dissemination of new knowledge.

The relation of education to economic growth is now a matter of worldwide study. It shows that there is a high correlation between literacy and per capita production among the nations of the world. No illiterate nation has achieved a high level of productivity; all literate nations have relatively high per capita incomes.

The educational level attained by a nation's population is more important than the possession of natural resources in determining its per capita income.

In some nations that possess abundant natural resources, people live in semistarvation. Other nations that have invested in human capital have achieved high productivity, even though they have meager natural resources.

The rapid economic growth of the U.S.S.R. is partly the result of heavy investment in education made since the Bolshevik revolution.

The superior productivity of Western Europe is in part an outcome of its early establishment of universal education. Its rapid recovery after World War II was facilitated by its stock of educated human capital. The lack of such capital in the less-developed nations is partly responsible for their laggard economic gains.

Probably the most significant returns from investment in education are certain qualities and insights that are essential for growth in economic as well as other spheres of life. Education contributes to the development of a literate and informed people capable of maintaining free institutions and achieving democratic aims. Education helps in maintaining the degree of political and social stability that is essential for economic and other forms of national growth. Education develops respect for scientific research and for the new knowledge it discovers. Education aids in developing readiness to apply new knowledge to economic and other areas of life. Education plays a major role in developing the specialized technicians and the broadly educated and responsible leaders demanded in all fields in a complex and highly developed society such as that of the United States.

It is imperative that we recognize the many and highly significant returns which accrue from wise investment in education. It is also imperative that we avoid the social penalties that have their origins in neglect of education.

PENALTIES OF INADEQUATE SCHOOLING

It is a shocking fact that while the United States stands for equality of opportunity, it permits gross inequalities in educational opportunity.

Far too high a percent of our citizens suffer handicaps that result from lack of functional literacy. Fewer and fewer children are denied schooling completely, but many children attend poor schools and only for a short period. Lack of adequate schooling, both as to quality and amount, is partly responsible for the millions of disadvantaged Americans who have recently been migrating from underdeveloped rural slums to congested urban slums.

Low educational achievement is associated with low earning capacity, unemployment, high rates of rejection for military service, and dependence on various types of relief.

The plight of the dropouts from school deserves special attention. They are thrown into a labor market where there is a declining demand for unskilled labor. The possibility of their being called for military training discourages employers from offering them opportunity for employment and training. The out-of-school, unemployed youth is a potential delinquent.

Adequate schooling is one of the factors which can aid in ameliorating some of our most serious social problems. Provision of adequate schooling for all is fully justified solely on the basis of our commitment to equality of opportunity. The cost of providing education, right in amount and kind for every child, would probably be less than expenditures to cure the results of inadequate schooling.

MAXIMIZING RETURNS

To realize full economic and other benefits from investment in education will require several types of action. There must be quality schools available and attended by all children and youth in all communities. Good schools require well prepared teachers, adequate school buildings, and other essential physical facilities. These are lacking in too many communities today.

Curricula must be developed that take account of the wide range of aptitudes and life goals of the heterogeneous population now enrolled in public schools. There must be full response to the fact that those in the upper grades of elementary schools and in high schools are no longer a select group. Public schools now include the talented and those of average and below-average ability.

Accordingly, the public school program must provide more than a single track of general education for all. There must also be varied provisions for all groups, so that the Nation may fully capitalize on its total human resources.

There must be effective guidance programs in every school system to help each student achieve his potential. Well-trained guidance counselors with facilities for effective performance must reduce waste of human resources.

COUNTING THE COST

Substantial increases in expenditures for public schools will be required if economic and other returns from investment in human capital are to be maximized. While money is not everything in providing quality schooling, it is something. Quality schools almost universally are high-expenditure schools.

The problem is one of making additional funds count most in buying the quality of schooling demanded by the type of society and economy to which we aspire.

Currently wide variations in the quality of schools in the United States are in considerable degree a result of enormous and indefensible differences in the financial support of schools in different regions and localities. States and communities with low levels of financial support for schools are the sources of millions of disadvantaged citizens.

There has been inadequate response in school expenditures to the mounting demands made upon the schools. Between 1900 and 1958, the purchasing power of the money available to pay for each day of schooling provided in public schools declined. Taking account of all factors, boards of education in the United States generally had less ability to buy first-rate schooling for each child, for each day he was in school, in 1958 and 1900.

A recent congressional study concluded that this low elasticity in the support of public schools should be of deep concern to those convinced that improvements in education are essential if the United States is to remain a leading world power.

A number of citizens committees have estimated what it would cost to finance quality schools in all communities in the United States. They agree that there must be a substantial increase in school expenditures to achieve this end. Their estimates are that approximately a doubling of present expenditures for public schools will be needed during the 1960's.

Adequate support for public schools will require decisive action on the part of many citizens. There must be recognition that investment in public education pays handsome dividends. The fiscal obstacles that now block the road to adequate financial support for public education must be removed.

The rewards of decisive and intelligent action in providing excellent schools everywhere in the United States would be substantial. The penalties of failure in this regard would be severe. Leaders throughout the Nation should ponder these alternatives with great care.

Mr. MORSE. Mr. President, I salute the national committee, under the leadership of Mrs. Agnes E. Meyer, for having performed the great public service of bringing this information to the attention of the American public. She and those who work with her deserve high commendation for the program they have initiated. I look forward particularly to reviewing the results of the first national conference held at the Statler-Hilton on April 7–9.

At this point, Mr. President, I feel it is most appropriate to draw the attention of Senators to the program of that conference. I, therefore, ask unanimous consent that it be printed at this point in my remarks, together with the brief biographical sketches of the discussion leaders.

There being no objection, the biographical sketches were ordered to be printed in the RECORD, as follows:

FIRST NATIONAL CONFERENCE: THE COMMUNITY FACES THE CRISIS OF THE PUBLIC SCHOOLS

(Convened by the executive committee of the National Committee for Support of the Public Schools)

Agnes E. Meyer, chairman; Harold Taylor, vice chairman; William Benton, Omar N. Bradley, Marion B. Folsom, John Hersey, David E. Scoll, secretary-treasurer; Mary C. Kohler, James G. Patton, John I. Snyder, Jr., Ralph W. McDonald, executive director.

SUNDAY, APRIL 7, 2 P.M.–9 P.M.

Registration, second floor, upper lobby, Statler-Hilton.

MONDAY, APRIL 8, 9:30 A.M., FIRST SESSION

Federal room

Welcome to the Conference

Mrs. Agnes E. Meyer, chairman, National Committee for Support of the Public Schools.

Realities of the Present

Presiding: Mrs. Dexter Otis Arnold, president, General Federation of Women's Clubs, Washington, D.C.

"The Crisis in the Cities," Dr. Mark C. Schinnerer, vice president, Shaker Savings Association, Shaker Heights, Ohio.

"In the Suburbs," Dr. Harold Taylor, vice chairman, National Committee for Support of the Public Schools.

"The Towns and Rural Areas," Dr. Warren G. Hill, commissioner of education, Augusta, Maine.

"The Deprived Americans," Dr. Albert W. Dent, president, Dillard University, New Orleans, La.

Discussion

At 12:30 p.m. (luncheon).

Congressional Room

Presiding: Dr. Rosemary Park, president, Barnard College, New York, N.Y.

"The Federal Role in Education," the Honorable Anthony J. Celebrezze, Secretary of Health, Education, and Welfare.

At 2:30 p.m. (second session).

Federal Room

Public Schools—An Investment in People.

Presiding, John I. Snyder, Jr., president, U.S. Industries, Inc., New York, N.Y.

"Public Schools and the Development of American Manpower," Dr. Eli Ginzberg, professor of economics and director of conservation of human resources project, Columbia University, New York, N.Y.

"Education and the Investment in Human Capital," Dr. Theodore W. Schultz, professor of economics, University of Chicago, Chicago, Ill.

Discussion

At 5:30 p.m. (reception in honor of the Governors).

Congressional Room

At 7:30 p.m. (banquet).

Presidential Ballroom

What Are the States Doing To Strengthen Their Public Schools?

Presiding: Marion B. Folsom, director and managing consultant, Eastman Kodak Co., Rochester, N.Y.

The Honorable Edmund G. Brown, Governor, State of California.

The Honorable John H. Chafee, Governor, State of Rhode Island.

The Honorable Terry Sanford, Governor, State of North Carolina.

TUESDAY, APRIL 9

At 9:30 a.m. (third session).

Federal room

How To Make the Public Schools Fully Effective

Presiding, Marquis Childs, chief Washington correspondent, St. Louis Post Dispatch.

"The Kind of Public Schools We Want," the Honorable Francis Keppel, U.S. Commissioner of Education.

"Financing Our Schools—The CED Position," Dr. T. V. Houser, chairman, board of trustees, committee for economic development, Washington, D.C.

"The Cost of Good Public Schools," Dr. Arthur F. Corey, executive secretary, California Teachers Association.

Discussion

At 12:30 p.m. (luncheon).

Congressional Room

Presiding: Gen. Omar N. Bradley, chairman, Bulova Watch Co., Washington, D.C.

Address: The Honorable W. Willard Wirtz, Secretary of Labor.

Summary of the conference: Mrs. Agnes E. Meyer, chairman, National Committee for Support of the Public Schools.

At 2:30 p.m. (final session).

Federal Room

Meeting of the Membership, Closed Session

Meeting of NCSPS members to discuss future policies and program.

BIOGRAPHICAL SKETCHES OF LEADERS OF NATIONAL CONFERENCE

Agnes E. Meyer: Lecturer, author, social worker. Founder of NCSPS. Her vigorous efforts through the years in the interest of public education and social progress have made her one of the Nation's most forceful spokesmen for human freedom and dignity. Writings include "Out of These Roots: Education for a New Morality."

Harold Taylor: Educator, author, former president of Sarah Lawrence College, has unusual insight into school needs of rapidly expanding urban and suburban communities. Dr. Taylor believes "the educator must have an image of the child in the reality of his school, and his society." Books include "On Education and Freedom."

William Benton: Connecticut Yankee who thriftily uses one lifetime for multisuccesses as master of advertising, university administrator, publisher, Senator, diplomat. From his energy came the Voice of America; from his insight, our first awareness of the potency of Soviet education.

Omar N. Bradley: The Missouri schoolmaster who trained a citizen army and led it across Africa and Europe to defeat Hitler. General of the Army and first head of the Joint Chiefs of Staff, he is the quiet "GI's general" who now fights militantly in pursuit of adequate education for peacetime Americans.

Marion B. Folsom: Shares with sputnik some top credit for arousing America to the school gap. Scholar, corporation manager, community leader, his zeal cut through red tape and prejudice to show executives there is room at the top for effective public service. As HEW Secretary, scored highest for education.

John Hersey: Noted American author, says "A great national hypocrisy stands in the way of our children. It is to be seen in the gap between our pretensions and our performance in public education." Books include "A Bell for Adano," "The Wall," "The Child Buyer," and just published "Here to Stay, Studies in Human Tenacity."

Mary C. Kohler: Retired from the San Francisco Juvenile Court in 1953 after 15 years on the bench. She has served on a number of organizations concerned with young people and their futures. Presently she is chairman, executive committee, National Committee on Employment of Youth.

James G. Patton: Has served in a wide range of private and governmental activities to improve the security of the farm family. A farm leader with the world view, he is a founder of International Federation of Agricultural Producers, the organization of farmers throughout the free world. Book: "The Case for Farmers."

John I. Snyder, Jr.: Cochairman of the Foundation on Automation and Employment, is actively engaged in alleviating the impact of automation on employees, believing employers must assume some responsibility. Member: board of trustees, Committee for Economic Development; NYU-Bellevue Medical Center Board.

Mrs. Dexter Otis Arnold of Concord, N.H., is the youngest president in the history of General Federation of Women's Clubs. A graduate of Syracuse, she served as director of speech and dramatics for the Syracuse schools. Author of a textbook on speech, an expert parliamentarian, she has lectured in every State.

Mark C. Schinnerer: Member, Ohio House of Representatives. Former long-time superintendent of Cleveland schools, he recently made a heralded one-man study of New York City schools for State department of education. Received 1963 Distinguished Service Award from the American Association of School Administrators.

Warren G. Hill: Maine's Commissioner of Education. Having served as elementary school principal, college instructor, acting college president, Dr. Hill has intimate knowledge of rural school problems and is particularly qualified to lay the foundation for better understanding of similar problems throughout the country.

Albert W. Dent: In his 20 years as president, Dillard tripled its enrollment and became a leading private liberal arts college. Active in education and health, he was three times a delegate to the World Health Organization; is a member, National Advisory Council, Peace Corps; vice president of United Negro College Fund.

Rosemary Park: A distinguished scholar, served as president of Connecticut College for 15 years before moving to Barnard. During her years as president, the college expanded to accommodate a one-third increase in student body. She has received Radcliffe College's Graduate Chapter Medal for Distinguished Achievement.

Anthony J. Celebrezze: Was serving an unprecedented fifth term as mayor of Cleveland when called to Washington. He gained nationwide recognition for outstanding achievement in slum clearance, voluntary neighborhood rehabilitation and improvement in health, welfare, recreation, and traffic programs.

Eli Ginzberg: Internationally known for research and writings on the human aspects of economics. Consultant to Departments of Army, State, Labor, and the Executive Office. His many publications are standard works in the field. Books: "The Negro Potential," "Human Resources," "The Ineffective Soldier," "The Nation's Children."

Theodore W. Schultz: Considered the Nation's outstanding researcher on the economic values of education, has stressed that, "Truly, the most distinctive feature of our economic system is the growth in human capital." Former Chairman, Department of Economics, University of Chicago. Author of numerous books and articles.

Edmund G. Brown: Is a native Californian. Worked his way through night school, became District Attorney, Attorney General, and in 1959 Governor. His concern for welfare of all citizens, hard work, and administrative ability caused voters to express their confidence by reelecting him last November. Education was a key issue.

John H. Chafee: Is only the second Republican in over 2 decades to gain the governorship in usually Democratic Rhode Island. A fighting Marine who served for 6 years in World War II and Korea, he rose from buck private to captain. In politics he started as precinct worker and ended in the Governor's chair in 1962.

Terry Sanford: The South's new voice, says, "We need our own Emancipation Proclamation which will set us free to grow and build, set us free from the drag of poor people, poor schools, from hate, from demagoguery." North Carolina's Assembly approved greatest increase for school support of any State since his governorship.

Marquis Childs: Suave as a diplomat as he moves among summits and battlefronts, ignites journalistic rockets which illuminate the events, men and movements of today. The unwavering analyst-reporter, he insists on defining the real issues which spell history—refusing to come to terms with poverty, misery and ignorance.

Francis Keppel: U.S. Commissioner of Education. Under his resourceful, imaginative leadership as dean of Graduate School of Education, Harvard, new techniques for improving quality of teaching were introduced. Perhaps no American today is better equipped to describe the kind of schools needed at this critical period.

T. V. Houser: Retired corporate executive, serves as chairman of the board of trustees of the Committee on Economic Development. Formerly with Sears, Roebuck & Co. A director of Bell & Howell Co. and trustee of Northwestern University, Mr. Houser feels "the quality of education is critical for American society."

Arthur F. Corey: Has been a teacher, principal, district superintendent. As head of the largest State professional organization of teachers in the United States, he believes professional prestige cannot be bought or legislated—but that it must be earned by making teaching a quality profession, our preeminent profession.

W. Willard Wirtz: U.S. Secretary of Labor, began his career as a high school teacher and taught law at Iowa and Northwestern Universities. Former General Counsel of War Labor Board; Chairman of National Wage Stabilization Board. As labor arbitrator, became vitally concerned with effects of unemployment and automation.

Mr. MORSE. Mr. President, as Chairman of the Education Subcommittee of the Senate Committee on Labor and Public Welfare I intend to bring to the attention of my subcommittee during the course of our hearings on the President's comprehensive education bill the papers presented and the results of the discussions when they are published.

AUTHORIZATION FOR MILITARY PROCUREMENT

The Senate resumed the consideration of the bill (H.R. 2440) to authorize appropriations, during fiscal year 1964, for procurement, research, development, test, and evaluation of aircraft, missiles, and naval vessels for the Armed Forces, and for other purposes.

Mr. MANSFIELD. Mr. President, what is the pending business?

The ACTING PRESIDENT pro tempore. The pending business is the military procurement bill, Calendar No. 105, H.R. 2440.

POPE JOHN XXIII AND WORLD PEACE

Mr. PELL. Mr. President, as we look back over the past several years and examine the words of all our rulers, spiritual and temporal, we find that the one who has spoken out most often, most forcefully, and most cogently for the cause of world peace is Pope John XXIII.

Five years ago, shortly after he was elected to the Papacy by the College of Cardinals, he came out with his first appeal for peace, when he addressed church leaders, saying:

> Look at the people entrusted to you and listen to their voice. What do they seek? What do they implore from you? Not these new monstrous instruments of war which our times have produced and which can be the cause of fraternal slaughter and annihilation of all—not these, but peace. We say peace, by which the whole human family may live freely, thrive, and flourish.

Later in the summer of 1961, he said:

> Everything is lost and lost to everyone through war. Nothing will be lost through peace.

Then, last year at the time of the Cuban crisis, he said:

> To promote, favor, and accept negotiations, at all levels and at all times, is a rule of wisdom and prudence which calls down the blessings of heaven and earth. * * * Let them do everything in their power to have peace. By so doing, they will spare the world the horrors of a war that would have disastrous consequences such as nobody could foresee. * * * Let them continue to negotiate * * * at all levels and at all times.

And now today he has again expressed himself on behalf of the same cause, this time with a full-fledged, deeply thought-out encyclical entitled "Pacem in Terris"—Peace on Earth. I believe this will prove one of the most significant contributions that have come forth in the last 2 years toward the long-awaited lasting peace.

This document is significant in many ways, but paramount to its commanding logic is the universality of its appeal—for it is not addressed to Catholics alone but also to all men of good will. And all men will certainly be affected by it.

It is interesting to note that of the temporal rulers who have taken public cognizance of the Pope's appeals, Premier Khrushchev is one of the most prominent. The efforts that Pope John is making today to lower the politically high temperature in the world is shown by his securing of the release early this year of Archbishop Josef Sleipyj who had been incarcerated for so many years; by the permission granted Stefen Cardinal Wyszynski to attend the Ecumenical Council in Rome; by his conversations with Khrushchev's daughter and son-in-law, Rada and Aleksey Adzhubey; and now by this remarkable encyclical.

Pope John, by his efforts to lower the political temperature in the world and hence be better able to ameliorate the conditions of people behind the Iron Curtain, has made a very real contribution to world peace. Even more important though is that in this period of our history when jingoism and war talk is all too rampant he gives to the cause of peace a public dignity and a worthiness that it would not otherwise enjoy. Christianity has been with us for almost 2,000 years, steadily spreading and increasing throughout the world. Taking the long look at history and looking to the future, I think this fact, plus the basic inadequacies of communism to meet the normal, natural desires of human beings to worship freely, work freely, speak freely, travel freely, vote freely, and possess property freely will show which system will survive in the long haul. The only problem is to insure first that there is not mutual self-destruction in order that there will be a long haul.

RECREATION OPPORTUNITIES IN RURAL AMERICA

Mr. HART. Mr. President, the senior Senator from Indiana [Mr. HARTKE] has today introduced a bill, which I am pleased to cosponsor, to establish a Commission on Rural Life. The commission would be instructed to study problems related to food supply, costs and markets for farm and manufactured goods, job opportunities, and individual and community initiative in maintaining and developing community institutions and services.

We are living in a time of rapid change in community living as well as in technology. It is well for us to focus our attention on what is happening to the millions of people in our rural communities.

A quick look at my own State of Michigan, for example, shows that we have long prospered from the development of our resources and from the export of our wealth to other States and other nations. The abundance of our fields, our forests, and our mines created income in Michigan. Then the automobile and machinery industries were born and thrived there.

All these cornerstones of the Michigan economy—farming, forest products, mining, and manufacturing—continue to provide jobs and income for the people of Michigan. We cannot but realize, however, that our timber and mineral resources are now less to be counted on as a source of income than heretofore. We are well aware of the fact that autos are now being made in other States and nations, even if not quite as well or as economically as in Michigan. We know that the growing productivity of agriculture, some of it in areas once only deserts, is competing with the great Michigan fruit belt and other agricultural resources of our State.

Michigan is not alone in having to face up to some of these facts. It confronts all of us in America. When we recognize that of every 10 young people living on the Nation's farms today only 1 can expect to be gainfully employed in agriculture, it is sufficiently urgent that we set in motion work and program proposals from which can come fuller utilization of new opportunities for gainful employment in rural areas.

We also need the analysis and study of the full range of problems confronting our citizens in rural America that would come from the establishment of this Commission on Rural Life.

We, in Michigan, are not alone in straining our ingenuity in order to gain from the old sources the growing income needed for a better living for more people each year. The productivity of man and his machines, together with new agricultural and industrial productivity of new areas, is making the marketplace a little tougher for all of us. Man and his machines are building a material abundance which we can celebrate but which we must at the same time regard as a challenge.

It is in these circumstances that Michigan and other States must look to a further development of that relatively new source of major income: recreation and tourism. We have beautiful lakes and bountiful trout streams. We have quiet forests and peaceful open land where a man can breathe. And we have all this in a time when millions of people need the exercise, the pleasure, the tranquillity, and the relaxation that these great outdoors offer.

It is to the opportunities that are present to us in Michigan and throughout the United States for fuller utilization of programs for developing these recreation resources that I wish to direct my remarks today. We are making progress in Michigan in utilizing the tools that are presently available through Federal and State programs. This effort enjoys widespread support among the farm organizations and increasing interest on the part of individual farmers and rural community leaders.

Today, Mr. President, as we propose this Commission on Rural Life and look toward enhancing the economic well-being of this root spring of our Nation's strength, I would like to mention some of the experiences we have had in Michigan in putting these programs to work, as well as some experiences in other parts of the United States.

Let us look first at some national facts and figures:

First. There is more land in the United States than is needed to produce the food and fiber we need currently for ourselves and for export. So great has become the productivity of the American farmer that the Department of Agriculture reports 50 million acres of farmland could be taken out of production by 1980 without creating any shortages. Shall we produce even greater surpluses or shall we help rural people find a more productive, profitable use for some of their land?

Second. While we ponder this question, more and more millions of people, crowded into cities and suburbs need, and are willing to pay for, more outdoor recreation. Shorter hours and better incomes have already built outdoor recreation into a $20 billion-a-year business and tourism into a $25 billion annual volume. And this is only the beginning; it is estimated that outdoor recreation needs will treble by the end of this century.

So we have the land available for new uses on one hand, and the need for outdoor recreation on the other. Why, then, are these acres, these rural resources not automatically diverted to the full need for public and commercial recreation?

Actually, of course, more and more land is being devoted to outdoor recreation, but not at a rate fast enough to take care of idled acres or to meet growing needs satisfactorily. It is in the interest of our rural landholders, in the interest of people who need jobs, in the interest of people who seek outdoor recreation, and in the interest of the Nation to accelerate that rate.

The need for speed in developing outdoor recreational facilities is based partly on the urgency of the need for land diversion and partly on the growing demand for leisure-time play space. Time is important in another way: Unless we move now, the recreation land will not be where we need it, not accessible to the people who will use it, and much of its beauty will be spoiled.

In examining what Government can do to help individual citizens and local communities develop outdoor recreation, we ought to look at public facilities and at those that are privately owned.

There is an acknowledged need for public recreation facilities: Federal, State, and community parks, lakes and other publicly owned recreation areas. Each year these facilities are being increasingly overloaded. Each year the cost of land acquisition by cities, counties, States and the Federal Government is rising. Each year land ideally suited to recreation near population centers is being put to other uses.

Under this administration, the Federal Government is serving the need for outdoor recreation through accelerated improvement and expansion of national park facilities.

The Recreation Advisory Council, a Cabinet-level body created by Executive order of President Kennedy in 1962, is working on this problem. So is the Bureau of Outdoor Recreation, created in the Department of Interior last year following the report of a bipartisan committee which had been studying the problem for several years. Legislation has been introduced to establish a program to help States purchase lands for public recreation.

The open-space land program of the Housing and Home Finance Agency can also be of help to communities and States in meeting their need for public recreation facilities.

In low income and high unemployment counties over the country, the Accelerated Public Works Act of 1962 has helped to meet public recreation needs. Federal grants can be provided for improvements needed—the boathouse, the cabin, the bridge, or the pool—to make a public park usable, just as this kind of financing can be used to help finance a town's water system.

We must continue and improve our efforts to develop more publicly owned recreation facilities. Whatever we accomplish will almost certainly be less than enough to meet the need.

Some people oppose the use of land for public recreation facilities because they say this takes the land off the tax rolls. While the land itself may not be taxed, I question whether the creation of good public recreation facilities has ever reduced the total tax base of a city, a county, a State, or the Nation. Availability of such facilities generally increases the value of other properties, and stimulates business incomes more than enough to offset any tax losses.

Important as public development is in putting land to its best use and providing our people with adequate outdoor recreation, it is only part of the answer. The development of commercial recreation on privately owned lands is at least equally vital. The diverting of excess acres into commercial recreation uses can provide more jobs and more income for rural people, in Michigan and in other States. By turning to more profitable, productive use of marginal farmland, we can reduce agricultural surpluses. And simultaneously, we can help provide people with close-to-home recreational opportunities they need, want, and can afford.

We can all think of numerous commercial recreational possibilities. They range from the farmer who houses and feeds city vacationers to huge recreation complexes with lakes, lodges, golf courses, tennis courts, and theaters. In between, there is the farmer who builds a few cabins and a boat dock on a lake, the one who rents camping sites or provides hunting and fishing services for a fee. There is a place for all these in meeting the commercial recreation needs of people for a few hours, for a weekend, or for a vacation. There is a place for all these in stimulating greater economic activity in rural areas.

The previous Congress and the administration can take pride in recognizing this potential and doing something about it.

For example:

First. The Area Redevelopment Act, passed in 1961, provides loans to help launch industries and businesses in the lowest income-highest unemployment areas, rural as well as urban. Commercial recreation projects may be eligible for these loans if they result in permanent employment and if financing cannot be found elsewhere.

Second. The Food and Agricultural Act of 1962 contained several provisions specifically designed to divert more land into commercial recreation.

Through the rural areas development program launched in the Department of Agriculture in 1961, help is available to rural people in making use of the provisions of these and other programs in developing commercial recreational enterprises.

Under this program, the Federal Extension Service has been given primary responsibility for assisting rural people to get organized to make their community what they want it to be.

The Farmers Home Administration, in addition to providing help through its own programs, is coordinating the Agriculture Department's various programs with State, area, and county programs.

Recreation facilities and programs in the national forests are being expanded with an eye to future needs.

The Agricultural Act of 1962 authorized recreational activities as one of the purposes of small watershed projects.

The Rural Electrification Administration is assisting its borrowers, as well as the other rural people in ARA-designated areas, in the development of specific enterprises.

MICHIGAN EXTENSION SERVICE EMPHASIZES TRAINING

The rural areas development program, supported by the agencies of USDA, has provided a basis for expanding the Michigan Cooperative Extension Service work in developing the State's recreational resources.

The Michigan State Rural Areas Development Committee, consisting of leaders representing various State economic and social interests, provides basic policy guidance to rural area development activities as well as assistance to the Area Redevelopment Act program. Working through RAD and ARA, the Michigan Extension Service anticipates that recreation will be more and more important to the economy of the State. Rapidly expanding needs for recreation and the particular character of Michigan's land and water resources make Michigan especially adaptable to this type of development. The financial assistance made possible through the Area Redevelopment Act, the Manpower Training and Development Act, and the Food and Agriculture Act of 1962 will contribute to the expanding recreational activities in Michigan.

Special projects for training of motel operators, waitresses, and other types of occupations needed in this field have attracted public attention and enthusiastic support of local groups. An article entitled "Boosting the Tourist Economy" by Clare A. Gunn, Tourist and Resort Specialist, School of Hotel, Restaurant, and Institutional Management, Michigan State University, which appeared in the January 1963 issue of the Extension Review, details some of the successes of the program.

FARMERS HOME ADMINISTRATION SPURS RURAL RENEWAL IN MICHIGAN

There is a tremendous need in most of the Nation's rural areas today for money to finance basic capital improvements, such as farm enlargement, community facilities, shifts in land use, rural industries.

One agency in the Department of Agriculture that has begun to move in the direction of helping meet what I would call "the capital gap in rural America" is Farmers Home Administration.

As organized programs of rural area development take hold in more and more counties, under local leadership, this agency will be called on increasingly to support and to finance local projects when private capital is not available.

Farmers Home Administration just recently emerged from the doldrums of the 1950's, a period in which it was reduced to virtually the liquidation stage. A period, I might also add, when 2 million farms went out of business and 1,600 rural counties lost population.

Under the leadership of Secretary Freeman, Assistant Secretary Baker, and Administrator Howard Bertsch, this agency has been revitalized in just 2 short years.

In 1961 Farmers Home Administration was authorized to expand and modernize its farm lending programs, and to begin meeting some of the limitless need in rural America for housing credit and loans for community facilities and community development.

Last year this process of arming FHA for the tremendous tasks and challenges of the present decade was continued. Congress set up a loan program for the elderly living in rural areas, one of the Nation's most disadvantaged groups, and authorized some fundamental new approaches to rural development.

The latter include credit and technical assistance for on-farm and communitywide public recreation projects; shifts in land use to more suitable, more needed enterprises; and assistance to public agencies as they move to build a more satisfactory rural environment.

Modernization of FHA was begun in 1961, continued in 1962 and, I trust, will be enlarged upon this year.

For plainly the work of this agency, in all its many facets, adds up to the most practical kind of rural area development.

FHA's supervised credit programs are helping reverse the economic deterioration which has blighted so many of the small town and countryside communities of America in the past decade.

I cannot speak for the rest of the Nation. But I testify that the Farmers Home Administration program in Michigan serves as a vigorous force making for general farm and rural prosperity.

In 1962 the agency loaned nearly $13.5 million in my State for a variety of purposes. This was more than twice the amount loaned in 1960.

This large investment that Farmers Home Administration is making in rural people and rural America is a net gain for the people concerned. The money would not otherwise have been available. The loss of farm families, of households, of community improvements would not have been prevented.

In some areas of Michigan, the growth of the recreation business has been handicapped by a lack of capital. This is particularly true where farmers would like to convert farm resources, such as lake shore lines, woodlots and fields, to recreation uses. Now Farmers Home Administration is authorized to supply some of this capital, at least.

Another example from my State. In the Upper Peninsula, important economic advantages would result from some long-range land planning and development measures. Such measures not only would strengthen agriculture but also enable large-scale recreation and other developments. Under another new loan program of Farmers Home Administration, capital is now available for this purpose. Here is a field in which private capital has too often been insufficient or completely lacking.

Although the program is only a few months old, Farmers Home Administration already has 138 applications for loans to finance on-farm recreation enterprises and other shifts in land use. New York and North Carolina lead all the other States, with 23 and 13 applications, respectively. Proposed projects include plans for hunting preserves, fishing and camping enterprises, public parks, and swimming pools.

REA AIDS RURAL RECREATION

The 1,000 REA-financed rural electric systems and 800 REA-financed telephone systems can be of assistance to local people in rural areas in the development of additional commercial recreation enterprises. They can provide these enterprises with modern electric and telephone service. They can help provide technical assistance needed to develop sound enterprises and help in finding credit sources, calling on REA itself for additional help in these areas when it is appropriate. Under section 5 of the Rural Electrification Act, the electric borrower can, when other sources of credit are not available on reasonable terms, help provide financing for electrical equipment, wiring, and plumbing needed in enterprises of this type which are within their rural service areas.

For some years now REA borrowers providing service in remote and isolated rural areas have been helping local people develop recreational sites. When the Southern Illinois Power Cooperative built a 3,000-foot earthen dam for its generating plant, the result was an artificial lake of 29,000 acres which now furnishes a tourist attraction south of Marion, Ill. Nearby Halsey, Nebr., an REA borrower provides electric service which makes possible summer camping for 3,000 4-H members each year on a site leased from the Forest Service.

Many rural electric co-ops in North Carolina work hand in hand with local groups to develop that State's recreational opportunities. One example is the Blue Ridge Electric Membership Corp., which serves a complete western village near Blowing Rock. At some distance from Jackson, Ga., another rural electric cooperative serves a modern camp and swimming area. A country club in western Pennsylvania was evolved from a farm, and its handsome building which was once a dairy barn is now served by the Central Electric Cooperative of Parker, Pa. Up to 2,400 young folk will enjoy the facilities of a 4-H club camp in Nicholas County, Ky., which depends upon a REA-financed system for its electricity. And in my own State of Michigan, where the gross income from tourists was in the neighborhood of $140 million a year as far back as 1959, REA borrowers serve a large number of hunting lodges, lake cottages, tourist camps and related businesses.

This is all rural area, and it is precisely in these rural areas that we look now for recreational potential.

Government assistance in launching sound commercial recreation enterprises can sometimes lend itself to ridicule when the nature of the assistance, the objective of that assistance, and the beneficial effects for all taxpayers are not understood. Most Members of the Senate have probably read some of the publicity on a $23,800 REA section 5 loan an Illinois rural electric co-op made to help a resort in its area finance snowmaking and other equipment. But look at the effect of the loan:

The president of the local bank has written that, combined with the loan he made to the resort, this REA loan helped get the new enterprise over the hump.

Jobs of some 10 to 20 people were provided at the resort itself.

One Saturday this winter, the local people report 5,000 people came to the resort, spending money for skiing, but also for food, lodging, gasoline, and other goods and services.

A new 64-unit motel has been built.

The electric co-op serving the resort is selling more power, helping its members use electricity and strengthening itself financially so that it can repay the REA loans and continue to provide good service.

And the taxpayer? The electric co-op guaranteed the repayment of that loan even if the resort failed. That is required under REA policies. And who can possibly determine the added income collected by all levels of Government due to the extra income of the people in that rural community?

Or consider a $50,000 recreation type loan by the Farmers Home Administration in Taos County, N. Mex. This county reported almost 14 percent of its labor force unemployed in 1961 and another 21 percent either working part-time or scratching a meager existence from farming. It will be interesting to see in a few years, as that Federal loan is being repaid, what the tourist income to the lodge and resort will do to those figures, and what the effect is on tax revenues to the local, State, and Federal Governments. Then we can determine how good an investment of Federal funds this has been from the viewpoint of taxpayers far from New Mexico.

ASC FARMER—COMMITTEES TEST NEW PROGRAM

As a part of the Food and Agriculture Act of 1962, the Congress authorized the Department of Agriculture to use up to $10 million to assist farmers in the conservation of cropland to grass, forests, wildlife habitat, and recreational facilities.

Since sufficient funds were not available to conduct the program on a national basis, a total of 41 test counties in 13 States have been selected to provide a broad cross-section of experience with different kinds of crops, land, and farms, different income levels, and different types of land use adjustment opportunities. Included in these counties are 75,147 farms and 7,246,075 acres of cropland.

Under this phase of the program farmers are being assisted in making needed conversions primarily to pasture or trees through adjustment payments, cost-sharing payments for the establishment of needed conservation practices, technical assistance, and in some Northern States forestry incentive payments.

Farmers in counties designated in these 13 States may file applications to participate in the program through March 22.

The Agricultural Stabilization and Conservation Service, including State and county ASC committees, will have responsibility for administration of the program. Farmers who are interested in participating in the program may file their applications at the county ASCS office. Farmers whose applications have been approved will then enter into either 5- or 10-year agreements with the county ASC committee, depending upon the type of enterprise being undertaken.

The agreements with individual farmers will be based on farm conservation plans which have been developed in cooperation with soil conservation districts and with technical planning from the Soil Conservation Service.

In addition to the 41 test counties, every State has been requested to recommend one or more projects for the conversion of cropland to an approved type of recreation use. Studies are currently being conducted in each State aimed at developing and recommending a list of suitable recreation projects. However, due to the limited nature of the program, only a small number of projects can be approved in each State.

In order to give farmers participating in the program as much help and encouragement as possible in making what, in some cases, may be an expensive, long-time, and difficult transition to other enterprises, adjustment payments are being made in a lump sum soon after a farmer enters into an agreement.

Conservation cost-share and forestry incentive payments will be made as soon as a practice is properly carried out or forest trees planted.

Technical assistance is being provided by such agencies as the Soil Conservation Service and the Forest Service. Where projects meet loan requirements, financial assistance may be provided by the Farmers Home Administration.

Until the present time, very little publicity has been given availability of funds or program details relating to recreational projects. Despite this fact, requests for more than 200 proposed projects have already been submitted from all parts of the country.

In most instances, farmers are requesting help in developing fishing, hunting and other outdoor recreation projects.

The following are examples of projects that Michigan farmers have suggested:

A 180-acre farm with 160 acres of cropland near Port Huron, Mich. The farmer is interested in developing a picnic area, riding trails, swimming pool, fish pond, ball park, miniature golf course, and a children's playground. A creek running through the farm could be further developed.

A 101-acre farm with 54 acres of cropland near Jackson, Mich. This farmer is interested in devloping a camping area, picnic area, swimming facilities, and a bridle path. His request indicates other such private or public facilities are not available in the area.

A 200-acre farm with 160 acres of cropland east of Morley, Mich. This farmer is interested in developing fishing, a hunting preserve, a limited boating area, and riding facilities. Income possibilities include six to eight saddle horses, with trails for riding and hiking and three or four fish ponds. He plans to build two cabins capable of housing a total of 16 persons, and in addition provide room and board for additional guests. The Little Muskegon River runs through the farm, thus providing a potential for added income through further development of fishing and boating facilities.

WATERSHED PROJECTS CAN BUILD RECREATION

As a former member of the subcommittee of the Committee on Agriculture and Forestry passing on watershed projects I have been impressed by the tremendous potential of watershed protection and flood prevention projects.

At least three aspects of watershed projects appeal to me greatly. One is their multipurpose character, the fact that they can be used to solve practically every community resource problem and meet every community resource need.

Each project can serve any or all of these purposes: Flood prevention, agricultural water management, municipal and industrial water supply, recreation, and fish and wildlife development.

A second aspect of watershed projects that impresses me is the fact that they offer a splendid mechanism through which rural and urban interests can work together to solve common community problems related to land and water.

The third appealing aspect of watershed projects is that they are initiated and controlled by the local people with the approval and assistance of the State. These are not Federal projects—the Federal Government merely gives technical and financial assistance in developing local projects.

The Congress, in the Agriculture Act of 1962, expanded the usefulness of watershed projects. Among other things it provided for Federal cost sharing on recreation developments in watershed projects. This was a big step forward. Congress also made it possible to provide for future water supply for municipal and industrial use in watershed projects. This, too, was an important new development. We of the Congress were pleased to provide these additional conservation tools. I am distressed to note that the President's budget does not provide for increases to take advantage of them. Except for additions earmarked for the pay act increase and higher postal rates, new fund requests for the watershed program are held to last year's levels.

This simply is not realistic. The new tools were provided because the people want them and because they are needed. But these tools are no good whatever unless we use them. If we are to use them we must have increased funds that will make such use possible.

I hope my colleagues on the Appropriations Committee will give full consideration to this real need for additional funds to implement additional authorities in multipurpose watershed projects. I urge them to consider also the acute problem of providing additional technical help in soil conservation districts.

RECREATION IN THE NATIONAL FORESTS

We take great pride in Michigan in making all outdoors our classrooms where our young people and their parents can study science, conservation, arts, and crafts, and where they can enjoy recreation. The classrooms are the camp and picnic sites, the wildlife habitat, the boating docks, and the trails of our forests.

There are now nearly a thousand-family units in campsites in the four national forests in Michigan. The demands on them are heavy.

There is special interest in seven areas in these forests. These are the areas that the U.S. Forest Service has designated to demonstrate multiple-use management of public and private lands.

Private capital has financed the development of our popular winter sports sites—Silver Valley, Caberfae, and the Manistee winter sports area on the Huron and Manistee National Forests, and Thunder Bowl, Mission Hill, and Indianahead Mountain on the Hiawatha and Ottawa National Forests.

The resort complex in each instance is enhanced by the winter sports, organization camps and other public facilities which are provided by the U.S. Forest Service.

We are strengthening our recreational facilities in many ways. This past year the Congress at my urging enabled the Forest Service to add a 1,400-acre shoreline tract to the Manistee National Forest, on Lake Michigan.

The Accelerated Public Works Act made it possible to speed up work that has been underway in the national forests for several years. One thousand two hundred men have been employed in 43 recreation areas of the national forests in Michigan—building tent and picnic sites, fireplaces, boat docks, and parking areas, and roads.

All of these improvements are necessary if the national forests are to serve the increasing number of visitors from our cities and from out of State.

What is being done now will help us meet the demands on forestry for recreation in the next 2 or 3 years. Our people are making long-range plans to draw more fully on Michigan's superb forest resources for recreation. They have formed more than 50 committees on rural area development in the heavily wooded counties. Within the past year the committees in more than half of these counties have drawn up inventories of their resources and long-range plans for using them.

WHAT IS THE TASK AHEAD?

In these and other ways, a beginning has been made. What we must do now is:

Recognize the recreation needs of our rapidly growing population in considering all legislation affecting both public and private recreation facilities;

Recognize the fact that more income must be provided for more people and that, in this era of automation, many of these must be the service-type jobs created by recreation; and

Recognize that fewer acres of land will be needed to produce food and fiber and that the creation of nonfarm income is the most humane, economical solution to many of the resulting problems.

Recognizing these things, the Congress should consider greater expenditures to divert more acres to publicly owned recreation, whether that acreage is controlled by the Federal Government, State government or local governments. The Congress should appropriate the necessary funds to accelerate the various Federal programs operating under existing legislation. Then the Congress should design additional legislation to fill the gaps.

One of the gaps we know exist is in financing a large recreation complex in an area which cannot get an ARA loan. The needs are too great to be met by the Small Business Administration. The complex is not being started by an association of farmers, so it is ineligible for a Farmers Home Administration loan. It cannot get private financing which finds more attractive opportunities elsewhere. Despite all the benefits it might bring to the area and to the Nation, a project conceived in such a situation will not be built.

During this session, we should devise ways to provide the help that is needed for the develpment of adequate recreation facilities in the public interest. We must recognize the contributions of programs like the Farmers Home Administration, the Rural Electrification Administration, the Soil Conservation Service, the Area Redevelopment Administration, and the Small Business Administration to the development of recreation enterprises, and we must supply them both the tools to do the job and the direction to assure their appropriate attention to the problem.

We must stretch Federal dollars by participating in matching programs with the State and local governments to the maximum extent possible. In encouraging commercial recreation, we must concentrate, to the extent possible, on low interest, longterm loans rather than grants, although there may be instances where even grants will be justified in order to serve the greatest public need.

If we do these things, we will be making investments, not expenditures. The way the books are now kept, these may appear as red ink, but we and our children will be reaping the benefits. While the loans are being repaid, we and they will be enjoying happier, fuller lives. Rural people will have better incomes, and surplus farmland will be in more productive, profitable uses.

We often hear about bequeathing our children a public debt. None of us wants to do this, but if we do not begin developing now our recreation resources, we will bequeath them a still greater debt plus a life confined to the asphalt and concrete of crowded cities, miles from any open field on which they can step, any woodland in which they can walk, or any stream to enjoy.

THE CUBAN EXILES

Mr. MORSE. Mr. President, I have been considering all day breaking into the Senate debate for the insertion in the RECORD of an article published in this morning's Washington Post entitled "U.S. Rejects Terms Set by Cuban Exile." However, I thought I would wait until the Senate had disposed of the Youth Corps bill. This is the first opportunity I have had to make these very brief remarks on the article.

I ask unanimous consent that the article be printed in the RECORD at this point in my remarks.

The ACTING PRESIDENT pro tempore. Is there objection?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES REJECTS TERMS SET BY CUBAN EXILE—DEMAND MADE FOR $50 MILLION INVASION FUND

(By Chalmers M. Roberts)

The row over American policy toward Fidel Castro's Cuba blew up again yesterday with an administration charge that a Cuban exile leader had tried to serve a $50 million ultimatum on the U.S. Government.

Earlier yesterday news dispatches from Miami reported that Jose Miro Cardona was offering his resignation as president of the Cuban Revolutionary Council in token of a clash with the Kennedy administration over Cuban policy.

A few hours later the State Department said publicly that while the administration and Miro Cardona had seen eye to eye on the goal of a free Cuba they were not in accord on steps to attain that goal.

EXILE LEADER'S DEMAND

Almost simultaneously U.S. Government officials reported that Miro Cardona had made what they said amounted to an ultimatum to the United States: either give him $50 million to train and equip an exile army to invade Cuba or give him an intimate role in the preparation and implementation of an early invasion of Cuba by U.S. forces.

Both parts of the ultimatum, these officials said, were unacceptable to the administration.

The Cuban exile leader was in Washington last week to confer with American officials responsible for Cuban affairs. He returned to Miami last Saturday. He was reported to have spent last weekend preparing a 13-page statement charging the United States with going back on promises to encourage action against the Castro regime.

Many Cuban exile leaders now in the United States were dismayed at President Kennedy's recent firm crackdown on any more hit-and-run attacks on Cuba, including attacks on Soviet ships in Cuban ports. However, there have been differences of opinion among the exiles on how best to harass Castro.

The Presidential crackdown on hit-and-run raids created less of a political reaction within the United States than some administration officials had feared. Yesterday's prompt revelation of Miro Cardona's reported ultimatum may have been designed to cut off further criticism which almost certainly would have followed news of his resignation.

Whether the reported ultimatum will squash a new round of calls for action against Castro, especially from critical Republican Members of Congress, remains to be seen, however.

A spokesman for the Cuban Revolutionary Council in Miami was quoted yesterday by the Associated Press as saying the group will reject Miro Cardona's resignation.

The spokesman said that a four-man delegation from Washington, headed by Robert Hurwitch of the State Department's Cuban Desk, met with Miro Cardona yesterday in an attempt to dissuade him from resigning.

He said the Kennedy crackdown meant that anti-Castro forces now have no more bases in the Bahamas, British islands near Cuba, and he commented that this could have disastrous results for the Cuban underground movement. Britain has cooperated with the United States in the crackdown.

Miro Cardona was the American-picked leader of the combined Cuban exile groups at the time of the April 1961, Bay of Pigs invasion fiasco. He was supposed to go to Cuba and proclaim a free government once the troops won a beachhead. He never got there; instead he was kept incommunicado during the invasion by a Central Intelligence Agency team in a Miami area house.

He has been criticized for being too close to the United States. His resignation apparently was intended to show both his independence and the frustration of many Cuban exiles at the Kennedy crackdown.

The President's position is that the hit-and-run raids cause no real harm to the Castro regime and indeed have a contrary effect by making it more difficult to get Soviet Premier Nikita S. Khrushchev to remove the 12,000 to 13,000 Soviet troops still in Cuba.

Mr. Kennedy's critics have implied that he must have made some secret deal with Khrushchev, a charge flatly denied. The new disclosures may add a new round of accusations.

Mr. MORSE. Mr. President, the article points out that Jose Miro Cardona, chairman of the Cuban Revolutionary Council, is reported to have made a $50 million ultimatum on the U.S. Government for the financing of another attempt on the part of Cuban exiles to invade Cuba, and thereby at least through the back door—although I think most of us agree it would be through the front door—seek to involve the United States of America in war.

Mr. Cardona happens to be the recipient of a privilege, the recipient of the privilege of being a refugee in this country, an exile, entitled, through the sufferance of the United States, to sanctuary in the United States.

Several days ago on the floor of the Senate I spoke on the subject of Cuban exile attempts to involve us in war. I shall continue to speak about it, as long as there is a group of Cuban exiles in this country who are violating the privilege that we have granted to them, and until all the necessary steps have been taken to hold them responsible and restrict them to their rights of sanctuary in this country.

There is no doubt about what Cardona is up to. He will be satisfied with nothing less than war with Cuba. He will be satisfied with nothing less than American intervention in Cuba, and the sacrifice not only of American boys in that intervention, but also the sacrifice of many thousands of civilians in this country if even a limited war with Cuba comes about. It will not be a limited war.

I repeat what I said the other day, that the decisions on American foreign policy should be made by the United States, not by Mr. Cardona. He has not even been able to unite the Cuban exiles in this country in any united program. They are composed of a host of factions. He has not been able to give them united leadership, although the Cuban Revolutionary Council is reported by the Washington Post as having refused to accept his resignation from the chairmanship of the Cuban Revolutionary Council. It is their privilege to do so if they want to follow that course of action.

Let us take a look at what the article goes on to say:

> The Cuban exile leader was in Washington last week to confer with American officials responsible for Cuban affairs. He returned to Miami last Saturday. He was reported to have spent last weekend preparing a 13-page statement charging the United States with going back on promises to encourage action against the Castro regime.
>
> Many Cuban exile leaders now in the United States were dismayed at President Kennedy's recent firm crackdown on any more hit-and-run attacks on Cuba, including attacks on Soviet ships in Cuban ports. However, there have been differences of opinion among the exiles and how best to harass Castro.

Mr. President, as one American, I am fed up with Cuban exiles attacking American foreign policy while they are here in our country by our suffrance. I am sick and tired of hotheaded Cuban exiles, many of whom are Batistaites. Let us look at the cold, ugly truth.

If a great many of these exiles were put in power in Cuba they would attempt to reestablish a Facist order such as existed under Batista, just as harmful to human rights as the Communist order of Castro. They both are intolerable.

The American people ought to be told that a surprising number of these Cuban exiles are Cuban oligarchs.

In my judgment they were as serious enemies to Cuban democracy while they were there as are the Castroites now. The senior Senator from Oregon has been heard to say before, as far as human rights and human liberties and civil liberties are concerned, that there is no difference between a Fascist and a Communist.

Be that as it may, I say the time has came to make clear to the Cardonas that if they do not like it here, they should get out. It is time to lay down the American policy that if they continue to attempt to interfere with and intervene in American foreign policy, they must be deported. The sooner the Cardonas are deported, the better, if they are going to take the position that they will violate their so-called sanctuary in this country by preparing a 13-page attack on the President of the United States. It is about time that we make clear to them who is the Commander in Chief of American foreign policy. It is about time that Members of Congress, on both sides of the aisle, make clear to the President that we are united when it comes to the matter of interference and intervention on the part of a group of foreigners, to whom we have given sanctuary on our soil in order to save their very lives from Castro assassination, if they were still in Cuba.

As one member of the Committee on Foreign Relations and as chairman of the Subcommittee on Latin American Affairs, I once again serve notice on the Cuban exiles that I will not hesitate to speak out against what I consider to be their illegal course of action in this country in violation of their sanctuary and their rights of refuge, when they persist in attacking the foreign policy of the United States.

It is about time to tell them that while they are in this country they must keep their mouths shut, and stop their efforts to get us into war, or they must get out of this country.

I say to my President again, as I said the other day, when these exiles hold some of their press conferences, as they did when some of these exiles came back from an attack on a Russian ship the other day, that they ought to be met by U.S. marshals and thrown into jail until they can be deported. They have no right under international law while they are in this country to seek to intervene in American foreign policy.

That is for Americans to determine, not for the Cuban exiles. That goes for Mr. Cardona and for all the rest of the Cuban exiles, as well.

TRANSACTION OF ADDITIONAL ROUTINE BUSINESS

By unanimous consent, the following additional routine business was transacted:

JOINT RESOLUTION OF MAINE LEGISLATURE

Mrs. SMITH. Mr. President, on behalf of myself, and my colleague, the junior Senator from Maine [Mr. MUSKIE], I present, for appropriate reference, a joint resolution of the Legislature of the State of Maine memorializing Congress to extend the northern terminus of the Interstate and Defense Highway System in Maine from Houlton to some point located on the northern boundary of the State of Maine.

There being no objection, the joint resolution was referred to the Committee on Public Works; and, under the rule, the joint resolution was ordered to be printed in the RECORD, as follows.

RESOLUTION OF THE STATE OF MAINE

Joint resolution memorializing Congress to extend the northern terminus of the Interstate and Defense Highway System in Maine from Houlton to some point located on the northern boundary of the State of Maine

We, your memorialists, the Senate and House of Representatives of the State of Maine in the 101st legislative session assembled, most respectfully present and petition your honorable body as follows:

Whereas it has been recognized that the Nation's economy and the Nation's security require the construction of a National System of Intertsate and Defense Highways; and

Whereas the primary responsibility for construction of such a system rests in the Federal Government; and

Whereas the objective is to complete the presently designated national system by 1972; and

Whereas the people of Maine through appropriate action have deemed it essential that the highways of this State be integrated into the Interstate and Defense System; and

Whereas the Department of Defense of the U.S. Government has extensive defense installations in northern Aroostook County; namely, Loring Air Force Base located in Limestone, Maine, and supplemental installations to this base also located in the general area of northern Aroostook County, in the State of Maine: Now, therefore, be it

Resolved, That we, your memorialists, recommend and urge to the Congress of the United States that appropriate action be taken to require the Department of Commerce through the Bureau of Public Roads to relocate the northern terminus of the Interstate and Defense Highway System in Maine from Houlton to some point on the northern boundary of the State of Maine which would more adequately serve the more heavily populated areas of central and northern Aroostook County and would provide additional highway facilities for defense installations in northern Aroostook County; and be it further

Resolved, That a copy of this memorial, duly authenticated by the secretary of state, be immediately transmitted by the secretary of state to the Senate and House of Representatives in Congress and to the Members of the said Senate and House of Representatives from this State.

JOINT RESOLUTION INTRODUCED

A joint resolution was introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. DOUGLAS (for himself, Mr. LONG of Missouri, and Mr. MCCARTHY):

S.J. Res. 69. Joint resolution designating the corn tassel as the national floral emblem of the United States; to the Committee on the Judiciary.

(See the remarks of Mr. DOUGLAS when he introduced the above joint resolution, which appear under a separate heading.)

DESIGNATION OF THE CORN TASSEL AS THE NATIONAL FLORAL EMBLEM

Mr. DOUGLAS. Mr. President, on behalf of myself and Senators LONG of Missouri, and MCCARTHY, I introduce, for appropriate reference, a joint resolution to have the corn tassel designated as the national floral emblem. I ask unanimous consent that the resolution be printed in the RECORD and that it lie on the desk until the end of business on April 24, 1963, for additional cosponsors.

Mr. President, the recent warm weather seems to have stirred the hearts of those people who would have the United States adopt as a floral emblem flowers which are neither native to our great Nation nor productive to its great economy. While I love all flowers and have no negative attitude toward any of them, I do believe that the United States should adopt as its national floral emblem the corn tassel, the unique symbol of America in all its strength and beauty.

The ACTING PRESIDENT pro tempore. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD and held at the desk, as requested by the Senator from Illinois.

The joint resolution (S.J. Res. 69) designating the corn tassel as the national floral emblem of the United States, introduced by Mr. DOUGLAS (for himself and other Senators), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Whereas for more than three and one-half centuries from the birth of the United States, through the development of the Thirteen Colonies and the stern years of the Revolutionary War, to the prospering of all parts of this great land, corn and corn products have helped build the United States; and

Whereas in the Nation's Capital recognitions of and tributes to our wonderful American plant have been carved in marble, the cornstalk columns, first decoration in our Capitol, placed there by order of President Jefferson; the thirty ears of corn carved in pink granite on the Lincoln Memorial testifying to the thirty frugal years of the Emancipator's early life during which he was nourished by corn; and

Whereas in the White House a further tribute to corn is to be seen on President Harrison's china, bordered with gold sprays of the corn plant; and

Whereas corn with its myriad byproducts has built vast industrial plants, great schools of learning, costly temples of worship, and has given employment to countless millions of men and women; and

Whereas our national floral emblem should be distinctively and wholly American, and corn is native to our Nation; and

Whereas since 1607 corn has been rooted in the very fabric of the United States, and it is as significant and distinctive as our flag and as necessary to and as much a part of our Nation as the air we breathe: Now, therefore, be it

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That the corn tassel, the floral element of corn, is hereby further honored and is hereby designated as the national floral emblem of the United States, and the President is requested to declare such fact by proclamation.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, if there is no further business to be transacted, I move that the Senate adjourn until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 10 o'clock and 50 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Thursday, April 11, 1963, at 10 o'clock a.m.

EXTENSIONS OF REMARKS

The Imperative Issue

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1963

Mr. COHELAN. Mr. Speaker, there is no greater problem facing the Nation and the world today than the prospect of unlimited nuclear proliferation. The continuing arms race already presents a grim and foreboding picture, and as the nuclear club expands the balance of terror becomes ever more precarious.

President Kennedy, in his March 21, 1963, press conference, said:

> Personally I am haunted by the feeling that by 1970, unless we are successful, there may be 10 nuclear powers instead of 4, and by 1975, 15 or 20. With all the history of war, and the human race's history has been a good deal more war than peace, with nuclear weapons distributed all through the world, and available, and the strong reluctance of any people to accept defeat, I see the possibility in the 1970's of the President of the United States having to face a world in which 15 or 20 or 25 nations may have these weapons. I regard that as the greatest possible danger and hazard.

The road to an effective treaty banning nuclear testing and to a meaningful program of arms control and reduction is without question difficult. We are confronted with opponents who are all too often intransigent. But I believe that we must persevere in our efforts to secure such a treaty.

As a distinguished group of American scientists reported in an open letter appearing in this morning's Washington Post:

> Careful studies by the formost experts in the United States and by the President's advisers on national security, including those in the Defense Department, have furnished the conclusion that the risk of continuing the arms race without a test ban treaty is considerably more than the risk that such a treaty might be violated by secret testing.

Mr. Speaker, I believe that this very thoughtful letter and the excellent article by Mr. Max Freedman, which appeared recently in the Washington Post, deserve our attention, and I commend them to our colleagues for their consideration.

The letter and article follows:

[From the Washington Post, Apr. 9, 1963]

A Communication: Statement on the Test-Ban Treaty

In view of recent controversy concerning the desirability of concluding a nuclear test-ban treaty with the Soviet Union, we wish to make the following statement in support of the efforts of the U.S. Government to conclude such a treaty as soon as it can be negotiated.

Our primary reason for support lies in the fact that a test-ban treaty is in the best interests of the United States and of world peace. A treaty would reduce the speed of the present arms race, inhibit the spread of nuclear weapons to nonnuclear powers, reduce the likelihood of nuclear war, and prevent the extension of the hazards of fallout. We therefore commend the President of the United States for his sincere attempt to reach a workable agreement with the Soviet Union on a test ban, and urge that Members of the U.S. Congress and of the general public consider the question of the test-ban treaty in the light of scientific fact and rational argument rather than in terms of partisan politics.

Unfortunately, public debate on the issue has been confused in recent weeks by some Members of Congress and by public figures who have attacked the test-ban treaty by spreading a completely false view of the test-ban situation. They also would appear to be operating on the fallacious assumption that American security can best be maintained by unlimited development of our nuclear weapons capability no matter what the other nations may be free to do in this regard. The attackers have failed to recognize the clear fact that once the overkill capabilities of the Soviet Union and the United States have reached their present level, and hardened missile bases are in place, making a successful disarming attack impossible for either side, an increase in nuclear capacity by one side or the other does not upset the balance of deterrence.

DETERRENCE REMAINS

Even though we probably possess between three to eight times as much intercontinental nuclear weapons capability as the Soviet Union, we would still have little chance of escaping an incredibly destructive retaliation were we to strike first with our strategic force. Since the smaller Soviet force is enough to deter us from a nuclear attack on the Soviets, a considerable change in force levels would still leave us with more than sufficient force to deter the Soviets from making a nuclear attack on us.

The opponents of the test ban treaty also base their argument on the fallacious assumption that any attempt on our part to negotiate with the Soviet Union means that we are taking a soft political line and making dangerous concessions. The treaty opponents therefore consider any lowering of the number of onsite inspections by the United States simply as a sign of weakness and of yielding to the advantage of the Soviet Union, rather than as realistic negotiation to improve national security. In fact, during the period since the testban discussions began in 1958, detection techniques have been rapidly improving and may be expected to improve still further. It is now possible to detect many of the explosions within a given country by stations outside that country, and the number of onsite inspections required for checking the identification of earthquakes versus explosions has been greatly reduced. Research has also shown that there are many fewer earthquakes in the Soviet Union than was formerly thought, thus making a reduction in the possibility of their being confused with nuclear tests.

The strategy of the opponents of a treaty is to exaggerate the risks of clandestine testing and to minimize the risks of a continuing nuclear arms race. Among the most flagrant violations of fact which they have publicized in these matters are the recent statements by Dr. Edward Teller that a test ban agreement "would be virtually unpoliced" and "would not interfere with Russian progress," and Senator DODD's claim that the test ban policy of the Eisenhower and Kennedy administrations "has already cost us our nuclear superiority over the Soviets."

MISSTATEMENT CHARGED

In making this claim, Senator DODD is completely misstating the facts as set forth by responsible Department of Defense officials. If the Soviets learned more than we did in the 1961–62 testing and narrowed the gap between us, it was because they had more to learn. There is every reason to believe that they would have narrowed the gap even more rapidly had there not been a moratorium and had there been continuous testing on both sides after 1958. Conversely, if we had been able to conclude a test ban treaty in 1959, the Russian tests of 1961–62 would not have taken place and we would still have our great superiority of nuclear weapons technology. By no stretch of the imagination could these tests have been carried out secretly underground.

The direct advantages to the United States of a test ban treaty are these:

1. Dependable assurance that no atmospheric testing, which is the really important kind, is taking place.

2. Reasonable assurance that underground testing of small nuclear weapons is not taking place.

What assurance do we have that in the event of a test ban treaty the Soviet Union would not conduct secret underground tests?

Even though a single small test might be concealed by being confused with an earthquake if the test were conducted in a region of frequent earthquake occurrences, any significance series of tests would be almost impossible to conceal.

RISK IS EMPHASIZED

It is extremely unlikely that the Soviet Union would be willing to risk the breakdown of the treaty for the marginal gain they might achieve by testing explosions small enough to escape detection. It is important to recall that American nuclear weapons experts insisted that underground testing was of little value for military purposes when, in 1961, our testing was temporarily limited to underground explosions. We have additional assurance in the fact that the Soviet Union has agreed to three onsite inspections should suspicious indications of underground testing be discovered by the detection system of the United States and the United Kingdom, and is willing to permit a number of automatic seismic stations on Soviet territory.

The Soviets surprised us by starting big atmospheric tests in 1961 when we thought at that time they would continue negotiations for a test-ban treaty. The opponents of a present treaty now claim that this means the Soviets broke a test ban agreement in 1961. On this basis they warn against entering another agreement. It is too often forgotten that there was no test ban agreement (much less a treaty) in 1961; and that President Eisenhower on December 29, 1959, terminated the 1-year informal moratorium by announcing, "The voluntary moratorium on testing will expire on December 31." Even though the Soviets and most other nations have broken treaties, a test ban treaty would be very different from a mere cessation of tests, particularly if adhered to by an increasing number of nations, because it would be in the interest of the United States and the Soviet Union to abide by it. To be on the safe side, our developments and preparations would continue as far as possible without testing, and there should be no doubt that American testing would be resumed if the Soviets should break the treaty by again resuming tests in the atmosphere.

Even if the treaty should be abrogated after a time or should fail to develop into a world test ban because of the recalcitrance of France or China, it would not have interfered with our nuclear development appreciably more than the Soviet. The treaty would emphasize above all the common interest of the United States and the Soviet Union in trying to avoid nuclear war.

In summary, the test ban treaty, as proposed, will stop atmospheric testing as long as the treaty is in effect. It will leave some uncertainty about very small tests (one ten-thousandth the size of the H-bomb) but could reasonably be expected to deter the Soviets from even small-scale cheating (a) because it would teach them relatively little, (b) because of the serious risk of being caught and (c) because there are good reasons for the Soviets to want the treaty to function.

Careful studies by the foremost experts in the United States and by the President's advisers on national security, including those in the Defense Department, have furnished the conclusion that the risk of continuing the arms race without a test-ban treaty is considerably more than the risk that such a treaty might be violated by secret testing. We support the President in this conclusion and believe that once the Members of Congress and the people of the United States are aware of the realities of our present situation and of the facts of the test-ban case, that they too will support the President in his effort to find answers to the greatest question before the world today, the question of survival.

In Perspective: Humphrey and Disarmament

(By Max Freedman)

Without Senator Humphrey the debate on disarmament would proceed against hopeless odds. He has been President Kennedy's chief supporter in Congress for a prudent and responsible treaty. When Mr. Eisenhower was President he gave the same kind of courageous support to a Republican administration. It is not the least of his merits that he believes that disarmament, like defense policy, should be above mere partisan skirmishing. In view of this record he is entitled to a thoughtful hearing when he makes a major statement on the disarmament negotiations at Geneva.

Yet this careful examination of his proposals is precisely what has been lacking. It almost seems as if the cynical principle is being followed of ignoring Senator Humphrey's points because one cannot answer them. Some time ago he delivered an elaborately documented analysis of the disarmament deadlock but his address met with little response in the Senate and with only scattered attention in the country. This surely is shabby treatment for a Senator who is carrying the lonely burden of protecting the public interest in a safeguarded disarmament treaty.

It may therefore be some contribution to the public debate if one summarizes the main points which Senator Humphrey is now making.

He points out that in 1958 it was the belief of both Russian and American scientists that there would have to be an international inspection system with about 180 control posts, of which 19 would be in the Soviet Union. It would have taken between 4 to 6 years to install this system; scores of international technicians would have been included in the project; the system would have cost $2 billion to build and several hundred million dollars a year to maintain. Today no such system needs to be established at all.

The United States, like Russia, can now identify nuclear tests in the atmosphere, under water, and in outer space. If Russia would agree to a treaty outlawing such tests, the risks of successful evasion or cheating would form no problem. The real concern is with tests conducted underground where they may be harder to detect or may be confused with earthquakes.

Senator Humphrey reports that in the past 5 years the United States has greatly improved its ability to identify earthquakes in Russia. It is a generous figure to suggest that these unidentified occurrences in any one year will be "only a few dozen at most." Under the British-American treaty each of these mysterious events would be subject to inspection. From a scientific or technical standpoint, the problem of security is wholly manageable. Russia would soon learn this fact if it were willing to give the proposed treaty a fair trial.

Senator Humphrey asked the Kennedy administration to make available the results of studies of underground events in Russia from 1958 through 1962. He has quoted "a competent administration official in whom I repose the highest confidence" as saying that the United States has the present ability to monitor a test ban agreement with full safeguards for American security.

Under these new arrangements it would be necessary to supplement these monitoring devices by inspections inside Russia carried out by inspectors who could be accompanied by Soviet observers. The inspected area would be small and would be located by using the records of at least four detection stations. There would be no more than seven inspections each year. The treaty would lapse and the United States would be free to resume its tests if Russia refused to agree to any suggested inspection or was caught in a secret test.

Since the 1960 campaign Mr. Kennedy has shown much more eagerness than the general public to reach a disarmament agreement with Russia, above all on a test ban treaty. The public has tended to view the Geneva talks with resigned apathy as a meaningless charade. Yet all the time hard-working and often misunderstood officials have been closing the gap between the Russian and American positions, while always striving for a treaty that would be endorsed by two-thirds of the Senate. It is high time that we realize that American public indifference is very helpful to Russia in resisting a treaty. For Russia can twist and equivocate at Geneva without being called to account by a bored American press.

Tax Cut and Deficit Spending

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1963

Mr. BERRY. Mr. Speaker, let us face it. J.F.K.'s program for tax cut and deficit spending to avoid a business slump is nothing less than an admission of bankruptcy.

After 2 years in the White House he says that we can no longer pay our way and keep the economy rolling. Since the taxing end of the tax-and-spend philosophy has become politically unpopular, his plan obviously is to write off the debt through inflation—just about 10 percent the first year.

Here we are in peacetime, a creditor nation, with gross national product at its historical peak, with more people employed at higher wages than ever before anywhere, and now he tells us that we can no longer pay our way, and he wants to start the printing presses.

If the country is not insolvent, then where is the bankruptcy, except in the minds of the inexperienced idea men in the White House?

SOS: Save Our Streams

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 10, 1963

Mr. METCALF. Mr. President, in January of last year the bipartisan Outdoor Recreation Resources Review Commission, authorized in the 85th Congress, issued its comprehensive report entitled "Outdoor Recreation for America." Most of us are aware of the outstanding job done by the Commission and its staff in preparing this report.

The Commission was headed by Chairman Laurance S. Rockefeller and included as members several of our distinguished colleagues in this and the other body. All Americans have reason to be thankful to the Commission for its thorough and excellent analysis of what must be done to insure recreation opportunities for our citizens.

As the letter of transmittal for the report points out:

> The report surveys our country's outdoor recreation resources, measures present and likely demands upon them over the next 40 years and recommends actions to insure their availability to all Americans of present and future generations.

As the junior Senator from a State which possesses an abundance of outdoor recreation resources, I congratulate the Commission for its outstanding contribution to the discussion of recreation needs of our citizens.

I have studied the ORRRC report carefully and find myself in complete agreement with respect to many of the recommendations it contains. Several of the important proposals before this Congress follow the recommendations of the report. One of its recommendations—one with which I am immediately concerned—has to do with routing of highways and the effect on recreation resources.

Mr. President, I call the attention of my colleagues to recommendation 8-13 regarding highways on page 136 of the ORRRC report. It states:

> Federal and State Governments should give explicit recognition to recreation values in the planning and design of highways.

Mr. President, I ask unanimous consent that the ORRRC report statement supporting this recommendation be printed in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

HIGHWAYS

> Recommendation 8-13: Federal and State governments should give explicit recognition to recreation values in the planning and design of highways.
>
> Mobility is a key factor affecting outdoor recreation. Routing, design, extent, and capacity of highways exert profound influences on the kind and location of pressures brought to bear on recreation resources.
>
> Through a number of programs, the Federal Government is concerned with the construction of every major road in the Nation. These programs, which collectively involve large sums of Federal money each year, strongly influence the availability of recreation opportunities. Yet with the single exception of the billboard provision of the Federal-Aid Highway Act of 1958, there is no formal consideration of outdoor recreation values in any Federal legislation concerned with financing and constructing the Nation's roads.
>
> Highway policies thus far have been directed primarily toward the accommodation of greater speeds and larger volumes of traffic. While the design and location of roads for efficient and safe transportation is clearly of high priority, other considerations merit recognition. Travel to reach outdoor recreation facilities is a major use of many of our highways. Roads and highways are multiple-use structures serving a variety of public purposes, and outdoor recreation is an important one of these purposes. Wherever feasible, provision should be made for such compatible recreation opportunities as hiking, bicycling, and picnicking. In some cases, highway fills can serve as dams to impound water for recreation purposes.
>
> New highway design should take esthetic considerations into account. Wherever possible, highways constructed along any body of water should be so designed as not to impair recreation values. Additional measures should be adopted to prohibit objectionable developments from marring roadside scenery.

Mr. METCALF. Mr. President, the Outdoor Recreation Resources Review Commission has pointed out that, with one exception, there is no formal consideration of outdoor recreation values in any Federal legislation concerned with financing and constructing the Nation's roads. This is in spite of the fact that the Federal Government is involved in one way or another in construction of nearly every major highway in this country.

Mr. President, the recommendation of the ORRRC report substantiates what many people have been saying for years, that highway construction is damaging some of this country's finest recreation resources. With this problem in mind, I introduced S. 2767 in the 87th Congress. The bill died in the Committee on Public Works with the adjournment of the Congress last fall.

Early in the current session of Congress I introduced, on behalf of the distinguished junior Senator from Utah [Mr. Moss] and myself, an identical bill which has been designated S. 468 and referred to the Committee on Public Works. Since S. 468 was first introduced, two more of our colleagues, the distinguished junior Senator from Alaska [Mr. Gruening] and the distinguished junior Senator from Wisconsin [Mr. Nelson], have joined in cosponsoring the bill.

S. 468, known as the S O S—save our streams—bill, proposes amendment of the Federal-Aid Highway Act to require approval of the Secretary of the Interior, in consultation with appropriate State agencies, of plans and specification for Federal-aid highway construction. The bill is designed to help protect fish, wildlife, and recreation resources from damage due to such highway construction.

Mr. President, adoption of S. 468 would represent a big step in the direction recommended by the Outdoor Recreation Resources Review Commission. The bill would give "explicit recognition to recreation values in the planning and design of highways," as recommended in the ORRRC report.

I have taken the floor many times in the last 2 years in support of this bill. The Congressional Record has carried literally dozens of articles, editorials, statements, letters, and other supporting materials from all parts of the country.

Mr. President, I urge my colleagues to study this problem as it relates to their own States. When they have thoroughly considered the arguments for and aganist S. 468, I am sure they will decide, as I have, that legislation is desperately needed in this area to help protect what remains of our once abundant fish, wildlife, and recreation resources.

Part 15: Let's Keep the Record Straight—A Selected Chronology on Castro and Cuba (February 1, 1963–February 7, 1963)

EXTENSION OF REMARKS
OF

HON. DON L. SHORT

OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1963

Mr. SHORT. Mr. Speaker, part of my chronology could be termed the "confessional" because various Government officials now began confessing that things had taken place in the Cuban affairs which the public had already learned of through other public statements.

For example, on February 1, Secretary of State Dean Rusk conceded there was indeed a "significant Soviet military presence in Cuba which is of great concern to the United States." Although not news to many, this nevertheless made it official.

Senator Strom Thurmond—southern Democrat—now entered the controversy by statements in a newsletter home as to the military buildup in Cuba. He gave a figure of between 30,000 to 40,000 troops in Cuba, under command of a Soviet general. Secretary Rusk had stated there were 16,000 Soviet troops in Cuba. Pentagon "spokesmen" declared the Senator's information was at wide variance with U.S. intelligence data—and suggested they would appreciate the Senator providing proof of his statements. Although ignoring the challenge he did not change his estimates—instead announced there was between 100 and 200 ballistic missiles, with ranges of up to 2,200 miles, still in Cuba. Pentagon "spokesmen" countered with a statement that there was no evidence of such ballistic missiles in Cuba, and neither was there any evidence of nuclear warheads. Neither won the argument—and neither gave an inch. However, no one cried "partisan politics" for the obvious reason that the Senator was a majority party member.

An Assistant Secretary of State for Inter-American Affairs also conceded in a television appearance that it was possible Russian troop strength in Cuba was 10 times what it was before the missile crisis in October—but explained the discrepancy in figures by claiming original estimates had undoubtedly been faulty.

Senator Stennis, whose subcommittee was to investigate the Soviet buildup in Cuba, called for a firm, hard policy in dealing with Soviets in Cuba—and was joined in this by various majority party members, and others.

Congressman Donald Bruce, of Indiana, announced that the Soviets had originally sent 82 to 88 medium-range ballistic missiles to Cuba, which meant obviously that since 42 had been removed, almost that same number still remained as a threat to our security. This, too, was promptly disputed.

Several majority and minority party members now took turns making public statements on how bad the situation really was in Cuba—always being swiftly contradicted by Pentagon "spokesmen" and others.

The now famous "eat your hat" offer was made to Secretary McNamara by Senator Keating. The Secretary accepted the challenge, although admitting he did not really own a hat but would be glad to provide one since he meant to refute the Senators statements. He then made his unprecedented appearance on a nationwide television hookup—on orders of the President—and tried to prove by aerial photographs of missile sites that there were dismantled sites and the missiles sent back to Soviet Russia.

Everyone was admonished to "keep our heads" by the President, and when a reporter sympathetically asked what the administration could now do to convince Republican critics that the Russians had withdrawn all offensive weapons the American public gave a collective snort of derision because it was now obvious the administration was having as much, if not more, trouble convincing members of its own party that this was true.

Which all goes to prove that our beloved Will Rogers was wrong when he said:

> There is no more independence in politics than there is in jail.

A Selected Chronology on Cuba [1]—February 1, 1963 to February 28, 1963

February 1, 1963:

Secretary of State Dean Rusk conceded that there was a "significant Soviet military presence in Cuba which is of great concern to the United States."

---

[1] Unless otherwise stated excerpted from the Washington Post and the Washington Star; reproduced with the permission of the Washington Post and Washington Star.

In his news conference, the Secretary of State did not depart from earlier administration estimates of the strength of Soviet military personnel in Cuba.

He said the 16,000 Soviet troops there are something "which this entire Hemisphere must be concerned about." He added that he does not believe there has been a recent significant buildup of any major proportions in Cuba.

Sharply different views and figures on the military situation in Cuba were given by Senator STROM THURMOND, Democrat, of South Carolina.

Senator THURMOND said there are reliable estimates that between 30,000 and 40,000 troops in Cuba are under command of a Soviet general. A Pentagon spokesman contradicted the statement.

"Behind the brush curtain around Cuba is a formidable Soviet strategic military base," THURMOND said in weekly newsletter to constituents.

He listed an array of missiles, bombers and other armament which he said "indicates the presence of a complete Soviet army, and the inventory normally assigned to a Soviet air army."

A few hours after THURMOND made the remarks public, a Pentagon spokesman told newsmen:

"The information contained in Senator THURMOND's weekly newsletter is at wide variance with carefully evaluated data collected by U.S. intelligence from continued surveillance and other sources.

"The information obtained by our intelligence has been and is being made public to the extent it does not comprise intelligence sources.

"If Senator THURMOND has proof of any kind to support the information he has released, which differs from official intelligence information, the Department of Defense would like to receive the evidence."

THURMOND made public his estimates without identifying his sources. The size of the Soviet force which he said is under command of Gen. C. O. Slakenzo is at least double the 16,000 to 17,000 Soviet military personnel President Kennedy said are still in Cuba.

The Pentagon spokesman contradicted the Senator's figure of 30,000 to 40,000 Russian troops and took issue with his statement that there are in Cuba missiles with ranges up to 2,200 miles.

THURMOND's statement that there are between 100 and 200 ballistic missiles with ranges up to 2,200 miles was countered with Pentagon insistence that "there is no evidence of any ballistic missiles."

The spokesman also said "we have no evidence of any nuclear warheads."

February 2, 1963:

Senator STROM THURMOND, Democrat, of South Carolina, charged the Defense Department with being less than frank about the size of the arsenal.

Brushing aside a Pentagon challenge to supply data on his claim that the island is fast becoming a strategic base for increased Soviet troops and missiles, THURMOND said in a statement:

"The business of gradually and reluctantly admitting more and more Soviet power in Cuba can never bring about a facing up to the situation as it is now.

"Even if the latest admissions by the Defense Department represented all that is in Cuba—which they don't—the most serious questions are raised about our security and our policy on Cuba."

In a newsletter to constituents, THURMOND said he had learned from reliable sources that Cuba is a formidable Soviet strategic base with ballistic missiles and 30,000 to 40,000 troops. A Pentagon spokesman disputed the report.

February 3, 1963:

The United States may be forced to demand that Russia pull its troops out of Cuba just as it demanded that the Soviets remove their offensive missiles and bombers, Senator JOHN C. STENNIS, Democrat of Mississippi, stated.

STENNIS, who heads a Senate subcommittee that will investigate the Soviet buildup, made the statement as the Government prepared to issue a new crackdown against foreign shippers engaged in trade with Cuba.

An order that may be issued soon will bar U.S. Government cargoes to shipowners whose vessels have traded with Cuba since January 1. Shippers could free themselves from the ban by removing their vessels from the Cuban trade.

In another development a little more light was thrown on the activities of Soviet troops in Cuba last night by Edwin M. Martin, Assistant Secretary of State for Inter-American Affairs. He said in a television interview that the Government believes some of the troops are helping to build "defensive facilities and storage facilities" for the Cuban armed forces.

Martin, appearing on the Howard K. Smith program (WMAL–TV, ABC) said it was possible that Russian troop strength is now 10 times what it was before the missile crisis in October.

Immediately after the crisis, the administration said Russia had between 7,000 and 8,000 troops in Cuba. Officials have said the number is now between 16,000 and 17,000.

"I don't think our figure for last July is accurate enough for me to be sure that it would be 10 times, but I think that this is within the range of possibility," Martin said.

STENNIS, in a separate radio-television interview, said that intelligence data suggested that the Soviet buildup was designed in part to promote "blackmail, subversion, intimidation, threats of coercion, and even an invasion" of smaller countries in the hemisphere.

STENNIS' Senate Preparedness Subcommittee is undertaking an investigation of the Soviet buildup.

"I want to get all the facts, but with this formidable strength, I think we must have a hard, firm policy about it—convince them we are going to be hard about it," he said. "It could lead to the proposition that we'd have to make demands for this force as we did for the missiles and bombers.

He said the subcommittee would try to find out whether the missiles and bombers that Soviet Premier Nikita Khrushchev purportedly removed from Cuba last October "are really gone."

STENNIS said he hoped to make public "basic facts" developed by his subcommittee. He added that "without anyone being accused of wrongdoing," the people have not been told all the facts.

"I think we ought to have a hearing so that there will be congressional information as well as that for the people," STENNIS said. He said he expects the sessions to start with testimony from Secretary of State Dean Rusk, Director of of Central Intelligence on Soviet strength in Cuba.

February 4, 1963:

Representative DONALD C. BRUCE, Republican of Indiana, declared in a House speech that diplomats of friendly governments have informed the State Department that Russia originally sent 82 to 88 medium-range ballistic missiles to the Red-controlled island and removed only 42 of them.

The Defense Department promptly disputed the statement, declaring:

"No friendly government has so informed the United States. There remains no credible evidence that there are offensive Soviet weapons in Cuba."

Senator KEATING, in a copyrighted interview published in the U.S. News & World Report, reiterated his charge that Russia is "continuing to maintain medium-range missile sites" in Cuba and is working at some of them around the clock.

He also declared that there are "20,000 or more" Russians in Cuba, including 6,000 to 8,000 combat troops.

Two other Members of Congress contributed to the mounting pressure for tougher administration action in Cuba. Representative AUGUST E. JOHANSEN, Republican of Michigan, introduced a resolution calling upon President Kennedy to clear Cuba of all foreign Communist armed forces by whatever means required.

And Representative PAUL ROGERS, Democrat of Florida, asked in a House speech for "effective action" instead of "timid overtures" to end the Communist menace in Cuba.

The Associated Presss quoted McNamara as saying that five types of Russian defensive missiles "undoubtedly are stocked in Cuba."

The five types listed by McNamara were: "(1) Air defense missiles; (2) air-to-air missiles used by fighters to attack other fighters; (3) surface-to-sea missiles used for coastal defense purposes; (4) missiles for coastal purposes fired from patrol-type boats; and (5) ground-to-ground missiles for short-range use against troops in the field."

Meanwhile, the State Department clarified a statement by Assistant Secretary of State Edwin Martin that there might have been a tenfold increase in the number of troops in Cuba since last summer. It declared that Martin meant 10 times the estimate of 1,500 Soviet technicians believed to have been on the island in July.

February 5, 1963:

The United States is moving to tighten up its Cuban policy as the controversy over the extent of the Soviet military buildup continues.

The administration is acting in two ways:

1. Original measures to discourage shipping to Cuba announced in October before the missile crisis will be strengthened and implemented immediately.

2. Brigade 2506, which invaded Cuba in April 1961, will not be supported as a unit by Washington. Members will be encouraged to join Cuban units attached to American forces.

Under a four-point shipping restriction plan announced by the United States about 4 months ago:

1. American ports will be shut to the vessels of any country whose ships carry arms to Cuba.

2. U.S. Government cargoes will be denied to the vessels of any firm whose vessels are employed in Cuba-Communist bloc trade.

3. U.S. shipowners will be prohibited from engaging in Cuban trade.

Secretary McNamara was reported to have told the House Armed Services Committee that statements by lawmakers questioning Defense Department information about the Soviet military establishment in Cuba were "disgraceful" and "irresponsible."

Representative STRATTON charged that Senator KENNETH B. KEATING, Republican, of New York, "has been guilty of disgraceful irresponsibility in his frantic efforts to get headlines by pretending he knows more about what is going on in Cuba today than do the properly designated intelligence agencies of our Department of Defense."

Senator HUMPHREY, in calling for public hearings, said that Senator KEATING and other Members of Congress unnecessarily created doubt and suspicion by making accusations before giving their information to the CIA.

Simultaneously, Senator DIRKSEN supported charges that Soviet offensive missiles remain hidden in Cuba despite administration denials.

February 6, 1963:

MIAMI (Associated Press).—Manuel Artime, leader of the anti-Castro brigade in the

Cuban invasion, said that U.S. military personnel soon will begin training members of the brigade, liberated last Christmas from Cuban prisons.

Artime, in a news conference at his home, said the training would be voluntary and that 1,400 to 1,500 members of Brigade 2506 had been invited to take part.

He said the training by the U.S. Army, Navy, and Air Force would last 6 to 8 months. It would be conducted at different sites within the United States, according to the type of training.

February 6, 1963:

The United States prohibited foreign-flag ships that trade with Cuba from carrying U.S. Government-financed goods, in an initial step to tighten the free-world economic boycott of that country.

The ban, a White House announcement said, would apply to vessels that have engaged in Cuban trade since January 1, through foreign shipowners who promise to refrain from conducting such trade in the future will be allowed to share in U.S. Government trade.

Already in effect is an edict prohibiting U.S. shipowners from shipping strategic materials to Cuba.

February 6, 1963:

Both the Defense Department and Central Intelligence Agency presented detailed intelligence data and aerial photography to support administration statements that no offensive Soviet weapons remain in Cuba.

Defense Secretary Robert S. McNamara appeared before an extraordinary, 2-hour news conference carried on radio and television to lay out his evidence and submit to questioning by reporters.

Under reporters' questioning, McNamara said he believed that the Russians moved nuclear warheads into Cuba during last fall's missile buildup. But he said that "we observed" the shipment of the vehicles believed to have had A-warheads out of Cuba and back to the Soviet Union.

Earlier in the day, John A. McCone, Director of the CIA, appeared before the Senate Preparedness Subcommittee behind closed doors to present the full top-secret intelligence picture on the Russian military situation in Cuba.

A censored version of McCone's statement summarized the same data about the Soviet military force in Cuba that was given in greater detail by McNamara and an aide at the news conference.

The unprecedented presentation of intelligence data, including both high and low-level photographs of Cuban bases and ports, was made by McNamara in the State Department auditorium.

The lengthy intelligence briefing and question-and-answer session were ordered by President Kennedy.

For well over an hour, John Hughes, a top official of the Pentagon's Defense Intelligency Agency, presented slides giving data on the Russian weapons in Cuba, and showing aerial photographs of missile sites, airfields, ports and weapon-laden Soviet ships on the high seas.

The long series of remarkably clear photos traced the early buildup of Russian forces on the island late last summer and fall, and revealed the progress of dismantling the offensive missile bases, the loading of missiles and bombers aboard Soviet ships and their movement back to Russia.

Hughes' commentary also told how the Air Force and Navy reconnaissance planes followed the offensive weapons on trucks along the roads and into the ports. He listed what missiles left on which ships from named ports on specific days.

Other photographs showed the buildup of the defense weapons still remaining—Mig–21 fighters, beach defense areas with antiwarship missiles, SA–2 antiaircraft missiles and the military camps of four Soviet Army armored units, with the latest Russian weapons.

McNamara said the United States has a record of the missiles observed in Cuba and that the exact number has been recorded being removed. He also declared that the entire island was photographed and that only 42 offensive ballistic missiles were located and that they were observed being shipped back to Russia.

The Secretary was reminded that Senate Republican Leader EVERETT M. DIRKSEN, of Illinois, has said that the aerial photography would not show what missiles may be in caves in Cuba. McNamara said it is "unlikely beyond any reasonable doubt" that such weapons could have been unloaded and stored underground.

McNamara seemed to differ a bit from McCone in his appraisal of the reliability of aerial reconnaissance to reveal what is going on in Cuba. The CIA Chief said yesterday that absolute assurance that no missiles are stored in caves can come only from "continuing, penetrating on-site inspection."

The Pentagon leader said aerial reconnaissance would not provide completely reliable data on the number of Soviet troops in Cuba, but that he was satisfied it showed what weapons are there.

KEATING called a new conference before the McNamara appearance to answer questions and propound a long list of questions he felt the Secretary should answer. He also stressed that the 1,100-mile medium-range ballistic missile sites in Cuba were "still in place."

The New York Senator offered to eat his hat in front of the Capitol if McNamara could refute this statement. McNamara was asked about this after photographs described as dismantled IRBM sites were put on the screen.

"I don't have a hat, but I hope he does because he is going to have to eat it on the basis of the evidence we have presented today," said the Secretary.

KEATING later said he had no intention of eating his hat, as McNamara had not satisfied him.

McNamara told reporters that the evidence showed that 5,000 of the 22,000 Russian troops in Cuba last October left when the missiles and bombers were withdrawn.

Remaining in the hands of 17,000 Soviet troops, he said, are: some 24 operational antiaircraft missile sites, each with 6 launchers and a total of 500 missiles; about 42 Mig–21 fighters and 60 other Mig's; 4 operational coastal defense missile sites with 150 missiles; 12 Komar guided-missile patrol boats; 4 armored groups with a total strength of about 5,000 men.

Newsmen wanted to know why these were ruled "defensive," as the question of whether they are for offense or defense depends on intent.

The Secretary said there were no amphibious ships in Cuba able to move any such small force to other countries in this hemisphere. He also declared that the Mig–21's were not now adapted to carry A-weapons, and if they were they would have only enough range to bomb the tip of Florida.

McNamara said he had no evidence that Cuba is being used as a base for subversion directed against other Latin American countries. He also declared that there is positive evidence that no Russian submarine bases have been built there.

As the conference ended, a reporter asked McNamara whether the newsmen should conclude from his comments that Cuba has become less of a threat, rather than more, in recent weeks.

"Cuba is a lessening military threat to the extent that the military personnel of the Soviet Union and their equipment are being removed," he replied.

"Five thousand Soviet military personnel have moved out in the last 8 or 9 weeks, and there appears to be some continuing movement out. What the future holds, I can't say."

February 7, 1963:

President Kennedy assured the Nation that the Soviet Union's forces and weapons in Cuba are not a military threat to the United States.

He was talking at a news conference about the Cuban situation as it is at the moment. Refusing to prophesy about the future, he said, it could not be proved that the Russians won't again try to ship nuclear missiles to the island.

"The Soviet Union and Cuba and the United States must all be aware that this will produce the greatest crisis which the world has faced in its history.

"So I think that the Soviet Union will proceed with caution and care, and I think we should."

Mr. Kennedy, backing up a statement by Secretary of Defense Robert S. McNamara, said the Russians have reduced the size of their forces and the amount of their equipment since the pull-out of missiles and bombers last fall.

He said it was a time to "keep our heads," that Premier Fidel Castro has been "discredited" in recent months and that the United States and the Soviet Union are continuing talks about the removal of Russian forces and weapons from Cuba. He indicated that the United States had no present thought of an invasion of Cuba.

"You have said that the presence of Russian forces on the island is a matter of concern," a reporter said. "I would like to ask this question: Do you think that Cuba is a serious military threat to the United States?"

"I think we ought to keep a sense of proportion about the size of the force we are talking about," Mr. Kennedy replied, adding that the Russians had about 4 organized military groups in Cuba, totaling about 6,000 men.

"Obviously," he continued, "those forces cannot be used to invade another country. They may be used to maintain some sort of control within Cuba, but obviously they are not a force that can be used externally.

"And, in addition; Cuba cannot possibly, it lacks any amphibious equipment, and, quite obviously our power in that area is overwhelming."

Mr. Kennedy said the big dangers in Latin America—illiteracy, bad housing, maldistribution of wealth, and so on—were unrelated to Cuba. It was at this point that he said that Castro had been discredited since October. But he went on to say that he was concerned about Cuba being used as a training center for Red agents and as a base for propaganda and subversion.

He repeated that Cuba was not a military threat now, and would not become one unless Russia reinforced offensive weapons there.

Asked about the chances of eliminating communism from Cuba, the President refused to make an prediction. One way, he said, would be for the Cubans to revolt, which he thought would be difficult now.

"The other way would be by external action," he said. "But that is war, and we should not regard that as a cheap, or easy way to accomplish what we wish."

A reporter wanted to know what more the administration can do to convince Republican critics that the Russians have withdrawn all offensive weapons from Cuba.

Mr. Kennedy said he didn't know—that Secretary McNamara and CIA Director John McCone had asked anybody possessing information aboute a Russian buildup to turn it over to the Government so that it could be checked.

But even some Members of Congress have refused to do this, after spreading reports and rumors, the President said.

Senator KENNETH B. KEATING, Republican of New York, said after the President's news

conference that he still cannot accept the much touted distinction between offensive and defensive weapons.

Representative WILLIAM C. CRAMER, Republican of Florida, another critic of the President, said that Congress had authorized the Chief Executive to use armed force, if necessary, to prevent any further buildup in Cuba, but that mandate is being ignored.

HOUSE OF REPRESENTATIVES

THURSDAY, APRIL 11, 1963

The House met at 12 o'clock noon.

Rev. Father Joseph F. Thorning, Ph. D., D.D., pastor of St. Joseph's Church, Carrollton Manor, Md., and professor of Latin American history, Marymount College, offered the following prayer:

Heavenly Father, author of life and of love, let the light of Thy countenance shine brightly upon the Speaker of this House and all the Members of the U.S. Congress.

Impart, we beseech Thee, Thy choicest blessings to the Presidents of the American Republics, their legislatures and judicial bodies.

Grant to all peoples and governments the graces necessary to uphold freedom, family ideals, religious principles, and genuine social progress.

In every hour of peril, grant that Thy inspiration and the example of the Founding Fathers of our beloved country may strengthen us to endure the gravest hardships, rather than to abandon our friends and fellow Americans to a slavery that, if we fail to provide vision, valor, and leadership, will be our own destiny.

In our devotion to these ideals, dear Saviour, we implore new gifts of wisdom, courage, resourcefulness, and imagination, characteristic of men and women of prayer. In this way, may we grow in Thy friendship and in our love for one another.

We ask for these divine favors in the name of our most Holy Redeemer, the Christ of the Andes. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries, who also informed the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On April 9, 1963:

H.R. 4374. An act to proclaim Sir Winston Churchill an honorary citizen of the United States of America; and

H.J. Res. 282. Joint resolution designating the 6-day period beginning April 15, 1963, as "National Harmony Week," and for other purposes.

On April 10, 1963:

H.R. 1597. An act relating to the tax treatment of redeemable ground rents.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a concurrent resolution of the House of the following title:

H. Con. Res. 134. Concurrent resolution establishing that when the House adjourns on Thursday, April 11, 1963, it stand adjourned until 12 o'clock meridian, Monday, April 22, 1963.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 1. An act to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of natural resources and recreational areas; and to authorize local area youth employment programs;

S. 22. An act to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve; and

S. 386. An act to consolidate Vicksburg National Military Park and to provide for certain adjustments necessitated by the installation of a park tour road, and for other purposes.

PAN AMERICAN DAY

The SPEAKER. Pursuant to House Resolution 300, this day has been designated as Pan American Day.

The Chair recognizes the gentleman from Alabama [Mr. SELDEN].

Mr. SELDEN. Mr. Speaker, I offer a resolution and ask unanimous consent for its immediate consideration.

The Clerk read the resolution, as follows:

HOUSE RESOLUTION 316

Whereas April 14, 1963, will mark the seventy-third anniversary of the session of the First Conference of American States, held in our national capital, out of which has developed an inter-American system of free Republics of this Hemisphere, our Organization of American States; and

Whereas the purpose of the Organization of American States as set forth in its charter are to achieve an order of peace and justice throughout the American Republics, promote their solidarity, strengthen their collaboration, and defend their sovereignty, their territorial integrity, and their independence; and

Whereas the United States, which during seventy-three years has adhered to and upheld the inter-American system and its pledged objectives, and which is now actively engaged with the other free Republics of America in carrying forward a vast Alliance for Progress designed to satisfy the basic needs of all our citizens for opportunity and development: Therefore be it

Resolved, That in honor of this seventy-third anniversary the House of Representatives of the United States of America extend cordial fraternal greetings to the legislative body of each of the other free Republics of this Hemisphere, and to the peoples of the American Republics, with assurance of continued energetic cooperation in our common purpose of realizing effectively and speedily the objectives of the Organization of American States and the goals of the Alliance for Progress.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

The SPEAKER. The Chair recognizes the gentleman from Alabama [Mr. SELDEN].

Mr. SELDEN. Mr. Speaker, April 14 marks the 73d anniversary of the Western Hemisphere's regional organization—which is now known as the Organization of American States.

From a small conference establishing a commercial bureau to distribute trade information in 1890, the Organization of American States has broadened its functions until today it is a vital agency of inter-American cooperation.

In the beginning, the Organization's only guideline was the ideal of men like Simon Bolivar, who envisioned a united community of free nations in the New World dedicated to peaceful pursuits and united against foreign aggression.

The history of the Organization of American States has been one of constant experiment and innovation. Occasional setbacks, disputes, and clashes of opinion have not altered the long-range view—Bolivar's ideal of "the most extraordinary and strongest—league—which has ever appeared on earth."

Several generations of Americans—both north and south of the Rio Grande—can be justifiably proud of the progress made in the past 73 years by this remarkable, unique regional organization. To the patient men who struggled toward a dream of hemispheric solidarity and to the freedom of future generations, we owe a special duty to preserve the values of the American Republics as reflected in the OAS Charter.

As an instrument of multinational purpose, the OAS antedates both the United Nations and NATO by many decades. Today, however, the inter-American system is threatened by the greatest challenge in its history. Its future as an international agency depends on how it measures up to this challenge.

Today, we need only to look to the heartlands of the Americas to see a Moscow-Peiping puppet regime, which is conducting an extensive campaign of subversive aggression against the nations of the hemisphere. As a result, the peace and security of the Western Hemisphere is threatened as never before. If it is to survive, the inter-American system must meet and surmount the present crisis.

At the 1962 foreign ministers conference at Punta del Este, the OAS members first faced up to the menace of Castro's Cuba by approving a program of action to curb the menace of international communism to the freedom of the hemisphere. The OAS acted to oust Marxist-Leninist Cuba from the inter-American system, and, at the same time, reaffirmed the Alliance for Progress as the only concrete hemispheric path to democratic development and economic improvement.

Following the Punta del Este meeting, only five Latin American nations still maintained diplomatic relations with Cuba. In addition, our own Government announced a ban on Cuban imports.

As these events indicate, the conference signaled a strengthened hemispheric attitude toward the Communist threat. Faced with a grave challenge, the conference took an important step toward meeting it. Had Punta del Este ended in failure to meet our hemispheric responsibility, or had there been an appeasement of Cuban communism, a tragic chapter would have been written in the history of the hemisphere. The inter-American system itself would have been reduced to worthless scraps of paper.

But the system did not fail. When the showdown came, our Latin American allies, with few exceptions, joined us in a determination to uphold the inter-American principle.

At Punta del Este, the hemisphere took a large step forward, but it was only a beginning.

The preservation of democratic institutions requires the acceleration of political and economic progress in Latin America. In the Alliance for Progress—a new dimension in inter-American cooperation—the hemisphere has a comprehensive blueprint for long-range economic action. As such, it is a great improvement over stopgap aid which this country has furnished our Latin American neighbors since the end of World War II.

We should never lose sight of the fact, however, that the Alliance represents a long-range answer to the economic troubles that beset the Western Hemisphere. If it is to succeed, we must first reach our hemispheric short-range objective—that of eliminating Castroism and communism from the Americas.

Castro threatens every facet of the Alliance. His policies usurp the principles of the Alliance. The very existence of a Communist Cuba blocks all hemispheric plans for stable economic progress. Communist terrorism and sabotage act to cripple and destroy the Alliance, and, if unchecked—it can even destroy the entire inter-American system.

The history of the Organization of American States will note that at the 1962 Punta del Este Conference, the U.S. delegation pointed the way, and Latin American delegates—despite the conflicting pressures which threatened to destroy any attempts at harmony—joined together in breathing new life into hemispheric unity.

Future historians will also record that when the United States dramatically assumed its role of hemispheric leadership last October, the principles of the inter-American system were reaffirmed by the quick and overwhelming endorsement of the nations of the OAS. Latin American members of the Organization rallied to President Kennedy's side when he took a firm stand, and the issue was clearly drawn.

The swift action of the OAS during the October missile crisis and the stand of the Latin American delegations at Punta del Este clearly indicate that if the inter-American system is to remain strong, the United States must live up to its role of hemispheric leadership.

At this crucial juncture in OAS history yet another nation of the hemisphere should be asked to reconsider its present policy toward the inter-American system. To make our hemispheric unity complete, Canada should seriously consider joining the Organization of American States and other intercontinental endeavors to bolster hemispheric security and solidarity.

The partnership of Canada in such programs would add a vital link to the chain of hemispheric security. It would write a bold new chapter in the fulfillment of Bolivar's dream of a free and unified New World.

For certainly, if the Western Hemisphere's international system is worthy of its conception and in its ideals, and more important, if our concepts concerning government and freedom are to survive—the nations of the Americas can spare no effort, afford no delay, permit no misunderstanding of their intention to maintain a great bulwark of freedom and prosperity in the western half of the globe.

Mr. ROGERS of Florida. Mr. Speaker, will the gentleman yield?

Mr. SELDEN. I yield to the gentleman from Florida.

Mr. ROGERS of Florida. I thank the gentleman for yielding.

Mr. Speaker, I think it is most appropriate that the gentleman from Alabama [Mr. SELDEN] should be making these remarks on Pan American Day because of the very excellent work which the gentleman has done as chairman of his subcommittee of the Committee on Foreign Affairs for Latin America which certainly needs action in these days.

Mr. Speaker, as the gentleman has pointed out very recently in the report from his committee, the report which the gentleman's committee issued is most revealing. In my opinion if we could carry out some of the policies enunciated therein, as I believe they will be, we may well accomplish some of these objectives under the watchful eye of the gentleman and then we can see a great change come about in this continent.

Also I want to say that the gentleman's participation in the conferences that have been held in South America, for the Organization of American States and Central American countries has been most helpful I am sure in firming up a stronger position in this whole area.

Also, I would like to note that Pan American Day would not be Pan American Day without Father Thorning here to offer the prayer. His great interest and leadership in this field have always been noticed by this House and recognition is due him in this regard.

Mr. Speaker, the United States is paused today to reflect on the well-being of this hemisphere. Pan American Day gives us a fitting opportunity to examine the relationships existing between the nations of North and South America.

Never in the history of this Nation has the need for harmony and good will between North and South America been more imperative. In Cuba, international communism has established a bridgehead to the continent to the south. Our Latin neighbors, their economic problems providing fuel for Communist agitation, are currently engaged in an unprecedented battle against Communist subversion and control.

The history of Latin America is a proud one. The nations of that continent have long been concerned with freedom. Many of them won their freedom and independence at great cost.

This historic struggle against communism in Latin America has many of these same nations engaged in the struggle against another form of colonialism—20th century Communist brand.

As a champion of freedom, the United States once again finds itself very deeply involved in the fate of its allies. This Nation has based its hemispheric policy on the Monroe Doctrine, and has thus been strongly opposed to extracontinental influence in this hemisphere.

On this Pan American Day, it would be well for those whom the American people have entrusted with the preservation of freedom to reflect on the seriousness of the Communist problem in this hemisphere. Those whose hands hold the key to freedom and order in this hemisphere should consider the extracontinental influences of international communism now spreading in the hemisphere.

Pan American Day should signal the strengthening of U.S. leadership in this hemisphere. The United States must lead the nations of this hemisphere in a drive for concerted action through the Organization of American States to halt the spread of communism.

Mr. SELDEN. Mr. Speaker, I thank the gentleman from Florida for his very kind remarks. He has been one of the leaders in alerting the Congress and the American people to the dangers we face in the southern half of this hemisphere. Also, I join him in welcoming Father Thorning who has always been a great friend of the nations of the Latin American area.

Mr. ALGER. Mr. Speaker, will the gentleman yield?

Mr. SELDEN. I yield to the gentleman from Texas.

Mr. ALGER. Mr. Speaker, is the gentleman directing his remarks on Pan American Day to a resolution.

Mr. SELDEN. A resolution has been introduced.

Mr. ALGER. When was the resolution introduced?

Mr. SELDEN. At the beginning of my statement.

Mr. ALGER. I just asked for a copy of the resolution, Mr. Speaker. I should like to ask the gentleman whether we will be given any opportunity to debate this?

Mr. CURTIS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The Chair will state that the resolution has not been adopted as yet. Unanimous consent was granted for the consideration of the resolution.

Mr. CURTIS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. Does the gentleman from Alabama yield for that purpose?

Mr. SELDEN. I yield.

Mr. CURTIS. Is this being considered under the 1-hour rule; in other words, the gentleman has 1 hour to proceed, is that correct?

The SPEAKER. That is correct.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SELDEN. I yield to the gentleman.

Mr. GROSS. Does the gentleman intend to yield some time to the minority on this?

Mr. SELDEN. I certainly do. I would be happy to yield to the gentleman or to anyone else who would like to speak on the subject.

Mr. GROSS. Does the gentleman propose to yield half his time to the minority side?

Mr. SELDEN. I shall be happy to yield to anyone who wants to speak on this subject.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, let me ask, When was this resolution before the Committee on Foreign Affairs?

Mr. SELDEN. This or a similar resolution is introduced each year in the same way it was introduced today. Appropriate remarks Members may wish to make in connection with Pan American Day usually follow the introduction of the resolution. This has been an annual custom since I have been a Member of Congress.

Mr. GROSS. If the gentleman will yield further, does not the gentleman think that a resolution of this nature ought to be printed so that Members of the House may know what is contained therein?

Mr. SELDEN. This same type resolution has been introduced each year and has been adopted by the House. I am sure the gentleman was on the floor on other occasions when similar resolutions were introduced and adopted. If he had had any objection to them, I am sure he could have so stated.

Mr. GROSS. I will say to the gentleman, if he will yield further, that I am not particularly enamored of some of the wording in this resolution. I do not feel that we are getting the cooperation that the resolution implies from some of the American states and those nations which are part and parcel of the Alliance for Progress. This resolution assumes that we are. I am at a loss to know the objectives of of the Alliance for Progress in light of testimony before the gentleman's Subcommittee on Inter-American Affairs, of which I am a member.

I would certainly hope that next year before any of these resolutions come to the floor of the House that they be brought before the Committee on Foreign Affairs where we can scrutinize and know what is in them, at least have printed copies, so that we may know to what we are lending our consent.

Mr. CURTIS. Mr. Speaker, will the gentleman yield?

Mr. SELDEN. I yield to the gentleman from Missouri.

Mr. CURTIS. Is this the identical language that was used in the one last year? Here is the point. If this resolution is to have any meaning and is to be bipartisan, which of course it should be, and I think it could be, certainly courtesy as well as good understanding would suggest submitting the language to those of us on this side who are interested in this, particularly the appropriate committee, in this instance our members of the Committee on Foreign Affairs, so that we can be sure, without this business of coming in with a resolution that has not been printed in the RECORD and which no one has seen. I respect the gentleman. I am sure his motives are very fine. But if the Congress is going to make its resolutions meaningful, let us have this kind of proper consideration so they can be.

I would suggest the gentleman withdraw the resolution at this time and give the minority an opportunity of going over the language to be sure that it is the kind of attitude and consideration that all of us feel. I think we could get together on it. I am worried. I glanced at the resolution at the Speaker's desk. This great buildup of the tag "Alliance for Progress" is something that requires a lot of consideration. I have read that there has been mostly public relations and very little getting down to the hard-core problems.

I was on a subcommittee of the Joint Economic Committee on inter-American economics. I was distressed to find out, and I must use this expression, how much of it was President Kennedy's public relations approach and how little had to do with reality. I do not want to be just another patsy to another one of President Kennedy's public relations ideas, and have the Congress just put a rubber stamp on it. If we are to be meaningful about these things in our relations abroad, I just wish the gentleman would withdraw his resolution at this time and submit it to our members of the Committee on Foreign Affairs. I am sure you can come up with strong, mutual language, and let the Congress express itself.

Mr. SELDEN. Pan American Day is held each year. On March 28, 1963, a resolution was passed in the House designating April 11, 1963, for the celebration of Pan American Day. The resolution stated that, after the reading of the Journal, remarks appropriate to such occasion could occur. The gentleman from Indiana [Mr. ADAIR], a ranking Republican member of the House Committee on Foreign Affairs, stated there was no objection to it on the Republican side of the aisle and added that it was an excellent idea. Also, the senior Republican member of the subcommittee of which I was chairman was reminded yesterday, and again today, that Pan American Day was scheduled——

Mr. CURTIS. Who is that?

Mr. SELDEN. The gentleman from Pennsylvania [Mr. WHALLEY] was notified that this resolution would be introduced today, and if there was anyone on the Republican side of the committee who wished to make any remarks it would be most appropriate for them to do so.

Mr. CURTIS. Who on the Republican side of the Committee on Foreign Affairs was notified?

Mr. SELDEN. We attempted to contact the gentleman from California [Mr. MAILLIARD] but he was out of town. Mr. WHALLEY, the second ranking Republican, was notified. There was no effort on my part to bring this resolution to the floor without proper notification to the Republican Members.

Mr. BECKER. Mr. Speaker, will the gentleman yield?

Mr. SELDEN. I yield to the gentleman from New York.

Mr. BECKER. I would like to join in a resolution of this kind, and I have, with the gentleman, all through the years. I think it is a day we have always recognized and should in the future. But I must agree with my colleague from Missouri that not only are there changes in this resolution from what has been passed here before but there also is a change in the situation in that part of the world that ought to be recognized. I would like to have the resolution be the type that could come on the floor and we could all heartily join in passing it, and let the world know how we feel about the Pan American countries who are cooperating with us, and at the same time let the world know that the Monroe Doctrine is a sound doctrine for this part of the world. I think we could do this by following my suggestion to the gentleman from Alabama, who has been carrying this on for years. I was hopeful we could do this in such a way that when we brought it on the floor we could do it in so wholehearted a manner that there would be no doubt in anyone's mind. I would suggest to the gentleman that we do this.

Mr. ALGER. Mr. Speaker, will the gentleman yield?

Mr. SELDEN. I yield to the gentleman from Texas.

Mr. ALGER. Was there any particular reason why—was it haste?—that this ended up in our not having a printed resolution? I do not even know what the language is. I have listened to the gentleman and I have listened to the history that he has been giving us here of the OAS, and I must remind the gentleman that a lot has happened since last year. We are deeply concerned. The gentleman from New York mentioned the Monroe Doctrine. Without going into details, and many of us are endeavoring to find out, and the record, as the gentleman knows, shows that much has happened since last year including the OAS and including our study of how our foreign aid has gone; and those Members that do not join with us including what happened at Del Estes and other things that do trouble us. We would simply like a printed resolution and we would like to be able to look at this and see and understand it because without meaning to, the gentleman is forcing many of our colleagues to join those of us who feel we ought to read before we sign. I am sure we join the gentleman in spirit, and it is my hope that we can have a copy of the resolution.

Mr. SELDEN. I do not think the gentleman will find anything in this resolution with which he would drastically disagree. It is a simple resolution designed to appropriately commemorate the founding of the Organization of American States.

Mr. ALGER. Our procedure always is to have a printed resolution.

Mr. SELDEN. This is the last day before the Easter recess on which we can commemorate this occasion. April 14 is Pan American Day, and appropriate remarks are customarily made on that particular day. Since we will not be in session on April 14, today was designated by resolution passed by the House more than a week ago.

Mr. ALGER. But there is no reason for not printing the resolution otherwise?

Mr. SELDEN. No; there is no reason except that it has not usually been done in connection with similar resolutions.

Mr. ALGER. We have printed resolutions available here for other matters that we will consider, but there is nothing at the Clerk's desk with reference to this resolution.

Mr. SELDEN. This is generally done this way. I have seen similar resolutions in connection with Pan American Day adopted this way for 10 years. As a matter of fact, I have never seen it done any other way. If the gentleman has any objection to this procedure, however, I would join next year with the gentleman in having it brought before the Committee on Foreign Affairs before it is considered on the floor of the House.

Mr. CRAMER. Mr. Speaker, will the gentleman yield me 5 minutes of time?

Mr. SELDEN. I would be happy to yield to the gentleman from Florida.

Mr. CRAMER. Mr. Speaker, with regard to the resolution itself, the resolution that was passed last year, in the resolving clause stated this:

> That on this seventy-second anniversary of the founding of the Pan American Union, the House of Representatives of the United States extends to the legislative bodies of each of the other Republics of the Western Hemisphere its warm greetings and expresses a sincere hope for the continuance and intensification of the cooperation of the Americas in the Organization of American States and in other peaceable ways.

I am confident that the gentleman is familiar with that language. But, listen to the language this year—and, perhaps, the gentleman could explain that—and I thank him for the time—for the 5 minutes—as to what is meant by the language in this year's resolution which is far more definitive. It says:

> With assurance of continued energetic cooperation in our common purpose of realizing effectively and speedily the objectives of the Organization of American States and the goals of the Alliance for Progress.

Now I do not think there is any question but that is a far more definitive statement than was contained in the previous resolution. And I think this would justify the Members of the House being advised in advance as to the contents.

Let me say, parenthetically, as far as I am concerned, the distinguished gentleman from Alabama, particularly with regard to the investigation of his subcommittee into Latin American subversion, has rendered a great service to this country. I am not being critical of the gentleman or of his objective of commemorating Pan American Day in this instance, I want it clearly understood, but I do think when there are such changes in substance as appear here, I think, for instance, it would be well to have a discussion as to what we are talking about when we say "common purposes," "energetic cooperation," "effectively and speedily the objectives of the OAS," and "the goals of the Alliance for Progress." I would like to know what some of those goals are. I do not think the goals are what they should be. For instance I think we should use the Alliance for Progress to encourage other Latin American nations to withdraw recognition from Castro, for instance, and to stop other nations from permitting the Russians and Red Chinese as well as the Cubans to infiltrate, for instance, as Brazil is doing. Yet, Brazil came here and asked for hundreds of millions of dollars in a loan to aid the buildup of its activities so that it could continue to trade even further with the Russians, Red Chinese, and the satellite nations. Brazil continues to recognize Cuba.

I think it is interesting to note on this date or this anniversary that we are commemorating, the anniversary of the Pan American Union, that on this date which also is the second anniversary of the Bay of Pigs fiasco what we find on the ticker—what do we find in the Associated Press reports?

We find Cuba's Premier Castro is praising the U.S. Government for doing what? For halting rebel raids on Cuba, and he indicated hope that the United States will accept other Communist terms, other Communist terms for peace in the Caribbean, including the abandonment of the big Guantanamo Naval Base. In an hour-and-forty-minute speech broadcast by Havana Radio Castro said the U.S. crackdown on the refugees fulfilled one of his five points for peace, which have been endorsed by the Soviet Union.

Castro said:

> It is a step toward reducing the risk of crisis and war—

And—

> It can be said that of the five points we have now achieved one—

We have now achieved one—

> Four still have to be fulfilled. The only sensible thing the U.S. rulers can do is to cease violations and aggressions against our revolution and our country.

So I say, Mr. Speaker, on this which is almost the second anniversary of the failure of the Bay of Pigs invasion, Castro's statement that the United States has now surrendered on one of his five demands puts our soft policy toward Cuba in clear focus. We have surrendered to Castro's and Khrushchev's demands for coexistence in this hemisphere. The United States has given its one-fifth acquiescence to coexistence with Castro's government by surrendering to the Communists in this demand for coexistence, to the abandoning of the Monroe Doctrine, to the guaranteeing of Communist Cuba against invasion.

I do not think this is a very laudable record either in respect of the Alliance for Progress or as we celebrate this second anniversary. On this date, which is almost the second anniversary of the Bay of Pigs invasion, recalling that 2 years ago Castro was cursing our efforts in support of the Bay of Pigs invasion by the Cuban exile freedom fighters, we find today Castro praising the United States for siding with him and the Communists—with giving in to one of his five demands.

Is it any wonder that Miro Cordona, leader of the Consejos Revolutionarios, a group of Cuban exiles, would charge the United States with "softness"? Such a reaction should have been expected when we abandoned the freedom fighting forces of the exiles for those of Castro tyranny. This leads to the obvious next question: Is America to suffer further humiliation in acceding to the additional demands of Castro who is the puppet for the Communists? Is America considering giving in on the other four demands of Castro? For instance, are we considering a second demand for the abandonment of the Guantanamo Naval Base? After all, the same reasoning used by the New Frontier for the quarantining of the freedom fighting Cuban refugees could be used for giving up Guantanamo, that is, to do so would lessen tensions and the prospects of a crisis.

Under what possible policy does the United States, as the freedom-loving and powerful leader of the free nations of the world, give aid and comfort to the enemy Communist Cuba to the extent that Castro praises this country for taking a step toward reducing the risks of crisis and war, and giving in to one of his five demands for peace? It would be well at this point to state in the RECORD what the full five demands were that were made on October 28, 1962, over Havana radio by Castro to the United States, noting particularly that these demands were made after the quarantine had been put into effect, but at a time when our lack of intention to press it to its obvious objectives of onsite inspection or guaranteed, properly supervised, and inspected removal of weapons endangering the security of this hemisphere. These are those demands, and it is obvious that we have acceded to the first and, as a matter of fact, are taking steps that indicate further accedence, and this only leads to the conclusion that the administration's ultimate policy appears to be coexistence.

Those demands are as follows:

First. End all subversive activities, dropping and landing of arms and explosives by air and sea, organization of mercenary invasions, infiltration of spies and saboteurs, all of which are organized in U.S. territory and certain accomplice countries.

Second. Withdraw from Guantanamo.

Third. End U.S. economic blockade and all measures of commercial pressures.

Fourth. End United States and Puerto Rican based pirate attacks.

Fifth. End all violation of air and naval space by North American military aircraft and ships.

The full statement made by Castro to a group of 79 graduates of a Communist-indoctrination course, is as follows:

> MIAMI.—Cuban Premier Castro praised the U.S. Government early today for halting refugee raids on Cuba and indicated hope that it will accept other Communist terms for peace in the Caribbean—including abandonment of the big Guantanamo Naval Base.
>
> In an hour-and-40-minute speech broadcast by Havana radio Castro said the U.S. crackdown on the refugees fulfilled one of his "five points for peace," which have been endorsed by the Soviet Union.
>
> "The measure adopted by the U.S. Government to restrict the exiles is an action of positive character," Castro said. "It is a step * * * toward reducing the risks of crisis and war.
>
> "It can be said that of the five points, we have now achieved one * * * four still have to be fulfilled * * * the only sensible thing the U.S. rulers can do is to * * * cease violations and aggressions against our revolution and our country."
>
> Castro's five points included a demand that the United States halt American-based "counterrevolutionary" attacks on Cuba as well as a demand for abandonment of Guantanamo.
>
> In a speech directed specifically to 79 graduates of a Communist-indoctrination course, Castro jeered at refugee leaders who are protesting the "soft" U.S. stand.

It appears that some concessions toward demand No. 3 are being considered and negotiated. It has been announced publicly that the resumption of the ferry line between Key West and Havana is being "negotiated" with Fidel Castro. I can only assume it is being negotiated by either the Swiss Embassy or Mr. Donovan, the latter being completely without portfolio or official authority to act in any capacity on behalf of the United States or any trading interest in the United States. This leads to the obvious question—is this the forerunner of acceding to Castro's third demand—that of having the U.S. economic blockade lifted and all measures of commercial pressure?

For all practical purposes the United States has also acceded to the fourth demand with its quarantine and blockade against the Cuban freedom fighters, by stopping their boats, including *Violin III* recently, which had aboard some 17 refugees intending to reinfiltrate into Cuba to take up the fight against Castro internally.

I think these recent developments should give every American cause to be concerned and every right to demand to know what our policy is and every reason to be dissatisfied with what events indicate our policy to be—that is—of softness, indecision, and lack of determination to rid the hemisphere of Castro's communism and the subversion throughout the Americas that is resulting.

I have thus raised the question on this resolution as to my not wanting to rubber stamp such a policy which appears to be implied in the present wording of the resolution in that I unalterably oppose any concessions to Castro, any thought of coexistence, but rather insist upon the restatement and implementation of the Monroe Doctrine meaning to rid this hemisphere of this cancer.

How proud has been the history of our country—of our unflinching fight for freedom—of preventing any alien philosophy from establishing its system in this hemisphere. Only a few years ago, the United States helped oust communism from Guatemala. Teddy Roosevelt, in 1903, intervened in Panama and Venezuela. Woodrow Wilson, in 1914–17, took action in Latin America to preserve constitutional republics in this hemisphere—readily remembered by the events at Vera Cruz, the message to Pancho Villa, the gallantry of General Pershing. What has happened to this freedom-fighting American spirit?

Mr. SELDEN. Let me read this resolution to you gentlemen from Florida.

After the "whereas" clauses:

> *Resolved*, That in honor of the seventy-third anniversary, the House of Representatives of the United States of America extends cordial fraternal greetings to the legislative body of each of the other free Republics of this hemisphere, and to the people of the American Republics with assurance of continued energetic cooperation in our common purpose of realizing effectively and speedily the objectives of the Organization of American States and the goals of the Alliance for Progress.

If my colleagues on the Republican side of the aisle have any objection to this specific wording, certainly I do not wish to be unreasonable about it. I will be very happy to withdraw this present resolution and submit the identical resolution which was passed last year, if that is in accord with the thoughts of all Members on both sides of the aisle, and will remove what should be a bipartisan matter from the political arena.

Mr. CURTIS. I think that would be very good.

Mr. SELDEN. I shall be very happy to do so.

Mr. Speaker, I ask unanimous consent that I may withdraw this resolution and submit the identical language which was passed by the House unanimously last year.

Mr. EDMONDSON. Mr. Speaker, reserving the right to object, and I shall not object, but I do want at this time to make it very emphatic that an agreement to the withdrawal of this language does not indicate, so far as this Member is concerned, any lack of enthusiastic support for the Alliance for Progress and for its objectives, because these are part of the declared policy of the U.S. Government, and of this Congress, and of the President who is the actual architect of our foreign policy.

Mr. CURTIS. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield.

Mr. CURTIS. In light of the previous remark let it also be noted that on this side of the aisle the objection is simply to the way this resolution is brought up without our having had a chance to consider its wording in advance. We do not know what it is, we have had no opportunity to go over it. I hope no one will draw any other conclusion. By resubmitting last year's resolution which does express what I know is our unanimous feeling on this it clears the matter up.

Mr. MOSS. Mr. Speaker, further reserving the right to object, I would like to make it clear that the acceptance by this Member of the substitute language is not to be construed as giving any cognizance of validity to the specious contention that there has been any softness on the part of this Government toward the Castro regime.

I reject any such contentions as being totally lacking in support or validity.

The SPEAKER. Is there objection to the request of the gentleman from Alabama [Mr. SELDEN]?

Mr. GROSS. Mr. Speaker, reserving the right to object, may I say that the gentleman from Alabama [Mr. SELDEN] has carried on a series of exhaustive and excellent hearings with respect to the whole situation in this hemisphere. Those hearings were held by the Inter-American Subcommittee of the Committee on Foreign Affairs of the House, of which the gentleman from Alabama is the chairman, and I compliment him.

I am pleased that he has agreed to go back to last year's resolution, for I am still unable to learn what the objectives of the Organization of American States may be, especially with respect to Cuba. The Chairman of the Organization of American States stated only a month or so ago that he did not know the policy of the United States; that he and other members of the Organization of American States were waiting for the United States to arrive at a policy with respect to Cuba.

So I think the language previously referred to ought to come out of any resolution, since it would be incompatible with the statement made by the Chairman of the Organization of American States. I am pleased that the gentleman will substitute other language.

Mr. McCORMACK. Mr. Speaker, on April 14 we salute the 73d occasion of Pan American Day. Western Hemispheric solidarity is embodied today in the Organization of American States, and represents the oldest international organization in the world.

The year through which we have just passed has tested as never before the qualities of the inter-American system. The unanimous support by our southern neighbors, moral and material, for the U.S. interdiction of the delivery of offensive weapons to Cuba was a crucial reaffirmation of the principle of hemispheric cohesion. It proves to the world once more that the nations of the New World will not tolerate outside intervention in our affairs. We will not tolerate threats to the peace of the peoples of the Americas. These are the principles suggested by Simón Bolívar, enunciated by President Monroe, and fought for and accepted by generations of Americans ever since. They are living, persisting principles, for which, as Mr. Khrushchev learned, Americans are willing to face the risks of war—even in this day and age, the awesome risks of nuclear war.

But though we have successfully faced an outsider's challenge to hemispheric peace, and backed him off, we are still faced with our own backyard problem of Cuba. The meeting of this threat to the peace will be as crucial to the future of the Organization of American States as was the meeting of the threat of Mr. Khrushchev last October. And let us be honest—many Americans have hoped that the inter-American system would be more forthright and effective in meeting the challenge of Castro-Communist subversion and agitation in the Western Hemisphere. But men of good will and high hopes are still laboring on this problem, and it may be that this 73d year of pan-Americanism will witness the welcoming back into the fold of sister nations a free and independent Cuba. That is a consummation devoutly to be desired.

Other hemispheric problems challenge us in addition to the immediate threat of Cuba. And they are the problems of backwardness, poverty, inequality, and injustice that the Alliance for Progress has been formed to eradicate. But the road is steep, the burden formidable, and the hour late for the accomplishment of these worthwhile ends. The forces which resist change in Latin America are still powerful and in many instances unconvinced of the dangers of the revolution bound to come if evolution is thwarted. We in the United States must understand that these problems are not amenable to quick and easy solutions. We must gird ourselves for a long and strenuous pull, confident in our conviction that what we seek is good and just and honorable, worthy of any sacrifice which we can sustain.

Therefore, it behooves us on this 73d Pan American Day to be thankful for what we have accomplished in this last year, but to be humble before the challenging tasks which still lie ahead. May we not be found wanting in the meeting of those challenges.

Mr. O'HARA of Illinois. Mr. Speaker, once again this month we observe Pan American Day. April 14, 1963, marks the 73d anniversary of the inter-American system—a system which has grown from very humble beginnings into today's Organization of American States.

The United States is a proud member of this Organization, and a proud partner in the hemispheric endeavor to make the Americas a clean, healthy, progressive, safe, and happy place in which to live. Such goals are not attained easily and without difficulties, but the year through which we have passed since we last marked Pan American Day shows that the Organization of American States can be an effective instrument for action when its members are convinced that vital interests are at stake.

The crisis of last October, and the willingness of our southern partners to take their places beside us on the nuclear firing line, clearly show the value and potential effectiveness of inter-American solidarity.

This remarkable system was first conceived of in 1815, by the Liberator of South America, Simón Bolívar. Even before the task of throwing off the yoke of autocratic Spain was completed, this remarkable man foresaw a system of American Republics which would be the wonder of the world.

> More than anyone—

He wrote—

> I desire to see America fashioned into the greatest nation in the world, greatest not so much by virtue of her area and wealth as by her freedom and glory.

Bolívar convoked a conference of the American Republics in Panama City in 1826 in an attempt to achieve his dream—but this first attempt failed to obtain widespread support, and the idea of a pan-American community receded until 1889.

In that year, the Secretary of State, James Blaine, called for a conference to be held here in Washington. The First International Conference of American States, held in 1890, is the occasion of which we here take note—Pan American Day's 73d anniversary, thus making the Organization of American States the oldest international organization in the world.

From its beginnings as a commercial bureau in 1890, the system evolved into the Pan American Union in 1910; achieved real solidarity with the hemispheric adherence in 1933 to the Monroe Doctrine, an event which inaugurated the era of the "good-neighbor policy"; formalized a collective security arrangement in 1947 with the adoption of the Rio Treaty; formalized its overall form and juridical structure in 1948, becoming the Organization of American States; and there the amazing story of international cooperation which we are now engaged in really began to take shape.

The Program of Technical Cooperation was inaugurated in 1950, and marked the beginning of a massive hemispheric effort to raise the health standards, educational level, and social, cultural, and material well-being of every citizen of the Americas. The foundation of the Inter-American Development Bank in 1960 was a great stride in this effort; but the year 1961 will be remembered as the year for formal dedication to inter-American development.

In that year, the Alliance for Progress was formalized at Punta del Este, Uruguay, at the behest of President John F. Kennedy. This challenging and imaginative undertaking resolves a decade of development effort for the American Republics in the task of achieving a better life for all citizens of this hemisphere. Planning and working together, we hope to achieve concrete goals set forth in the Charter of Punta del Este, in the matters of personal and national income, housing, health and sanitation, education, agricultural production and just ownership of the land, and social and cultural betterment.

In all these events, the role of the United States of America has been, and continues to be, central and of vital import. The tasks before us are formidable, but the goals worthy of our best, our continuing, efforts. We must be patient with the slow and complex unraveling of events in Latin America—let us remember, that while we are dealing with essentially a Western European culture, it still differs from ours in many respects.

We must not expect to see things done as we might do them, for we are not doing them; we are helping our partners in the Alliance to accomplish these things themselves. If ever there existed an area of the world which was threatened by the forces of Sino-Soviet conquest, and was in need of a stanch, patient, understanding friend and ally, that area is Latin America today. The United States must be, by virtue of location, history, culture and ideology, that friend and that ally.

Together, as one member working with all other members of the family, we shall continue to strive for hemispheric solidarity in understanding, in purpose, in common welfare and in security.

I commend the gentleman from Alabama [Mr. SELDEN] for scheduling this observance of Pan American Day and I congratulate him on his remarks today. He is a great chairman of a great subcommittee of which the gentleman from Illinois has been a member in four Congresses.

Mr. WHALLEY. Mr. Speaker, this Pan American Year just ending—the period between April 14, Pan American Day, 1962, and April 14, Pan American Day, 1963—has had its full share of doubt, uncertainty, and danger, but it has had also splendid successes. It is more than possible that historians in the year 2063 may consider that a great climacteric in human destiny occurred on October 22 of this Pan American Year just past.

In every pan-American area of planning and action throughout the year, two factors inevitably have had to be taken into consideration: on the one hand, the continuous efforts of the Communist regime occupying Cuba to subvert freedom in this hemisphere; on the other, the increasing momentum of the Alliance for Progress to which our Governments and peoples are pledged as freedom's surest safeguard.

Certainly one outstanding fact of the Pan American Year has been a notable agreement by the free American Republics with respect to fundamental principles and ultimate objectives, in spite of various differences regarding method. Above all, there has been an increasing awareness that, for all of us, the independence of free peoples has become inseparable from their interdependence. Cuba itself is visible, outstanding proof that when one of our peoples loses its freedom, the freedom of all is threatened.

During this Pan American Year the Inter-American Economic and Social Council, meeting in Mexico City, made plans for accelerating the Alliance for Progress; and before the year ended, seven countries presented national programs of economic development under the Alliance, while programs in the other countries are being readied.

It has been a year in which Peace Corps groups, invited into Latin American countries, have shown by fine young example ways of community self-help and at the same time have won better understanding and better friends for the United States.

It has been a year of memorable visits: among them, President and Mrs. Kennedy's visit to Mexico, where they were greeted with demonstrations of cordial friendship at every hand and category, from children in the schoolroom to President López Mateos and his Cabinet. It was a year marked also by the visit to our country of President Betancourt of Venezuela, in spite of subversive outbreaks of violence in that country which tried to prevent his trip. We gave a wholehearted welcome to this chief of state who has been shot at because he upholds the freedoms we believe in. Among other good neighbors who visited us during the year were President Alessandri of Chile and, just before his inauguration, President Bosch of the Dominican Republic, leader of a people newly free after a long dictatorial regime.

Above all, this has been the memorable year that has seen the President of the United States place the responsibility for the rocket bases in Cuba squarely where responsibility belonged: on the Soviet Union. And it is the year that unforgettably on a most historic occasion last October saw the Soviet Union, confronted by that stern ultimatum, concede and give way.

It is the year that in that same month of October saw the Organization of American States in splendid unanimity resolve without a dissenting vote to recommend that the member states take all necessary measures, including the use of armed force, to insure the dismantling and removal of Communist rocket missile systems in Cuba and to prevent entrance into that unhappy subjugated land of military supplies endangering hemisphere security.

Among the final events of this historic Pan American Year was the meeting of the Presidents last month at San José, Costa Rica. There the President of the United States and the Presidents of the Central American Republics, conferring together, accelerated steps toward the economic integration of Central America and toward reforms in tax laws, education and agrarian planning, public administration, and measures for public health which will make the Alliance for Progress more speedily effective in that area and consequently throughout the hemisphere.

Independence, interdependence, freedom, and progress—these have been the key words of our Pan American Year.

Mr. FARBSTEIN. Mr. Speaker, today, April 12, is the 30th anniversary of President Franklin D. Roosevelt's historic address on the "good neighbor policy," delivered at the Pan American Union on April 12, 1933. In his first inaugural address the preceding March 4 he had announced his intention to:

> Dedicate this Nation to the policy of the good neighbor—the neighbor who resolutely respects himself, and because he does so, respects the rights of others * * *.

To reread that address, as fresh and vital now as it was this day 30 years ago, is to realize how forcefully it relates to our present hemisphere relations.

President Roosevelt might have been consciously laying the bases for the Alliance for Progress when he explained the good neighbor policy in these terms:

> Friendship among nations, as among individuals—

He said:

> Calls for constructive efforts to muster the forces of humanity in order that an atmosphere of close understanding and cooperation may be cultivated. It involves mutual obligations and responsibilities, for it is only by sympathetic respect for the rights of others and a scrupulous fulfillment of the corresponding obligations by each member of the community that a true fraternity can be maintained.
>
> The essential qualities of a true pan-Americanism must be the same as those which constitute a good neighbor; namely, mutual understanding, and, through such understanding, a sympathetic appreciation of the other's point of view. It is only in this manner that we can hope to build up a system of which confidence, friendship, and good will are the cornerstones.

President Roosevelt was not speaking of, nor can he have had prescience of, the present Communist occupation of Cuba—though it sounds as if he had—when he went on to say:

> In this spirit the people of every republic on our continent are coming to a deep understanding of the fact that the Monroe Doctrine, of which so much has been written and spoken for more than a century, was and is directed at the maintenance of independence by the peoples of the continent. It was aimed and is aimed against the acqquisition in any manner of the control of additional territory in this hemisphere by any non-American power.

Finally, in 1963 as in 1933, President Roosevelt's pledge of mutual faith rings true:

> Your Americanism and mine must be a structure built of confidence, cemented by a sympathy which recognizes only equality and fraternity. It finds its source and being in the hearts of men, and dwells in the temple of the intellect.

Mr. MORSE. Mr. Speaker, it is appropriate, on this Pan American Day to remind ourselves of the truism that the world we live in grows smaller every day. The technology of the 20th century has made our oceans shrink to moats. Weapons surpass the imagination of the capacity for mass destruction and in the speed with which their wantonness can be visited on the most distant point of the globe. Surely at no time in man's history has John Donne's thought expressed so many centuries ago been more appropriate than now: "No man is an island entire of itself."

In a world where no man is an island, we in the Western Hemisphere have united for our collective security in the Organization of American States. The charter which established the OAS says that the Organization was developed "to achieve an order of peace and justice, to promote their solidarity, to strengthen their collaboration, and to defend their sovereignty, their territorial integrity, and their independence."

We all recall the resolute action of the OAS at the time of the missiles crisis last fall when the Organization adopted a strong resolution calling for the withdrawal of offensive missiles from Cuba. But the OAS role was not limited to the passing of a resolution.

Important military contributions were made by several countries. Ships from 3 Latin American countries participated in the quarantine, and offers of other types of assistance were received by the OAS from a total of 12 Latin American countries.

Six months have elapsed since the October crisis in Cuba. The menace of offensive missiles has passed, but the menace of subversion and Communist intervention in the hemisphere remains. We are actively working with Latin American countries in developing programs to counter this subversion. As President Kennedy said last month at San José, we are building a wall of men determined to protect their own freedom and sovereignty. This wall is being created through the Alliance for Progress.

Thus, the security of the hemisphere is being strengthened through the collective determination of the American Republics acting in concert through the OAS. The road ahead is difficult. There are no shortcuts. But thus it has always been.

In 1861, the independence of the Dominican Republic was forfeited and Spanish colonial rule reintroduced. Four years elapsed before freedom was restored.

Some day Cuba shall be free again. On this Pan American Day let us pledge ourselves to that end, and let us rededicate ourselves to the ideals of the hemisphere so that its security can be achieved through the collective determination of our governments; and so that an ever richer and freer life for all our peoples can be secured for ourselves and future generations.

Mr. RYAN of New York. Mr. Speaker, I should like to commend the distinguished chairman of the Subcommittee on Inter-American Affairs, the gentleman from Alabama [Mr. SELDEN], for taking the leadership in observing Pan American Day.

The 14th of April marks the 73d anniversary of the inter-American system. Pan American Day marks the anniversary of the world's oldest international organization, now formally known as the Organization of American States. It is appropriate on this occasion to assess this system of international hemispheric cooperation. This is especially true on this 73d anniversary, since, in the past year, we have passed through the gravest crisis ever faced by the nations of North and South America. Furthermore, despite the fact that the missile crisis of last October was surmounted, urgent, unmet needs still remain to challenge the viability of the inter-American idea—the need to return Cuba to the fold of free nations in the Western Hemisphere and the need to face and overcome the obstacles to the accomplishment of the goals of the Alliance for Progress.

As early as 1815 the great liberator of South America, Simón Bolívar, had conceived of a hemispheric America which would be the greatest in the world, "greatest not so much by virtue of her area and wealth as by her freedom and glory," according to his since-famous Jamaica letter.

After liberating half of the South American Continent from the colonial rule of autocratic Spain, Bolivar called for a Conference of the American Republics in Panama City in the year 1826. He hoped that the nations of the New World would unite in a permanent association for their collective defense.

However, this idea was advanced by the liberator before the nations were ready for it, and the "Perpetual Union, League, and Confederation" created by the poorly attended Panama Conference never materialized. Nevertheless, in Bolivar's words, the Conference established "the plan of the first alliance that marked the beginning of our relations with the universe."

The anniversary we call Pan American Day relates to the First International Conference of American States, called in 1889 by Secretary of State James Blaine. Held in Washington, this Conference created in 1890 the International Union of the American Republics and, as its initial concrete form, a central office called the Commercial Bureau of the American Republics. Thus, the early stages of inter-American cooperation were limited to trade and commercial relations. The pan-American idea was to develop gradually and carefully over the coming years.

In 1910 the Commercial Bureau was renamed the Pan American Union, and its Washington headquarters building, the "House of the Americas," was dedicated at 17th and Constitution Avenue. The Pan American Union is still with us today as the General Secretariat of the Organization of American States.

But the years from the turn of the century until the initiation of the good neighbor policy in 1933 were dark ones from a standpoint of hemispheric solidarity. There was no acceptance of the U.S. self-appointed role as the policeman of the Western Hemisphere, and the big stick and dollar diplomacy interventions left scars of fear, mistrust, and resentment on our Latin American neighbors which are still visible today.

Fortunately, at the Montevideo Conference of 1933 we reversed our policies of the previous three decades and pledged nonintervention, thus opening the gates to the development of the good neighbor policy of President Franklin D. Roosevelt, which led to the close wartime cooperation between the United States and its hemispheric trading partners to the south.

The Second World War, drawing our peoples together as it did, led to the adoption of a system of collective security against external aggression by the Western Hemisphere. This was embodied in the Inter-American Treaty of Reciprocal Assistance, known as the Rio Treaty of 1947. It was under the terms of this important pact that our neighbors supported our actions during the October crisis of 1962.

The Ninth International Conference of American States held in Bogotá, Colombia, in 1948 marked a turning point in the evolution of the inter-American system by adopting a charter giving it juridical form and structure. This Charter of Bogotá changed the name of the Union of American Republics to the Organization of American States and designated the Pan American Union as its General Secretariat. The American Declaration of the Rights and Duties of Man, the first intergovernmental document of its kind in history, was adopted by this Conference. The machinery was thus erected for the evolution of pan-Americanism into its next stage of cooperative development.

That step took place in 1950, with the inauguration of the Organization of American States' Program of Technical Cooperation. To raise the economic, social, and cultural standards of their peoples, the members of the OAS undertook vital programs touching almost every human need: the improvement of rural life, livestock, crops, and food supply; public health and sanitation; housing and city planning; and the training of teachers and technicians in a score of basic professions. After 12 years of operation this program constitutes one of the most important chapters in the pan-American story.

In July of 1956 the Presidents of the American Republics met in Panama City to commemorate the 130th anniversary of the Congress of Panama and to honor the man who had called it, Simón Bolívar. The once utopian dream of the liberator was constantly evolving, and a new chapter in inter-American unity was begun with the Declaration of Panama, which called for an intensive, cooperative effort to make human liberty and decent living conditions a reality for all the peoples of the Americas. The Government of Brazil responded in 1958 with a plan called Operation Pan America, which laid the foundations for what a dynamic President of the United States would come to formalize as the Alliance for Progress 3 years later.

The pan-American concept, however, is much more idealistic and human in its scope than mere economic development efforts. In 1959 the Inter-American Commission on Human Rights was created by the fifth meeting of Consultation of Ministers of Foreign Affairs, which requested draft conventions on human rights and the exercise of representative democracy.

The year 1960 saw fulfilled yet another dream of the founders of the inter-American system. First called for in 1890, the Inter-American Development Bank was inaugurated on the 70th anniversary of that first meeting. The Act of Bogotá, by which it was established, set forth measures of social improvement and economic development within the framework of Operation Pan America and laid the foundations for the Alliance for Progress. This bank, run by Americans for Americans, has done a great deal in its first 2 years of operations. Loans have been granted for housing, sanitation and irrigation projects, agricultural and industrial development, educational projects, and many more vital areas of needed investment in Central and South America. Its securities and bond issues are being accepted very well on the international financial market, and it has an established reputation for competence, efficiency, and sound operating principles.

The major event in pan-American annals for the year 1961 was the adoption of the Charter of Punta del Este and the Declaration to the Peoples of America on August 17. This event heralded the realization of President John F. Kennedy's proposal for an Alliance for Progress in this hemisphere, inaugurating a new era for the inter-American community in its efforts to secure a better life, under freedom and democracy, for present and future generations. Facing these formidable problems has been a sobering task so far—perhaps some of us were overly hopeful for quick results for the Alliance. But we have learned much in the first years of this massive endeavor; and one of the primary points driven home was reemphasized recently by the Clay Committee report, which stated:

> The Alliance for Progress is a long-term venture of extraordinary complexity and scope, demanding a decade or more of sustained effort by all involved to attain truly significant results; the American public should cease to judge the Alliance on whether it has accomplished in 2 years what must take much longer.

The year 1962 was of tremendous significance in the annals of the international affairs of the Western Hemisphere. The January Conference of the Foreign Ministers of the OAS at Punta del Este was ably attended, at the request of the President, by two Congressional observers—Senators WAYNE MORSE and BOURKE HICKENLOOPER. Their report to the Foreign Relations Committee of the Senate describes how Secretary of State Rusk, by virtue of patient but arduous negotiating, secured sufficient support among the 20 Republics to exclude the present Government of Cuba from the activities of the Organization of American States and to condemn it as incompatible with the inter-American system. Senators MORSE and HICKENLOOPER stated that this move proved that OAS was capable of effective action and was significant in the precedent that it set.

In addition to the exclusion of Cuba from the activities of the OAS, the remaining 20 American Republics agreed to restrict trade to Cuba in a further effort to isolate the Castro regime.

But October 1962, marked the passage of not only the United States, but of all our hemispheric neighbors, through the gravest crisis of the nuclear age. The direct confrontation of the Soviet Union by the United States over the erection of offensive missile sites in Cuba brought the world to the edge of an abyss. Every one of our partners in the Organization of American States joined in declaring, under the Rio Treaty, the right of the United States to interdict the delivery of further offensive missiles to Cuba—and many joined this effort physically, with naval or air forces, or the offering of the use of naval and air facilities. This unanimous stand by the Western Hemisphere considerably strengthened the hand of the United States in its eventual diplomatic resolution of that terrible crisis.

Mr. Speaker, there is a greater awareness, on Pan American Day this year, of the crucial importance of aiding our Latin American neighbors to establish political and social justice, than there has been for many years. In the spirit of the great men of the Americas—the Bolivars, the San Martins, the Jeffersons, the Roosevelts—we salute the Americas and join with all in this hemisphere in the hope for equality and social justice.

The SPEAKER. Is there objection to the request of the gentleman from Alabama [Mr. SELDEN]?

There was no objection.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

H. RES. 316

Whereas April 14 marks the anniversary of the founding of the Pan American Union, from which the present Organization of American States has evolved;

Whereas the Organization of American States seeks to promote understanding and cordiality among the Republics of the Western Hemisphere;

Whereas understanding and cordiality among the American Republics is a foundation for the peace and economic and social progress of the Americas;

Whereas the Organization of American States is playing an important role in the success of the Alliance for Progress, in which the United States is banded together with the other American Republics to create a better way of life for all the peoples of the hemisphere: Therefore be it

Resolved, That on the seventy-third anniversary of the founding of the Pan American Union the House of Representatives of the United States extends to the legislative bodies of each of the other Republics of the Western Hemisphere its warm greetings and expresses a sincere hope for the continuance and intensification of the cooperation of the Americas in the Organization of American States and in other feasible ways.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND REMARKS

Mr. SELDEN. Mr. Speaker, I ask unanimous consent that all Members may have permission to extend their remarks in the RECORD following the remarks that have been made on this matter.

The SPEAKER. Is there objection to the request of the gentleman from Alabama [Mr. SELDEN]?

There was no objection.

Mr. SELDEN. Mr. Speaker, I also ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on Pan American Day.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

CUBA: WHERE DO WE GO FROM HERE?

Mr. HORTON. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. HORTON. Mr. Speaker, on this day, when we recognize Pan American Day, I feel it is important that we assess our situation in the Caribbean area.

Cuba is clearly the No. 1 testing ground today in the great struggle between international communism and the free world. This is not because of any fear of invasion of the United States from Cuba, but because the island represents a nearby base for subversion and insurgency throughout Latin America.

The attempt by some people to play down the threat of Communist Cuba to our security is both dangerous and foolish. It is also unfortunate that some have tried to label responsible critics of our policies toward Cuba as warmongers or destroyers of the spirit of bipartisanship in foreign affairs.

The fact of the matter is that by planting themselves so firmly in Cuba, the Soviets have shown their ability—and their daring—to set up camp in our own backyard. To many people around the world, Cuba demonstrates that the Soviet Union has the power and gall to establish a significant military, political, and economic base only 90 miles from our coast.

Yet, in only one respect—the introduction of long-range missiles and bombers last fall—has the United States acted to block the Communists. In every other way since the disastrous Bay of Pigs invasion, we have done little more than talk.

As a result of our indecision, the Russians have in effect maintained the initiative in the Caribbean. They have even gained most credit in some countries for pursuing a "course of moderation" when we forced them to withdraw as a result of the missile crisis.

The continued rule of Fidel Castro, the Communist puppet, in Cuba reduces the prestige of the United States in the eyes of the world. It is obvious evidence that our Government lacks the purpose to eliminate a Communist threat in its own backyard.

Where, then, do we go from here? There are no easy nor readymade solutions. What we need is a change in attitude in certain quarters and implementation of a firm program to eradicate communism from Cuba.

First of all, there is need for a frank facing up by leaders in our Government to the grave threat to the security of the free world posed by Communist domination of Cuba. This threat cannot be swept under the rug if we expect our allies to join us in effective actions to squelch the Red menace in the Caribbean.

There is today a sort of "crisis of confidence" in the foreign policies of the United States, simply because we have failed to articulate a consistent and firm policy with regard to Cuba. We have been flooded with bold words, but there is a drought of concrete action by our Government.

In the place of consistency, we have had zig-zagging. Instead of planning, we have had improvisation. Rather than determination and boldness, we have had indecision and timidity.

Instead of steering a straight course, dictated by thoughtful policy decisions, we have too often adopted a wait-and-see attitude in dealing with Cuba. This drifting indecisiveness led us to the brink of disaster last October. We may well be in the same situation again if we do not soon launch counterinitiatives of our own.

A continued national debate over Cuban policy—responsibly pursued—can be healthy if it finally prods our Government to take a firm and determined stand. For if there is any lesson that we should have learned from the missile crisis last year it was that when we take a strong stand against Communist expansionism, the result is an easing of tensions.

A clearly enunciated policy to rid the Western Hemisphere of Castroism, followed up by concrete acts to implement it, will show the Soviets we mean what we say. It will demonstrate that they have nothing to gain by their belligerent tactics.

The formulation of an effective policy will not be easy. It must certainly include the wholehearted cooperation of our friends in the Organization of American States and the North Atlantic Treaty Organization. By exploiting the island nature of Cuba, we can strangle communism there by economic rather than military means.

Formulate a decisive policy we must—and the sooner the better. Furthermore, our policy must have a sense of urgency. The longer we delay taking determined steps, the harder it will be to blunt the Communist design to take over South America.

History has shown time and time again that the real peacemakers are not those who try to compromise with unscrupulous aggressors, but those who see danger in time and act resolutely to counteract it. Peace is something that we, leading the free world, must win—through policies which prove to the Soviets that they have nothing to gain by hostility and that we intend to protect our freedoms at any cost.

The risks involved in a concerted effort to extinguish the flame of communism in Cuba are admittedly great. But there will be even greater risks if we procrastinate further.

HOUSE RESOLUTION 314

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PUCINSKI. Mr. Speaker, yesterday the distinguished chairman of the Rules Committee, the gentleman from Virginia [Mr. SMITH], introduced House Resolution 314, which would have authorized three members of my subcommittee and two outstanding American scientists to visit the Soviet Union in order to examine the All Union Institute on Scientific and Technical Information at Moscow. The trip is part of a program our committee is carrying on to see whether or not we can bring some sort of correlation or coordination between the vast research activities that are going on in our Nation today at the universities throughout America. We are spending millions and even billions of dollars on this research, and it appears to me some effort must be made to develop a better system of inventorying this huge research program.

Our committee is holding hearings to see if some program can be worked out to coordinate those activities. It is our hope that we will be able to ultimately have a more efficient manner of assembling, codifying, and retrieving all of this research material so that duplication can be kept to a minimum. I am certain that American taxpayers can be saved vast sums of money by reducing duplication. More important, researchers can use their valuable time more effectively on new research if that work already done is quickly made available to them.

The Soviet Union is the only nation in the world at this time that has a central institute where all research data is assembled and made available to others through the use of retrieval computers. It is our hope to personally examine this operation so we can fully evaluate its effectiveness.

In view of the fact that neither one of the two minority members on the subcommittee are able to make the trip during the Easter recess, we have made a request, and we have discussed this with the ranking minority member of the Committee on Education and Labor, also the minority leader, the Speaker of the House, and the chairman of the Rules Committee, that we temporarily postpone final action on House Resolution 314 until such time as at least one of the minority members can participate in the trip. I have been informed this can be done sometime in May.

Mr. Speaker, I do feel very strongly that the minority should be represented on such a visit, and, therefore, I have requested that House Resolution 314 not be called up at this time but seek a more propitious time when both sides of the committee can make the trip. I have been informed the delay will not interfere with plans already initiated by the State Department for the visit.

UNAUTHORIZED TRIPS TO CASTRO'S CUBA

Mr. WILLIS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The **SPEAKER.** Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. WILLIS. Mr. Speaker, I wish to advise the House that our good friend the distinguished gentleman from Pennsylvania [Mr. WALTER] has introduced today a bill designed to prevent the unauthorized trips to Castro's Cuba.

The first stage of studies and investigations conducted by the Committee on Un-American Activities has already provided evidence that such unauthorized trips take place and that most of these excursions are designed to establish contacts with Soviet and Cuban Communist activists, in order to obtain propaganda material in behalf of Castro and his regime.

The bill would give the President of the United States authority to control the travel abroad of U.S. citizens in time of war or national emergency. On that point it appears important to stress that the United States is at this time still in a state of national emergency proclaimed by President Truman in 1950 at the outbreak of Korean hostilities. That proclamation has never been revoked by either President Eisenhower or President Kennedy.

Mr. Speaker, there is obvious need for diligent investigation and legislative action based on the facts developed by such investigation. What we know so far is that U.S. citizens do travel to Cuba without legal authority and in order to conceal their visits they obtain through the cooperation of Castro's consular agents Cuban visas not stamped in their U.S. passports or other travel documents but simply issued on plain sheets of paper which are disposed of after an entry to Cuba is made. This, of course, is done for the purpose of avoiding any evidence or indication that such trips to Cuba are being made. This is an urgent matter, Mr. Speaker, and I hope that we may have action on the bill soon.

NATIONAL SERVICE CORPS

Mr. THOMPSON of New Jersey. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The **SPEAKER.** Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. THOMPSON of New Jersey. Mr. Speaker, I have the honor today to introduce on behalf of myself and 36 colleagues the President's National Service Corps legislation, known to some as the Domestic Peace Corps. Essentially, Mr. Speaker, the wonderful objectives of this legislation are to work with people who are in great need, to dramatize human needs, to motivate other Americans to serve, and to attract more Americans into the helping provisions.

I shall include following these brief remarks a communication to the President from the Attorney General and from the President to the Speaker, along with a section-by-section analysis of the bill. I commend it to the attention of our colleagues, and I believe that the great majority will agree that this is indeed a splendid and forward-looking program which can help many Americans to realize their needs. I have the honor to have as my cosponsors the following Members:

The gentleman from Michigan, Congressman O'HARA; the gentleman from Maryland, Congressman SICKLES; the gentleman from Pennsylvania, Congressman DENT; the gentleman from California, Congressman BROWN; the gentleman from Hawaii, Congressman GILL; the gentleman from California, Congressman HAWKINS; the gentleman from California, Congressman ROOSEVELT; the gentleman from Minnesota, Congressman BLATNIK; the gentleman from Rhode Island, Congressman FOGARTY; the gentleman from Rhode Island, Congressman ST GERMAIN; the gentleman from Ohio, Congressman VANIK; the gentleman from Arizona, Congressman UDALL; the gentleman from Delaware, Congressman MACDOWELL; the gentleman from New York, Congressman GILBERT; the gentleman from Washington, Congressman HANSON; the gentleman from Pennsylvania, Congressman MOORHEAD; the gentleman from Michigan, Congressman DIGGS; the gentleman from Massachusetts, Congressman MACDONALD; the gentleman from Michigan, Congressman DINGELL; the gentleman from New Jersey, Congressman RODINO; the gentleman from New Jersey, Congressman DANIELS; the gentleman from New Jersey, Congressman JOELSON; the gentleman from New Jersey, Congressman MINISH; the gentleman from New Jersey, Congressman PATTEN; the gentleman from New York, Congressman RYAN; the gentleman from West Virginia, Congressman HECHLER; the gentleman from New York, Congressman DULSKI; the gentleman from Montana, Congressman OLSEN; the gentleman from Michigan, Congressman STAEBLER; the gentleman from Ohio, Congressman ASHLEY; the gentleman from New York, Congressman STRATTON; the gentleman from Hawaii, Congressman MATSUNAGA; the gentleman from Arizona, Congressman SENNER; the gentleman from Tennessee, Congressman BASS; the gentleman from Illinois, Congressman LIBONATI; the gentleman from Florida, Congressman PEPPER.

APRIL 10, 1963.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Enclosed herewith is a draft bill relating to the creation of a national service program which you indicated in your "Message on Our Nation's Youth" of February 14 would be submitted to the Congress shortly.

Our recommendation for a national service program is rooted in the paradox of critical human need in the midst of general prosperity. Unfortunate numbers of Americans live in substandard conditions—people who despite efforts to help themselves or because they cannot help themselves, are denied the essentials of a decent life in a generally prosperous society.

These citizens who need help are found among residents of depressed areas and rural and urban slums, the mentally ill and mentally retarded, the elderly, dependent children, those without sufficient education. They include American Indians, Cuban refugees, and migratory farm workers.

Dedicated volunteers in unprecedented numbers work constantly in their own communities to aid these deprived people, and they are doing an excellent job. But the task they face is overwhelming and their human resources are inadequate. Therefore, I am submitting to you a draft bill entitled the National Service Corps Act of 1963, which is designed to accomplish four goals:

To work with people in great need: The program would provide an opportunity for full-time service. At the request of local agencies, institutions, or organizations, corpsmen will work with those Americans in greatest need to help them help themselves.

To dramatize human needs: Many Americans in greatest need are isolated—unseen and forgotten. By informing the Nation pointedly and dramatically of their needs, a national service program—while not solving all these problems—will help to expand the attack on the forces producing deprivation in the United States.

Motivating other citizens to serve: Because projects will be planned, initiated, and supervised by the localities, and will include local counterpart volunteers, the national service program will be a vehicle through which communities can help themselves. Corpsmen, working full time will, by their example, motivate many more citizens to give part-time service in their own communities.

Attracting more Americans into the helping professions: The experience of helping others will inspire many people to choose careers in the service professions—social work, teaching, nursing—all of which suffer from critical shortages of trained personnel.

We envision a National Service Corps small in numbers, modest in cost. A huge national program is neither practical nor consistent with American tradition. It is our recommendation that the program begin with 1,000 corpsmen the first year at an estimated cost of $5 million, gradually expanding to a maximum of 5,000 corpsmen in perhaps 3 years.

Through these corpsmen and the demonstration projects to which they are assigned, the national service program will act as a catalyst to promote greater citizen effort toward the elimination of critical human needs.

We know that Americans have responded to a call from their Government in a time of war. Now we are confident they will respond to another great challenge from their Government in time of peace.

This program will help to awaken Americans to the pockets of poverty and human misery. Americans have demonstrated countless times their willingness to assist their less fortunate countrymen.

In preparing this draft legislation, the study group sought the advice of hundreds of organizations including those which would be most concerned with a national service program. The program has received the enthusiastic support of city and State governments, youth and senior citizens groups, farm and labor organizations, religious groups. Also, groups with which corpsmen would cooperate have endorsed the formation of a corps.

The study group feels that the National Service Corps Act would be a vital supplement to the pending Youth Employment Act. Where youth employment is concerned with finding constructive employment opportunities for boys and girls 16 through 21 who lack adequate skills for today's labor market, the National Service Corps—with skilled and carefully selected men and women of all ages—is aimed at stimulating volunteer efforts in local communities to expand the attack on deprivation in the United States.

Sincerely,

ROBERT F. KENNEDY.

THE WHITE HOUSE,
Washington, April 10, 1963.

Hon. JOHN W. MCCORMACK,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: I am transmitting herewith for the consideration of the Congress a legislative proposal to authorize the establishment of a National Service Corps to strengthen community service programs in the United States. This proposal is an outgrowth of a study by a Cabinet-level committee under the chairmanship of the Attorney General and composed of the Secretaries of Agriculture, Interior, Commerce, Labor, and Health, Education, and Welfare, the Administrators of the Housing and Home Finance Agency and the Veterans' Administration, and the Chairman of the Civil Service Commission.

Poverty in the midst of plenty is a paradox that must not go unchallenged in this country. Ours is the wealthiest of nations, yet one-sixth of our people live below minimal levels of health, housing, food and education—in the slums of cities, in migratory labor camps, in economically depressed areas, on Indian reservations. In addition, special hardships are faced by our senior citizens, dependent children, and the victims of mental illness, mental retardation and other disabling misfortunes.

As I stated in my "Message on Our Nation's Youth" to the Congress on February 14, recommending a National Service Corps, this legislation will provide for a carefully selected corps of men and women of all ages who are willing to serve and whose skills and knowledge can contribute in a most valuable and practical way to the ongoing attack upon these problems of national concern. These men and women will be made available, upon local invitation and in cooperation with interested governmental and nongovernmental agencies, to serve for a limited time in projects directed toward the critical human needs of our countrymen.

The example of men and women rendering full-time service within the corps should motivate additional Americans to volunteer their services in their own communities. I am also enclosing a letter discussing the proposed legislation in greater detail which was sent to me by the Attorney General. Also enclosed is a section-by-section analysis of the proposed legislation.

Sincerely,

JOHN F. KENNEDY.

SECTION-BY-SECTION ANALYSIS OF NATIONAL SERVICE CORPS BILL AS SUBMITTED BY THE EXECUTIVE BRANCH

The following is a section-by-section analysis of the executive branch proposed National Service Corps bill. The bill was prepared and submitted to the Congress on the basis of the findings and recommendations of the President's study group on a national service program. The provisions of the bill are patterned upon those of the Peace Corps Act with modifications to reflect the fact that the proposed program would operate in the United States rather than in foreign nations. The bill contains a proposed authorization of $5 million for the fiscal year 1964.

Section 1 provides that the bill may be cited as the "National Service Corps Act."

Section 2 states the purposes of the bill. These are to open new opportunities for full-time service working with those Americans in greatest need; to illuminate those needs, so as to expand the attack on deprivation in the United States; to motivate many more citizens to volunteer their services in their own communities, thus encouraging communities to help themselves; and to inspire more people to choose professions that serve their fellow citizens.

This section declares that it is the policy of the United States to carry out the purposes of this act through a National Service Corps, patterned after the Peace Corps, which will be composed of carefully selected men and women of all ages who shall be made available—upon local invitation and in cooperation with interested governmental and nongovernmental agencies—to serve for a limited time in projects directed toward the critical human needs of our countrymen. Projects may include projects designed to make corpsmen available for work with persons in institutions for the mentally ill and mentally retarded and during their return to normal living; in meeting the health and education needs of migratory workers and their families, Indians living on and off reservations, and residents of depressed areas and rural and urban slums; in care and rehabilitation of the elderly, the disabled, the delinquent young and dependent children; in improving standards of educational opportunity; and in other projects directed toward critical human needs. To the extent possible, each project carried out under this act shall provide for contributions by the cooperating agencies.

Section 3(a) authorizes the President to carry out projects in furtherance of the purposes stated in section 2 on such terms and conditions as he may determine. This bill, like the Peace Corps Act, provides for the granting of all authority and the appropriation of all funds to the President, with power to delegate any or all functions and to allocate any or all funds as he sees fit. (See secs. 4(b) and 7(c).)

Section 3(b) provides that before undertaking a project, the President shall assure himself that it will not displace regular workers or duplicate or replace an existing service in the same locality.

Section 3(c) authorizes an appropriation to the President for the fiscal year commencing July 1, 1963, of not to exceed $5 million to carry out the purposes of the bill.

Section 4(a) authorizes the President to appoint, by and with the advice and consent of the Senate, a Director of the National Service Corps. The President may fix the salary of this officer at a rate not exceeding $20,000 per annum. This section authorizes the President to appoint a Deputy Director of the National Service Corps and to fix his salary at a rate not exceeding $19,500 per annum.

Section 4(b) authorizes the President to exercise any functions vested in him by the bill through such agency or officer of the Government as he shall direct. The head of any agency or any officer performing functions under the bill delegated by the President is authorized to promulgate rules and regulations and to delegate his functions under the bill. This subsection is identical to section 4(b) of the Peace Corps Act. Under the authority of this subsection it is intended that the National Service Corps would be established by the President as a semiautonomous agency within the Department of Health, Education, and Welfare, with most of the operating functions delegated to the Director of the National Service Corps.

Section 5(a) authorizes the President to enroll in the National Service Corps for service in the United States, qualified citizens and nationals of the United States, to be known as corpsmen. It is intended that the terms and conditions of the service of National Service Corps men be exclusively those stated in the bill and those consistent with the bill which the President prescribes. Because many of the statutory rules relating to persons regularly employed in Government agencies would be inappropriate or irrelevant to this new type of temporary volunteer service, this subsection, patterned after the Peace Corps Act, provides that corpsmen are not to be deemed to be officers or employees of the United States for any purpose except as provided in the bill. By providing that service as a corpsman is not to be considered Government employment, this subsection would, for example, permit retired Government personnel to serve as corpsmen and receive the same benefits as other corpsmen without loss of pension rights.

Section 5(b) provides that whenever the President determines that it is in the national interest, he may, under such terms and conditions as he may deem appropriate, enroll qualified foreign nationals in the Corps for service in the United States. It is intended that the authority granted in this subsection would be sparingly used to permit the enrollment, for example, of Cuban nationals resident in the United States for service on a project serving the needs of Cuban refugees or of Mexican nations for service on a project serving the needs of migrant workers and their families.

Section 5(c) is similar to the comparable subsection in the Peace Corps Act and provides that corpsmen shall be furnished with such living, travel, and leave allowances and such housing, transportation, supplies, equipment, subsistence, and clothing as the President determines to be necessary for their maintenance and to insure health and effectiveness. It is intended that, as nearly as practicable, the corpsmen will live on the same level as their counterparts in the host community. This subsection also authorizes the furnishing of transportation and travel allowances to applicants for enrollment and former corpsmen en route to or from places of examinations, training, enrollment, and termination. The authority with respect to applicants is included because persons will not be enrolled in the National Service Corps until they are finally selected, following training, and actually report for service.

Section 5(d) is similar to the comparable subsection in the Peace Corps Act and provides for payment of an adjustment allowance to corpsmen at rates fixed by the President but not to exceed $75 for each month of satisfactory service as determined by the President. These payments would accumulate monthly but would normally not be paid until the termination of service, as they are intended primarily to assist corpsmen during the period of transition back to life at home. However, in order to enable the corpsman while in service to meet important obligations, such as contribution to the education of other members of his family, payment of life insurance premiums, or emergency expenses, the President could permit a portion or all of the accrued amount of the adjustment allowance to be disbursed while the corpsman was in service.

Section 5(e) authorizes the designation of corpsman leaders from among the corpsmen. Corpsman leaders would be persons, generally senior to corpsmen in age and experience, who were required for supervisory or other special duties or responsibilities in the field. All the provisions of the bill relating to corpsmen would apply to corpsman leaders, and the term "corpsmen" throughout the bill includes "corpsman leaders."

Section 5(f) provides that corpsmen shall be treated as Government employees for the purposes of the Federal Employees' Compensation Act, which provides for disability compensation payments and medical care in the case of injury or disease arising out of Federal employment. For the purpose of fixing the level of disability benefits, which is related to earnings, corpsmen would be deemed to be receiving monthly pay at the lowest rate provided for GS–7 in the executive branch. Under this provision, at present GS rates, a corpsman who became permanently and totally disabled would receive $—— per month.

As under the Peace Corps Act, where a corpsman suffered injury or illness while located in the United States, the rules applied in similar cases by the Federal Employees' Compensation Board would determine whether the illness or injury arose out of the corpsman's service. Although covered by the Federal Employees' Compensation Act at all times, a corpsman would not begin to receive disability payments and other benefits so long as he was in service, since he would be receiving living expenses and full medical care during that time and would continue to accrue his adjustment allowance. This subsection also insures that the injured corpsman, or his dependents in the case of death, will not receive double benefits, by providing that any payment on account of the same injury or death received from the entity to which the corpsman was assigned shall be credited against any benefits payable under the Federal Employees' Compensation Act.

Section 5(g) provides that corpsmen shall be deemed to be employees of the United States for purposes of the Internal Revenue Code of 1954 and of title II of the Social Security Act, and any service performed by an individual as a corpsman shall be deemed for such purposes to be performed in the employ of the United States. It is intended that corpsmen would be treated equally with other persons not in the National Service Corps, with respect to income and withholding taxes, social security taxes, and social security coverage. There are no provisions in the bill comparable to sections 201 and 202 of the Peace Corps Act which amended the Internal Revenue Code and the Social Security Act to provide for exemptions from gross income for certain allowances, and for special "backpay" treatment of termination or readjustment payments.

Section 5(h) is similar to the comparable provision in the Peace Corps Act and authorizes the President to make provision for health examinations and immunization of corpsmen preparatory to service and complete health care during service. Under regulations prescribed by the President, such examinations, immunization, and care could be provided through available medical facilities of other agencies and in such cases the agency operating the medical facility would be reimbursed from National Service Corps appropriations. Where examination, immunization, or care were not furnished through other Government facilities, other arrangements would be made either by the National Service Corps or, in the case of some projects administered through other agencies, by the administering agency pursuant to agreement with the National Service Corps.

Section 5(i) enables corpsmen to obtain credit for the period of their volunteer service for the purposes of retirement, and also generally for the purposes of seniority, reduction in force, leave accumulation or other rights and privileges based on length of service, in the event they later became employed in any of the various Federal civilian employment systems. Under such conditions as the President might specify, examinations and other prerequisites for admission to other Federal employment established by laws administered by the Civil Service Commission could be waived for corpsmen who had successfully completed volunteer training.

Section 5(j) authorizes the President to detail or assign corpsmen or otherwise make them available to other agencies of the U.S. Government or any State or subdivision thereof, private nonprofit organizations, and other organizations, individuals and firms. Corpsmen so assigned or detailed would continue to be entitled to the benefits, allowances and privileges provided for corpsmen.

Section 5(k) provides that corpsmen shall be deemed employees of the Government for the purposes of the Federal Tort Claims Act and other similar Federal claims statutes (such as the Suits in Admiralty Act) which waive the Government's immunity from suit. This means that the Government could be sued for damages for the negligent act or omission or certain other wrongful conduct of a corpsman under circumstances where the Government, if a private person, would be liable. Claims of this nature not in excess of $2,500 could be settled administratively under the Federal Tort Claims Act. This subsection also provides that corpsmen shall be subject to provisions of the Hatch Act which limit the political activities of employees of the United States.

Section 5(l) authorizes the President to terminate the service of a corpsman at any time at his pleasure.

Section 5(m) provides that upon enrollment every corpsman shall take the following oath prescribed for persons appointed to any office of honor or profit by section 1757 of the Revised Statutes of the United States:

"I, A B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

Section 5(n) authorizes the President to provide training for applicants for enrollment as corpsmen and for corpsmen following enrollment. It is intended that actual enrollment in the National Service Corps take place after the basic period of training and after final selection for service on a particular project. During training, however, applicants for enrollment would be treated in all respects as corpsmen and would be subject to the same conditions of service as corpsmen, except that their training period would not be credited toward retirement or other benefits in other Federal services in which they may subsequently be employed. (See sec. 17(c).)

Section 5(o) provides that the number of corpsmen enrolled in the National Service Corps shall not exceed 1,000 during the fiscal year commencing July 1, 1963, and shall not exceed 5,000 at any time thereafter, unless otherwise authorized by the Congress.

Section 6 authorizes the President to employ such personnel other than corpsmen as the President deems necessary to carry out the purposes and provisions of the bill. Such personnel, unlike corpsmen, would be subject to the usual rules of Government employment and to the provisions of the bill applicable to employees.

Section 7(a)(1) is similar to section 10(a)(1) of the Peace Corps Act, and authorizes the President, in furtherance of the purposes of the bill, to make contracts and agreements and otherwise cooperate with agencies of the U.S. Government or of any State or subdivision thereof, private nonprofit organizations, and other private organizations, individuals, and firms.

Section 7(a)(2) authorizes the President to accept voluntary services and gifts of money or property for the use of the National Service Corps in furtherance of the purposes of the bill. This provision is similar to one contained in section 10(a)(3) of the Peace Corps Act. It makes clear the National Service Corps' authority to accept gifts of money or equipment or to accept contributions, for example, to establish training or operating facilities which might provide the framework for National Service Corps projects. This subsection also authorizes the President to dispose of such donated property in furtherance of the purposes of the bill.

Section 7(b) provides that a contract or agreement for services of corpsmen may obligate current fiscal year funds available under the bill for a period of not more than 2 years, including funds for the purpose of paying or providing for the allowances and other benefits of corpsmen. Such contracts or agreements would be subject to termination if Congress terminated the program. This subsection is based upon section 10(c) of the Peace Corps Act which provided 3-year contract authority.

Section 7(c) is similar to section 10(e) of the Peace Corps Act, with minor modification. It permits funds available for the purposes of the bill to be allocated to any Government agency in connection with activities under the bill. Funds so allocated could be spent in accordance with the authority of the bill or in accordance with authority governing the activities of the agency to which the funds were allocated.

Section 7(d) is the same as section 10(f) of the Peace Corps Act. It authorizes any officer of the Government carrying out functions under the bill to utilize the services and facilities of other Government agencies to procure commodities from other Government agencies.

Section 7(e) is the same as section 10(g) of the Peace Corps Act. It sets forth the manner in which reimbursement or payment, when required, is to be made to another agency furnishing facilities, services, or commodities to carry out the bill.

Section 8(a) is substantially identical to section 12(a) of the Peace Corps Act. It authorizes the President to appoint persons to membership on a National Service Corps Advisory Council to advise and consult with him with regard to general policies and programs designed to further the purposes of the bill. The members of this Council are to be broadly representative of various public and private organizations and groups as well as individuals interested in the programs and objectives of the National Service Corps.

Section 8(b) provides that members of the Council shall serve at the pleasure of the President and meet at his call. It further provides that members who are not employees of the Government may receive out of funds available for purposes of the bill compensation not exceeding $75 for each day, not to exceed 20 days in any fiscal year, spent away from their homes or regular places of business in connection with meetings or conferences of the Council, and while so engaged may receive travel expenses and per diem in lieu of subsistence as authorized by law (5 U.S.C. 73b–2). This provision is similar to section 12(b) of the Peace Corps Act.

Section 9(a) is similar to section 13 of the Peace Corps Act. It authorizes the employment of experts and consultants and organizations thereof in accordance with 5 U.S.C. 55a, with compensation at rates not exceeding $75 per diem plus travel expenses and per diem in lieu of subsistence as authorized by law (5 U.S.C. 73b–2). The proviso at the end of this subsection authorizes annual renewal of all contracts under this subsection.

Section 9(b) exempts experts and consultants appointed under section 9(a) from Federal conflict-of-interest laws except insofar as they prohibit any individual from receiving compensation from nongovernmental sources with respect to any particular matter in which he was directly involved in the performance of his Government service. Exemption is also provided from laws governing reemployment of retired officers or employees and simultaneous receipt of compensation and retired pay or annuities. The same exemptions are provided for members (except regular Government employees) of the Council referred to in section 8. These exemptions are the same as those provided in section 13(b) of the Peace Corps Act for experts and consultants and members of the Peace Corps National Advisory Board.

Section 10 provides express authority for a number of specific kinds of expenditures. Most of these provisions are designed to provide the express authority to make specific uses of appropriated funds which is (or appears to be) required by various statutes and Comptroller General rulings, or to overcome or modify certain Government-wide restrictions which would inhibit effective and efficient National Service Corps operations. Each of these authorities is provided with respect to the Peace Corps program by section 15 of the Peace Corps Act. Specifically, this subsection authorizes:

(1) payment of rents in the United States, for which express authorization is required by the provisions of 40 United States Code 34, 40 United States Code 304c, and Reorganization Plan No. 18 of 1950. Rental funds for Peace Corps activities have been included in the Peace Corps appropriations rather than in General Services Administration appropriations. It is intended to continue this practice for the National Service Corps. This would enable the National Service Corps to rent recruitment or training facilities outside of Washington. This paragraph also permits expenditures for repairs, alterations, and improvements to leased properties in excess of 25 percent of the first year's rent, the ceiling imposed by 40 United States Code 278a.

(2) expenses of printing and binding without regard to the provisions of section 11 of the act of March 1, 1919 (44 U.S.C 111). This provision, similar to that contained in section 15(a) of the Peace Corps Act, would be utilized sparingly as necessary to meet the needs of the National Service Corps for recruiting materials and for printed matter in a time schedule which cannot be met under existing regulations.

(3) expenses in connection with meetings concerned with the purposes of the bill, including meetings of experts or consultants appointed under section 13(a). This paragraph has been included, as in section 15(d)(2) of the Peace Corps Act, in view of the provisions of 31 United States Code 551 and 31 United States Code 673.

(4) expenses of preparing, transporting and disposing of remains of corpsmen dying while away from their homes participating in activities under the bill. This is similar to the provisions of section 15(d)(10) of the Peace Corps Act and to authority presently available for employees of the Government and their dependents under 5 United States Code 103a.

Section 11 requires the President to transmit reports to Congress on operations under the bill at least once in each fiscal year.

Section 12 provides that all persons employed or assigned to duties under the bill and all corpsmen enrolled in the National Service Corps shall be investigated to insure that the employment, assignment, or enrollment is consistent with the national interest in accordance with standards and procedures established by the President. Under this provision, the security investigations of all persons employed by the National Service Corps and all corpsmen would be governed by the provisions of Executive Order 10450, as amended. Corpsmen would receive the same security investigation now conducted of all persons who are candidates for a "nonsensitive" position with the U.S. Government.

Section 13 authorizes the President to adopt a seal or emblem for the National Service Corps.

Section 14 is the same as section 20 of the Peace Corps Act. It amends the student loan provisions of the National Defense Education Act of 1958 to suspend principal and interest payments on such loans for student borrowers during the period of their National Service Corps service, as is now provided with respect to borrowers in military service. Because of possible constitutional objections to this amendment if applied mandatorily to loans outstanding on the date of enactment of the bill, a proviso has been added which would apply the amendments to loans outstanding on that date only with the consent of the lender.

Section 15 is the same as section 21 of the Peace Corps Act. It contains a technical amendment to the Civil Service Retirement Act to assure that a corpsman who later became a participant in the civil service retirement system would not receive both annuity payments under that system and social security benefits based upon his period of volunteer service.

Section 16 defines various terms used in the bill. In particular, subsection (d) defines the period of service of a corpsman so as to include the training period prior to enrollment, except for the purpose of accruing retirement or other credit in connection with subsequent Federal employment. These definitions are substantially the same as those in section 25 of the Peace Corps Act.

Section 17 is a standard separability provision.

Section 18 provides that the bill's effective date shall be the date of its enactment.

Mr. RYAN of New York. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RYAN of New York. Mr. Speaker, I am happy to join my distinguished colleague from New Jersey [Mr. THOMPSON] in sponsoring the legislation which President Kennedy today has transmitted to Congress to establish a National Service Corps.

Mr. Speaker, our Nation faces critical human needs—needs which are often overshadowed by our concern with foreign affairs and obscured by the fact that ours is the most prosperous Nation in the world. Poverty is a way of life for a large segment of our population.

President Kennedy has put the challenge, "Poverty in the midst of abundance is a paradox that must not go unchallenged." The skills, talents, and leisure of Americans of all ages could be utilized in renewed attacks upon unmet needs.

President Kennedy's proposed national service program is designed to awaken every citizen to our human problems and to stir an individual sense of responsibility for the public welfare. The program can do this in two ways.

First, the legislation would provide a small national service corps of skilled men and women, embodying a totally new concept of voluntaryism: a year of full-time service work with people in great need—in mental hospitals, in urban slums, and underdeveloped rural areas, in migrant labor camps, on Indian reservations—at local invitation.

Second, and most important, the work of these corpsmen, by focusing immediate attention on problem areas, will stimulate many more Americans to join volunteer programs attacking problems in their own communities.

Thus, the goal is a great citizen response to needs at the community level, through public and private agency programs. The National Service Corps would trigger this response, which would benefit existing volunteer programs throughout the country.

For example, there is an urgent need for volunteers to help young people who fail in school or quit before graduation because of lack of help and guidance.

School failure and school dropouts represent a tremendous challenge to the future vitality of our Nation, yet there are simply not enough professional teachers to give badly needed personal attention to these young people. The New York City Board of Education suggests that an auxiliary worker—a corpsman or a local part-time volunteer—

serving as an aid to the professional teacher, could help close the gap. The roles of these aids would be as varied as the reasons for school failure.

One of the most serious disadvantages of many children entering school from deprived home backgrounds is limited verbal skill. The child has not been exposed to the varieties of spoken expression that most children hear in their homes. Thus, he may fall behind and never catch up in the basic skills of reading and writing. With professional guidance, corpsmen would organize speech clinics and other group activities to improve the verbal ability of these children.

Another often neglected group of children are those with better than average IQ's who do poorly in school because of emotional difficulties caused by problems in their home life. Often well behaved in school, these children quietly drop out before graduation. Under professional guidance, a corpsman would work with 20 to 30 such students on an individual basis. He would serve as a combination caseworker, friend, and counselor, trying to help the children solve—or at least learn to live with—their home problems. He would tutor them after school and generally serve as a guide throughout the critical period when they might ordinarily quit school.

The New York City Board of Education proposal also calls for the corpsmen to help develop new school community programs for local volunteers. These new programs would be cosponsored by local community organizations.

Thus, a National Service Corps could pave the way for increased citizen involvement in this field and others by showing where there is a need and by pointing out how local part-time volunteers can give useful service.

Mr. Speaker, the problem of narcotic addiction is one of the most serious problems in the country. At last we are beginning to deal with it as an illness. In my congressional district the New York City Department of Health is experimenting with clinics which provide psychiatric help and guidance and vocational counseling for narcotic addicts. This is an imaginative approach which has been developed in cooperation with local civic and political groups which comprise the West Side Narcotics Council. I have worked closely with those involved in this effort in presenting the program to the mayor and board of estimate.

National Service Corps volunteers could play a major role in expanding this program. I strongly recommend that the proposed National Service Corps develop a project to work with narcotic clinics to provide aftercare and rehabilitation services for addicts.

Mr. Speaker, if our Nation is to continue as a beacon of hope and inspiration to the rest of the world, we must use our full resources to meet the unfilled needs of millions of our fellow Americans who live in ignorance, poverty, and disease. I believe that thousands of dedicated volunteers will come forward to help millions of our underprivileged citizens achieve better health, education, and opportunity for a decent life.

The national service program is an effective way to expand existing volunteer programs on the local level. Let us consider it as a spark which will kindle community concern and reflect American idealism at home as the Peace Corps does overseas.

TO ESTABLISH THE OZARK NATIONAL RIVERS AREA

Mr. ICHORD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. ICHORD. Mr. Speaker, the Senate Committee on Interior and Insular Affairs and the House Committee on Interior and Insular Affairs held hearings this week on S. 16 and H.R. 1803, and H.R. 2884. These bills are identical. S. 16 has been introduced by the Honorable Senators STUART SYMINGTON and EDWARD V. LONG of Missouri. H.R. 1803 has been introduced by me and H.R. 2884 has been introduced by my colleague, the Honorable FRANK KARSTEN, Member of Congress from the First District of Missouri. The purpose of the legislation is to establish the Ozark National Rivers Area to be administered by the Secretary of the Interior under the objectives of the 1916 act establishing the National Park Service for the purpose of preserving and interpreting the unique qualities of the area while allowing its use.

The preservation and development of the Current, Eleven Point, and Jacks Fork Rivers in Missouri is something that has been under discussion and study for many years. I first became interested in the proposal while serving in the Missouri House, when the house in 1956 appropriated funds to match Federal funds for the purpose of making a study of the area. Later, when I was speaker of the Missouri House of Representatives, I made a trip to Washington in behalf of the proposal.

During recent years a great deal of attention has been devoted to the need for setting aside in public ownership the unspoiled portions of our rivers, lakes, and ocean shorelines. The need becomes more apparent each year as our population increases. The Current and Jacks Fork Rivers country in my district in southern Missouri represents a striking opportunity for preservation in the interest of not only the Midwest, but the entire Nation—clear, cold, beautiful, spring-fed streams, but not assured of remaining in that state unless something is done.

Located within the proposed park area are some of the largest springs in the world. Big Spring, at Van Buren, has flowed as much as 840 million gallons a day and it has averaged over the last 20 years better than 250 million gallons a day. The area has six springs which flow more than 65 million gallons a day each. Within the area close to the rivers are 13 named caves, 11 interesting geological sites, 40 archeological sites, a number of splendid ecological sites and many sinks. There are few places in the world where so much of nature's beauty can be preserved by setting aside so little.

The bills introduced in the 87th Congress gave the proposed park area the classification of a monument within the national park system. Approximately 16 percent of the land was already in State or Federal ownership. The area had 117 miles on the Current, 39 miles on the Jacks Fork, and 34 miles on the Eleven Point, in Oregon County. No land was to be taken within 2 miles of the city limits of Van Buren, Doniphan, and Eminence, which was for the purpose of leaving room for future growth of those towns.

The boundaries of the proposed park are located in an underdeveloped section of the Ozarks. Forty percent of the farmers in the region have an income of less than $1,000 per annum, and it is an area of diminishing population. The population today is only 70 percent of what it was 50 years ago. Employment opportunities are very meager and there are relatively few people of working age in the area. Certainly, something needs to be done to improve the economy of the area and all studies have shown that establishment of the proposed park will increase the economic opportunities of the region.

Even though the area did consist of 113,000 acres of land and running along 190 miles of the three rivers, there was a surprisingly small number of people living full time in the area. But these people do present a difficult problem. Many of the families have lived for generations in the area, and it is a pretty harsh procedure to compel them to leave the area in the interest of preservation. There are many values other than monetary which they attach to the land. To alleviate the difficulties of the residents we wrote into the bill a provision permitting the owners to reserve a life estate. That is, the Government could only purchase the remainder—the interest after the life of the owner and his or her spouse. There are also other provisions in the bill designed to protect the interest of the landowner.

When I began the Ozark Rivers project, my primary consideration was improving the economy of the area, rather than preservation. However, today I am just as strongly motivated by the need of preservation. Many people not being familiar with the area have written me asking why we do not leave the area as it is. Why change? These people fail to realize that to keep the area as it is without governmental action is impossible. The beauty of the area has begun to erode; and the erosion will continue at a more rapid pace in the years ahead. Today most of the land along the rivers is owned by nonresidents, and it has become increasingly difficult for the public and even residents of the area to gain access to the river.

Further provisions of the original bill provided for the U.S. Government to make payments to the county in lieu of taxes in order to compensate the counties for tax losses due to land being taken off the tax rolls prior to the operation and buildup of the park.

It further provided that hunting and fishing in the park would be permitted in accordance with the laws of Missouri. Several people have asked why we designated the park as the Ozark Rivers National Monument indicating that the word "monument" is not very descriptive of the area. They were correct. The only reason we designated the area as a monument was because hunting was frowned upon in national park areas and nearly everyone agreed that hunting should be permitted in this area. The Missouri Conservation Commission which has 15,000 acres of land in the area felt very strongly that hunting should be permitted. Then, too, monuments in the National Park System are usually employed in areas with one outstanding feature. In the Ozark Rivers area we have several thousand acres and many attractive features. The name definitely was not appropriate. H.R. 1803 and S. 16 differ from the bills introduced in the 87th Congress in only three respects.

First. The name is changed from the Ozark Rivers National Monument to Ozark National Rivers. This is a change in name only. The area will still be administered by the National Park Service.

Second. All the area in Howell, Oregon, and Ripley Counties is omitted. The Eleven Point River is not included in the bill due to objections from people in Oregon County.

Third. The National Park Service is given the explicit power to negotiate the purchase of scenic easements. This is new authority given the National Park Service. However, this is authority to negotiate and purchase alone. The Park Service is not given the power to condemn a scenic easement.

H.R. 1803, H.R. 2884, and S. 16, Mr. Speaker, represent an outstanding opportunity to set aside in public ownership one of the most beautiful areas in the United States. I sincerely hope the Congress will act favorably upon the legislation during this session of Congress.

AFRICAN FREEDOM DAY

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, 2 years ago on April 15 the President of the United States joined in the observance of African Freedom Day in the ceremonies in Washington. The occasion was the third anniversary of a gathering of representatives of the then free African states, eight in number, at which was adopted a resolution that spoke the spirit of independence and of amity among the nations and the peoples of the continent of Africa in working out their destiny in a world of freedom.

The fifth anniversary of African Freedom Day will fall on April 15, when the House will not be in session. I am happy to take this opportunity, before we adjourn for the Easter recess, of extending congratulations and good wishes to all the peoples and all the free nations of Africa. Sincerely do we wish them well in meeting the problems of new nations; problems that are never easy and that challenge the utmost in effort, in hard work, and in dedication. Those were the problems faced by our own Nation when we broke from colonialism years ago and started on the task of building a nation that now has become the leader and the bulwark of the world of freedom.

As the chairman of the Subcommittee on Africa I have followed closely the developments in that continent. I have had the privilege and the pleasure of acquaintance with many of the leaders in many countries in Africa. I have been heartened and my faith in the future has been strengthened by the marvelous progress that has been made. To all the new emerging nations of Africa, to all the African nations on the threshold of independence, to all the people of Africa do I extend warmest good wishes.

We are in a changing world. We are in a world in which peoples everywhere are looking for freedom from poverty, from disease, from the handicap of ignorance. We are looking forward to a rebuilt world in which there will be the blessing of permanent peace because there will be no causes to incite nations to the destructive tragedy of war.

We are building to a tomorrow in which men everywhere will enjoy dignity. Communism is certain to fail because in communism is a denial of human dignity. Nowhere is that recognized more thoroughly than in Africa. As the new emerging nations of Africa in increasing numbers take their places among the sovereign nations of the world, some of them destined to greatness because of the character of their people and their potential wealth, I am confident they will be strong forces for freedom in the world of the tomorrow. Again, my congratulations and good wishes.

THE "PAUL REVERE RIDERS"

Mr. BASS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. BASS. Mr. Speaker, I noticed in the morning press that the opposition party is going to send out a task force over the country during the Easter recess which they claim will act as informers.

Mr. Speaker, I was rather surprised that they would name this group "The Paul Revere Riders" because in my opinion if Paul Revere were alive today he would be a Democrat. He was a man of vision and courage and a man who was working in the interest of freedom and progress for the great American people. It might be, however, that they have named this group "The Paul Revere Riders" in order to date the type of information and education which they will try to portray on this futile tour.

I would say to my friends that the Democrats are going home to listen.

We are going home to talk to our people and to listen to them and to do the things that we have always done. That which is inspired by our constituents back in the district. But I am afraid some of my Republican friends are going on this trip because they do not want to go home. They do not want to have to explain the vote that they cast yesterday on the bill which was designed to stimulate our economy and bring progress to the country. Some of the city and county officials and people who are the recipients of that program may want them to explain their reasons for that vote yesterday, against the public works appropriation.

FATHER JOSEPH F. THORNING

Mr. OSTERTAG. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. OSTERTAG. Mr. Speaker, I rise to pay tribute to a great American who today offered the prayer in the House of Representatives on the anniversary of Pan American Day. I am referring to Father Joseph F. Thorning, of Carrollton Manor, in the heart of Maryland. Farther Thorning, as you know, is the pastor of St. Joseph's Church there. I would like to remind the House that Father Thorning has offered the prayer here in the House of Representatives on this day ever since the year 1944, for 19 consecutive years.

He is a great American and he has done much in the Latin American area in the cause of freedom, liberty, and the pursuit of happiness.

I hope, and I know we all hope, that we will be privileged to have him here to offer the prayer in the House of Representatives for many years to come on the anniversary of Pan American Day.

PORK OR PRINCIPLE

Mr. CURTIS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS. Mr. Speaker, I was rather amazed to hear the gentleman from Tennessee [Mr. BASS] take the floor to gloat over the vote yesterday. The vote was very clearly one on a question of pork or principle. Every Congressman in the House had something in his district involved in that bill, in all probability; indeed, I did. And I shall go back to my people and tell them that the national interests are such that they transcend what might be the provincial interests of my community, because we have a serious problem of balance of payments, of gold flow, of deficit financing. The vote yesterday was one in which a Member had to make up his mind whether the provincial interest in his district ought to prevail over the national interest.

Let anyone on the Democratic side deny that it was not placed on that kind of a low level by this administration. Each one of us was contacted and in one way or another appealed to in his local interest and the desire of a Congressman to get reelected, on the assumption that if he voted for a project in his district, whether it was justified or not or whether it was in context with the national interest, that it would help him.

I am hopeful that when my Democratic colleagues go back home they will find that the people have a better understanding of the importance of the national interest and are willing to put aside what might be to their momentary advantage in some of these ill-conceived projects and in the case of worthy projects defer them until our revenues reveal we can afford them.

GOVERNMENT CONTROLS

Mr. KYL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. KYL. Mr. Speaker, in the month of May, farmers who grow wheat will vote to determine what type of Government program shall rule their destiny. That destiny is more than economic. The decision's import will touch every American citizen.

To put this matter in perspective, the gentleman from Iowa would ask these questions:

If the U.S. Government can, through a compulsory program, determine what a farmer will plant, and how much he can plant, that same Government has the same fundamental authority to tell a newspaper what to print and how much to print—to tell a preacher what to preach or a teacher what to teach. Can that statement be refuted? Is there some philosophic or legal conception which sets agriculture apart from other considerations—which places farmers under a different set of privileges or restraints?

And in the final analysis, does it make a particle of difference whether the farmer voted for the loss of freedom willingly, or under duress, or because of misleading or misunderstanding?

Is there yet one among us, Mr. Speaker, who can relate the history of any nation which traded some of its freedom for security, and ever retained either?

This is proper season, Mr. Speaker, to note that "man cannot live by bread alone," even if the bread is made from $2 wheat.

Apropos of the previous comment is the following letter which was received by the Honorable DURWARD HALL, Representative from the State of Missouri:

> DEAR MR. HALL: I understand that Freeman and Kennedy contemplate the complete control of the dairy industry. The deal as explained in the Springfield paper would practically ruin me and others around here for we milk in the spring and summer off the grass. A monthly quota system would simply mean to give most of it away. Cows milk after they freshen and if they are geared to calve in the spring it is time and production consuming to change them to suit the shims and fancies of politicians. Tell the boys they milk much cheaper from grass than even from Government grain. I milk cows, raise hogs, beef, corn, and hay. If my farm is state controlled and I don't have the freedom to run it as I choose, do I really own it? If I don't own it what is the difference between this and Russia?
>
> Now I realize that to simply be against something is not enough. We must find some constructive answers to the dairy problem, if there is a problem. Perhaps something that could be seen about in Washington would be the finding of some other medium besides milk to test the amount of fallout. This has hurt milk sales no doubt. Then about the world trade deal—I don't understand that Dr. Hall and I don't think anyone else around here does; perhaps you should enlighten us as well as Mr. Kennedy is going to do.
>
> I've got three boys, 7, 5, and 1; sure would hate to see politics and schooling get mixed up together. We don't need any Federal aid in Jenkins. I've said enough, just wanted you to know that we, the people, are still interested in our country, and are behind you 100 percent.

DR. JOSEPH F. THORNING

Mr. MATHIAS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Maryland?

There was no objection.

Mr. MATHIAS. Mr. Speaker, I should like to associate myself with the remarks made by the distinguished gentleman from New York with reference to the "Padre of the Americas," who offered the prayer here today. I certainly echo his sentiments in hoping that Dr. Thorning can be here on Pan American Day for many years in the future.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. MATHIAS. I yield to the gentleman from Oklahoma.

Mr. ALBERT. I am delighted that Members are taking time for this purpose today, and I associate myself with the gentleman's remarks.

Mr. MATHIAS. I would also like to comment on the remarks of the gentleman from Tennessee, with whom I often agree. I do not know, however, how he can determine that Paul Revere was a member of either of our parties, because I believe Paul Revere had all the qualities of patriotism that all Americans would want to emulate today. I have to admit there is an affinity that is recognizable and timely. Certainly Paul Revere was a man who had an ambition to manage the news.

FEDERAL SPENDING

Mr. FOREMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. FOREMAN. Mr. Speaker, in response to some of the spending activity that has taken place on the floor of this House this week, and partially in response to a question posed to me by some of my colleagues on the other side of the aisle, including the remarks of the gentleman from Tennessee, I am prompted to make a brief reply.

Being new in this body, I was somewhat surprised this week at the number of times I heard the statements:

"This program won't cost us a dime."

"This program will actually save us money."

"Don't you want to do something for the people?"

It was amazing also, that almost every program presented was the best program ever offered.

Now, I do not know about other parts of the United States, but I do know about west Texas and, frankly speaking, Mr. Speaker, we supposedly saved so much money this past week in appropriating new funds to help aid depressed areas that I am concerned that west Texas received such a savings that we could also, very possibly, become a depressed area if such savings programs are continued. I am glad we will not be saving money this next week during the Easter recess like we did last week.

In answer to some of my free-spending colleagues, yes, I do want to do something for the people. I want to grant them a little relief from their continually growing tax burden. I want them to have the freedom to make their own decisions and spend their own money instead of some Federal bureaucrat doing it for them.

For some strange reason, I find the folks in my district of west Texas are sick and tired and fed up with the sort of savings programs we have been enacting this past week. The folks back home, in west Texas at least, are looking for a Government "hand out"—they want the Government's hand out of their pockets.

Some have posed the question, in response to my reasoning and statements, "What kind of a nut is he?" The answer is best given by my hometown daily, the Odessa American, as follows:

> WHAT KIND OF A "NUT" IS HE?
>
> He wants to run his own business.
> He wants to select his own doctor.
> He wants to make his own bargains.
> He wants to buy his own insurance.
> He wants to select his own reading matter.
> He wants to provide for his own old age.
> He wants to make his own contracts.
> He wants to select his own charities.
> He wants to educate his children as he wishes.
> He wants to make his own investments.
> He wants to select his own friends.
> He wants to provide his own recreation.
> He wants to compete freely in the marketplace.
> He wants to grow by his own efforts.
> He wants to profit from his own errors.

He wants to take part in the competition of ideas.

He wants to be a man of good will.

What kind of a nut is he? He's an American who understands and believes in the Declaration of Independence, that's what kind.

Aren't you glad you are too? And don't you wonder why so many of our fellow Americans are trying so hard to destroy the kind of life that has made us the aim and the envy of every other people on earth?

The question is: What kind of nuts are they?

NUCLEAR SUBMARINE—THE "THRESHER"

Mr. BECKER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BECKER. Mr. Speaker, as we approach this Easter season, this being Holy Thursday, tomorrow Good Friday, and on Sunday our Lord rises from the dead and is resurrected, I am impelled to say a word about the 129 young Americans whose bodies probably are entombed at the bottom of the North Atlantic in our great attack submarine, the *Thresher*.

I am sure every Member of this House feels just as I do that it is a great tragedy and that if one of our sons were there, it would be a terrible personal tragedy.

So I say, Mr. Speaker, as one of the Members of this House with a tremendous responsibility in passing the Selective Service Act and drafting or otherwise inducing our young men into the service of the United States for the protection and freedom of our citizens, my prayers, and I am sure those of my colleagues, today and over this weekend go out for sympathy to the parents and the members of the families of these young men.

Our first prayers express hope that they may be rescued and returned; yet, at this time I have the feeling and it has been voiced in official circles that there is little hope left for them.

So my prayers, our prayers, go out to the families of these young men. Surely, it is some consolation to them that these men died in the service of their country. It is our duty to see that their deaths shall not have been in vain and that this House of Representatives now and in the future will see to it that we try to preserve that peace for which they gave their lives.

REPORT OF RAILROAD RETIREMENT BOARD FOR FISCAL YEAR ENDING JUNE 30, 1962—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 27)

The SPEAKER laid before the House the following message from the President of the United States which was read, and, together with accompanying papers, referred to the Committee on Interstate and Foreign Commerce and ordered to be printed with illustrations:

To the Congress of the United States:

In compliance with the provisions of section 10(b)4 of the Railroad Retirement Act, approved June 24, 1937, and of section 12(1) of the Railroad Unemployment Insurance Act, approved June 25, 1938, I transmit herewith for the information of the Congress, the report of the Railroad Retirement Board for the fiscal year ended June 30, 1962.

John F. Kennedy.

The White House, *April 11, 1963*.

COMMITTEE ON THE DISTRICT OF COLUMBIA

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on the District of Columbia have until midnight Saturday, April 13, to file certain reports.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

HEED WARNINGS ABOUT REDS IN THE CARIBBEAN

Mr. CRAMER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. CRAMER. Mr. Speaker, in the April 6, 1963, issue of the Miami Herald, and in the April 9, 1963, issue of the Chicago Sun-Times, editorials appeared concerning my efforts to warn the Congress and the American people of the Communist conspiracy pushing toward impending disaster in certain areas in the Western Hemisphere. Although the editorials, for which I am dearly grateful, speak for themselves, I would like to remind this great body that the Herald is the largest daily newspaper in the State of Florida and the largest American daily sitting closest to Cuba and to the Caribbean while the Chicago Sun-Times expresses a similar view many miles to the north. I hold a great deal of respect for their evaluation of the present situation in the Caribbean and am, therefore, inserting their editorials in the Record at this point. I believe the Herald's and Sun-Times' evaluation of my statements to be a further substantiation of the facts and for my concern. I have asked the British Government to advise me of the number of Russians, Red Chinese, and satellite nations' passports they have issued in the last 2 years. The British have an open door to the Caribbean for the Communists—still do business with those countries—including Castro's Cuba. The United States has made no public request to Great Britain to end this aid to the Communist. Is it not about time such a demand was made?

[From the Miami (Fla.) Herald, Apr. 6, 1963]

Red Dominoes From Cuba?

The possibility of a "domino effect" in the West Indies has existed since Cuba fell to the Reds 4 years ago. Representative William C. Cramer, Republican, of Florida, cites disturbing signs of stepped-up Soviet activity to topple the chain of islands which form the eastern shore of the Caribbean, the Mediterranean of the New World.

Mr. Cramer predicts flatly that Haiti will fall within 3 or 4 months unless the United States takes emergency action. This won't be news to Herald readers who have followed on-the-scene reports of impending disaster in Haiti, which shares the island of Hispaniola with the Dominican Republic.

All that separates Haiti from Communist Cuba is the deep and narrow Windward Passage, a major world sealane. The two countries are literally within sight of each other, and many Haitians work in Cuban sugarfields.

Mr. Cramer attributes his information to "sources which I consider completely reliable." They tell him there are Russians—"as many as 1 Russian to every 10 natives"—in major cities of such key islands as Trinidad, Barbados, and Curacao.

The reliability of Mr. Cramer's sources may be appraised by his recent reports of travel to Cuba from Mexico. He got his facts from the manifests of Cubana Airlines planes. They showed 3,447 trips to Cuba by this route in a 6-month period last year. Nearly half the travelers were from 17 Latin American countries. There were 265 from Russia and its satellites. Ninety-nine citizens of the United States made the journey in defiance of a U.S. ban.

No one has challenged the accuracy of Mr. Cramer's figures on the comings and goings between Mexico City and Cuba. No one in official position has done anything about it, either.

If his reports on Russian infiltration of the West Indies are correct, the danger to the Americas is obvious. The islands command all the eastern approaches to the Panama Canal. They are the "soft underbelly" of the Western Hemisphere, like Europe's relation to islands in the Mediterranean and the north coast of Africa.

The Congressman from St. Petersburg is serving as a present-day Paul Revere. What counts will be the response to his warnings.

We need help.

[From the Chicago (Ill.) Sun-Times, Apr. 9, 1963]

Another Caribbean Threat

The Windward and Leeward Islands stretch like a curved necklace of green jewels from south of Puerto Rico almost to the coast of Venezuela. The islands, rich in history, separate the Atlantic Ocean from the Caribbean Sea. First discovered by Columbus the islands for long years were a first port of call for European ships, riding the trade winds down the long reaches of the Atlantic.

Representative William C. Cramer, Republican, of Florida, has charged that many of the Windward and Leeward Islands are heavily infiltrated with Russians. He says that in many of the towns in the island chain the ratio of Russians to natives is 1 to 10.

If this is true, and Representative Cramer says his information is completely reliable, then Great Britain now has reason to be an active partner in the U.S. efforts to rid the Caribbean of the Russian influence. The islands are under the protection of Great Britain.

It is easy to see why Russia would make a great effort to influence this island chain. The Windward and Leeward Islands stand squarely athwart the ocean highway leading to the Panama Canal. In a strategic sense they dominate the entire northern and eastern coast of South America and they afford many deepwater harbors suitable for naval bases.

Representative Cramer also says that Russia is training Haitian sugar field workers in Cuba in the arts of sabotage and subversion.

He declares that Russian arms caches in Haiti and the Dominican Republic are extensive and ominous.

Haiti is an even more sensitive area than the Windward and Leeward Island chain, so far as the safety and defense of the United States is concerned. If Haiti, a miserably poor and backward country ruled by an ironfisted dictator steeped in voodoo mysticism should fall into the Red orbit then the most important sea passage in the Caribbean, the Windward Passage, would be flanked on the one side by Cuba and on the other by Haiti. The free world cannot afford the loss of this strategic seaway; the United States cannot tolerate such a loss.

Haiti has long been ripe for a political change of an abrupt and bloody nature. The country seethes with rumors of conspiracies by one or more of a score of clandestine organizations that range from the pro-Castro and anti-Castro Communists to Roman Catholic action groups.

The United States has emphasized its disapproval of Haiti's president, Francois "Papa Doc" Duvalier, by cutting off almost all of the U.S. economic assistance program to Haiti. This action has enraged even the pro-U.S. factions in Haiti.

The eventual fate of Haiti is not yet clear but the threat posed by Russian infiltration of the Windward and Leeward Islands, as outlined by Representative Cramer, is very clear. Great Britain has seen fit to cooperate with the United States in deterring Cuban patriots from making punitive attacks on Russian shipping; now Great Britain should clear the Russians out of Britain's island protectorates. The United States and the Organization of American States should offer all possible assistance.

VACILLATING CUBAN POLICY CONCERNS MANY MEMBERS OF THE PRESS

Mr. CRAMER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. CRAMER. Mr. Speaker, I am inserting in the Record, an editorial which appeared in the Fort Lauderdale News, Fort Lauderdale, Fla. I am also inserting two articles, one written by Columnist Henry J. Taylor and the other through the services of the North American Newspaper Alliance.

Although written by different men from throughout the world, all have one thing in common—concern over this country's vacillating, timorous, and highly questionable policy with regards to Cuba. I think their messages are of primary concern to all Americans and I recommend them to the attention of my colleagues for their careful study and consideration.

For many years now, I have been advocating a firmer U.S. policy toward Castro and the Communist threat in this hemisphere. A careful analysis of these articles most assuredly justifies my growing concern and raises many interesting questions which I feel the administration has a duty to answer:

[From the Fort Lauderdale (Fla.) News, Mar. 29, 1963]

Price on Cuban Policy May Run Even Higher Than We Bargained For

Despite the Kennedy administration's obvious success in getting some of the top Republican leaders to soft-pedal the Cuban issue, this entire situation continues to be a highly irritating bone in the throats of the American people as a whole.

Why this is so isn't difficult to see. The Communist-controlled Government and the Soviet troops in Cuba are an accomplished fact and no amount of administration doubletalk can hide this situation.

This, in turn, leads to only one conclusion. Again, despite doubletalk from the White House and the State Department, this Nation's long-standing Monroe Doctrine has definitely been sidetracked as our official policy now amounts to nothing more than a "containment" of the Communist regime in Cuba rather than a positive program of removal or ejection.

Now, there may be reasons why this administration is fearful of removing the Communist plague in Cuba. We have been told that one of the basic reasons happens to be that we don't want to force Russia into a position where the Soviets will have to resort to war to save face. We have also been told that Cuba cannot be separated from other trouble spots throughout the world and that any action on our part to oust the Soviets from Cuba is quite apt to trigger repercussions in Berlin and elsewhere that could easily bring on a devastating war.

So, to avoid these things we have adopted the policy of trying to solve the Cuban problem with words rather than with deeds. Our Government tells us no concessions have been given to the Russians in return for the removal of Soviet missiles and Soviet long-range bombers from Cuba. Yet everything that has happened since the missiles were supposedly removed indicates that concessions or pledges were made on our part.

One of these concessions may or may not have been a pledge by us to discourage or prevent attacks by rebel forces on Cuba. Russia, in bitterly protesting an armed attack against a Soviet ship a couple of weeks ago, charges that this represents a violation of the Kennedy-Khrushchev agreement and that if the attacks are continued the result may well be to heat up the crisis again.

Hardly had this protest been received in Washington than another and reportedly more serious attack on a Soviet vessel took place. This brought immediate orders from Washington for a full-scale investigation by the Coast Guard, FBI, and other agencies to determine if these attacks were being launched from U.S. soil.

Already Washington has decried these rebel attacks as being "irresponsible" and dangerous. Dangerous they might well be. But if it is "irresponsible" for courageous Cubans to use every method they can devise to strike back at invaders who have taken over their homeland, then a lot of people in this country and in Cuba have to learn a new definition of this word.

From all these events it is clearly evident to any sensible person that rather than winning a victory in forcing the Russians to take their missiles from Cuba we have suffered a rather inglorious defeat. It may be true we avoided a serious threat of war by calling off our blockade and pulling back our forces when we unquestionably had the upper hand.

But, if the price is now to be acceptance of a full-blown Russian military base in our own backyard, then we, and a great many other Americans, gravely question the thinking behind this policy.

It will be recalled that for a while Prime Minister Neville Chamberlain, of Great Britain, was acclaimed as a great hero for preserving "peace in our time" by virtue of the concessions he gave Adolf Hitler. Yet, history has shown that these concessions added up in the long run to one of the sorriest mistakes ever made by any world leader. They didn't avert war, they only made it more inevitable, and the same may well be true of the appeasement policy we are now following in regard to Cuba.

No nation can avoid a war by displaying weakness or fear. Yet, weakness and fear are the hallmarks of our Cuban policy today. This our people realize, and this is why they simply cannot understand nor accept the indecisive and spineless attitude our Government is taking today.

President Kennedy and his advisers don't have to look very hard or very far to understand why his popularity, as evidenced by the Gallup Poll, is dropping off at an increasing pace. The hard truth happens to be that more and more of our people each day are becoming sick and disgusted with our timorous and vacillating policy on Cuba.

It is an issue that cannot be tucked quietly under the rug by inducing congressional opponents to stay quiet on the subject. It is the big, burning issue of the day, and until there is less talk and more action out of Washington to meet it forthrightly and courageously, it is not going to be shoved aside or forgotten.

Our Cuban Policy's a Leaky Beanbag

(By Henry J. Taylor)

British General Ritchie, later relieved by Montgomery, was defeated by Marshal Rommel in the desert battle at Knightsbridge, leading to the fateful fall of Tobruk.

Ritchie's headquarters were camouflaged in great disarray behind a mesa in the Libyan sands. I traveled there to see him with doughty U.S. General Scott. Ritchie, crouching over the maps, showed Scott his field position. "What should I do?" he asked.

"Well, General," Scott replied, "I don't know what you should do. But I know this. You're going to have to do something different from what you're doing now, because you're getting the hell beat out of you."

So it is with our policy toward Castro, built along the lines of a leaky beanbag.

Who would have dreamed that mighty America could have come full circle? In one's wildest imagination could anyone conceive a foreign policy that could arrive at such a dismal, defunct, and dangerous end?

Here we said, as the minimum demand of the American people, that "a Communist state will not be tolerated in the Western Hemisphere," that "communism is not negotiable in the Western Hemisphere," that the Castro cancer would defeat our security throughout Latin America and even pledging to the ransomed freedom fighters that their bloodied pennant will be returned to them in a freed Cuba, and what happens? We end up protecting, guaranteeing, and solidifying Red Castro and the Soviet lodgment there with all the power of our great Air Force and the U.S. Navy.

If we have a foreign policy, or, rather, if what we have can be called a policy, you might as well call Humpty Dumpty the Rock of Gibraltar.

This is not a policy; it is a debacle in thinking. The results are cumulative, like cancer is cumulative, finally spreading beyond correction. And who can deny the frightful cost of historic errors which quickly become impossible of correction?

That's the really lethal damage in our wrongheaded thinkers' manipulation of the news. By employing an acute sense of timing, and such distractions as the President's appearance before the ransomed freedom fighters in Miami, the grim failures can be—and are—compounded one after the other along a retreat road never made clear to the American people.

With each one, as in the case of the Bay of Pigs and then our October 22 Munich, the choice of corrections narrows. It becomes limited to a choice of bad choices among worse choices.

Thus, mile by sandy mile, President Kennedy has negotiated our position downhill. Step by step, as the resulting situation has closed in (which is the purpose of the enemy), our Government is forced into the inevitable alibi: that to do something different from what it next proposes would be worse than what it now must do. Then that bad choice is called wisdom. Accordingly, we end up what we're doing now. Knightsbridge to Tobruk to where?

A Humpty-Dumpty policy is not good enough for the world's leading power nor will it allow us to remain that. There are always barbarians outside the walls. No leading nation, no matter how productive or apparently powerful, can live through our incredible behavior in a decisive area like Cuba without correction. Either we correct our fantastic blunders, as Montgomery corrected Ritchie's, someway, somehow, or Rommel in the form of the U.S.S.R. will correct them for us.

Politicians skin our ears with baroque oratory, cliche piled on cliche, announcing that the United States must meet its world responsibilities. Yet the first responsibility of a government is to supply security to its own citizens by correcting its own failures.

We talk of healing the world when we are not securely governing ourselves. We're giants when pronouncing of the universe and pigmies in our own performance.

In tragic truth, Castro's Russian masters have outthought us, outmaneuvered us, and cast us out of control of the situation besides. How else—how else—could we now find ourselves forced to order a wrong-way blockade against fighters for freedom instead of against Castro?

UNITED STATES, RUSSIA MADE DEAL, FRENCH SAY

PARIS.—The idea Russia and the United States have made a secret bargain involving the withdrawal of American missiles from Europe in exchange for the Soviets pulling their missiles out of Cuba is now official French doctrine.

This was revealed by an article in the "Revue Militaire d'Information" regarded as the most authoritative publication put out under the imprint of the French Defense Ministry.

The two great powers bypassed their allies, the magazine asserted, and came to an arrangement between themselves. This was the meaning of the disclosure so soon after the Cuban crisis that Jupiter missile installations in Turkey and Italy would be dismantled, it added.

The magazine went on: "There was thus indeed an agreement between the great powers on the 'demissilization' of Western Europe, an operation evidently demanded by the Soviets in return for their own nuclear disengagement in Cuba. This is a strange alliance in which the most exposed allies are deprived of a part of the means of assuring their security through an accord reached over their heads and with the principal opponent."

The article's anonymous author declared the whole idea of a NATO multinational nuclear force—which France has spurned—was cooked up afterwards as a maneuver to disguise the truth.

"Western public opinion was tricked," he declared. There was "clearly nothing" to America's insistence that a multinational force based on seagoing Polaris missiles was a decisive step forward in modernizing Western Europe's defenses.

Allied diplomatic sources here were startled by the vehemence and bitterness of the article, appearing as it did in an official publication. They agreed it could not have been published without President de Gaulle's approval and confirms that he regards present American nuclear policy as, firstly, a step toward total subjugation of Western Europe to American strategy, and, secondarily, a Soviet-American settlement prejudicial to the interests of America's allies whose views, in the final analysis, Washington will simply ignore.

The article dismissed the Nassau agreement between President Kennedy and Prime Minister Macmillan as nothing more than a move to insure Britain also would be dependent on American strategy and her nuclear independence limited.

The article makes clear that De Gaulle regards the multinational nuclear force proposal as more of a political move designed to give Washington absolute control of Allied destinies than fulfilling a genuine strategic need.

The French military writer declared that whatever the vulnerability of the Jupiter missiles on the ground, they compelled a potential aggressor to use nuclear weapons first in order to destroy them before mounting his main attack.

But, he added, removal of missiles from the soil of Western Europe meant the decision on whether nuclear weapons were to be used to check an attack on the Continent had switched from the aggressor to Washington.

He declared "under the pretext of modernizing the armaments of Turkey and Italy, the United States has cleverly disengaged itself by absolutely reserving for itself the privilege of an eventual intervention."

SHAME!

Mr. CRAMER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. CRAMER. Mr. Speaker, the precipitous action of this administration in confining anti-Castro Cubans to the Miami area and halting their symbolic raids on Cuba, their supplying men and arms and food to the underground, will, I think, be regarded by future historians as the true turning point in America's long and distinguished fight for individual freedom and human dignity.

For never before, in the history of our great country, have we purposefully and deliberately hampered the efforts of men who are willing to fight for what all men have traditionally wanted—and died for—their homeland's freed.

The administration's effort to stop these brave Cubans from exercising their will violates the sacredness of all that we, as Americans, hold so dear: liberty and freedom.

I believe it will be discovered, as Americans awake to what has actually transpired, that this administration has misjudged completely the temperament of the people.

At this point, I would like to insert in the Record an editorial which appeared in the April 3, 1963, issue of the Richmond News-Leader, entitled "Shame!"

SHAME!

The most melancholy manifestation of the administration's "no win" policy is to be seen in the maddening restrictions newly clamped upon the anti-Castro raiders. In heaven's name, who are we fighting—our friends, or our enemies? What new heights of hypocrisy and timidity is Mr. Kennedy reaching for now?

In cracking down on these heroic men, our Government has announced that the United States does not propose "to see our own laws violated with impunity, or to tolerare activities which might provoke armed reprisals."

It makes you a little sick at the stomach. At the time of the Bay of Pigs fiasco, our own Government violated every neutrality act on the statute books, and a dozen other laws besides. As recently as last October when the President's spine was stiffer, our own Government engaged in activities that might well have provoked full-scale armed reprisal. To this day, we are engaged in Vietnam in a military action filled with risk of a broadened war.

What is to be gained by hobbling the raiders? It is said that their continued hit-and-run attacks will provide a justification to the Russians for keeping troops in Cuba. This is the only line of reasoning that makes any sense, and it doesn't make much sense. If the Russians want to keep their troops in Cuba, they can trump up a justification on their own. And when did the Russians justify their course of conduct anyhow?

A second argument is that these sporadic raids will provoke attacks on American shipping in the Caribbean. All right. Suppose they do. The U.S. Navy is not helpless to protect ships flying the American flag. There is a French proverb to the effect that you can't make an omelet without breaking some eggs. We ought not to imagine that effective pressure can be kept on Castro without risking some loss of life and property.

Against these pusillanimous and legalistic arguments, every consideration of patriotism and every factor of morale have been discounted. It is said that the raiders accomplish nothing significant: They sink a freighter, they blow up a dock, they drop leaflets, they land a few rifles. These achievements are counted as nothing at all.

We count such activities for a very great deal. "Exiles feed on hope," says Creon in "Antigone." These brave conspiracies, these heady raids along the Cuban coast, are visible symbols of the fire of counterrevolution. They are feats of derring-do from which legends are made. To thousands of Cubans longing for freedom from Castro's Communist rule, the raiders bring a message that sustains: Have courage. You are not forgotten.

Mr. Kennedy would snuff out this spark of resistance; he would jam the message. He will not countenance a Cuban Government in exile; he will not tolerate attacks on Castro's Cuba. The British are brought into this disgraceful affair, in order to round up a band of 17 raiders in the Bahamas; the presumption is strong that our own Central Intelligence Agency exposed their hideout. Henceforth the Cuban commandoes must fight two foes—the Communist enemy in front, the American "friend" behind.

Bravery. Personal heroism. A certain impudence. A sense of glory. These are qualities once highly esteemed in the American tradition. Why must they now be suffocated in a fog of diplomacy and a blanket of neutrality law? Shame, Mr. Kennedy. We cry shame.

LAO SITUATION EXAMPLE OF DESTINY MANAGEMENT

Mr. LAIRD. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the Record and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. LAIRD. Mr. Speaker, last July when the Declaration and Protocol on Neutrality in Laos was signed, I sent a letter to Secretary of State Dean Rusk in which I raised very serious questions about the wisdom of entering into an agreement under the terms contained in that document. The doubts I expressed in that letter and in the subsequent exchange of letters seem to have been well founded in the light of the recent outbreak of fighting between the neutralists and the Communist Pathet Lao in the Plaine des Jarres. At the conclusion of my remarks, I will insert into the RECORD the letter I sent to Secretary of State Dean Rusk last July. I will also include the reply sent to me by then Assistant Secretary of State for Far Eastern Affairs, Averell Harriman, at the direction of Secretary Rusk, as well as my reply to him.

Mr. Speaker, I do not rise today to claim credit for accurately predicting what would transpire in Laos; I do not claim any prescience or foreknowledge denied to my colleagues or to the executive branch. But I do claim that in the case of Laos, the administration was given ample warning by many of the Representatives of the people on both sides of the aisle concerning what would happen if we entered into that troika arrangement.

Time after time, in the situation in Laos, in South Vietnam, in Cuba, in Berlin, in the Middle East, in Africa, in almost every crisis spot we have faced, the Executive was warned by Democrats and by Republicans in the Congress of the consequences we would face if our policy were not altered.

And time after time, the executive branch has seen fit to ignore completely the advice and counsel that was offered on a truly bipartisan basis by the representatives of the people.

From this deliberate decision to ignore the counsels of Congress, we have a sorry record of rollback defeats, sorry frustrations, decline of prestige, and diminishment of freedom. This failure of bipartisanship is evident on two levels. When the Executive chooses to ignore the counsel of Congress as a whole, he thwarts what we might loosely call a bipartisanship between those two major branches of the Government. Having destroyed bipartisanship on that level, it is small wonder that bipartisanship also breaks down within the legislative branch itself.

Mr. Speaker, far worse than any news management we have witnessed thus far is this commitment on the part of the executive branch to engage in destiny management. By arrogating to itself the sole prerogative of determining what our actions should be, the executive branch is usurping what should be the responsibility of all Americans whether they live on Pennsylvania Avenue or Main Street. This destiny management bypasses the traditional role of the Congress and the people who in the past participated meaningfully in the formulation of consensus that goes far beyond the formalities of foreign policy declarations.

In every single instance one could cite in which the United States faced a cold-war crisis, there have been legislative voices raised urging a correct policy. These voices were heard but not heeded by the Executive. Instead, the Executive has chosen to ignore those voices in order to pursue a policy that at best has been questionable.

Need I recall, for example, the legislative voices that demanded dismantlement of the Berlin wall as it was being raised? We know now that the Russians were expecting this and no nuclear holocaust would have been unleashed.

Need I recall the voice of Senator KEATING, who demanded action in Cuba long before the Executive would even admit that missiles were being placed on that island? Hindsight demonstrates that KEATING was correct, the Executive wrong.

Need I list the long roster of legislators, Democrat and Republican, who urged the establishment of a blockade or quarantine on Cuba long before Russian missiles zeroed in on the majority of our cities?

Is it necessary to recall the constant questioning of our incomprehensible policy in the Congo both by Democrats and Republicans?

Is it possible that we have not as yet learned the lesson of our own past mistakes? With such a long list of accurate predictions by the representatives of the people, is it not time to reestablish real bipartisanship? With such a long list of frustrations and failures whenever the executive unilaterally decided to ignore the right solution by pursuing the questionable one such as in Laos, is it not time for the Executive to heed the counsel and advice of the representatives of the people?

Is it conceivable that only a calamity of the proportion visualized by a loss of all southeast Asia will be the only way to reestablish true bipartisanship?

Mr. Speaker, I call for the executive branch of this Government to put real meaning back into bipartisanship by listening to those men on both sides of the legislative aisle who have accurately forecast the failure of this present unilateral policy in which a built-in capacity for error is apparent. With my colleagues, I stand ready to join in a truly bipartisan effort to formulate and execute effective cold war policies.

The letters referred to above follow:

JULY 24, 1962.

Hon. DEAN RUSK,
Secretary of State,
Washington, D.C.

MY DEAR MR. SECRETARY: It is, of course, no secret that grave doubts and deep concern are being expressed in many quarters over the present Lao situation. I, too, as a member of the Defense Appropriations Subcommittee, am deeply troubled. I have been for many, many months.

On the basis of information recently made public concerning the Declaration and Protocol on Neutrality in Laos, the only possible conclusion one could draw is that Laos is being surrendered to the Communists, as Poland was at Yalta 17 years ago.

The oft-expressed fear, now apparently a fact that Communist forces are being replaced in Laos to carry on the fight in South Vietnam in which 8,000 American troops are now deeply involved should be sufficient to shake administration complacency. Obviously it is not.

I strongly believe that the net effect of this agreement on Laos will be the intensification of war in southeast Asia and a weakening of the confidence of free Asians in the value of close cooperation with the United States.

The provisions of article 14 of the declaration and protocol appear to confer a veto power on Communist Poland over the policies of the United States and all other signatory powers in relation to Laos. This, I regard as a nullification of the promises of the agreement.

I gravely disapprove of the procedure, presently being followed, which fails to submit the declaration and protocol to the U.S. Senate for ratification as a treaty.

The Congress and the country deserves a full and frank report from you on future American policy toward Laos. You will recall that President Kennedy, on March 23, 1961, told the American people, "if the Communists were to move in and dominate this country, it would endanger the security of all, and the peace of all southeast Asia, that quite obviously affects the security of the United States."

I would be interested in receiving from you a plausible explanation of what makes today any different from March 23, 1961.

Other specific questions to which I would respectfully request detailed replies would include the following:

1. On what tangible facts do you base the expectation, expressed in the declaration and protocol, that this agrement will "assist peaceful democratic development of the Kingdom of Laos" and "the strengthening of peace and security in southeast Asia"?

2. What provisions, contained in the declaration, prevent complete domination of Laos by the Communists?

3. Does the treaty specifically prohibit Communist troops presently in Laos from moving into South Vietnam?

4. How would the United States regard a veto by Poland? Would it be looked upon as a barrier to action by the non-Communist signatories of the declaration? Would it be a barrier to action in the event of a Communist takeover in Laos? Would it prevent action if the practice of dispatching Communist troops through Laos to Vietnam were continued?

5. What action would the Government of the United States take in the event of a violation of the treaty and in the face of a Polish veto on action?

It is my profound hope that you will draft an early reply to this letter, a reply that I and the American people can only hope will allay our fears about the present direction of administration policy in southeast Asia.

Sincerely yours,

——— ———.

AUGUST 10, 1962.

Hon. MELVIN R. LAIRD,
House of Representatives.

DEAR CONGRESSMAN LAIRD: The Secretary has asked me to reply to your letter of July 24 which raises a number of important questions about the recently concluded Geneva agreements. I am glad to have this additional opportunity to clarify our policy toward Laos and to answer your specific questions on the Geneva agreements.

We have considered, in close consultation with the congressional leadership of both parties, the various possible approaches to a settlement of the Laos question. Certainly the course of action that has been adopted is not without risk, but we believe that our present policy is the one most likely to further the national interest of the United States. That policy is to assure the maintenance of a peaceful, independent, and neutral Laos within the framework of the 1962 Geneva agreements.

I am enclosing a copy of the full texts of the agreements which were signed at Geneva. I think you will see upon a careful reading of them that, far from surrendering Laos to the Communists, the effect of these agreements is to prevent that from occurring. All the signatories at Geneva, including the Communists, have agreed to respect the sovereignty, independence, unity, neutrality, and territorial integrity of Laos. For its part, the United States fully intends to abide by its commitments under the agreements and to assist the Royal Government of Laos to maintain its independence. We will, of course, expect the other signatories likewise to live up to their undertakings. The latter aspect will be the real test of Communist intentions. If contrary to their commitments the Communists were, as President Kennedy said on March 23, 1961, "to move in and dominate this country, it would endanger the security of all, and the peace of all southeast Asia * * * that quite obviously affects the security of the United States." We continue to hold this view.

As one of the cochairmen of the Geneva Conference, the Soviet Union bears a particular responsibility to see that the Geneva agreements are properly implemented. It is written into the agreements that, "The cochairmen shall exercise supervision over the observance of this protocol and the declaration on the neutrality of Laos" (art. 8 of the protocol). In effect this means that the Soviet Union is responsible to see that the Communist countries, particularly Communist China and North Vietnam, live up to the agreements.

The Geneva agreements were concluded by the United States as an executive agreement. The President has adequate authority under the Constitution, by virtue of his power to conduct the foreign relations of the United States and as Commander in Chief, to enter into an executive agreement of this kind. No obligations created by the Geneva agreements on Laos in any way impinge on the constitutional powers or prerogatives of the Congress or of the States. While the formal advice and consent of the Senate has thus not been sought for these agreements this administration has as I stated earlier fully consulted with appropriate congressional committees and leaders on all aspects of the Lao situation.

With respect to the provisions of the agreements themselves, you raise in your letter the question of the interpretation of article 14 of the protocol relating to voting procedures of the International Control Commission. The general rule prescribed in that article in the second sentence of the second paragraph, is that decisions of the Commission shall be made by majority vote. To this general rule, specified exceptions are made in the first sentence of that paragraph to which the rule of unanimity applies: (a) "decisions" on questions relating to violations of certain articles, (b) "conclusions" on those major questions which are sent to the cochairmen, which it is felt, will be very limited in number; and (c) "recommendations" of the Commission. These exceptions should be viewed in the light of the provisions of article 15 of the protocol. That article provides that all decisions of the International Commission on initiation and carrying out of investigations shall be made by majority vote and that the Commission shall submit reports on its investigations in which differences of view may be expressed, thus enabling publications of minority and majority opinions.

On the five other specific questions you raise I would comment as follows:

1. The preamble to the declaration on the neutrality of Laos expresses the view that "the independence and neutrality" of Laos "will assist the peaceful domestic development" of Laos and "the achievement of national accord and unity in that country as well as the strengthening of peace and security in southeast Asia." After years of hostilities and factional strife largely fomented from without, the independent and neutrality of Laos and the termination of foreign interference in the internal affairs of Laos should permit the restoration of peace in that country and give to the people of Laos an opportunity to develop their democratic institutions. The cessation of hostilities in Laos, the maintenance of that country's independence and neutrality, and the prevention of the use of Lao territory for interference in the internal affairs of other countries will contribute to the peace and security of southeast Asia. In this connection I think it is significant that Thailand, Vietnam, Burma, and Cambodia—all southeast Asian countries concerned with the peace and security of the area—fully participated in the negotiation of the Geneva agreements and are signatories of them.

2. There are a number of important provisions of the Geneva agreements designed to prevent Communist or other foreign domination of Laos. There is, for example, the undertaking by all the signatories to respect and observe in every way the independence and neutrality of Laos and not to commit or participate "in any way in any act" which might "directly or indirectly" impair that independence or neutrality. There is a specific undertaking to refrain from all direct or indirect interference in the internal affairs of Laos and not to use the territory of any country for such interference. There are obligations on all parties to withdraw all foreign military personnel from Laos and not to introduce such personnel into that country. The agreements establish an International Control Commission with important supervisory, investigatory and reporting functions. These and other provisions of the agreement are designed to help safeguard the sovereignty, independence, neutrality, unity and territorial integrity of Laos.

3. The agreements do specifically prohibit Communist troops presently in Laos from moving into Vietnam.

The Communist signatories to the agreements have agreed "not to use the territory of the Kingdom of Laos for interference in the internal affairs of other countries," and Laos, in its statement of neutrality, has undertaken not to allow its territory to be used for such purposes. These provisions were specifically designed to prevent North Vietnamese troops from being introduced into South Vietnam from or through Laos. In addition, article 3 of the protocol specifies that all foreign troops are to be withdrawn from Laos "only along such routes and through such points as shall be determined by the Royal Government of Laos in consultation with the [International] Commission." Under article 10 of the protocol the Commission "shall supervise and control" this withdrawal.

4. As I indicated earlier, the veto power of the members of the International Commission is very limited. The Commission cannot be prevented by a veto from initiating or carrying out investigations if it or the Government of Laos believe a violation has occurred. A majority or minority of the Commission cannot be prevented by a veto from immediately reporting on investigations to all parties to the agreements. In the event of a Communist takeover in Laos or if Communist troops continue to be dispatched through Laos to Vietnam, the signatories to the agreements are in no manner bound to inaction by a veto in the Commission. Indeed, should there be a violation of the agreements, the signatories are bound by paragraph 4 of the declaration to consider measures to be taken to insure observance of the agreements, regardless of the decisions or recommendations of the Commission itself.

5. As pointed out above, there is no veto which can prevent action in the event of a violation of the Geneva agreements. Should such a violation occur, the U.S. Government would take whatever action is necessary and appropriate in the circumstances.

The new 14-nation Geneva agreements cannot end the struggle for power among the various factions in Laos. The agreements do, however, shift the struggle from the military arena to the political and economic arena. If the non-Communist elements in Laos are to be successful in this competition it is essential that they be supported by the United States and other free world powers. To insure his success we must assist Prince Souvanna Phouma and his government of national union during this critical period. We laid the groundwork for this cooperation during Prince Souvanna's visit in Washington last week. We hope for continued bipartisan support for this policy, which is the only peaceful possibility for a non-Communist Laos.

Sincerely yours,

W. Averell Harriman.

(Enclosure: Text of the Geneva agreements, 1962.)

Congress of the United States,
House of Representatives,
Washington, D.C., August 23, 1962.

Hon. W. Averell Harriman,
Assistant Secretary of State, Department of State, Washington, D.C.

My Dear Mr. Harriman: Thank you for your letter of August 10 responding to certain questions I had raised about the Lao peace treaty.

In candor, I must state that your letter has heightened the fears which led me to write to Secretary Rusk in the first place. I agree with the perceptive reporter, Richard Starnes, that the administration's justification of the agreement of July 23 on Laos is "another fable * * * added to the dangerous mythology that is the foundation for much of what passes for American policy in southeast Asia." I think that Mr. Starnes is right in saying, "To believe the Communist world means to keep the peace in a neutral Laos, one must first believe Communist policy has undergone a sharp and total reversal since the disgraceful rout of the United States-backed royal Lao Army at Nam Tha in May. This was the final disaster for the West in Laos, the ultimate proof of the bankruptcy of our policy, and it was a Communist victory as decisive as Dien Bien Phu."

Your letter assures me that "the Communists have agreed to respect the sovereignty, independence, unity, neutrality, and territorial integrity of Laos." I find this flat assurance incredible in one who had direct personal experience with the Communists at Yalta. Have we not learned from this experience and many others since World War II that promises of this type made by the Communists are valueless?

The declaration and protocol on neutrality in Laos establishes a troika composed of Communist Poland, neutralist India, and Canada to supervise the execution of the agreements. When the Soviet Union proposed the establishment of a troika to handle the duties of the Secretary General of the United Nations, President Kennedy quite properly said: "To install a triumvirate in the United Nations administrative offices would replace order with chaos, action with paralysis, and confidence with gross confusion." It seems to me that the same results, against which the President warned, can be expected from the installation of a triumvirate to supervise the execution of the Geneva agreements.

Further, the troika which is responsible for supervising the execution of the declaration and protocol is the same one which failed in the performance of a similar responsibility with respect to the Geneva agreement of 1954. If this three-member International Control Commission had done its job after 1954, there would have been no Communist aggression in Laos or Vietnam—and no need for new agreements in 1962.

You write that the "general rule (applying to the work of the International Control Commission) * * * is that decisions of the Commission are made by majority vote." But article 14 of the protocol clearly states that "decisions of the Commission on questions relating to violations of articles 2, 3, 4, and 6 of this protocol or of the cease-fire referred to in article 9, conclusions on major questions sent to the Cochairman and all recommendations by the Commission shall be adopted unanimously." The articles of the protocol specified in this sentence cover the entire range of the authority granted to the International Control Commission—the withdrawal of foreign troops from Laos, the prohibition of the introduction of more foreign troops and of arms, and the maintenance of a cease-fire in Laos.

It is true that the Commission may by majority vote undertake investigations, but article 15 of the protocol clearly declares, "The conclusions and recommendations of the Commission resulting from investigations shall be adopted unanimously."

Consequently, I cannot accept your statement that the general rule is that the Commission will act by majority vote. On the contrary, the general rule is that the Commission can act only by unanimous vote, including the vote of Communist Poland.

In fact, the veto is stitched into every part of the fabric of the incredible Geneva agreements. It is given to Communist Poland as a member of the International Control Commission. It is given to Prince Souphanouvong, the Communist representative in the troika which rules Laos, without whose concurrence the Control Commission cannot exercise any of its functions.

I am hardly reassured by your statement that a vote on the part of one of the members of the International Control Commission is not final since the 14 signatory nations can "consider measures to be taken to insure observance of the agreements, regardless of the decisions or recommendations of the Commission itself." I find it hard to believe that the Soviet Union, Communist China, North Vietnam, Poland—and all signatories of the agreements—can be expected to take corrective action when a violation of the agreements by the Communists occurs. Indeed, press reports indicate that the agreements have already been violated by the movement of Communist forces from Laos into South Vietnam. Yesterday noon the deadline on agreeing to exit routes for foreign troops to get out of Laos expired. Already the treaty will be violated.

The negotiations at Geneva were an unbroken retreat by the United States from positions which our President, our Secretary of State, and our Government had taken over the past 12 months. President Kennedy in March 1961 said that he would not permit Communist aggression to succeed in Laos. Secretary Rusk said that he would not sit down to negotiate in Geneva until there was an effective cease-fire in Laos. Mr. Rusk and the Lao control body "should not be paralyzed by a vote." You yourself sought to include in the protocol a provision requiring the integration of the three armies in Laos. This was not included. You sought to include a provision prohibiting reprisals against the Lao who fought against the the Communists at the urging of the United States. This was not included. The fate which these Lao allies of ours now face can be judged from the reports that the recently freed American prisoners give of their treatment by Communist captors.

The disappointment which our Nation experienced at Geneva is understandable. But when responsible spokesmen for our Nation return from Geneva to tell us that this defeat is really a victory, to assert that peace has thereby been made more secure, to profess confidence that the Communist aggressors will keep their promises, their behavior is so like that of Neville Chamberlain at the time of Munich that it should send cold chills down the spine of all whose memories go back to the 1930's.

Prime Minister Chamberlain said of Hitler at the time of Munich "* * * here was a man who could be relied on when he had given his word." The Washington Post of July 26, 1962, reported "W. Averell Harriman, former Ambassador to Moscow, says he trusts Soviet Premier Nikita S. Khrushchev to keep his word in carrying out the Geneva agreement guaranteeing the independence of Laos."

Every effort is made by me to support our foreign policy on a bipartisan basis. To ask me or the members of my party to support your actions regarding Laos which were directly opposite to the pronouncements of our President and our Secretary of State is most difficult to understand.

With best wishes and kindest personal regards, I am,

Sincerely yours,

MELVIN R. LAIRD,
Member of Congress.

COMMITTEE ON BANKING AND CURRENCY

Mr. SMITH of Virginia. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 310 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That, notwithstanding the provisions of H. Res. 179, Eighty-eighth Congress, the Committee on Banking and Currency is hereby authorized to send two of its members to Caracas, Venezuela, the latter part of April 1963 to attend the Directors meeting of the Inter-American Development Bank.

Notwithstanding section 1754 of title 22, United States Code, or any other provisions of law, local currencies owned by the United States shall be made available to the committee and employees engaged in carrying out their official duties under section 190(d) of title 2, United States Code: *Provided*, (1) That no member or employee of said committee shall receive or expend local currencies or appropriated funds for subsistence in an amount in excess of the maximum per diem rates approved for oversea travel as set forth in the Standardized Government Travel Regulations, as revised and amended by the Bureau of the Budget; (2) that no member or employee of said committee shall receive or expend an amount for transportation in excess of actual transportation costs; (3) no appropriated fund shall be expended for the purpose of defraying expenses of members of said committee or its employees in any country where counterpart funds are available for this purpose.

That each member or employee of said committee shall make to the chairman of said committee an itemized report showing the number of days visited in each country whose local currencies were spent, the amount of per diem furnished and the cost of transportation if furnished by public carrier, or if such transportation is furnished by an agency of the United States Government, the identification of the agency. All such individual reports shall be filed by the chairman with the Committee on House Administration and shall be open to public inspection.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AGREEING TO SENATE AMENDMENTS TO H.R. 4715

Mr. SMITH of Virginia, from the Committee on Rules, reported the following privileged resolution (H. Res. 317, Rept. No. 210) which was referred to the House Calendar and ordered to be printed:

Resolved, That immediately upon the adoption of this resolution, the bill H.R. 4715, with the Senate amendments thereto, be, and the same hereby is, taken from the Speaker's table, to the end that the Senate amendments be, and the same are hereby, agreed to.

Mr. SMITH of Virginia. Mr. Speaker, this resolution has to do with the Roosevelt Memorial. I understood there was some ceremony to take place in the near future and was asked by the author to get this through. I am informed now that the ceremony does not take place until after we return from the Easter recess. There was some controversy about it on the floor yesterday. I would suggest, however, that it be taken up the Monday we return, because I believe on Tuesday some ceremony is to be held in connection with the memorial.

Mr. ALBERT. Mr. Speaker, we had planned to put that on the program for Monday, April 22.

COMMITTEE ON THE JUDICIARY

Mr. SMITH of Virginia. Mr. Speaker, there is another resolution similar to the one just passed. The Judiciary Committee wishes to send two members to a conference in Geneva which takes place next week on the immigration question. The Speaker will recall that the Judiciary Committee has jurisdiction over immigration problems, and I would hope that the Speaker would recognize me a little later to ask that it be passed today.

AMENDING LEAD-ZINC SMALL PRODUCERS STABILIZATION ACT

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 309, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3845) to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766). After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SISK. Mr. Speaker, I yield myself such time as I may consume; and following that, I shall yield 30 minutes to the gentlewoman from New York [Mrs. ST. GEORGE].

Mr. Speaker, House Resolution 309 provides for the consideration of H.R. 3845, a bill to amend the Lead-Zinc Small Producers Stabilization Act of

October 3, 1961. The resolution provides an open rule with 1 hour of general debate.

H.R. 3845 will assure that the benefits of the Lead-Zinc Small Producers Stabilization Act are received only by persons and firms who are in fact small producers and will not be extended to persons and firms who may be major producers of other metals or minerals. This will be accomplished by first, providing that a small producer must have as his principal product or products lead and zinc; and second, defining the term "principal produce and products" to mean that more than 50 percent of the value of metal or minerals produced or sold is lead or zinc or a combination of both.

The present act provides a program of payments for assistance to small domestic producers of lead and zinc. Payments are based on the difference between the market price of lead and zinc and the statutory stabilization price. The term "small domestic producer" is defined so as to limit qualification to those who have not in any one year since 1956 produced or sold more than 3,000 tons of lead and zinc combined.

It has been possible for major producers of other metals or minerals to qualify under this definition for benefits of the act because qualification is based only on the amount of lead and zinc without regard to other metals or minerals.

H.R. 3845 is designed to preclude major producers of other metals or minerals from participating in the program. Advice is that six or seven participants might be disqualified by adoption of the bill.

Enactment of the bill will not result in an increase in budgetary requirements.

Mr. Speaker, I urge the adoption of House Resolution 309.

Mrs. ST. GEORGE. Mr. Speaker, the gentleman from California [Mr. SISK], has very ably given a résumé of this resolution making in order the consideration of the bill H.R. 3845. I know of no objection to the resolution, and I know of no objection to the bill.

I also urge, Mr. Speaker, that it be passed without further ado.

Mr. SISK. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AUTHORIZING THE GOVERNMENT OF THE VIRGIN ISLANDS TO ISSUE GENERAL OBLIGATION BONDS

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 307, and ask for its immediate consideration.

The Clerk read the resolution, as follows:

> *Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1989) to authorize the government of the Virgin Islands to issue general obligation bonds. After general debate, which shall be confined to the bill, and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. SISK. Mr. Speaker, I yield myself such time as I may consume, following which I shall yield to the gentlewoman from New York [Mrs. ST. GEORGE] 30 minutes.

Mr. Speaker, House Resolution 307 provides for the consideration of H.R. 1989, a bill to authorize the government of the Virgin Islands to issue general obligation bonds. The resolution provides an open rule with 1 hour of general debate.

The purpose of H.R. 1989 is to amend section 8(b) of the Revised Organic Act of the Virgin Islands in order to permit the Virgin Islands Legislature to authorize the issuance of general obligation bonds. A similar bill passed the House in the 87th Congress.

By act of October 27, 1949, the Congress gave the Virgin Islands government authority to issue general obligation bonds up to the level of 10 percent of the aggregate assessed valuation of the taxable real property in the territory. The 1954 organic act omitted this bonding power and provided that the Virgin Islands Legislature should have "no power to incur any indebtedness which may be a general obligation of the Virgin Islands government."

The enactment of H.R. 1989 will reinstate the power to issue general obligation bonds for certain specified purposes, including schools, firehouses, slum clearance, libraries, electric systems, and so forth. Many of these purposes are not revenue producing and, therefore, cannot be financed except by current taxes or by such borrowing as the bill will sanction. The enactment of the bill will entail no additional expenditure of Federal funds. The bill specifically provides that the bonds shall not be obligations of the United States and that interest thereon shall be tax free.

Mr. Speaker, I urge the adoption of House Resolution 307.

Mrs. ST. GEORGE. Mr. Speaker, I again wish to second the motion of my colleague, the gentleman from California [Mr. SISK]. This resolution did pass the House in the 87th Congress and makes in order the consideration of H.R. 1989, which was introduced by the gentleman from New York, [Mr. O'BRIEN]. We know of no objection to the bill and hope for its speedy passage.

Mr. SISK. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

AMENDING THE LEAD-ZINC SMALL PRODUCERS STABILIZATION ACT

Mr. EDMONDSON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3845) to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766).

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 3845, with Mr. FEIGHAN in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. EDMONDSON. Mr. Chairman, I yield 10 minutes to the distinguished and able chairman of the Committee on Interior and Insular Affairs, the author of H.R. 3845, the gentleman from Colorado [Mr. ASPINALL].

Mr. ASPINALL. Mr. Chairman, I urge the adoption of H.R. 3845, a bill designed to plug a loophole in the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766).

That act, Members will recall, was designed to help the small businessman-producer. However, the definitions in the act permit a few major producers of other metals or minerals to come in as small producers of lead and zinc and obtain the benefits of the law.

I think you will all agree that this loophole should be closed quickly.

In connection with the presentation of this bill, we should like to bring Congress and the Nation up to date concerning the lead-zinc industry generally.

The Congress, in 1961, enacted the Lead-Zinc Small Producers Stabilization Act for the purpose of assisting small businessmen who had come to the help of the Nation when it needed them in time of emergency, and who had either been forced out of business or were threatened with being driven out of business by reason of distressed conditions in the peacetime lead-zinc industry. I do not like subsidies; your Committee on Interior and Insular Affairs does not like subsidy payments. But, it is not unusual for Congress and the American people to approve subsidy payments to essential industry when all else fails.

The program approved for the small domestic producers of lead and zinc was and remains a modest program. It was not thought that this act would alleviate the general distressed conditions of the entire lead-zinc industry.

The House Committee on Interior and Insular Affairs, in reporting H.R. 84, 87th Congress, which became the Small Producers Stabilization Act, pointed to the endorsement by the administration of a limited program that would gradually phase out and stated:

> The committee accepts the principle advanced by the administration and joins in the hope that the administration will, at an early date, submit to Congress its long-range solutions to the basic problems of the entire industry.

While we still do not have a solution on which all can agree, I want you to know that we are studying alternative proposals. Last month, on March 14, 1963, Assistant Secretary of the Interior, John M. Kelly, met with representatives of a broad cross-section of the lead-zinc mining and smelting industries. A general review was conducted, including a look at economic conditions as well as the continuing impact of export and import programs.

Since that time I have been in communication with both the White House and the Secretary of the Interior in an effort to appraise the current situation.

While it is generally too early to fully assess the impact of the Trade Expansion Act of 1962, I would like to call to the Members attention the fact that the first petition under that act for assistance to displaced workers came as a result of a closing by the New Jersey Zinc Co. of a zinc mine and mill at Hanover, N. Mex., on December 1, 1962. The workers were laid off and the union petitioned the U.S. Tariff Commission on January 9, 1963, for assistance under the Trade Expansion Act.

The Tariff Commission, on March 11, 1963, rejected the petition and denied relief. The Tariff Commission's announcement is a revealing document and I recommend that everyone read it. It demonstrates the difficult path ahead for anyone seeking to utilize this type of relief. Because, despite their knowledge of how imports have hurt the domestic lead-zinc industry, the Tariff Commission came to the conclusion that competition from imports "was not the major factor" in the closing of the mine and mill.

Under leave to extend my remarks, I include the text of the Tariff Commission announcement of March 11, 1963, for the information of all concerned:

TARIFF COMMISSION REPORTS TO THE PRESIDENT ON ZINC WORKERS' PETITION FOR ADJUSTMENT ASSISTANCE

The Tariff Commission today reported to the President the results of its investigation No. TEA-W-1, conducted under section 301(c)(2) of the Trade Expansion Act of 1962. The investigation was made in response to a workers' petition for determination of eligibility to apply for adjustment assistance. The petition was filed with the Commission on January 9, 1963, by the International Union of Mine, Mill and Smelter Workers on behalf of a group of 126 workers of the zinc mine and mill at Hanover, N. Mex., owned and operated by the New Jersey Zinc Co. These workers were laid off when production operations at the mine and mill ceased on December 1, 1962. The whole of the Commission's report cannot be made public, since it contains much data received in confidence, such as that pertaining to the operations of an individual concern. However, the following excerpts from that report give the Commission's finding and summarize the principal considerations in support of the finding:

"On the basis of its investigation the Commission unanimously finds that unmanufactured zinc[1] is not, as a result in major part of concessions granted under trade agreements, being imported in such increased quantities as to cause the unemployment of a significant number or proportion of the workers at the zinc mine and mill of the New Jersey Zinc Co. at Hanover, N. Mex."

Before the Commission can make an affirmative finding under section 301(c)(2) of the Trade Expansion Act of 1962, it must determine (1) that the imports in question are entering the United States in increased quantities; (2) that the increased imports are due "in major part" to trade-agreement concessions; and (3) that such increased imports are "the major factor" in causing, or threatening to cause, unemployment or underemployment of a significant number of the workers of the firm or subdivision of the firm in question.

In the instant case, the Commission determined that unmanufactured zinc is not being imported in increased quantities. Commercial imports for consumption[2] of unmanufactured zinc have not increased since 1958 * * *. Such imports have been prevented from rising since October 1, 1958, as a result of the imposition of absolute quarterly quotas equal, on an annual basis, to 80 percent of the average annual imports during the years 1953–57.[3] Annual commercial imports during 1953–57 averaged 651,300 tons. The import quota, on an annual basis, was established at 520,960 tons * * *. In the last 4 years, 1959–62, actual commercial imports averaged 501,406 tons per year, or 23 percent less than the rate during 1953–57. The average annual commercial imports during 1959–62 also were considerably smaller (by 22 percent) than the average for the preceding 7 years, 1952–58.

The absolute import quotas reduced the flow of imports below the rate that had prevailed (under the trade-agreement concessions) for a period of about 7 years prior to the imposition of the quotas. The Commission therefore finds that unmanufactured zinc is not "being imported in increased quantities," within the meaning of the statute. The petitioners' contrary claim rests on the ground that the average annual imports were much higher in 1959–62 than in 1946–50—a decade and a half ago. Even if the Commission accepted the petitioners' claim, it could not agree that the alleged increase in imports occurred "as a result in major part of concessions granted under trade agreements" inasmuch as the concessions have been largely or completely offset by the absolute quotas imposed on imports of zinc.

In filing the petition in this case the workers were seeking a determination of eligibility to apply for adjustment assistance under chapter 3 of the Trade Expansion Act. Among other things, chapter 3 provides for trade readjustment allowances to be paid to "adversely affected" workers. In the report of the Committee on Ways and Means of the House of Representatives on H.R. 11970 (which, after various amendments, ultimately became the Trade Expansion Act of 1962), the provisions of the bill relating to adjustment assistance to workers are discussed. On page 30 of the report it is stated: "Your committee believes that the scale of trade adjustment allowances [for workers] is appropriate in view of the fact that the finding that the unemployment was caused by increased imports resulting from the removal, in whole or in part, of tariff protection implies that continuation of the prior tariff would have provided full job protection. This worker assistance is, therefore, in the nature of an adjustment to conditions brought about by removal of prior job protection."

Thus the Committee defined the "concession" as meaning "the removal, in whole or in part, of tariff protection."

The tariff protection that was removed by trade-agreement concessions on unmanufactured zinc consisted of the removal of part of the duties originally established for such zinc under the Tariff Act of 1930. The changes in the rates of duty since the act of 1930 are summarized below:

Item	Zinc-bearing ores [1]	Zinc blocks, pigs, or slabs [2]	Zinc scrap, dross, and skimmings [2]
Effective date:			
June 18, 1930	1.50	1.75	1.50
Jan. 1, 1939	1.20	1.4	----------
Jan. 30, 1943 [3]	.75	.875	.75
Jan. 1, 1948 [3]	.75	.875	.75
June 6, 1951	.60	.7	----------
Total rate reduction since June 18, 1930	.90	1.05	.75

[1] Cents per pound on zinc content.

[2] Cents per pound gross weight.

[3] The trade agreement with Mexico, which became effective Jan. 30, 1943, was terminated Jan. 1, 1951. The duties did not change as a result of the termination, however, because the same rates established by the agreement with Mexico were provided for, effective Jan. 1, 1948, in the General Agreement on Tariffs and Trade.

As reported above, the first concessions on unmanufactured zinc became effective on January 1, 1939, and the most recent ones became effective on June 6, 1951. The rates shown above were the only import restrictions imposed on unmanufactured zinc until the quotas were imposed. The increased protection afforded the domestic zinc industry by the subsequent imposition of the import quotas offsets in the main, if not entirely, the reduced protection that had resulted from the trade-agreement concessions. It is clear that the "remnant" of the original trade-agreement concessions after modification by the import quotas could not contribute in major part to the alleged increased imports.

In the course of its investigation, the Commission obtained considerable evidence to indicate that even if it could regard imports of unmanufactured zinc as entering in increased quantities, it could not find that the claimed increase was the major factor leading to the recent closure of the Hanover mine and mill.

The Commission's report then summarizes the evidence in support of that position, and concludes with the following observation: "In view of the considerations set forth above, it appears that the closing of the Hanover mine and mill was based primarily on ordinary business considerations. While competition from imports was no doubt a factor in the decision, it was not the major factor. In any event, since the level of imports has been stable for the past 4 years (and may be expected to remain so in the absence of change in the tariffs and absolute quotas applicable thereto), increased imports could not have been the major factor that caused the New Jersey Zinc Co. to close the Hanover mine and mill."

Mr. ASPINALL. Mr. Chairman, in substance, I regret to report that conditions in the lead-zinc industry have not improved measurably since we came before this body approximately 2 years ago with the stopgap program for assistance to the small domestic producers. Nor has that program been as successful as its proponents had hoped that it might be in the degree of help that it would extend to small producers. The gentleman from Oklahoma [Mr. EDMONDSON] the chief sponsor of the small producers program and chairman of the Mines and Mining Subcommittee, will bring you up to date on that program.

---

[1] The term "unmanufactured zinc" refers to zinc-bearing ores; zinc in blocks, pigs, or slabs; old and wornout zinc; and zinc dross and zinc skimmings. These articles are provided for in pars. 393 and 394 of the Tariff Act of 1930.

[2] The term "commercial imports for consumption" refers to direct entries for consumption plus withdrawals from bonded warehouses for consumption, exclusive of imports for U.S. Government account and exclusive of imports free of duty under bond for smelting, refining, and export.

[3] The quotas were established on a quarterly basis by Presidential Proclamation No. 3257 following an escape-clause investigation by the Tariff Commission under section 7 of the Trade Agreements Extension Act of 1951, as amended. The years 1953–57 were used as a base period by the three Commissioners who had recommended the imposition of quotas and also by the President.

Suffice to say at this time that even the limited objectives of the Small Producers Stabilization Act have not been fully realized. As a result, payments for 1962 production totaled $1,002,781 as compared to the authorization appropriation of $4.5 million.

The fact that we are not using up all the allotted money is no reason to permit payments to be made to persons and firms who are not in fact small producers of lead and zinc. The availability of funds does not justify opening the door to any except those for whom the legislation was intended.

Early in this Congress, during a review of Interior Department programs, the Mines and Mining Subcommittee learned that at least a few major producers of other metals or minerals had qualified and received payments for 1962 production as small producers of lead and zinc. That was on February 8, 1963. Ten days later, on February 18, 1963, the ranking minority member of the full Committee on Interior and Insular Affairs and the ranking minority member of the Mines and Mining Subcommittee joined with the chairman of that subcommittee and the chairman of the full committee in sponsoring the legislation we are now discussing.

In order to protect the program for legitimate small producers of lead and zinc, we propose to amend the definition of a "small producer" so as to provide that the principal product or products of such producer is either lead or zinc or a combination of lead and zinc. We then would define the term "principal product or products" so as to require that the dollar value of lead or zinc sold must have been 50 percent or more of the total dollar value of all minerals and metals produced and sold during the qualifying base period of any year since 1956.

I do not criticize a silver company or a tungsten producer, that produces a byproduct of lead and zinc in small quantities, for coming in and qualifying as a small producer of lead and zinc if the loophole is left for them. But having discovered the loophole we have moved to close it as quickly as possible.

I think everyone will agree that this is needed legislation and I urge its adoption.

Mr. SAYLOR. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, I would like to join my colleauge, the gentleman from Colorado [Mr. ASPINALL], chairman of the full committee, in urging the passage of this bill. I think that what has happened pursuant to the passage of the lead-zinc stabilization program, the act of 1961, should be a lesson not only to the House Committee on Interior and Insular Affairs but to all of the other committees of the House. That lesson is that you cannot be too careful in the drafting of legislation; because while the avowed purpose of the original act was to make sure that the small lead and zinc producers of this country were given some relief, the mere fact that we did not limit it to those whose principal product is lead and zinc requires the amendment which is now before us.

What this amendment and the bill that you are now considering do is merely to say to the people of the minerals industry that unless lead and zinc which you produce constitute 50 percent or more of your mineral production you do not qualify for relief under the lead and zinc stabilization program.

As the chairman of the full committee pointed out the reason for this grows out of the fact that several large companies which produce lead and zinc as a byproduct in the production of other minerals, and produce lead and zinc in the quantities that are covered in the original act, came in and applied for and received payments under that act. The purpose is to make sure that from the date of the final passage of this act, those companies which presently qualify because lead and zinc are a side issue with them will not be able to receive Government payments and that the small producers, those who produce less than 3,000 tons of concentrates of lead and zinc combined will qualify.

I urge that the bill be adopted.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to my colleague from Iowa.

Mr. GROSS. It is probably a good idea to keep some people in the business of producing lead and zinc in this country for the reason that gold is disappearing and apparently we are looking at a silver shortage. It might be that the monetary base for our currency in this country will have to be lead and zinc or some iron washers, or something of that kind, pretty soon.

Mr. SAYLOR. I might say that I joined with my colleague yesterday, and did not like the idea of backing up our paper money with more paper. I think the American people would still like to see it backed up with silver. However, even though we lost out in that fight yesterday we must maintain a strong minerals industry in this country. One of the complaints which the chairman of the full committee, the gentleman from Colorado [Mr. ASPINALL], and I have had of this administration and the prior administration, since we have been in the Congress, is that they have not come forward with a strong domestic minerals program.

If there is any one thing which the present Secretary of the Interior could do and which in my opinion would increase his stature and increase the stability of this country it would be to come forward with a program not just for lead and zinc but for all our minerals, so that we would have a strong domestic minerals industry.

Mr. EDMONDSON. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, initially I would like to say to the distinguished chairman of the full committee and also to the ranking member of the full committee that I appreciate very much the presentation they have made in connection with this legislation. I do not believe there are two more careful legislators in this body than the distinguished gentleman from Colorado and his counterpart on the other side of the aisle from Pennsylvania, who is ranking minority member of the Committee on Interior and Insular Affairs, because I know the care and attention which they give to every line that is in a bill that is reported out of our committee.

I can agree with them wholeheartedly that it was a complete surprise to us to discover that there was a loophole in this legislation and that action was necessary to close that loophole.

I must say that the reporting of this legislation followed as speedily as possible after the discovery of this loophole in the legislation that was passed in 1961.

May I say with reference to the surprisingly low level of participation in 1962 that the regulations were not actually completed and made available to the industry until August of 1962, and there was only a short portion of the year 1962 in which to become active and to participate. At the same time I would agree wholeheartedly with the gentleman from Colorado that we have not had the level of participation up to this time that we had hoped for in this program.

I do not think that there can be any controversy concerning the enactment of H.R. 3845. As indicated by the chairman of the Committee on Interior and Insular Affairs, the gentleman from Colorado, the Honorable WAYNE N. ASPINALL, this bill is fair and equitable. It is designed to plug a loophole in the Lead-Zinc Small Producers Stabilization Act of 1961.

My plea to you is for unanimity in passing this bill. Through unanimity this body can demonstrate its clear-cut support of the program to help small producers of lead and zinc. The loophole that this bill will close has permitted some major producers of other metals to come in and qualify as small producers of lead and zinc.

As author of the bill which led to enactment of the Small Producers Act in 1961, I can tell you that we had no idea of helping a large silver producer who mined small quantities of lead and zinc.

I think it is important for our friends in and out of Congress to act quickly in bringing to light and eliminating any loopholes. We in the Interior Committee are proud of the dispatch with which we have moved in this situation.

The loophole that will be closed by the enactment of H.R. 3845 came to light February 8, 1963, during a meeting of the Mines and Mining Subcommittee of which I have the honor to be chairman. On February 18, the majority and minority leadership of the committee joined in introducing legislation to close the loophole. Our report was filed on March 28, 1963, after full and extensive hearings and consideration. I trust that today, 2 months and 3 days after we learned of this situation, a bill to correct the defect in the law will have passed the House.

Before discussing the bill further, I would like to take this opportunity to inform everyone concerning the administration of the Small Producers Stabilization Act. The chairman of the Committee on Interior and Insular Affairs, the gentleman from Colorado [Mr. Aspinall], has stated that the program has not been as successful as we who sponsored it had originally hoped. Nonetheless we think it is a good program, that it is working well, and that it is helping a very important segment of the lead-zinc industry.

The 1961 act provides for stabilization payments to small domestic producers of newly mined lead and zinc. The payments are based on 75 percent of the difference between 14½ cents per pound and the average market price of lead and 55 percent of the difference between 14½ cents per pound and the average market price of zinc, calculated on a monthly basis. During 1962, the price of lead fluctuated between approximately 10 cents and 9½ cents per pound while the market price of zinc started out at 12 cents per pound and dropped last April to 11½ cents per pound, where it has remained.

In order to qualify as a "small domestic producer" the applicant must show that he has not produced or sold over 3,000 tons of lead and zinc combined "during any 12-month period between January 1, 1956, and the first day of the period for which he seeks payment under this act."

Two years ago when our Committee considered and the House acted on the Stabilization Act, we reported that there were in 1956—according to Bureau of Mines statistics—a total of 638 lead-zinc mines each of which produced not more than three thousand tons of lead and zinc combined, the limit for qualification under the 1961 act. We further reported that by 1960 the number of small producers reported by the Bureau of Mines had been reduced to 273. We then based our estimated cost for the program on a number of assumptions, among which was one that the year 1960 represented the low or minimum level for small producers; and we concluded that not all of the producers eligible to participate would resume production.

We were apparently wrong in estimating that 960 was the low point for small producers. A great number of additional small producers have gone out of business since then. Our conclusion that not all of the producers eligible for participation would resume production is now seen as a gross understatement. Apparently very few small producers could find sufficient incentive in the stabilization program to resume business.

Of a potential participation of between 273 and 638 small producers, only 84 were certified as eligible for the program on March 1, 1963. Under leave to extend my remarks, I include at this point tabulations showing the distribution of small producers by size and by State for the years 1956 and 1960 along with the number participating in the lead-zinc stabilization program:

Lead-Zinc Small Producers Stabilization Act

1. DISTRIBUTION OF SMALL PRODUCERS BY SIZE

Size of mine	1956	1960	Participants in the program as of Mar. 1, 1963
Production per annum:			
499 tons or less	558	244	51
500 to 999 tons	27	8	11
1,000 to 1,999 tons	29	14	20
2,000 to 2,999 tons	24	7	3
Total	638	273	85

2. DISTRIBUTION OF SMALL PRODUCERS BY STATES

State	Small producers		Participants in the program, as of Mar. 1, 1963
	1956	1960	
Alaska	1	3	0
Arizona	43	24	2
Arkansas	0	1	1
California	27	11	3
Colorado	93	40	0
Idaho	69	50	15
Illinois	9	6	0
Kansas	40	5	6
Kentucky	1	1	0
Missouri	13	1	0
Montana	98	38	6
Nevada	55	29	8
New Mexico	29	11	2
North Carolina	1	1	1
Oklahoma	74	3	20
Oregon	2	0	0
Tennessee	3	2	0
Utah	54	39	20
Washington	13	1	0
Wisconsin	13	7	1
Total	638	273	85

Mr. Chairman, in his report to the Congress on the first year's operation of the lead-zinc small producers stabilization program, the Secretary of the Interior, whose estimates 2 years ago concerning the scope of the program had guided the committee, stated:

> Participation in the program for the calendar year 1962 did not reach expectations. Interest was not as great as it was prior to the enactment of legislation financing the program. Apparently, many former small producers do not believe the benefits of the program to be sufficient for them to reopen their closed mines.

Of those who filed and have established their eligibility for participation in the program, 55 received payments on their 1962 production. These payments, as of March 1, 1963, amounted to $1,002,781.

Mr. Chairman, I have here a list of the participants who have received payment in the program. For the information of all concerned, under leave previously granted to extend my remarks, I insert at this point in the Record the listing prepared in the Office of Minerals Exploration in the Department of the Interior showing recipients of payments made to March 1, 1963, for 1962 production under lead-zinc small producers stabilization program:

Lead and Zinc Mining Stabilization Program—Participants in Payments on 1962 Production to March 1, 1963

Arizona Michigan Mining, Post Office Box 829, Prescott, Ariz.

Foreman & Foreman, 564 Cliff Drive, Laguna Beach, Calif.

Celtor Chemical Corp., 1694 Union Street, San Francisco, Calif.

Frank N. Marr, 611 Peyton Building, Spokane, Wash.

Clayton Silver Mines, Box 890, Wallace, Idaho.

Edward J. Bailey, Box 660, Kellogg, Idaho.

Martin C. Thompson, Elizabeth Park, Kellogg, Idaho.

McLin-Asher Lease, Box 641, Kellogg, Idaho.

Sunshine Mining Co., West 300 Mission Avenue, Spokane, Wash.

Silver Star-Queens Mines, 1370 South Third West, Salt Lake City, Utah.

Silver Dollar Mining Co., 409 Radio Central Building, Spokane, Wash.

Mountain Goat Lease, Post Office Box 469, Wallace, Idaho.

Mid-Continent Lead & Zinc Co., Post Office Box 229, Baxter Springs, Kans.

Helen H. Mining Co., Post Office Box 29, Baxter Springs, Kans.

B. & I. Mining Co., Box 305, Picher, Okla.

Trout Mining Co., 233 Broadway, New York, N.Y.

The Taylor-Knapp Co., Box FF, Philipsburg, Mont.

Percy Goodwin & C. A. Porte, Rural Route A, Helena, Mont.

Hoco, Inc., Post Office Box O, White Sulphur Springs, Mont.

Ida B. Hand, Argenta Star Route, Dillon, Mont.

Lahey Leasing Co., Post Office Box 8, Jefferson City, Mont.

Caeser Caviglia, 659 Mill Street, Ely, Nev.

Charles A. Vaccaro, Post Office Box 234, Eureka, Nev.

Gold Note Group, 2453 Tyler Avenue, Ogden, Utah.

Hamilton Corp., Post Office Box 337, Ely, Nev.

Tungsten Mining Corp., Henderson, N.C.

Scotty Mining Co., Inc., Box 96, Picher, Okla.

Max Mining Co., 400 North Francis Street, Picher, Okla.

Virgil Lee Mining Co., Post Office Box 216, Picher, Okla.

C. & M. Mining Co., Post Office Box 229, Baxter Springs, Kans.

Wesah Mining Co.-Tom Kiser, 1903 F Street NW., Miami, Okla.

Mark Twain Mining Co., Post Office Box 187, Picher, Okla.

Tuck Mining Co., Box 366, Picher, Okla.

Charles Marie Mining Co., 212 North River Street, Commerce, Okla.

William H. Stone, Rural Route 2, Galena, Kans.

Merit Mining Co., 409 South Main Street, Picher, Okla.

Contack Mining Co., Inc., Post Office Box 849, Miami, Okla.

Estate of Dewey S. Sims, 205 East Street, NW., Miami, Okla.

John Henderson, Post Office Box 281, Picher, Okla.

The Quapaw Co., Post Office Box 187, Picher, Okla.

Keystone Mining Co., 163 South Main Street, Salt Lake City, Utah.

Peter S. Martin, Post Office Box 636, Milford, Utah.

Cardiff Industries, Inc., 404 Boston Building, Salt Lake City, Utah.

Arundel Mining Co., 1701 Greenhill Avenue, Wilmington, Del.

Bowman & Williams, 310 West 5300 South, Murray, Utah.

Tony Bullock, Lark, Utah.

George C. Duncan, 1471 Roberta Street, Salt Lake City, Utah.

Duncan and Sears, 1471 Roberta Street, Salt Lake City, Utah.

Jesus Avila, Lark, Utah.

Leonard Steel, Lark, Utah.

Gilbert Sears, Salt Lake City, Utah.

Anton Kennikar, 393 West 6260 South, Murray, Utah.

Roy Bendixon, 2820 East 7000 South, Salt Lake City, Utah.

William Keller, 324 East 5900 South, Murray, Utah.

Peter S. Martin, Post Office Box 636, Milford, Utah.

John D. Torres, Post Office Box 246, Magdalena, N. Mex.

Mr. Chairman, we do not know exactly how many of these participants in the program will be eliminated by enactment of this bill. The Department of the Interior in its report and in testimony before the committee stated that "six or seven" producers now participating in the program might be eliminated. The elimination of six or seven will leave a strengthened viable program.

The approach we have used in H.R. 3845 is to require participants to obtain from lead and zinc at least 50 percent of the monetary return from their metals and minerals production. In order to preserve the program for the legitimate small producer we have worded the amendment so as to impose this 50 percent lead-zinc requirement during the entire base period from 1956 to date of application.

In other words, if before the stabilization payments were authorized, a company was a major producer of silver or tungsten, for example, it was not our intent to induce such a company to transform its operations in order to qualify for these Government payments. We intended these payments to assist small producers and by adopting the amendments contained in H.R. 3845 that purpose will be maintained.

Again in urging adoption of this measure I emphasize the need for unanimity to underline to the American people our good faith in providing this assistance only to those who need it.

Mr. EDMONDSON. Mr. Chairman, I have no further requests for time.

Mr. SAYLOR. I have no further requests for time, Mr. Chairman.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

H.R. 3845

A bill to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766)

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6(a) of the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766, 768; 30 U.S.C. 686), is amended by (a) adding the following before the period at the end of clause (2): "*Provided,* That the principal product or products of such producer is either lead or zinc or a combination of lead and zinc"; and (b) adding the following clause: "(6) The term 'principal product or products' means that the dollar value of lead or zinc or the combination of lead and zinc must have been 50 per centum or more of the total dollar value of all metals sold by the small domestic producer contained in the ores and concentrates produced, calculated on the basis of the product of the settlement assays for all metals sold and the quoted market prices of those metals at the time of sale."

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Page 1, line 9, after the colon strike out all of clause (6) through page 2, line 5, and insert in lieu thereof the following:

"(6) The term 'principal product or products' means that the dollar value of lead or zinc sold or the combination of lead and zinc sold must have been 50 per centum or more of the total dollar value of all minerals and metals contained in the ores and concentrates produced and sold by the small domestic producer, calculated on the basis of the product of the total metal and mineral content of the ores and concentrates sold, as determined from the settlement assays, and the quoted market prices of those metals or minerals at the time of the sale."

The committee amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker pro tempore [Mr. ALBERT] having assumed the chair, Mr. FEIGHAN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3845) to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766), pursuant to House Resolution 309, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

The question is on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in connection with the bill just passed.

The SPEAKER pro tempore (Mr. ALBERT). Without objection, it is so ordered

There was no objection.

AUTHORIZING VIRGIN ISLANDS TO ISSUE GENERAL OBLIGATION BONDS

Mr. O'BRIEN of New York. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 1989) to authorize the government of the Virgin Islands to issue general obligation bonds.

The SPEAKER pro tempore. The question is on the motion.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 1989, with Mr. FEIGHAN in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 1989, which the Clerk will report by title.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York [Mr. O'BRIEN] will be recognized for 30 minutes, and the gentleman from Pennsylvania [Mr. SAYLOR] will be recognized for 30 minutes.

The Chair recognizes the gentleman from New York [Mr. O'BRIEN].

Mr. O'BRIEN of New York. Mr. Chairman, I yield 5 minutes to the gentleman from Colorado [Mr. ASPINALL].

Mr. ASPINALL. Mr. Chairman, so far as I know there is no opposition to this legislation. The gentleman from Pennsylvania [Mr. SAYLOR], the ranking member of the committee, will have an amendment to offer, which amendment he offered in the subcommittee. But with what little controversary may develop with regard to the amendment, the legislation, I think, is very well supported by all members of our committee.

Mr. Chairman, H.R. 1989 has for its chief function the improvement of the economic situation in the Virgin Islands through permitting the sale of bonds by the territorial government. The bill provides that bonds in the amount of 10 percent of the aggregate assessed valuation of the Virgin Islands may be offered for sale. The most recent assessed valuation is approximately $70 million and this is conservative figure. The $7 million that would be realized from the bond sales would be used for hospital, school, library, firehouse, sewerage, and similar construction. Since these purposes are not revenue producing, they must be supported by the local government. The legislation specifically provides that the bonds shall not be obligations of the Federal Government but of the territorial government.

The Virgin Islands Organic Act of 1936 made no reference to a bonding authority, but subsequently a 1949 act gave the territorial government authority to issue general obligation bonds up to 10 percent of the aggregate assessed valuation of the taxable real property. No bonds were sold under this authority.

When we revised the 1936 organic act in 1954, we omitted this bonding power by providing that the legislature would have "no power to incur indebtedness." Now in order to meet some of the pressing needs of the administration, the Virgin Islands and the Secretary of the Interior have asked that the power under the 1949 act be reinstated.

The Virgin Islands have made remarkable progress during the past 10 years. The islands' revenues have increased from roughly $4 million in 1953 to about $14 million in 1963. The Virgin Islands are able to meet their day-to-day expenses but such projects as those contemplated under this legislation must be paid for from other funds.

The Secretaries of the Interior and Health, Education, and Welfare and the Virgin Islands Territorial Legislature have all reported favorably on H.R. 1989.

The Governor of the Virgin Islands appeared before our committee and explained to our satisfaction how the funds would be used. I recommend the enactment of the bill.

Mr. SAYLOR. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, this is a bill that in many respects is unusual. It might best be described as a bill to permit the people of the Virgin Islands to go into debt. Up until now the Virgin Islands, because of the Organic Act of 1954, are not permitted to issue any general obligation bonds and to go into debt. You heard the chairman of the full committee refer to the act of 1949 which Congress passed, and under which we authorized the Virgin Islanders to go into debt. He stated that no bonds were issued pursuant to that authority, and that is correct. I have been told that people of the Virgin Islands, at that time, checked and found out that the bonds were not salable or were salable only under such conditions that the financing would be prohibitive.

In 1954 Congress adopted what is now known as the Revised Organic Act of the Virgin Islands. In that act we did something which in and of itself, I think, is unusual; we provided that the local government could collect taxes based upon the income tax of the United States, and that those moneys would not be covered into the Treasury of the United States but would be covered into the treasury of the Virgin Islands, and that anyone who lived in the Virgin Islands would not have to pay Federal income tax per se in addition to his local taxes. As a result the Virgin Islands have grown and prospered.

Last year the present Governor, several members of the legislature, and a number of business people came up from the Virgin Islands, appeared before our committee. They made the statement that of all the things the United States has done for the Virgin Islands since 1917, nothing that Congress has done, including the acquisition of those islands by the U.S. Government and subsequently their operation by the Department of the Interior, has been so effective in increasing their prosperity as the Organic Act of 1954.

The bill we have before us authorizes them to go into debt to the extent of 10 percent of their assessed valuation, and I think we should give them that authority. But we have been very generous with the people who live in the Virgin Islands, and by the way, a number of people have moved to the Virgin Islands merely because they only have to pay one tax. They pay their income tax down there, and so far they have had no other taxes to pay.

In this bill, if you will read it, you will find they are authorized to engage in all types of public works. Many of them that they indicate are non-revenue-producing, others are revenue producing. I feel that we owe to the people of the Virgin Islands and the taxpayers of these United States, who receive no benefit whatsoever from the Virgin Islands, the right to provide some guidelines on the expenditure of this money. At the proper time I expect to offer an amendment that will strike out all of the things that are presently in the bill for which they are authorized to spend money, and limit it to hospitals, schools, libraries, gymnasiums, and athletic fields.

The reason I have picked these five categories is that the Governor and the members of the legislature, to whom I have talked, say that these five categories are the principal needs of the Virgin Islands to bring them into line with modern society; and while some of the others might be desirable, they can accomplish the other things which are asked for in the bill from general revenues that they receive.

I hope the committee will see fit to accept the amendment and limit the projects for which money can be expended under this bonded indebtedness.

Mr. O'BRIEN of New York. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. O'BRIEN of New York. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, the Committee is aware of the fact that our committee is in substantial agreement on the need for giving to the Virgin Islands the same authority that is given to any municipality in the United States.

I believe we have reason to be proud of the development of the Virgin Islands during recent years. It is not too long ago many of us can recall we were terribly disturbed about the abject poverty there, and the common use of the expression "the poorhouse of the Caribbean."

The Virgin Islands have reached a point in their development where, instead of scratching along in the mud and not even thinking of capital improvements and expansion, they are ready for that and should have the right to obtain that. It should be made clear the only difference between the gentleman from Pennsylvania and myself is over the amendment he proposes to offer. In effect, he is going to say through his amendment that the things we permit our municipalities and agencies of government to finance from bonds shall be limited in the case of the Virgin Islands.

I might point out that some of the things which would be eliminated are things which are very close to most of the municipalities in our country: bridges, wharves, harbor facilities, sewers, sewage disposal plants, electric distribution systems. Now, I know that the gentleman from Pennsylvania is on a very high plateau. He wants to give the Virgin Islands authority to build hospital facilities, which they need desperately; he wants to give them authority to build schools, which they need desperately. But, unfortunately it becomes my unpleasant duty at this Eastertide to get down to more mundane things, and I doubt very much if any of us would want to live in a community where we had a wonderful hospital, beautiful schools, but no sewage. And, I am sure that the gentleman from Pennsylvania does not want to put the Virgin Islands in that position.

And, I might point out, too, that quite recently a subcommittee of the Committee on Appropriations made it very clear that we were appropriating for the last time moneys for the electric plant in the Virgin Islands. Now, that means that the Virgin Islands are going to have to take over that plant. I am sure that the Government will allow very easy terms for taking it over, but there will immediately emerge the necessity for improving that plant, which is not capable today of taking care of the needs of a growing area. That could run into millions of dollars, and I think if we are going to at this time allow the Virgin Islands to have the 10-percent borrowing authority, which we give to all our municipalities, we should not limit it and exclude things which we know are necessary and force this Congress, our committee, to come back year after year and ask that the borrowing authority be extended to these other vital areas.

Mr. SAYLOR. Mr. Chairman, I yield 5 minutes to the gentleman from Washington [Mr. WESTLAND].

Mr. WESTLAND. Mr. Chairman, as has been indicated by the three speakers who preceded me, this bill pretty much meets with the approval of all the members of the Committee on Interior and Insular Affairs. I personally voted for the legislation with some reluctance.

Mr. Chairman, the Virgin Islands today consist of three islands with a population of about 30,000 to 35,000 people. It has an annual budget of about $17 million. I would ask any Member of this House of Representatives to take a look at any community in his district of similar size, 30,000 to 35,000 people, and ask himself what the annual budget of that town or city might be. And, I think he would find that $17 million would be certainly considered to be adequate for running the affairs and solving the financial problems of that particular city.

Now, the Virgin Islands are in a little bit different category, of course, in that they went into this thing from scratch, and as the gentleman from New York [Mr. O'BRIEN], who preceded me, just stated, the "poorhouse of the Caribbean" which is about right, but with the advent of the 1954 act and with the advent of the airplane, for which I do not think Congress should take any credit, arriving on a nonstop hop to St. Croix, things really began to pop in that area. Now you can buy a lot in some of these places for $10,000 to $20,000, $30,000 to $50,000. So, their economy is pretty good.

Mr. Chairman, I think the Members of the House should also know that the Federal Government chips in to the tune of about $7 million a year, I think it is, in the way of the contribution of excise taxes from the rum that is produced in the Virgin Islands. I might add that it is real good rum, too.

So, it was with some regret that we voted for this bill to let these people go in debt. They have all of this money, the $17 million a year. Yet now they want to go on the cuff for another 10 percent of the assessed valuation of the property which is somewhere in the area of $70 million, and probably will mount very quickly. However, if we do believe that these areas should be self-governing to the greatest extent possible, we ought to give them this authority to bond themselves. They wanted more. They wanted 15 percent. The committee cut it down to 10 percent. I think that was good judgment.

Mr. Chairman, I must disagree with the gentleman from New York [Mr. O'BRIEN] in one respect where the gentleman said that they might use this money to purchase the electrical producing facilities in the Virgin Islands. If you have ever seen a Rube Goldberg setup, this is the power producing facilities of the Virgin Islands. Several of us have been down there and have taken a look at it, and you have never seen such a haywire outfit in your life. These things are jiggling all over the place. Some of them have nameplates of "40 kilowatts," "18 kilowatts," and they have a half-dozen different generators. No two of the spare parts will fit and, therefore, different spare parts have to be kept of every different type. It is about as bad a setup as you could have. Why the Virgin Islands government would want to buy that kind of a deal I would not know, unless it would be to put some people on the payroll through patronage.

Mr. Chairman, on the other hand, if they should sell this property to an electrical utility company which knows something about its business, they would probably junk most of it and come up with a good operation and with this borrowing capacity that we are giving them here today they could use it to build their hospitals and schools, which I am sure all of us favor.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WESTLAND. I yield to the gentleman from Iowa.

Mr. GROSS. I understand that the Committee on House Administration has just approved the purchase of another high-speed printing press for the printing of money down at the Bureau of Engraving and Printing. I understand this press operates at fantastic speeds and prints on both sides in the same operation. It is my further understanding that it costs about $400,000.

I wonder if it might not be the better part of good judgment to just buy the people of the Virgin Islands a printing press and turn them loose the way we are doing in this country rather than letting them go into debt?

Mr. WESTLAND. I will say to the gentleman from Iowa now that we have repealed the $1 and $2 bills and, perhaps, they will not need that printing press quite so quickly. These are bonds, and they are tax-exempt securities. They, of course, carry a very low interest rate.

Basically, Mr. Chairman, I think the House should grant them this authority.

Mr. SAYLOR. Mr. Chairman, I have no further requests for time.

Mr. O'BRIEN of New York. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

Be in enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsection (b) of section 8 of the Revised Organic Act of the Virgin Islands, as amended (68 Stat. 497, 500; 48 U.S.C. 1574(b)), is redesignated as paragraph (i) of such subsection (b), and is amended by deleting the last sentence thereof and by striking out the word "subsection" and inserting in lieu thereof the words "paragraph (i)".

(b) Subsection (b) is further amended by adding the following new paragraph (ii):

"(ii) (A) Subject to the provisions of this paragraph (ii), the legislature of the government of the Virgin Islands may cause to be issued such negotiable general obligation bonds or other evidence of indebtedness as it may deem necessary and advisable to construct, improve, extend, better, repair, reconstruct, acquire, and operate any and all types of public works, which shall include, but not be limited to, schools, streets, bridges, wharves, harbor facilities, sewers, sewage-disposal plants, municipal buildings, libraries, gymnasia and athletic fields, firehouses, electric distribution systems or other projects pertaining to electric systems, and other public utilities, or to clear slums, accomplish urban redevelopment, or provide low-rent housing: *Provided,* That no public indebtedness of the Virgin Islands shall be incurred in excess of 10 per centum of the aggregate assessed valuation of the taxable real property in the Virgin Islands. Bonds issued pursuant to this paragraph (ii) shall bear such date or dates, may be in such denominations, may mature in such amounts and at such time or times, not exceeding thirty years from the date thereof, may be payable at such place or places, may be sold at either public or private sale, may be redeemable (either with or without premium) or nonredeemable, may carry such registration privileges as to either principal and interest, or principal only, and may be executed by such officers and in such manner, as shall be prescribed by the legislature of the government of the Virgin Islands. In case any of the officers whose signatures appear on the bonds or coupons shall cease to be such officers before delivery of such bonds, such signature, whether manual or facsimile, shall nevertheless be valid and sufficient for all purposes, the same as if such officers had remained in office until such delivery. The bonds so issued shall bear interest at a rate not to exceed that specified by the legislature and shall be payable semiannually. All such bonds shall be sold for not less than the principal amount thereof plus accrued interest. All bonds issued by the government of the Virgin Islands, including specifically interest thereon, shall be exempt from taxation by the Government of the United States, or by the government of the Virgin Islands or any political subdivision thereof, or by any State, territory, or possession or by any political subdivision of any State, territory, or possession, or by the District of Columbia.

"(B) The proceeds of the bond issues or other obligations herein authorized shall be expended only for the public improvements set forth in the preceding subparagraph, or for the reduction of the debt created by such bond issue or obligation, unless otherwise authorized by the Congress.

"(C) Bonds or other obligations issued pursuant to this paragraph (ii) shall not be a debt of the United States, nor shall the United States be liable thereon."

Mr. SAYLOR (interrupting the reading of the bill). Mr. Chairman, I ask unanimous consent that the bill be considered as read and open for amendment at any place.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

The CHAIRMAN. The Clerk will report the committee amendments.

The Clerk read as follows:

Page 1, line 8, strike out "an" and insert in lieu thereof "and".

Page 2, line 10, strike out "atheletic" and insert in lieu thereof "athletic".

Page 3, line 8, strike out the words "shall be" preceding the word "payable".

The committee amendments were agreed to.

Mr. SAYLOR. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAYLOR: On page 2, lines 6 to 13 inclusive, strike out "any and all types of public works, which shall include, but not be limited to, schools, streets, bridges, wharves, harbor facilities, sewers, sewage-disposal plants, municipal buildings, libraries, gymnasia and athletic fields, firehouses, electric distribution systems or other projects pertaining to electric systems, and other public utilities, or to clear slums, accomplish urban redevelopment, or provide low-rent housing:" and insert "hospitals, schools, libraries, gymnasia and athletic fields:"

Mr. SAYLOR. Mr. Chairman, the Virgin Islands, three small islands in the Caribbean, with a total population of somewhere in the neighborhood of 35,000, have an annual income in excess of $17 million. I have carefully checked and I find that there is no municipality in the United States with a population of 35,000 that has an income in the neighborhood of $17 million a year. With that income they are certainly able to provide, and they have provided, many of the things that they have needed. They have come far in the past 9 years from nothing. But one of the important things that I think this Committee should realize is that they have failed to provide the basic necessities of a modern society. They have not built the kind of hospitals they should have to take care of their people. They have not built the kind of schools they should have, and most of the 35,000 people who live there are of school age. They do not have libraries to supplement their schools, the schools that they do have. And they do not have the athletic fields and gymnasiums and equipment that should go with them. Therefore, if these people are going to go into debt for the first time I feel that some slight limitation should be placed upon them. I am trying to make sure that these people will build the things that they need most, the things that they have failed to provide from the money that they have had over the years.

Mr. ASPINALL. Mr. Chairman, will my friend from Pennsylvania yield?

Mr. SAYLOR. I am happy to yield to the chairman of the full committee.

Mr. ASPINALL. Among other things, as I understand it, the gentleman has stricken from the bill by his amendment the matter of electric distribution systems or other projects pertaining thereto. If we provide that the government of the Virgin Islands take over the Virgin Islands Corporation and thereby take over this part of the activities of the Virgin Islands Corporation, would it not be well to permit them to have the bonding authority to go ahead and use some of this money that they secure from bonds for the construction of electrical systems? I know that we are not united in our committee on whether or not this property should go to the Virgin Islands government or whether it should go to private businesses, as was referred to by the gentleman from Washington. We have not yet come to that point. But if it should happen to go to the Virgin Islands government, should they not have the authority to go ahead and construct these facilities?

Mr. SAYLOR. Mr. Chairman, I might say to my colleague that if the time comes when the people of the Virgin Islands and their legislature decide that is what they want to do I am perfectly willing to go along and have that included. But that time has not come. At the present time the Virgin Islands Corporation is furnishing all of the power for the Virgin Islands.

Mr. ASPINALL. Mr. Chairman, will the gentleman yield further?

Mr. SAYLOR. I yield.

Mr. ASPINALL. This is a matter that has to do, of course, with our present bill. The authority granted under the bill as presently written is more or less in line with general authority that municipalities of the United States have at the present time for such purposes; is that not correct?

Mr. SAYLOR. That is correct.

Mr. ASPINALL. The gentleman is making an exception by his amendment because of the reasons he has given to the committee.

Mr. SAYLOR. That is right. I feel that in view of the amount of money the Virgin Islands is getting from general tax revenue, many of the things that municipalities are required to bond themselves for, the Virgin Islanders should pay out of their income.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Along with a number of others on the majority side of the Committee, I feel that it would be desirable to retain the full powers for the municipalities that are envisioned by this bill, but I recognize the situation. I recognize the difficulty that will be encountered if this bill should be forced to a vote on this particular day with a controversy in progress.

I just wonder if the gentleman would be willing to enlarge the language of his amendment to include sewers, sewage disposal plants, and water systems, which are certainly areas of activity in which there is no question at all of any competition with any private company, and which are also areas in which the need for bonding and financing would be, I think, very apparent in any community of any size.

Mr. SAYLOR. I will say to my colleague I would be willing to accept that amendment. I do not want to get down into the sewer from the high plane on which I have been placed by my friend the chairman of the committee, but I would be perfectly willing to accept that amendment.

Mr. EDMONDSON. Then, Mr. Chairman, I ask unanimous consent to add the following language to the Saylor amendment: After the language that has been offered by the gentleman from Pennsylvania, add "sewers, sewage disposal plants, and water systems."

Mr. CRAMER. Reserving the right to object, Mr. Chairman, can the gentleman inform me then what the total authority will be for bonding projects? What will be involved?

Mr. EDMONDSON. I think the amendment would then provide authority to bond for hospitals, for schools, for gymnasiums, for athletic fields, for sewers, for sewage disposal plants, and for water systems.

The CHAIRMAN. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

The CHAIRMAN. The Clerk will report the amendment as modified.

The Clerk read as follows:

> Amendment offered by Mr. Saylor: On page 2, line 6, after "operate" strike out the remainder of line 6 and down to and including the words "low-rent housing" in line 13, and insert "hospitals, schools, libraries, gymnasia and athletic fields, sewers, sewage disposal plants, and water systems".

Mr. O'BRIEN of New York. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. O'BRIEN of New York. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I do not propose to prolong this discussion. I think we have a practical situation here, but I do think before we vote on this amendment it is my responsibility as manager of the bill to point out that the committee instructed us to support the bill as it appears as reported by the committee. While I am inclined to limit this to certain specific activity, I do think we should be aware of the fact that too often in this Congress when it comes to legislating for offshore areas, where the people are not citizens in the full sense, we are inclined to adopt a double rule. We have one rule for those on the mainland and we have another rule for the offshore areas.

I intend to support the amendment because it is the practical thing to do, but I do not intend to support it in a paternalistic way or attitude toward those people because I think they have as much responsibility and ability to govern as any municipal council throughout the country.

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

Mr. ASPINALL. Mr. Chairman, I ask unanimous consent to correct the bill on page 2, line 14, in a matter of spelling to change the word "pubic" to "public".

The CHAIRMAN. Without objection, it is so ordered.

There is no objection.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose, and the Speaker pro tempore, Mr. Albert, having assumed the Chair, Mr. Feighan, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H.R. 1989) to authorize the government of the Virgin Islands to issue general obligation bonds, pursuant to House Resolution 307, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER pro tempore (Mr. Albert). Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The question is on the amendments.

The amendments were agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

The SPEAKER pro tempore (Mr. Aspinall). For what purpose does the gentleman from Oklahoma rise?

CONSENT CALENDAR AND PRIVATE CALENDAR TO BE CALLED ON MONDAY, APRIL 22

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that on Monday, April 22, 1963, it shall be in order to consider business under clause 4, rule XIII, the Consent Calendar rule, and clause 6, rule XXIV, the Private Calendar rule.

The **SPEAKER** pro tempore. Without objection, it is so ordered.

There was no objection.

AUTHORIZING CLERK OF THE HOUSE TO RECEIVE MESSAGES AND AUTHORIZING SIGNING OF ENROLLED BILLS

Mr. ALBERT. I ask unanimous consent that notwithstanding the adjournment of the House until April 22, 1963, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The **SPEAKER.** Without objection, it is so ordered.

There was no objection.

CALENDAR WEDNESDAY BUSINESS DISPENSED WITH ON APRIL 24

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the business in order on Calendar Wednesday, April 24, 1963, may be dispensed with.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Oklahoma?

Mr. GROSS. Mr. Speaker, reserving the right to object, and I shall not object, will the Consent Calendar and the Private Calendar a week from Monday next be the only business to come before the House on that day?

Mr. ALBERT. There will be other business on Monday, but it was necessary to get that order making the Consent and Private Calendars in order on that day.

Mr. GROSS. I thank the gentleman. Mr. Speaker, I withdraw my reservation of objection.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

AUTHORIZING APPOINTMENT OF COMMISSIONS, BOARDS, AND COMMITTEES

Mr. ALBERT. I ask unanimous consent that notwithstanding the adjournment of the House until April 22, 1963, the Speaker be authorized to appoint commissions, boards, and committees authorized by law or by the House.

The **SPEAKER** pro tempore. Without objection, it is so ordered.

There was no objection.

LEGISLATIVE PROGRAM

Mr. HARSHA. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HARSHA. Mr. Speaker, I have asked for this time in order to inquire of the distinguished majority leader what the program will be for the House of Representatives for the week of April 22.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. HARSHA. I am happy to yield to the gentleman.

Mr. ALBERT. In response to the gentleman's inquiry, under the order just obtained, on Monday the Consent Calendar and the Private Calendar will be called.

Monday is also District Day and there are five bills as follows:

H.R. 3190, pour-over trusts.

H.R. 4330, amend District of Columbia Business Corporation Act.

H.R. 5044, mutual-aid fire protection.

H.R. 5081, power line right-of-way.

H.R. 5338, establish uniform commercial code.

Also, on Monday, the House will take up the resolution—House Resolution 317—to agree to Senate amendments to the bill H.R. 4715 establishing the Eleanor Roosevelt Memorial Foundation.

Tuesday: H.R. 12, Medical Professions Assistance Act. This is an open rule, with 3 hours of debate.

Wednesday: H.R. 4997, to extend the feed grains program. This is an open rule with 3 hours of debate.

Thursday and the balance of the week: H.R. 3120 to simplify administration of Lead-Zinc Small Producers Stabilization Act. This is an open rule, with 1 hour of debate.

H.R. 1762, Outdoor recreation, coordinate programs. This is an open rule with 1 hour of debate.

This announcement is made of course with the usual reservation that conference reports may be brought up at any time and that any further program will be announced later.

The distinguished chairman of the Committee on Appropriations advises that his Committee on Appropriations desires to bring up the Labor-HEW bill on April 29, that is the Monday following the date of reconvening.

Mr. HARSHA. I thank the gentleman.

WHY SHED TEARS?

The **SPEAKER.** Under previous order of the House, the gentleman from Ohio [Mr. Ashbrook] is recognized for 15 minutes.

Mr. ASHBROOK. Mr. Speaker, other Members of this House will have to excuse me for not shedding the same crocodile tears regarding the article that Jack Anderson recently wrote for Parade. While I cannot speak to the merits of the particular cases of "cheating" which he mentioned, I can say from my own experience that it ill behooves us to loudly protest general criticisms from outside these halls when we pay little attention to specific criticisms pinpointing specific abuses within these halls.

The public is not so easily fooled. All of the statements which purport to tell what we would do about the alleged malefactors in this body were we to get their names and the details of their unethical conduct is so much hogwash. What we would do concerning abuses we do not know about can only be honestly judged in the light of what we do not do about abuses we do know about.

On March 12, 1963, I outlined a situation in specific detail which exists regarding the reporting of counterpart funds under title 22, section 1754 of the United States Code. This law clearly requires the reporting and full disclosure of the counterpart funds expended by Congress. This speech, which appears on pages 4017–4019, indicated beyond a shadow of a doubt that the Committee on Education and Labor, through its chairman, the gentleman from New York [Mr. Powell], did not correctly report the counterpart funds expended by the chairman, other members and staff personnel.

On March 21, 1963, I again addressed the House and pointed out the impasse which I had reached regarding efforts on my part to secure information to rectify the situation presented. This speech appears on pages 4612 and 4613. As I pointed out then, no one seems to have responsibility for enforcing the law. The Justice Department says it is not their obligation; the Committee on House Administration says it is not their responsibility; the State Department says it is not their responsibility since they furnished the figures on counterpart expenditures to the gentleman from New York [Mr. Powell] on February 28, 1963. At the same time, they will not furnish these figures to me. The gentleman from New York [Mr. Powell] refuses to even answer the letter in which I requested a copy of the State Department letter to him.

Up to now, I have felt that our committee report represented a failure to comply with the law. However, when the facts are presented and there is a refusal to do anything about it, the matter ceases to be a question of complying with the law and instead becomes the obligation of the House to do something about it. When will we require compliance with the law? This House is countenancing a violation of the very laws that it has enacted at the same time it commands compliance by the rest of our citizenry.

There can be little doubt that the report submitted by the chairman of my committee was woefully inadequate. Without going into elaborate detail, note the report on just one trip. The gentleman from New York [Mr. Powell] together with two staff members, Miss Corrina A. Huff and Mrs. Tamara J. Wall, conducted a factfinding mission to Europe which took the chairman to five countries, Mrs. Wall to seven countries, and Miss Huff to six countries. The total transportation bill for this factfinding trip comes to $100 for the gentleman from New York [Mr. POWELL], $109 for Mrs. Wall, and $115 for Miss Huff, as indicated by the report which was filed on March 11, 1963, pursuant to the provisions of title 22, section 1754. The report was as follows:

Name and country	Name of currency	Lodging		Meals		Transportation		Miscellaneous		Total	
		Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency	Foreign currency	U.S. dollar equivalent or U.S. currency
Powell, Adam C.:											
Great Britain (9 days)	U.S. dollar		80.00		70.00		5.00		76.50 12.00		243.50
France (5 days)	do		110.00		87.50				48.00		245.50

Germany (3 days)	Deutsche mark		55.00		51.00		14.00		30.00	600	150.00
Denmark (5 days)	Kroner		75.00		62.00		8.00		26.00	1,200	171.00
Huff, Corrinne A.:											
Great Britain (4 days)	U.S. dollar		80.00		17.50		28.00		168.00		293.50
France (5 days)	do		110.00		82.50		12.00		46.00		250.50
Italy (5 days)	do		150.00		99.00				56.00		305.00
Greece (11 days)	do		192.00		181.50		75.00		84.00		532.50
Spain (4 days)	do		72.00		76.00				37.00		185.00
Denmark (4 days)	do		72.00		66.00				37.00		175.00

Does it stand to reason that such a trip can be made for this extremely small figure? No, it does not; so let us stop fooling ourselves. Someone had to pay for the basic travel expense. Possibly, MATS or other Government transportation could have been provided. No; this was clearly not the case as witness the following State Department telegram which alerted the oversea diplomatic corps to this trip:

> Congressman ADAM C. POWELL, chairman, Committee on Education and Labor, accompanied by Mrs. Tamara J. Wall and Miss Corrine Huff, staff members, traveling Western Europe accordance following itinerary: August 8, sailing *Queen Mary*, arriving Southampton August 13; Paris, August 16; Venice, August 20; Rome, August 23; Athens, August 27; Delphi, August 30; sailing *Leonardo da Vinci*, September 15 from Gibraltar. Arrival times and flights forwarded when firm.
>
> Provisions handbook congressional travel apply. Codel and party authorized use local currencies 19FT561 funds. Meet assist appoint control officers.
>
> Request one single and one double with bath as follows: London-Cumberland Marble Arch Hotel; Paris Hotel San Regis; Venice Royal Denieli; Rome (1) Excelsior (2) Flora (3) Victoria whichever has special embassy rates; Athens beachhouse at Astir Hotel Delphi, new government hotel name unknown. Confirm Department soonest.
>
> London, request three tickets August 14 and 15, best shows playing, except Broadway plays.
>
> Paris-Codel desires use U.S. Army car and chauffeur. Reserve three for first show and dinner best table Lido August 16.
>
> Southampton-Codel requests be met at *Queen Mary* Cherbourg with $100 U.S. equivalent in local currencies for each member party.

This certainly indicates that the trip was made on the *Queen Mary*. Patently on the face of the report, therefore, is the obvious fact that it does not truly reflect the cost of the trip unless the funds came from some private source. At this point, secrecy takes over and I cannot report further.

Secrecy is at the heart of most of the abuses which persist here in Congress. In the particular instance of counterpart funds, the practice of making the figures available only to committee chairmen and then relying on them to present the figures to the House has obviously not worked. I, therefore, have introduced H.R. 5622 which would amend title 22, section 1754, by adding the simple provision that "Each such record shall be available for inspection by any Member of Congress upon his request."

Before we shed too many crocodile tears about the criticism that we are receiving, let us honestly look at our own basic weakness of refusing to enforce the law as far as legislators are concerned. My bill would at least make it possible to get a true accounting of moneys expended and not give committee chairmen a cloak behind which they can hide when their reports are incorrect and in direct violation of the law.

The text of the bill follows:

H.R. 5622

A bill to amend section 502 of the Mutual Security Act of 1954 relating to the reporting of foreign currencies expended by Members of Congress

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 502 of the Mutual Security Act of 1954 (22 U.S.C. 1754) is amended by adding at the end thereof the following new subsection:

"(c) The Secretary of State shall keep a complete detailed record of each local currency owned by the United States which is made available during each calendar year under authority of subsection (b) of this section to each Member and employee of a committee of Congress. Each such report shall specify the amount furnished each Member and employee in each territory, possession, and commonwealth of the United States and in each foreign country visited, the dates of such visit, and the dollar-equivalent value of each such local currency. Each such record shall be available for inspection by any Member of Congress upon his request."

U.S. CONTRIBUTIONS TO THE UNITED NATIONS

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from Missouri [Mr. HALL] is recognized for 30 minutes.

Mr. HALL. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include extraneous matter and tables.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. HALL. Mr. Speaker, I have introduced today a bill designed to limit U.S. contributions to the United Nations in accordance with recommendations of the Clay Committee on foreign aid, and in keeping with the original intent of this Congress. My bill places a 33⅓-percent limit on U.S. contributions to all U.N. budgets and funds.

Mr. Speaker, American taxpayers now foot the bill for up to 100 percent of some U.N. funds, while other nations ignore their obligations to support the U.N. financially. If my bill is approved—and the principle already has received widespread vocal support—the savings to the American taxpayers could amount to approximately $50 million a year. And the other nations would be put firmly on notice that they must face up to their obligations to the U.N., if they wish the U.N. to continue to function.

As this House knows, I have been investigating the U.N.'s foreign aid activities for 2 months. It was the unpublicized extent of U.N. aid to Communist nations that first convinced me that U.N. aid is not now being administered in the best interests of the United States, despite the fact that the United States is the greatest supporter of the U.N. and the world's true champion of international peace and understanding.

Further checking reveals that U.N. aid is not even being administered in the best interests of the United Nations, and that continued bailing out of the U.N. by American tax dollars must come to a screeching halt.

The United States is obligated by charter—and by hope—to pay its fair share of U.N. costs. We are equally obligated by a domestic budget deficit and for the good of the U.N. itself, not to pay 1 cent more than our fair share.

The Clay Committee recommended just that with respect to United Nations assistance agencies, saying:

> U.S. contributions to the budget of these (assistance) organizations should not exceed our proportionate share of our regular U.N. budget.

Thus, the Clay Committee, in accord with the wisdom evidenced by the rest of its conscientious and meticulous report, advised the Nation to do exactly what the Congress of the United States had intended for us to be doing all along.

It should be noted here that American taxpayers now finance the U.N.'s myriad budgets and funds in widely varying amounts. For instance, our basic contribution to the U.N. general budget is 32.02 percent, but we give 40 percent to the Special Fund, some 70 percent to the Middle East emergency force, and 100 percent to some research programs. In other cases we give less than 32.02 percent.

My bill provides simply for the establishment of a flat rate ceiling above which no U.S. contribution to any U.N. budget or fund may go.

In fact, it is possible that American contributions to the U.N. in excess of 33⅓ percent of U.N. budgets already are illegal. At the very least those contributions are in direct opposition to the intent of the Congress as embodied in the State Department Appropriation Act of 1953.

In that act—now Public Law 82-495—the Congress, with foresight we unfortunately have not followed, provided this:

> No representative of the United States Government in any international organization after fiscal year 1953 shall make any commitment requiring the appropriation of funds for a contribution by the United States in excess of 33⅓ per centum of the budget of any international organization.

Since 1953 there have been occasions upon which it has been found convenient for that basic limitation to be circumvented. It has been claimed that "voluntary" funds are not covered by the above law, although the law makes no such exception in its language. On the basis of that dubious reasoning the Foreign Assistance Act of 1961 provided in section 301(b) that U.S. contributions to the U.N. Special Fund and the U.N. expanded program of technical assistance could be made, up to 40 percent of those funds' budgets.

And, by conveniently neglecting to remember the intent of the Congress, our State Department has gotten the United States into the deep financial waters of the U.N.'s emergency operations at rates up to 70 percent of U.N. expenditures.

My bill would return us to the intent of the 82d Congress and is designed to close the elusive "loopholes" by which we have ignored the wishes of that wise Congress.

The bill strikes out section 301(b) of the Foreign Assistance Act of 1961 and inserts in lieu thereof the following:

> Contributions, whether in cash or in goods and services, and other payments made by the United States for the calendar year 1964 or any subsequent calendar year to the United Nations or to any program or activity thereof (whether or not financed in whole or in part by assessments against member nations) may not exceed 33.33 per centum of the total amount contributed and paid by all nations for the calendar year involved to the United Nations, or the program or activity thereof, as the case may be.

Mr. Speaker, let me say that if the 33⅓-percent ceiling were applied to U.N. funds as they turned out in 1962, the American taxpayers would have been saved $37,836,000 last year. Even so only 10 of the 28 U.N. budgets would have been cut at all.

The table below shows the cuts that could have been made in 1962. Since the U.N. budgets are all continually increasing, it is apparent that savings in 1964 could be even larger—probably in the neighborhood of $50 million.

TABLE 1.—*Savings in U.N. contributions by the U.S. in 1962 if U.S. contribution limit had been 33.33 percent*

U.N. Fund:	*Saving*
Emergency forces	$1,233,000
Congo	10,193,000
Children's Fund	2,643,000
UNESCO (special)	1,364,000
ETAP	3,083,000
Palestine relief	12,941,000
Special Fund	4,223,000
WHO projects	2,156,000
Total	37,836,000

Mr. Speaker, the percentages which American taxpayers gave to the above projects in 1962 ranged from 40 percent to the special fund and the expanded technical assistance program to 100 percent for two of the three special projects of the World Health Organization.

The 18 U.N. funds and budgets to which the United States is now contributing less than 33⅓ percent include: General U.N. budget, International Maritime Consultive Organization, Food and Agriculture Organization, International Civil Aviation Organization, ICAO joint support program, International Labor Organization, International Telecommunications Union, United Nations Educational, Scientific and Cultural Organization, Universal Postal Union, World Health Organization general budget, World Meteorological Organization, and the U.N. High Commissioner for Refugees.

The proposed cutting back of our support to the U.N. is an effort to keep our own financial house in order, and to encourage added backing of the U.N. by other nations. This cutback is not supported only by myself and the Clay Committee. It has, indeed, received vocal support and active implementation by the Department of State.

The State Department announced March 13 that the United States no longer will support U.N. operations in the Middle East and in the Congo at rates in excess of our 32.02-percent general-budget assessment. In explaining that stand, our delegation to the United Nations under Delegate Francis Plimpton pointed directly to the 33⅓-percent limitation in U.S. law.

My bill, presented here today, is to clarify that law so that the State Department and the U.S. delegation to the United Nations will understand that Congress wants that 33⅓ percent ceiling aplied all the time and across the board—not just when the State Department decides it is convenient to apply the law.

I note also that the State Department itself has evidenced a similar opinion. On March 12, 1963, just 1 month ago, Mr. Richard N. Gardner, Deputy Assistant Secretary of State for International Organization Affairs, said in a speech before the American Association of the United Nations:

> It is true that the regular budget scale involves a ceiling for U.S. contribution. This ceiling derives from a fundamental principle long accepted by the General Assembly—that, in an organization of sovereign states where each nation has one vote, it is not in the interest of the organization to depend too much financially on any one state * * *. The financial load simply must be more broadly based, and the carefully worked out cost-sharing formula to accomplish this is the regular budget scale.

Mr. Speaker, my bill is based on just the cost-sharing formula Mr. Gardner described. It would establish the U.S. limit at a point just above the 32.02 percent now determined for us in the United Nations budget formula, allowing a margin for minor fluctuations in our fair-share rate. Such action by us would encourage other nations to pay their fair share—whether out of dedication or disgust—unless they are willing to accept a cutback of United Nations activity especially in the foreign aid field.

Let us remember that the difficulties of the U.N. do not arise from its ordinary operations. It is the extra operations that have turned the U.N. into a bottomless financial drain for American taxpayers.

Over the last few years almost 90 percent of the U.N. membership has been granted relief from making payments at their regular assessment level to the special U.N. operations of emergency forces and of foreign aid. As a consequence, the United States has been called upon to support those programs via large "voluntary" contributions.

To do that we had to wink at our limitation law.

Mr. Speaker, this situation has two unacceptable aspects:

First. It has placed a disproportionate share—nearly half—of the cost of these operations on the United States.

Second. Under this arrangement a large number of U.N. members are not meeting their obligations.

The Communist bloc pays nothing or makes only token contributions. In the case of some specific funds, France, South Africa and the Arab countries refuse to pay their fair share. Other underdeveloped nations do not pay their share, arguing that they are too poor.

Beside that, the Communist bloc limits the convertibility of currency it gives to the U.N. so that such currency often can be spent only for Communist goods and experts and only in Communist nations.

There have been several attempts to straighten out the finances of the U.N. The most notable attempt involved that $100 million bond issue in which the United States hesitatingly agreed to participate last year.

In addition the International Court of Justice handed down last July an opinion that costs incurred by the U.N. in the Congo and Middle East operations are "expenses of the Organization" and that assessments levied to pay for them constitute binding legal obligations.

Please note that my bill does not propose that the United States refuse to meet such legal obligations. The 33⅓ percentage is, in fact, a little higher than our current legal U.N. assessment figure of 32.02 percent.

It is difficult to escape the conclusion that the United Nations is not being supported in many of its funds and budgets. These arrearages will continue to grow so long as both major and minor powers refuse to fulfill their legal obligations. And, so long as the American taxpayers pay the bill, there is no reason to expect that other nations will be bothered with paying them.

The United States contributes to at least 28 United Nations funds and budgets. That makes for a lot of different U.S. relationships with a lot of different international organizations each in a varied and complex field.

Thus, we find ourselves approaching something of a showdown this year. We have had some 18 years of experience now in building international organizations under the United Nations. It has been an enterprise in which the U.S. executive branch and the Congress have been partners in a great many decisions to establish or help finance international organizations.

We have arrived now at the point where it is a major responsibility of the United States to manage this complex web of relationships. But at the present point the management problems involved are almost staggeringly complex.

The U.S. Congress and our delegation to the U.N. are having to function to a significant degree as the legislature of an international organization that lacks an effective internal legislature. We have a very big voice in the U.N. budget process. We have the problem of examining U.N. programs, trying to make sure they are sensible, and meantime keeping our percentage of financial commitment down to a fair-share level.

Mr. Speaker, the financing of the United Nations has just gotten out of hand. The U.N. cannot manage it. Now it becomes apparent that the United States—saddled with its own debt—cannot finance the U.N., too.

I do not reach this conclusion lightly. I have studied U.N. finances closely and have detailed a number of questionable U.N. projects in 15 previous speeches in this House.

What is happening now, Mr. Speaker, is that the American taxpayer—who has a massive foreign aid program of his own—is being drawn unknowingly into a second foreign aid program which he finances but over which he has no effective control.

Our United States is facing the first $12 billion planned budget deficit in all its history. We simply cannot afford to support two foreign aid programs.

We already have substantial agreement in principle to the cutting of our unilateral aid program. It is equally obvious that we must apply the cutting principle also to our donations to the United Nations. My bill proposes a realistic method of doing that. It does not end our membership in the U.N. It does make our membership a fair-share affair.

Now, Mr. Speaker, since the question is always near at hand in these cold war days, I want to deal briefly with the amount of U.N. foreign aid that has gone to or is programed for Communist bloc nations in 1963–64.

Many of these projects I have discussed here in detail in previous days. The aid includes that from the Special Fund and the expanded technical assistance program and from other U.N. funds and budgets—none of them limited to a 33⅓-percent U.S. contribution.

My research indicates that there are now in operation—or planned—103 U.N. aid projects in the Communist bloc. These will cost the U.N. $9,791,373 as detailed in the accompanying table.

TABLE 2.—*Total U.N. aid to or programed for Red bloc, 1963–64* (*includes Special Fund, ETAP, other funds*)

Nation	Projects	Cost
Cuba	16	$2,336,680
Poland	30	2,007,200
Yugoslavia	32	4,695,643
Albania	3	70,000
Interregional with Red Nations involved	12	583,000
Total	103	9,791,373

Mr. Speaker, I hope that in the coming days of debate and lawmaking in the foreign aid field, we in this Congress will be successful in closing all loopholes and in providing specifically that no American contribution to any U.N. fund ever shall exceed that 33⅓ percent now in our laws.

I have proposed a step in the right direction; the direction of fiscal sanity; the direction of realism. It is a realistic step that has widespread support and that can be accomplished quickly. It follows the recommendations of General Clay's committee for decreased, selective aid to international organizations. It could save us $50 million.

The step I propose provides for a limit on U.S. contributions to any and all U.N. funds and budgets and will encourage other nations to assume their moral obligation to pay their fairer share of U.N. financing. Many of these nations have been rehabilitated by our unilateral aid and by U.N. aid financed chiefly by Americans.

My colleagues, let us legislate a positive 33⅓ percent ceiling on U.S. aid to the U.N.

Let us enact a "fair share" ceiling.

A "fair share" ceiling will help make the United Nations stronger and more financially sound while at the same time making the United States of America stronger and more financially sound.

That is a good bargain.

Let us take advantage of it.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HALL. I am glad to yield to my colleague from Iowa.

Mr. GROSS. Mr. Speaker, I want to commend my friend from Missouri for the wealth of information he has brought to the attention of the House in connection with the United Nations and its subsidiary organizations. I would ask the gentleman this question, Will your bill put a stop to the vicious practice of so-called voluntary contributions that have run into many, many millions of dollars?

Mr. HALL. No; I would have to say to the gentleman from Iowa who is a distinguished member of the Committee on Foreign Affairs and of this House, that it would not within itself put a stop to the setting up by the United Nations or by their vote in the General Assembly of the voluntary fund, but it would keep us from participating more than the legal limit as established by the law of this Congress, which is 33⅓ percent.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, I was speaking of the voluntary contributions made by the United States, not by the United Nations; the voluntary contributions made by the United States to the United Nations and certain of its subsidiary organizations.

Mr. HALL. It is my opinion that it would stop those voluntary contributions over and above the regular assessments and as to those we could participate only up to 33⅓ percent. I am sorry I missed the gentleman's point in the beginning, but he is exactly right; that is the intent of this amendment to the bill which will take us back to the original concept of this House.

Mr. GROSS. It has been through this voluntary contribution gimmick that the executive branch of our Government has been evading what Congress said was a fair share contribution, 33⅓ percent.

Mr. HALL. It is 33⅓ percent at the present time, but we are assessed by the U.N. only 32.02 percent as a result of the action of the Finance Administration Committee in that organization's assessment upon us.

Mr. GROSS. If the gentleman will yield further, I thoroughly agree with him; I am sick and tired of a little group of people, mostly foreigners, going to New Delhi, India, or some other faraway place, holding a meeting and fixing the share of the contribution of the United States to the United Nations or one of its many agencies. These people are actually imposing taxes upon Americans by so doing.

Mr. HALL. That is correct. I will say as I did in the body of my speech that we have exercised considerable authority and participation in the Financial Administrative Committee, as I believe it is called. We have progressively reduced our legal limit of support, with

U.N. approval, and I say that not facetiously but in quotes, "approval," from 50 percent at the beginning to 32.02 percent at the present time. I would hope it would go much lower in the future, and that any future assessments by the U.N. would be progressively lessened to our true, fair share.

I want to make it obvious that I am not in this bill trying to hog-tie the United Nations. I am trying to make it legal, and for us to have even stiffer legal limitations. I think this will strengthen the United Nations. It will make more nations meet their obligations. It is supported not only by me but by others, including the State Department and the President's Committee on Foreign Expenditures. Many people feel that showdown time is here. This bill is one solution. I think it is reasonable support.

CUBA, TITO, AND THE TROJAN HORSE

The SPEAKER pro tempore (Mr. ALBERT). Under previous order of the House, the gentleman from Ohio [Mr. FEIGHAN] is recognized for 30 minutes.

Mr. FEIGHAN. Mr. Speaker, Tito, the Communist dictator of Yugoslavia, has been very much in the news in recent days and none of that news augers well for freedom's cause.

Titoism in Yugoslavia is one of the major issues to come before this Congress for resolution. It is an issue because of efforts being made to regain a favored nation status for Yugoslavia through an amendment to the foreign aid bill. The last Congress wisely removed Yugoslavia from the list of favored nations and the wisdom of that action has been amply confirmed by events in recent months.

There persists, however, remnants of the myth about Tito and the Communist regime in Yugoslavia—that Tito communism is somehow different from imperial Russian communism and that Titoism is a neutralist movement if not a movement friendly to the United States and the cause of the free world. That myth persists because of skillful manipulation of the news and a general failure to examine and understand the hard facts about Tito, Titoism, and the role of the Trojan horse in the global plans of imperial Russia.

Here are some of the hard facts which bear upon the issue before Congress on whether Tito's Yugoslavia should or should not be accorded favored nation status.

Tito is expected to pay a visit to Russian-occupied Cuba sometime in the immediate future. This visit may occur as early as June, but certainly within the next 6 months. There is some evidence, beyond the rumor stage, that Tito hopes to visit other countries in Latin America while he is in the Western Hemisphere. Within the past 10 days, President Adolfo Lopez Mateos, of Mexico, paid a so-called state visit on Tito during which he invited Tito to visit Mexico. Tito naturally accepted with enthusiasm. Such a visit to Mexico would make it that much easier for Tito to visit his comrade Castro in Russian-occupied Cuba, considering the problems of travel to Cuba these days and that the only regular airline service to Cuba is from Mexico City. Of course Tito could use a Russian jet for the trip, but that would uncover much of his Trojan Horse role in the schemes of imperial Russia. Moreover, the invitation from Mexican President Mateos provides additional "diplomatic cover" for Tito in his efforts to penetrate further the Russian cause into other Latin American Republics. The action taken by President Mateos makes him the first among the Organization of American States heads of state to break the ice for Tito in this hemisphere. The burden of resistance on other Organization of American States heads of state is thus considerably weakened and others may go the way of President Mateos.

It is generally agreed that Castro has been well exposed as a Russian Trojan Horse in the Western Hemisphere. President Kennedy played a vital role in bringing about that exposure. The Western Hemispheric crisis of last fall, when the Russians were caught redhanded in their military buildup in Cuba, provided our President with a unique opportunity to turn the floodlights of reality on the Castro regime. The impact of President Kennedy's exposure operation had a profound effect throughout all of Latin America. As a consequence, Castro is no longer useful to imperial Russia as a symbol of their wave of the future in this hemisphere. Castro is no longer the revolutionary symbol for the downtrodden and neglected masses to the south of our borders. He is now nothing more than an exposed Russian agent, a tool of an alien and despotic system.

The Russians are fully aware of what has happened to the Castro regime in terms of its appeal throughout Latin America. They have lost a long-term and expensive investment in that particular Trojan horse. But the Russians have many Trojan horses and Tito has been their most dependable one. He has weathered many storms—not the least of which was his sponsorship of a conference of so-called neutral nations arranged to coincide with the opening of the last series of Russian nuclear weapon tests. Tito and the neutralist conference provided propaganda cover to justify the Russians breaking the oral test ban understanding entered into during the Eisenhower administration. In the general political confusion which followed, Tito escaped detection of the crucial role he played in that maneuver. After we poured over $2 billion worth of American aid into Yugoslavia, Tito rewarded us with the public promise that he would stand shoulder to shoulder with the Russians in any showdown with the free world. But Tito is, as I have said, a rather special Trojan horse of the Russians and our Government has simply refused to take him at his word.

Now Tito has been assigned the mission to take up the slack in the Russian plans for this hemisphere caused by the exposure of Castro.

Let us not forget that Tito is the symbol of that nebulous system called national communism. He has been built up as the leader of a different kind of communism, a peaceful kind, a nonviolent kind, yes, even a kind of "democratic communism." All of this is, of course, a Russian-manufactured myth which some intellectuals and many theorists in the United States swallowed hook, line, and sinker. But the record shows that national communism is a propaganda technique to open the way for Russian takeover of legitimate revolutionary movements in countries where revolutionary change is the order of the day. This technique applies in countries seeking their national independence by escape from colonial rule and as well in countries where existing social and economic conditions invite revolutionary action to secure justice for the masses.

Much of Latin America is today in revolutionary ferment. There the revolution has both social and economic objectives. Revolutionary change, whether peaceful or violent, opens the door for Russian agents to enter the fray with their various techniques and methods calculated to capture leadership of the revolution. Once they have captured leadership of the revolution they immediately begin to apply their counterrevolutionary methods which we have come to call communism. Castro stands as a classic of that technique.

It is against this background that the mission of Tito to Cuba and Mexico takes on realistic meaning. Tito hopes, as I have said, to be invited to other republics in the hemisphere, after his visit with Castro.

These questions are pertinent to the upcoming Tito mission to Castro.

Will Tito advise Castro on the techniques of national communism and school him on the art of pilfering the pockets of the American taxpayers by promising to be a "good Communist?" Tito is proficient in both these games.

What methods will Tito use in his efforts to assume the role of Trojan horse for Moscow in the Western Hemisphere? Will he praise Castro as a reform leader who is misunderstood or will he urge the Yugoslav experiment in fraud as the answer to Castro's problems?

What is the role of Mexican President Mateos in the plans for the Tito mission? The free press reports that Lopez Mateos was in Berlin a few days ago and refused to leave his car to inspect the Berlin wall, for fear it would involve him in the East-West conflict. Does this mean that we will soon see a wave of neutralism infecting the Western Hemisphere? Neutralism follows a period of uncertainty about U.S. intentions and will in the conduct of the East-West conflict. Moreover, neutralism paves the way for the special mission of Trojan horse Tito. Tito can prove that it is highly profitable to pose as a neutral and at the same time be a shoulder-to-shoulder ally of the Russians. Fifteen years' experience at that game has made him a qualified and recognized expert.

Will the Tito visit to Cuba and Mexico create a situation in which it would be embarrassing for the United States not to invite him to make a stopover in Washington? In this age of confusion it is not at all difficult to engineer situations which on the surface can be built up as embarrassing. Not so long ago astute political leaders called this the art of fait accompli.

How many other republics in this hemisphere have heard the Tito knock on their doors and what will be their response if the United States in any way becomes a party to this Moscow scheme?

These questions deserve honest answers. Time will provide the answers and they will be unpleasant ones if Tito and his friends are given a clear field of operations. Answers should be forthcoming now from the Department of State whose duty it is to be on top of these insidious developments. If the answers are not now known in the Department of State, a search for them would serve to raise the alert signals throughout the hemisphere.

Only yesterday the delegates of the Communist Party in Yugoslavia adopted a new constitution. It is as unique a fraud as Tito. That constitution, prepared by the Communist Party, does not reflect the will of the people in the Yugoslav empire. It certainly does not reflect the feelings of the people in the Croatian nation, the Slovenian nation, or the Serbian nation, which are held by force within that empire. It does, however, reflect the wishes of the Communist Party and the big bosses in Moscow.

The most significant revelation about the new Yugoslav Communist constitution is a change in name for the state apparatus. The new name is "Socialist Federal Republic of Yugoslavia." It will be recalled that the former name was "Federal Peoples Republic of Yugoslavia." This change brings the regime in Yugoslavia into closer alignment with the Moscow pattern. All the captive non-Russian nations in the Soviet Union are known as "Socialist Republics." That name was pinned on such formerly independent nations as Ukraine, Byelorussia, Georgia, Armenia, and Azerbaijan, before they were forcibly incorporated into the Soviet Union. The change in name from "Peoples" to "Socialist" Republic just paves the way for the incorporation of Yugoslavia into the Soviet Union. This very likely will be accomplished by Russian legal methods—the same ones they used to bring about the illegal annexations of Estonia, Latvia, and Lithuania in 1939 or 1940.

It should be noted that only Czechoslovakia among the nations occupied by imperial Russia following World War II has changed from a "Peoples" to a "Socialist" Republic. As is known, that forced federation of once-independent nations is for all practical purposes a Soviet Republic. The Czechoslovak Communists have been rigidly loyal to mother Russia, supplying arms to Communist guerrillas in the free world, always voting the Russian line in the United Nations and more lately acting for the Communist regime in Cuba in dealings with the United States. The only difference between the Czechoslovak Communists and the Tito Communists is that the Czechoslovaks operate openly for mother Russia and the Titoites operate covertly for mother Russia.

Tito is now 71 years of age. His time in the service of Moscow is obviously limited by the norms of life expectancy. Some informed observers hold that the new Communist constitution just adopted is insurance against a change of Communist control after Tito goes the way of all mortal men. He is made President of Yugoslavia for life under the new constitution, but the way is now cleared to incorporate Yugoslavia into the Soviet Union when Tito passes out of Russian service, should any serious problems arise in transferring Russian control to Tito's successor from among the Communist elite.

In any case, if there has been any doubt in official circles about where Tito stands on the East-West conflict, that doubt should be removed by the adoption of a Moscow-dictated constitution by the delegates of the Communist movement in Yugoslavia. It is time the old Trojan horse of Moscow was unmasked. Otherwise Tito will carry on the propaganda work of Moscow in the Western Hemisphere which was exposed last fall.

THE LIVESTOCK INDUSTRY'S STAKE IN THE WHEAT REFERENDUM

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Texas [Mr. DOWDY] is recognized for 10 minutes.

Mr. DOWDY. Mr. Speaker, on May 21, the wheat farmers of America will be called upon to vote on the proposition of whether to accept the programs for wheat, as recommended by the Secretary of Agriculture predicated upon a bill passed by the 87th Congress, or to reject it.

This referendum will provide no choice as between one program and others—no choice as to the degree of benefits—no choice as to the lesser of two or more evils—just a simple yes or no. A "yes" vote by the wheat farmers will say we accept the program—its mixed-up price system and marketing controls, its lack of minimum acreage, its complete authority in the hands of the Secretary, the strictest control and regimentation of private enterprise ever seriously proposed in the United States, which would virtually convert farms into State enterprises. A "no" vote will say—we think the Congress will do better—that we still value our freedom, that we believe in the system that made us the greatest country in the world, the free market system.

But that is not all there is to this coming referendum. Wheat farmers are not the only producers involved; but their vote on this proposal of the Secretary will affect the livestock producers of the Nation; the dairymen, poultry and egg producers, and the entire farming industry. In the first place, it should be recalled that most of the commodities produced by our farmers and ranchers, both numerically and dollarwise, are not under any Government program, and, generally speaking, they are not in serious trouble. True, the markets of these commodities have fluctuated. They will continue to do so if they remain free—but the farmer is a businessman—he watches the markets and adjusts accordingly.

On the other hand, there are those who feel that since a few commodities are under Government programs, they should all be there. Apparently, they would even go further than that. They would go to any length to bring all commodities under the control of a central government. Having failed several times to bring various producers to "heel"—to have enacted programs to "help" these commodities—they would now adopt the indirect approach. They mean to win, one way or another.

So let us look at some of the questions posed above.

What is all the fuss about? Simply stated, this wheat referendum involves the most severe controls ever proposed for any segment of American agriculture. It is an authoritarian approach to a perplexing problem. Farmers are bewildered by the attitude of the Secretary—Why should he take a personal interest in promoting any program? Traditionally, this office has played referee, umpire, and arbiter. Today, it is the leading participant. Historically, the Department has dispensed fair, dependable, and reliable information. Today the facts and figures are tinged with slants and slopes toward the Secretary's program. So farmers are confused, befuddled, and bewildered—and so are a lot of other folks.

Is this all there is to the coming referendum? Well, hardly. This may be the first step but surely not the last. If this program is approved, the discretion will be in the hands of the Secretary—so some of the ideas of controls and controllers will be accomplished fact. The rest will be easy.

Are wheat farmers the only producers involved in this referendum? Again, hardly. The feed values of wheat are directly related to the feed value of corn and other grains—and these feed values are all directly related to livestock and livestock products. So all farmers are involved—but especially those who feed the dairy cows, the range and feeder cattle, the pigs, the chickens, the turkeys, and those who produce and nurture those products to fill the markets and the tables of the public. So even the consumer is concerned.

It is a melancholy fact that the nations of the world whose people are nearest to starvation and most unable to feed themselves, are the ones whose agriculture is run by a central government—an agricultural commissioner—or a dictator.

Finally, what is the stake of the livestock producers in the wheat vote? At least twofold. For many years, producers of livestock have resisted the various efforts of well-meaning people to help the livestock industry. The resistance has stood them in good stead. They have done well. It is true that prices move up and down—but overall the industry is healthy. The turkey producers recently voted down a similar program, but it was not so severe as this. Attempts have been made to control hogs, cattle, and so forth.

But failing the direct approach, the Secretary, seemingly, has chosen the indirect route—control the wheat, the feed grains, the market. Break the livestock prices, bring the producers to their knees, and they too will become easy prey for any program, for complete control in return for a handout from Uncle Sam.

The livestock people have a very real stake in this referendum. They need to help, even though they cannot vote, to defeat this vicious octopus—this insatiable desire for power, this sharp-fanged wolf in sheep's clothing before they get taken in.

Consumers also need to have a second look—before this referendum leaves them and their food supply in the hands of a patronizing government—before it follows the pattern of many other nations and leaves their stomachs empty and their children crying for milk and succor.

No nation is today better fed—at less cost, than we.

Why trade off a system which has been and is working, the system of free competitive enterprise, for one which has failed in every attempt, the system of centralized control of the right to produce, of supply management?

If you think about it a moment, you would not trade. So this referendum should be soundly defeated.

STATUS OF THE APPROPRIATION BILLS IN RELATION TO THE BUDGET RECOMMENDATIONS

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Missouri [Mr. CANNON] is recognized for 1 hour.

Mr. CANNON. Mr. Speaker, I ask unanimous consent to include in the body of the RECORD a summary of the appropriation bills of the 88th Congress up to this time and data updating the President's January budget recommendations as to new authority to obligate the Government.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CANNON. Mr. Speaker, for the information of Members and others who may be interested, I include a summary of the action in the appropriation bills down to date in the current session and an approximation of the portions of the President's obligation authority budget yet to come before the House for consideration in future bills:

Summary of the appropriation bills, 88th Cong., 1st sess., as of Apr. 11, 1963

(NOTE.—Does not include any "back-door" appropriation bills)

Fiscal year and bill	Budget requests	House action: Reported by committee	House action: Passed	Senate passed	Enacted	Bill at latest stage compared to budget requests
Fiscal 1963:						
Supplemental, Agriculture (shifted from original budget request for 1964)	[1] $508,172,000	$508,172,000	$508,172,000	$508,172,000	$508,172,000	
Supplemental, 1963	1,641,507,106	988,756,506	1,438,691,506			−$202,815,600
Public works acceleration	(500,000,000)	( )	(450,000,000)			(−50,000,000)
All other	(1,141,507,106)	(988,756,506)	(988,691.506)			(−152,815,600)
Total, 1963	[2] 2,149,679,106	1,496,928,506	1,946,863,506	508.172,000	508,172,000	−202,815,600
Fiscal 1964:						
Interior and related:						
Appropriations	998,009,000	929,690,200	922,625,200			−75,383,800
Borrowing authority	13,000,000	6,000,000	6,000,000			−7,000,000
Contract authority	17,500,000					−17.500,000
Total	1,028,509,000	935,690,200	928,625,200			−99,883,800
Treasury-Post Office and related	6,146,842,000	5,997,026,000	5,997,026,000			−149,816,000
Total, 1964 to date	7,175,351,000	6,932,716,200	6,925,651,200			−249,699,800
Grand total reductions to date on the portions of the budget processed through the regular appropriation bills (based on latest action on each bill)	9,325,030,106					−452,515,400

[1] Shifted from the 1964 budget request (which was reduced accordingly).

[2] This accounts for virtually all of the supplementals for fiscal 1963 specifically projected for 1963 in the January budget except for the $2,000,000,000 additional for the Export-Import Bank now pending as a "back-door" appropriation proposition.

Mr. Speaker, we will report another bill in the week following the Easter recess. The hearings on several other major bills are either completed or well advanced. But some major bills will again be delayed pending consideration of the related annual authorization bills which under the rules must precede the appropriation bills.

No further supplemental bills from the Committee on Appropriations for fiscal 1963 are now foreseen. There is pending in the House, however, a $2,000,000,000 "back-door" appropriation in the bill from the Banking and Currency Committee for the Export-Import Bank. As may be noted from the table I have included, the House has considered $7,175,351,000 of the new appropriation budget requests for fiscal 1964 in the two regular bills.

AMOUNTS YET TO BE CONSIDERED

The President's January budget proposed $107,927,000,000 in new obligational authority for fiscal 1964, of which $11,781,000,000 is for permanent appropriations recurring under prior law, principally interest on the debt, thus leaving, in round figures, $96,146,000,000 proposed for consideration in the present session applicable to fiscal 1964. The President has subsequently submitted several revisions to the January budget for fiscal 1964 totaling approximately $1,070,000,000 in reductions, principally the $508,172,000 switched over to fiscal 1963 and the $419,700,000 downward revision in foreign aid; there are approximately $142,700,000 in other downward adjustments. Thus the current total new obligational authority proposed for 1964 for action in the current session is, again approximately, $95,076,000,000. And the January budget identifies about $2,727,000,000 of that with propositions of legislation for new programs initially for consideration in legislative rather than appropriation bills; therefore it remains uncertain how much of that will eventuate in formal budget requests for actual appropriation. And some portion of the remaining $92,349,000,000 will probably also be affected as the Congress processes the annual legislative authorization bills for such major programs as space, military construction, and foreign aid; any changes will presumably also affect the budget request for actual appropriation.

So, Mr. Speaker, while we cannot at this point give the precise budget amounts yet to come before the House in the appropriation bills, on the basis of what is now pending before the committee the magnitude and character is approximately this:

Labor-HEW bill, $5,759,000,000;

Agriculture bill—and $855,000,000 loan authorization—$6,375,000,000;

Defense bill, $49,014,000,000;

State - Justice - Commerce-Judiciary bill, $2,158,000,000;

Independent offices bill, $14,513,000,000;

Public works bill, $4,558,000,000;

Military construction, $1,978,000,000;

Foreign aid bill, $4,840,000,000;

Legislative branch bill, $166,000,000;

District of Columbia bill, $34,000,000;

And, as usual, a closing supplemental bill, amounts now unknown.

Mr. Speaker, a necessary precautionary word for anyone who may take the time to balance out all these figures with the budget totals. The budget concept of "new obligational authority" is slightly different from the traditional "appropriation" concept—for instance, an appropriation to "liquidate prior contract authority" is counted as an "appropriation" but it is not "new obligational authority." And whereas in the foregoing tabulation the Post Office appropriations are counted, as heretofore, on a gross basis, in the budget only the estimated postal deficit, chargeable to the general Treasury, and being the excess of the appropriations over the estimated postal revenues, is reflected as "new obligational authority."

REVISED SUMMARY OF NEW OBLIGATIONAL AUTHORITY REQUESTED BY THE PRESIDENT, 1963 AND 1964

For the fiscal year 1963 ending this coming June 30, the President's January budget estimated total new obligational authority, including supplementals to be submitted to the present session, aggregated $103,192,000,000. Subsequent revisions from the President thus far increase that figure by the net amount of approximately $272,000,000—to a new total of $103,464,000,000; there have been formal downward revisions of $236,500,000, more than offset by the $508,100,000 switch from the 1964 budget for the Commodity Credit Corporation. A few small increases submitted by the President and not specifically identified in the January budget for fiscal 1963 are chargeable to the contingency allowance within the overall total.

For the fiscal year 1964, the revised total new obligational authority request, after adjustments as noted, is approximately $106,857,000,000.

Comparatively, then, the President's adjusted recommendations for new authority to obligate the Government for fiscal 1964 are as follows:

The 1964 total budget request exceeds the currently adjusted 1963 total by about $3,393,000,000.

The 1964 revised request exceeds fiscal 1961 by about $20,182,000,000.

The 1964 revised request exceeds fiscal 1954 by about $44,092,000,000.

And as previously documented, using official budget and Treasury figures, approximately 53 percent of the recommended increase, 1964 over 1963, is for "Other than national defense"; approximately 49 percent of the recommended increase, 1964 over 1961, is for "Other than national defense"; and approximately 60 percent of the recommended increase, 1964 over 1954, is for "Other than national defense."

NEW OBLIGATIONAL AUTHORITY VERSUS BUDGET EXPENDITURES

Mr. Speaker, a source of much confusion is the matter of just what set of figures correctly measures the size of the budget on which the Congress acts. Contrary to widespread impression, the House does not act directly on the more generally familiar $98,802,000,000 spending budget for fiscal 1964. The House acts on the new obligational authority budget of $107,927,000,000 for 1964—that is the 1964 total of the propositions submitted, and now revised to about $106,857,000,000. The grant of authority to obligate is the significant point of decision in the appropriation process. The actual expenditure in payment of the obligations necessarily follows in due course of time. If you do not appropriate, no obligation can be created. If no obligation is created, then no expenditure—disbursement—is made. The $98.8 billion spending budget is the checking account budget—it represents the checks drawn to pay the bills. The new obligational authority budget represents the authority to create the obligation. That is the key figure to keep in mind. An increasingly higher obligational authority budget and appropriation signifies, inevitably as night follows day, a higher disbursements or expenditure budget.

Members of the House, the press, and others from time to time during the year, and especially in the closing weeks and days of the session, inquire as to what Congress has done to the spending budget. Unfortunately, we cannot tell them because the figures are not available. And they cannot be precisely and authoritatively compiled here. The House will have opportunity to vote on approximately $44,668,000,000 only of the $98,802,000,000 spending budget figure for fiscal 1964—principally for two reasons. And even this diminished total will be fragmented among some 14 or 15 appropriation bills and numerous legislative bills, handled on a piecemeal basis throughout the session. About $42,353,000,000 of the spending in 1964 will be from obligational authority already voted in past years by previous Congresses. Then, roughly $11,781,000,000, will ensue from permanent appropriations recurring automatically under prior law and therefore not required to be voted on in the current session. These total $54,134,000,000, or over 54 percent of the 1964 spending budget of $98.8 billion not directly before the House for action this session.

As to the remainder, a portion is related to propositions of new legislation first for consideration in sundry bills in the legislative committees, or, on the other hand, if such be the decision, to be cut from the budget by failure to report or enact the new proposals. The separately identifiable January budget total for these new propositions of legislation, within the $107.9 billion total new obligational authority request, is $2,727,000,000 of new obligational authority for fiscal 1964, of which, according to the budget, $1,202,000,000 would be expended in 1964 and therefore included in the $98.8 billion spending figure for 1964.

SAVINGS IN APPROPRIATIONS THUS FAR IN FISCAL 1963 RELATED TO FAILURE OF THE CLOSING SUPPLEMENTAL BILL IN THE LAST SESSION OF CONGRESS

Mr. CANNON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CANNON. Mr. Speaker, on yesterday while the House was voting to expend vast sums we do not have, money which must be borrowed; while we were plunging the national debt toward the highest point in history, much was said here on the floor about savings that had been made. But no mention was made of the very substantial savings made in the last hours of the last session of the Congress when by failing to pass the last supplemental appropriation bill, we saved more than a quarter of a billion dollars in appropriations without any accompanying loss to the Government.

I want to say a few words about that.

At a time when we have accumulated the highest national debt since 1789.

At a time when we are called upon to act on the largest spending budget in our history.

At a time when we are confronted with the second highest budget deficit in time of peace and the possibility of setting a new record in that respect.

At a time when the cost-of-living index is at an all-time high.

At a time when our gold supply keeps draining away overseas.

At a time when appropriations of approximately $107,000,000,000 are proposed for the coming fiscal year of 1964.

At a time when we are spending more and more every year, and beyond our record national revenues—and more and more for nondefense items.

At a time when we are considering lightening the tax burden on American families—and, incidentally, increasing the debt burden on future generations.

At this especially critical time, Mr. Speaker, certainly every Member on both sides of the aisle can agree that we ought to take advantage of every opportunity to hold appropriations to the lowest possible minimum consistent with good government and to do so by every feasible means available to us. Certainly, that is the minimum the American people have a right to expect.

Now, when you want to reduce spending, all you have to do is to cut appropriations—a very simple matter.

When you do not want to start a new program or you do not want to accelerate an old program because you do not think we can afford to do so—and that is the situation at this time—all that is necessary is to deny the appropriations. Of course, sometimes it is painful. Often it involves desirable but not essential things; but it is nonetheless direct.

Often it is unpopular. You do not win popularity contests when you deny appropriations.

When you want to stop waste and extravagance, nothing in the long run is so effective as tightening the belt on the appropriation bills. We have the machinery—you have the machinery—all you need is the will to act.

Lest there be some mistaken impressions, may I say that the long record of the appropriation bills, going back over many years, will show that the bills as reported from the Committee on Appropriations to the House are the low-dollar point in the legislative process. Not that the committee bills were perfect. Seldom if ever do we report a bill satisfactory to everyone. Not that they have not—and not infrequently—been above the minimum necessary. Not that they have, on the other hand, always been too big, but that at times they have not been drafted to meet the situation. Nonetheless, of all the stages of the legislative process, they have represented the minimum.

But to return to the original question, I want to record a $251,601,000 appropriation saving in the current fiscal 1963 budget. I will include a tabulated statement, unmistakably convincing, of a quarter of a billion dollars not appropriated, not spent, not loaded on the Treasury, and not added to the record-breaking public debt by reason of not passing that closing supplemental bill in the last session.

You will recall that in the closing hours of the last session objection was made to sending to conference for last-minute adjustment the final supplemental appropriation bill. In consequence, you adjourned and went home leaving it to die with the 87th Congress. Why did you let it die? Why did you adjourn without submitting it to conference, adjusting the differences, and sending it down to the President for approval so the departments could begin to use over a quarter of a billion dollars now demonstrated as appropriation savings in fiscal 1963? The question answers itself—the appropriations were excessive, or unnecessary, and certainly of no urgency, just as was said here on the floor when the objection was made. The chairman who reported the bill at that time said that there was nothing in it of immediate urgency; that it would in no way discommode the Government if you failed to pass it; that such items as might in the future require consideration could very well be put over to the current session.

It was especially objected to because it was loaded with many propositions to initiate entirely new projects and programs, some of which had just been rejected in the regular bills. A catchall supplemental in the closing days and hours of a long, weary session is no place to be initiating new programs—least of all when the Treasury is empty—as it was then and as it remains today. They ought to receive whatever consideration they merit in the regular order, in the regular bills, along with the other expenditures of the particular departments.

But, Mr. Speaker, we were widely and severely excoriated for killing the bill carrying the excessive and unnecessary appropriations. So I am happy to report, after item-by-item comparison of the amounts and purposes considered in connection with the bill that failed and the amounts resubmitted for substantially the same purposes to the present session as supplementals and deficiencies for fiscal 1963, that thus far there is a savings in appropriations of $251,601,000. That is a substantial amount, even in the context of present-day multibillion-dollar budgets.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Speaker, I want to commend the gentleman for the valiant part he played last year in the dying days of the last session in blocking the passage of the last supplemental appropriation bill, thereby saving the taxpayers of this country a quarter of a billion dollars in appropriations.

I also want to commend the gentleman for the speech he made on the closing day of the last session. I shall never forget that speech. It was a memorable event in my life, and I commend the gentleman for the contribution he made at that time.

Mr. CANNON. May I say we are gratified to be able to cooperate with the distinguished gentleman from Iowa.

Mr. BEERMANN. Mr. Speaker, will the gentleman yield?

Mr. CANNON. I yield to the gentleman from Nebraska.

Mr. BEERMANN. Mr. Speaker, I, too, want to compliment the gentleman and associate myself with the remarks of the gentleman from Iowa [Mr. GROSS] and the gentleman from Missouri [Mr. CANNON], which made many friends in the First District of Nebraska. They informed me of the remarks made by the gentleman from Missouri on the closing day of the last Congress. I was here and heard it. I hope the gentleman continues here for many long years of service, and I wish him happiness for the coming Easter holidays and the years to follow.

Mr. CANNON. We are glad to cooperate with the gentleman.

Mr. Speaker, I include as documented evidence a self-explanatory table.

The table referred to follows:

Summary of savings in appropriations thus far to the Treasury in fiscal 1963 related to the closing supplemental bill in the 2d session of the 87th Congress, H.R. 13290, which failed of final passage

[NOTE.—Total Presidential requests for appropriations considered in connection with the defunct bill were $631,785,376. In addition, pertinent unbudgeted amounts totaling $49,684,000 were pending in the bill, for a grand total of $681,469,376, of which $251,601,000, as shown below, has been saved thus far based on resubmissions for fiscal 1963 in H. Docs. 61 and 90]

1. Budget requests considered in connection with the defunct bill for which there are no current resubmissions in H. Doc. 61 or 90 for fiscal year 1963		$56,591,000
2. Unbudgeted amounts inserted in defunct bill by House or Senate for which there are no current submissions in H. Doc. 61 for fiscal 1963 ($55,769,000, less $845,000 for 3 research construction projects included in 1963 Agriculture bill; less $1,265,000 for 7 corps projects included in 1963 public works bill; less $35,000,000 for defense education which was contingent on passage of enabling legislation which, however, did not pass, and less $45,000 for gratuities)		18,614,000
3. Unbudgeted amounts inserted in defunct bill by House or Senate for which there are now current budget requests submitted for fiscal 1963 in H. Doc. 61 ($31,025,000 in bill as passed Senate, less $30,625,000 now requested for the same purposes)		400,000
4. Budget requests for items of appropriation now submitted in H. Docs. 61 and 90 for 1963 supplementals and deficiencies and the corresponding budget requests for the same items considered in connection with the defunct bill:		
(a) Total budget requests involved in this category of items in connection with the defunct bill	$679,494,000	
Deduct amounts deferred in the 1963 annual bills, and therefore shown as reductions in reports thereon, and reconsidered in connection with defunct bill	−104,300,000	
Net budget requests, this category, defunct bill	575,194,000	
(b) Budget requests now resubmitted as fiscal 1963 supplementals and deficiencies in H. Docs. 61 and 90 for the same items of appropriations for substantially the same purposes as were embraced in the corresponding budget requests under (a) above. (Total now resubmitted for fiscal 1963 under these titles is $513,313,000, but $120,515,000 of this is for purposes different, principally general civilian pay raises, than those embraced in the defunct budget requests)	−392,798,000	
Deduct also the budget requests now resubmitted for fiscal 1963 in H. Doc. 61 for "restoration" of a portion of the $104,300,000 deferred in the annual bills and listed above	−6,400,000	
Savings in fiscal 1963 under this category of items based on resubmissions in H. Doc. 61 and 90		175,996,000
Total savings in appropriations thus far, fiscal 1963, as result of failure of the supplemental bill		251,601,000

MEMBERS OF THE WYOMING STATE SENATE AND HOUSE OF REPRESENTATIVES

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent that the gentleman from Wyoming [Mr. HARRISON] may extend his remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mr. HARRISON. Mr. Speaker, on Wednesday, April 10, an article appeared in a Washington morning newspaper, written by a well-known and very respected columnist. I regret very much that this columnist has seen fit in his article to impugn the integrity and the motives of the leaders and members of the Wyoming State Senate and House of Representatives as well as that of the people of Wyoming generally. It is quite apparent that he has made no real effort to check his statements because if he had done so, he would have found that the charges he makes are completely untrue. I have known the leaders of our State legislature for many years, as well as most of the members. They are honest men and women who are not controlled in any way by anyone except their own conscience. We in Wyoming are very proud of the fact that our political campaigns are clean. There is no mudslinging and no personal attacks. When this columnist makes the charges that our State legislature was more or less openly controlled by a so-called rightwing organization, he is making charges which are completely unfounded and completely untrue and, in my opinion, are nothing short of libelous. When he criticizes the actions of our legislature in adopting resolutions and requests for constitutional amendments, then he is attacking the sovereignty of the State of Wyoming. Certainly he has no right to sit in judgment over the actions of our legislature nor to criticize such actions because they do not coincide with his own thinking. The article is all the more unfortunate because it appears that its purpose is purely political and partisan. If this columnist is as fair as I think he is, I am sure that he will make an honest attempt to check the charges he has made and will apologize to the State of Wyoming and its citizens for the attack he has made on their honesty and integrity.

EAST EUROPEAN ANTI-RED EXILES SUPPORT POLICY BEING REVERSED

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. YOUNGER] may extend his remarks at this point in the RECORD and include an article.

The **SPEAKER** pro tempore. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mr. YOUNGER. Mr. Speaker, few articles that I have had the privilege of reading have so aroused my curiosity and resentment as the one by columnists Robert S. Allen and Paul Scott, published in the Northern Virginia Sun, yesterday, April 10.

I have directed a letter to the Secretary of State requesting a copy of the undisclosed paper which is quoted by Mr. Allen and Mr. Scott in the following article:

EAST EUROPEAN ANTI-RED EXILES SUPPORT POLICY BEING REVERSED

(By Robert S. Allen and Paul Scott)

President Kennedy's harsh crackdown on Cuban exile groups is being broadened to include the activities of the anti-Communist Eastern European refugee groups in the United States.

Behind the scenes, and without taking the American people into his confidence, the President is drastically reversing U.S. policies which have importantly aided these exiles since the late 1940's.

This undercover policy shift calls for hamstringing the efforts of the European refugees by sharply curtailing the cover funds supplied them by Government agencies, among them, the Central Intelligence Agency.

Although these financial curbs will not be fully effective until around July 1, the secret crackdown already is compelling Baltic and Russian exile groups to restrict their anti-Communist activities.

These groups are closing down anti-Russian and clandestine publications, broadcasts, and the doors of their assembly hall in New York, the so-called Baltic House.

In recent years, the Baltic House has served as a major exiles headquarters for exposing Soviet tyranny, helping defectors escape from the Iron Curtain, and rallying support in the United Nations to block Russian efforts to legalize their World War II territory grabs.

Leading architects of this new policy are McGeorge Bundy, ambitious foreign policy assistant to the President, and Dr. Walt Rostow, head of the State Department Policy Planning Council.

These two key policymakers have convinced the President that if the exile groups are squelched, the chances for working out a deal with Khrushchev on Berlin, Cuba and Central Europe would be greatly improved.

At the instigation of Bundy and Rostow the President has privately offered a quid pro quo to the Soviet for withdrawal of its combat troops from Cuba, in return for which the U.S. would reduce its garrison in West Berlin and withdraw several thousand troops from West Germany.

Even if the Kremlin rejects this accommodation Bundy and Rostow argue, the activities of the exile groups should be brought under tight control because they distract from the President's grand design of building a community of free nations, which will expand by its inner strength and attractive power * * *.

Equally curious is the backstage explanation given exile leaders for the timing of the crackdown. They are being told that their funds are needed for urgent efforts in Latin America. Beyond this bare claim no details are tendered.

The Bundy-Rostow policy also flatly rules out any military aid or intervention should a revolt develop in the Communist-dominated Eastern European nations.

As outlined in their undisclosed position paper, this hands-off policy is as follows:

"If revolt breaks out in East Germany or any other Communist satellite in Eastern Europe, we should bear in mind that our grand design is to build a community of free nations which will expand by its inner strength and attractive power when combined with the assertion of increasingly nationalistic trends within the Communist bloc.

"We do not wish to jeopardize this design by allowing Eastern Europe to become a battlefield between ourselves and the U.S.S.R. unless we are attacked.

"Accordingly, if turbulence erupts in the area, we should maintain this posture, and urge our allies to do the same, meanwhile exerting all the influence we can muster during such crises to yield less repressive and more nationalist regimes as the outcome.

"We should refrain from encouraging or supporting armed uprising, as distinct from peaceful demonstrations, strikes, and similar means of exerting public pressure against Communist regimes.

"Should a national Communist regime be established, we should make a maximum effort short of military action to permit its survival."

In ordering the crackdowns against the exile groups, the President has executed a complete flip-flop from the position he took in the 1960 campaign.

Then, in a speech in Johnstown, Pa., on October 15, he resoundingly declared:

"We must end the harassment which this Government has carried on of liberty-loving anti-Castro forces in Cuba and in other lands. While we cannot violate international law, we must recognize that these exiles and rebels represent the real voice of Cuba, and should not be constantly handicapped by our Immigration and Justice Department authorities."

THE LOSS OF 129 AMERICAN SAILORS ON THE SINKING OF THE ATOMIC SUBMARINE

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent that the gentleman from Illinois [Mr. FINDLEY] may extend his remarks at this point in the RECORD.

The **SPEAKER** pro tempore. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mr. FINDLEY. Mr. Speaker, 129 American sailors today lie in a steel tomb a mile and a half below the ocean's surface. They are dying that others may be free. Supreme sacrifices such as this have been repeated time and again throughout the history of mankind, and these gallant men join a galaxy of authentic heroes.

Are they to be pitied? They are giving their lives for a noble cause, and how many among us will be able to say as much when the time comes to draw the mantle of our couch about us?

Rather, we are the ones to be pitied. Thrust upon us is the awesome responsibility to see to it that these brave men shall not die in vain, that the time their sacrifice buys will be used wisely by those of us in responsibility.

We must raise our eyes from the dust of petty politics to the guiding star of freedom. We must exhibit a bit of the same courage displayed time and again by our men in uniform. We must measure our every deed by this question: Will it save and strengthen for future generations our great heritage of freedom?

This sacrifice has special meaning in Holy Week, and we can take comfort from the promise that all things work together for good. The entombment of Jesus led to great things for the children of God. The entombment of these 129 sailors, in a different but worthy way, may, too, lead to great things for mankind. The responsibility lies squarely in our hands.

It forces us to take a new and sober look upon our conduct both at home and abroad. Are our goals and deeds proper companions for the goals and deeds of the 129 American sailors? Are we doing all we can to weld effectively and permanently the great resources of freedom throughout the world? In candor, we must admit we are not.

As George Washington would suggest, let us raise a standard to which the wise and the honest can repair, and then courageously carry this standard.

With American sailors dying, let us listen to the ship's company as it sings:

Eternal Father, strong to save
Whose arm doth bind the restless wave
Who bid'st the mighty ocean deep
Its own appointed limits keep
O, hear us when we cry to Thee
For those in peril on the sea.

AMENDMENT TO RULES OF THE HOUSE

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. BOB WILSON] may extend his remarks at this point in the RECORD.

The **SPEAKER** pro tempore. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mr. BOB WILSON. Mr. Speaker, I have today introduced a resolution to amend the rules of the House to the extent that each bill placed before the House of Representatives must contain an estimate of Federal funds required to implement it. This regulation would reveal to each of us and to our Nation's citizens the hard, cold facts of the cost of each piece of legislation. Many proposals which may appear attractive on the surface will take on a different hue when "priced out" for all to see.

This is a conservative measure which in itself is a must. My resolution also requires that in instances where no cost will be involved, that a statement be included in the legislation to that effect.

Greater care will be used in introducing further legislative proposals when the requirements of my resolution are put into effect. This proposal to put a price tag on all House bills is clearly in the best interest of protecting our national economic strength. Not only will a higher grade of proposed legislation result, but we will eliminate many monetarily treacherous proposals of which even the study and consideration requires much of our valuable time to process.

I urge my colleagues to give favorable consideration to this proposed resolution, which in content is essentially the same as a resolution introduced by my colleague Louis C. Wyman, of New Hampshire.

DEPARTMENT OF AGRICULTURE

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. Oliver P. Bolton] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mr. OLIVER P. BOLTON. Mr. Speaker, the other day, an irate American brought to my attention a recent release of the Department of Agriculture.

When I read it, I shared his reaction, and have asked for this time to bring the matter to the attention of the House.

In order to save time, I enclose, for the Record, the release of the Department and my letter to the Secretary of Agriculture expressing my reaction to it.

April 11, 1963.

Hon. Orville L. Freeman,
The Secretary of Agriculture,
Washington, D.C.

Dear Mr. Secretary: This is with reference to the press release of the U.S. Department of Agriculture dated April 3, 1963, entitled "Bad Weather in 1962 Cut Agricultural Production in U.S.S.R. and Eastern Europe." Being an official release of your Department, it can be presumed that this was widely distributed not only within the United States but was available to the foreign press, as well as to the controlled press behind the Iron Curtain. It is not inconceivable to me that it was also carried by the USIA abroad as well as by information media throughout the free world.

The lead paragraph of that release read:

"The Soviet Union and her East European satellites, plagued by bad weather, experienced another disappointing agricultural year in 1962, according to a recent report by the U.S. Department of Agriculture."

As I read this release, the entire theme of your Department's position seems to be that the failures of Soviet agriculture were due to bad weather alone. Frankly, I was shocked to see a department of our Government in effect offering substance to the argument which Premier Khrushchev uses to explain away communism's failure in agricultural production.

You must know all too well that despite a land mass 2½ times larger than the United States, despite cropland 40 percent greater than the United States, and despite the allocation of 45 percent of the Soviet labor force to agriculture, the United States exceeds the annual agricultural output of the Soviet Union by over 60 percent.

At a time when the American farmer is being asked to take on quota allocations of feed grains, we should be pointing out that, though the United States and Russia have approximately the same amount of land planted to feed grains, U.S. production of these grains exceeds that of the Soviet Union by over 154 percent.

Obviously, with the whip of the dictator on his back, the Soviet farmer, with his communized agriculture, is simply not in the same league as the 2 million free commercial farmers in the United States.

Communism's failure as a way of life is most apparent in its agricultural collapse. I am in no position to deny that weather conditions undoubtedly did affect production in the Soviet Union this year—but, Mr. Secretary, I am unable to understand how our Government can take an official position which does not recognize the basic reasons for their lack of production—namely, the Communist society itself.

When Khrushchev was here in 1959 and visited some of our farms, he had to admit openly that our farm machinery, management, methods and research far surpassed those in the Soviet. How, then, çan our Government take the position that the food shortage in Communist Europe was caused entirely by poor weather conditions.

I sincerely hope that you will see to it that the members of your Department will understand and appreciate the serious damage done by a release of this nature, which examines only the statistics of one element of a large subject and, therefore, is neither accurate nor helpful to the position of the free world in the cold war.

Ever sincerely,

Oliver P. Bolton.

U.S. Department of Agriculture,
Washington, April 3, 1963.

Bad weather in 1962 cut agricultural production in U.S.S.R. and Eastern Europe:

The Soviet Union and her East European satellites, plagued by bad weather, experienced another disappointing agricultural year in 1962, according to a recent report by the U.S. Department of Agriculture.

Winter crops for 1962 harvest were damaged by drought in the fall of 1961, and spring field work was delayed by cool, wet weather in East Germany, Poland, and the central and northwestern regions of European U.S.S.R. Crops in the Danubian countries, southern regions of European U.S.S.R. and the Soviet Union's new lands, were hit by drought last summer.

The report, by USDA's Economic Research Service, shows the poor agricultural year aggravated food shortages throughout Eastern Europe. Shortages were especially acute in east Germany where meat and milk production were reduced.

According to official Soviet statistics, extremely poor growing conditions caused a 20 percent drop in potato production from 1961. Russia also suffered a drop in cotton production because the second dry winter in a row reduced the supply of irrigation water.

Poland's overall agricultural output was about 5 percent less than in the previous year and fruits, vegetables, butter, milk, and eggs are in shorter supply this year, the report shows.

In Czechoslovakia, the shortage of livestock feed forced farmers to slaughter cattle and other livestock.

The corn crop in Yugoslavia was about 5 percent above 1961 but output of both barley and oats was about the same. Wheat production was about average, 5 percent less than in 1961.

According to the report, total grain production in Hungary fell for the third consecutive year. Cabbage, carrots, and parsley were hit by drought, and production did not meet quotas.

Except in large urban centers, bread rationing is prevalent in most of Rumania because of a disappointing corn yield in 1962, the smallest since 1958.

Bulgaria's important export crops of tomatoes, grapes, and tobacco showed marked increases over the low 1961 levels. Low production forced rationing of onion, rice, beans, and potatoes.

Single copies of the report, "The 1963 Eastern Europe Agricultural Situation, Supplement No. 3 to the 1963 World Agricultural Situation," may be obtained from the Division of Information, Office of Management Services, U.S. Department of Agriculture, Washington, D.C.

AMERICA MUST NEVER FORGET THE NAZI HORRORS

Mrs. ST. GEORGE. Mr. Speaker, I ask unanimous consent that the gentleman from New Hampshire [Mr. Wyman] may extend his remarks at this point in the Record and include an article.

The SPEAKER pro tempore. Is there objection to the request of the gentlewoman from New York?

There was no objection.

Mr. WYMAN. Mr. Speaker, we must never forget the horrors that Fascist nazism perpetrated on a whole race of human beings in the torture and death camps of Adolf Hitler. This awful record of man's inhumanity to man should be writ in marble so we who now live and those younger folk whose world is to come will so order our Government, so conduct our personal affairs, and so fashion our individual and collective political philosophy that such terrible totalitarianism will never rise again.

Time fades memory. Of these horrors we must never forget. The obsession of racial superiority that was Hitler's is a curse and invention of the devil incarnate. This is proved by the documents now being found portraying the absolute hell of gas chambers and crematoriums gassing and burning 8,000 to 12,000 human souls each day.

Today in 1963 the West should note well that the history of communism's blood baths has not yet been fully told. As the Kennedy administration gives us a policy of weakness, of compromise, of appeasement, of coexistence with communism even in this hemisphere—which is every bit as much evil as was nazism under Hitler—let us ponder well the story of Mr. Ascherson of the London Observer as it appears in today's American press:

Finding of Jar at Auschwitz Uncovers an Act of Heroism

(By Neal Ascherson)

London.—The discovery of a small glass jar, buried under a handful of burned bone behind the crematorium sites at Auschwitz concentration camp, has revealed an act of heroism.

The jar—originally 1 of 36—contained day-to-day statistics of the numbers gassed in Auschwitz extermination centers in occupied Poland during October 1944.

The men who took these notes and buried them were one of the "Sonderkommando" teams, themselves Jews, who searched the luggage of each trainload of victims, stripping their bodies of hair and valuables, burning their corpses and burying the ashes.

After 3 months, each "Sondkerkommando" was itself gassed.

In late 1944, however, the inflow of victims became so vast that the Auschwitz commanders allowed one experienced team to survive for many months.

PRECISE STATISTICS

This group buried precise statistics in tins and jars concealed in a site where human ash brought from the crematories was dumped.

Members of this group wrote out a precise plan of where they had buried the statistics.

Later, the whole team rose against the Nazis, but after killing some SS men and blowing up one crematorium, they were overpowered, tortured, and executed.

The only surviving witness to the tins' burial was a Pole named Henryk Porebski, a prisoner employed as an electrician on the crematorium power circuits. But the document describing where the containers had been buried had vanished, and nobody believed his story.

After the war Porebski returned to the camp, where he now works in the Auschwitz museum. He found that the whole area where the tins had been buried had been disturbed by the gruesome "gold rush" that followed the camp's liberation.

People from as far away as Cracow had come to sieve the ash fields and debris for money, jewelry, and gold tooth fillings and it seemed impossible that the tins would still be where they were buried.

Finally, Porebski convinced a woman who had also been a prisoner that he was telling the truth, and she persuaded the authorities to make a search.

Two years ago, a digging team began to trench the site with the methods of scientific archeology, impeded by the countless small possessions of the dead—from spoons to lipsticks—that were imbedded in the earth.

They kept a watch for patches of calcined human bones, which Porebski said had been scattered by the "Sonderkommando" as markers when they buried each tin.

JAR DISCOVERED

Last summer, after periodic lapses in the search, the glass jar was discovered. The contents have only been deciphered, but they give accurate data of the scale of executions when the death installation was working at maximum power.

Nazi records and the crematoria and gas chambers themselves were destroyed by the S.S. before the camp was evacuated.

So far, Polish authorities studying the papers found in the jar have not announced the figures of deaths that they record. They will have to be checked against previous estimates: those based on the number of prison trains arriving in late 1944 calculate that between 8,000 and 10,000 people were being gassed and cremated every 24 hours.

No other containers were found, although the diggers went to search the whole area. But Porebski's story has been justified, and the courage of the Jews of the "Sonderkommando"—whose notes in the jar also described what happened within the gassing block where they worked—can be properly honored.

INCREASE FROM $10,000 TO $25,000 COVERAGE FOR DEPOSITORS BY THE FEDERAL DEPOSIT INSURANCE CORPORATION

The **SPEAKER** pro tempore. Under previous order of the House, the gentleman from New York [Mr. Halpern] is recognized for 10 minutes.

Mr. **HALPERN.** Mr. Speaker, I introduce today for appropriate reference a bill to increase the amount of insurance coverage under the Federal Deposit Insurance Corporation from the present $10,000 to $25,000.

Beginning with the Banking Act of 1933, the Federal Deposit Insurance Corporation insured accounts up to a maximum of $2,500 for each depositor. In July of 1933 this figure was increased to $5,000.

The Banking Act of 1935 provided a permanent plan of insurance, replacing a plan in the Banking Act of 1933 that never came into force. The act of 1935 continued the $5,000 coverage for each depositor, provided for an annual assessment of one-twelfth of 1 percent of deposits, and specified in more detail the supervisory responsibilities of the Corporation. These provisions were unchanged for the next 15 years, a period during which the chief legislative action affecting the Corporation was provision for retirement of the Corporation's original capital that had been provided by the Treasury and the Federal Reserve banks.

The Federal Deposit Insurance Act of 1950 made a number of revisions in deposit insurance: The insurance limit was raised to the present maximum of $10,000 for each depositor, provision was made for an annual assessment credit to insured banks after allowance for Corporation losses and expenses, and additional measures for dealing with failing banks were authorized. A 1960 statute provided new methods for determining assessments, and increased the assessment credit to insured banks from 60 percent—under the 1950 act to 66⅔ percent of the assessment income remaining after deduction of Corporation losses and expenses.

A total of 13,021 banks, or 86 percent of all banks in the United States, became insured when the insurance took effect on January 1, 1934. The proportion of banks participating in Federal deposit insurance has increased each year; the 13,445 so insured on December 31, 1961, comprised 97 percent of the number, and held 98 percent of the deposits of all incorporated banks of deposit.

At the end of 1961 there were 514 banks, of varied types, outside Federal deposit insurance. Of this number, 195 were mutual savings banks, 141 were incorporated commercial banks operating under the general banking codes of various States, 81 were unincorporated banks, 52 were trust companies not regularly engaged in deposit banking, 34 were industrial banks, 13 were banks of deposit operating under various special charters, and 8 were branches of banks chartered in foreign countries which are included in the statistics of banks because they are engaged in deposit banking in the United States. The unincorporated banks, the trust companies not regularly engaged in banking and the branches in the United States of banks chartered in foreign countries are not eligible for Federal deposit insurance.

During the period 1934–61 the FDIC made disbursements to protect depositors in 445 failing banks. These banks had about 1,460,000 depositors and total deposits of $611 million.

Mr. Speaker, I believe that the existing record of the Federal Deposit Insurance Corporation is one of which we can be proud. I believe also that this would be an appropriate time to look into the advisability of increasing the amount of insurance coverage under the FDIC. As we have seen the figure has changed a number of times since the original act of 1933.

In light of modern depositor trends, an increase in the present maximum would be very helpful. The legislation I am introducing would amend the Federal Deposit Insurance Act and title IV of the National Housing Act—relating to the insurance of savings and loan accounts—with respect to the amount of insurance which may be provided increasing from $10,000 to $25,000 the maximum amount of insurance.

HELP!

Mr. **LIBONATI.** Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. Fascell] may extend his remarks at this point in the Record and include extraneous matter.

The **SPEAKER** pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. **FASCELL.** Mr. Speaker, on March 13, 1963, I rose before the House to draw attention to the conditions of substantial and persistent unemployment existing in the district which I represent. My statements were reported on page 4109 of the Congressional Record of that date. I now wish to reiterate that such deplorable conditions exist not only because of the usual reasons for unemployment but are aggravated by the unusual economic distress and unemployment caused by the impact of approximately 150,000 refugees residing in this area who have fled the tyranny and oppression of Castro's Communist Cuba.

Mr. Speaker, I am of the opinion, as I have been since the passage of this act, that the area which I represent should be eligible under the terms, the spirit, and the intent of the Area Redevelopment Act, which was specifically adopted by the Congress to alleviate conditions of substantial and persistent unemployment in certain economically distressed areas.

In an effort to alleviate a situation so corrosive and deleterious to the economic future of Dade County, on March 13, 1963, I introduced H.R. 4848 which goes one step further than the administrative action which I have been calling for, for so long. Congress has heretofore, at my request, recognized the problem of the Cuban refugees as one for national concern. This House, and I am grateful to each one of my colleagues, and this Congress have approved the authorizations and the appropriations for Health, Education, and Welfare and other costs for the care of the Cuban refugees. Without this program, the whole cost would fall on local resources which are already strained to the limit. I am now, today, again calling, urging, and requesting the sympathetic and favorable consideration of my colleagues in this legislative body to continue their recognition of the impact and economic distress caused by the residence of approximately 150,000 refugees in the district which I represent, and the adjoining one, as still of national concern. I call the problem again to the attention of this House because the problem has not yet been completely resolved. Severe unemployment still exists—almost 13 percent. There is considerable economic distress.

Therefore, Mr. Speaker, my bill would provide an additional criteria for eligibility under Public Law 87-27, the Area Redevelopment Act. This additional criteria would provide benefits to those areas wherein 50,000 or more Cuban refugees have resided for 1 of the 2 preceding calendar years. Such a fact would be certified by the Secretary of Health, Education, and Welfare, who administers the Cuban refugee program, to the Secretary of Commerce, who administers the area redevelopment program. Under the bill we would also retain the criteria that the Secretary of Labor must determine and certify to the Secretary of Commerce that a condition of substantial unemployment has existed for the last 9 of the preceding 12 calendar months, which is a requirement now carried in the present public works acceleration law.

The exact language of the bill is as follows:

> A bill to amend section 5 of the Area Redevelopment Act to provide that certain areas within the United States having a large number of Cuban refugees shall be designated as redevelopment areas
>
> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That subsection (a) of section 5 of the Area Redevelopment Act (42 U.S.C. 2504) is amended by adding at the end thereof the following new sentence: "The Secretary shall also designate as 'redevelopment areas' those areas within the United States where the Secretary of Labor determines that a condition of substantial unemployment has existed for at least nine of the preceding twelve calendar months, and the Secretary of Health, Education, and Welfare certifies to the Secretary that the number of Cuban refugees residing in such areas has equaled 50,000 or more for one of the two preceding calendar years."

Florida's distinguished Senators, the Honorable SPESSARD L. HOLLAND and the Honorable GEORGE A. SMATHERS, jointly introduced S. 1257 embodying the same provisions. My respected colleague, the Honorable CLAUDE PEPPER, representing Florida's Third Congressional District, introduced a similar bill, H.R. 5232, providing the same criteria together with needed additional authorization, which I fully support.

Mr. Speaker, since the Castro Communist Government of Cuba has enslaved the people of that unhappy country, it is authoritatively estimated that 200,000 persons have escaped the tyranny and oppression existing there and sought refuge in the United States.

The bulk of these people are in the Miami area. Despite the generous assistance of the Catholic church and others, our local citizens, individually, local governments and many voluntary agencies—it soon became obvious that the needs of these refugees could not be met solely out of local resources, no matter how willing the local citizens nor how desirable such a solution might be. I thereupon immediately urged recognition of the existence of the Cuban refugees and the problems caused thereby as being the primary responsibility of the Federal Government.

Two administrations and the Congress of the United States have generously responded to my requests to assist the people of the district which I represent in dealing with the problems, economic and otherwise, created by the Cuban refugees.

Today I must again ask my colleagues and advise the Nation that the people of Florida's Fourth District are in need of additional assistance as a result of approximately 150,000 Cuban refugees still residing in our midst. This has caused tremendous economic pressure since the refugees, very naturally, have tried to obtain and have been successful in obtaining employment. Much of this employment has been at reduced wages, tending to depress the labor market. Every refugee so employed has displaced an American normally employed so that in addition to many thousands of refugees who are unemployed, there are many thousands of Americans also unemployed.

The U.S. Department of Labor had long ago determined that there were a sufficient number of unemployed American citizens so as to qualify Dade County as a class D labor surplus market area. However, we have not been certified for assistance under Public Law 87-27, the Area Redevelopment Act specifically adopted by this body to alleviate conditions of substantial and persistent unemployment in economically distressed areas.

Mr. Speaker, since the fall of 1962 I have repeatedly requested the Department of Labor to certify that the unemployment condition in the district which I represent is sufficient to qualify the area under the Redevelopment Act. This has not yet been accomplished for a variety of reasons. Whatever the reason, the point is that we have not yet been so certified so as to be eligible for the employment and economic benefits which would be available to us under the Area Redevelopment Act.

The economic situation in Dade County is distressing. Total unemployment, both American and Cuban, is fantastically high. Citizens and refugees are in open competition for a limited number of jobs. Wages have tended to become depressed. Feelings are running high. The laboring classes, and particularly the Negro, have felt the brunt of this distress.

Mr. Speaker, the foreign policy of the United States is one of long standing and great tradition—down through history we are known as a sure haven from persecution and the upholders of individual rights and freedom. But it is this very foreign policy, in action, which has permitted these refugees—mothers, fathers, wives, and children—to escape tyranny, fear, and death and to seek refuge and security in the United States.

I have no quarrel with this policy nor does the overwhelming majority of the people in the district which I represent. But, Mr. Speaker, I submit that the American citizens who are directly affected as a result of this policy, and who are the citizens of the district I represent, are entitled to consideration in obtaining whatever Federal assistance can be made available.

Today's problem, therefore, Mr. Speaker, is to obtain additional unemployment and economic benefits for the American citizens in Florida's Fourth District, which I represent, who are without jobs and who are otherwise economically distressed. My bill, Mr. Speaker, would seek to provide employment opportunities by making the area which I represent eligible for benefits under the Area Redevelopment Act.

Mr. Speaker, I, of course, do not imply that no assistance has been rendered to the citizens of the district which I represent. I strongly supported this administration's program, now known as Public Law 87-658, the Public Works Acceleration Act.

Just yesterday, I arose in support of the amendment which would restore to the supplemental appropriations bill for 1963 the full amount of the budget request to finance additional projects under the provisions of the Public Works Acceleration Act. My remarks on this subject appeared in yesterday's CONGRESSIONAL RECORD.

Because of the unemployment situation, the district which I represent has been certified as eligible to receive assistance under the Public Works Acceleration Act. Under this act we have thus far obtained several million dollars in approved programs. Under this act, which requires local participation, the district which I represent will secure approximately 5,600 additional man-months or 980,700 man-hours of employment. As long as the unemployment and economic distress exist in the district which I represent, we shall continue to request assistance and urge favorable consideration for approved projects under this very worthy program.

However, Mr. Speaker, the economic distress and unemployment in the Miami area arises not only from the usual sources, but also because of the tremendous number of refugees who are residing therein. Whether the refugee is employed or unemployed, his presence contributes directly to the economic distress and high unemployment of American citizens. It is this factor which my bill deals with. It is because of the persistence of these unusual factors that I have sought relief under Public Law 87-27, the Area Redevelopment Act.

I have also long sought relief under this law by administrative determination under existing criteria. Since the middle of last year, I have requested and urged repeatedly that in the criteria determination for Area Redevelopment Act eligibility, all unemployed shall be considered regardless of whether they are Americans or refugees. While the Department has had this matter before it all these many months, it has not yet been resolved.

On March 13, 1963, I directed letters to the Secretaries of Health, Education, and Welfare; Labor, and Commerce urging that immediate action be taken on this problem. I now report to you that I have received the following responses to my letters:

The Secretary of Commerce,
Washington, D.C., March 19, 1963.

Hon. Dante B. Fascell,
House of Representatives,
Washington, D.C.

Dear Mr. Fascell: This will acknowledge your letter of March 13, 1963, regarding the eligibility of Dade County for area redevelopment assistance.

It is my understanding that the Department of Labor is now engaged in making the necessary survey to determine whether unemployment in the area, including the special situation created by the influx of Cuban exiles, qualifies the area for assistance under the standards of the enabling act. Top officials from ARA and the Department of Labor have been meeting in Miami this week with local officials in order to expedite this determination, and we should have the results very soon.

I appreciate your calling this to my attention and understand your interest. You will be promptly advised of any further developments.

With cordial regards, I am,
Sincerely yours,
Luther H. Hodges,
Secretary of Commerce.

The Secretary of Health,
Education, and Welfare,
Washington, March 22, 1963.

Hon. Dante B. Fascell,
House of Representatives,
Washington, D.C.

Dear Mr. Fascell: This is in reply to your request that I "certify" to the Secretary of Labor and the Secretary of Commerce the number of Cuban refugees residing in Dade County.

There are two figures on Cuban refugees about which we can be certain: the number of refugees registered at the Miami Center and the number relocated with our assistance.

On March 8, 1963, these figures were, respectively: 161,151 and 56,452. This leaves 104,699 refugees registered but not resettled through the assistance program.

While we are quite sure that the Department of Labor has these figures since the U.S. Employment Service is associated with us, both in Washington and Miami, in assisting Cuban refugees, we are immediately communicating them to Secretary Wirtz and to Secretary Hodges.

Our information is necessarily limited to figures on refugees who have registered with us and who have been resettled through our program. We, therefore, do not have any figures on the number of Cuban refugees who have resettled from Miami without our assistance or on the number of refugees who may be living in Miami that have not registered with us.

If we can be of further assistance we shall be pleased to do so.

Sincerely,
Anthony J. Celebrezze,
Secretary.

The Secretary of Commerce,
Washington, D.C., April 9, 1969.

Hon. Dante B. Fascell,
House of Representatives,
Washington, D.C.

Dear Congressman Fascell: I have been informed that Area Redevelopment Administrator William L. Batt, Jr., met with you this past week and that you had a full discussion of the situation in Dade County. I am thankful for this exchange and I know that he reiterated my concern for the very difficult situation arising from the presence of the large number of Cuban refugees in the Miami area.

Let me assure you that we will act just as soon as the data to be provided by the Secretary of Labor becomes available. I understand that the promised survey is underway and that we can expect results within weeks. We have the personal assurances of officials of the Department of Labor that they are actively pressing the investigation.

Mr. Batt also informed me of recent special legislation that you have introduced on this matter. I am certain that through our common efforts we can find a reasonable solution to the unusual situation in Miami.

Sincerely yours,
Luther H. Hodges,
Secretary of Commerce.

Mr. Speaker, I am extremely pleased to report today that hearings were conducted before the Banking and Currency Committee on April 9 in support of the proposed legislation to amend the Area Redevelopment Act.

At that time corroborating testimony to existent conditions in Dade County was given by the Honorable Robert King High, mayor of the city of Miami, Fla.; the Honorable Joseph A. Boyd, Jr., chairman of the Board of County Commissioners of Dade County, Fla.; Mr. W. J. Owens, president of the Dade County Federation of Labor; the Honorable Arthur Patten, Jr., county commissioner of Dade County; and the following Representatives to the Florida State Legislature from Dade County: the Honorable Leo Furlong, the Honorable Richard Pettigrew, the Honorable Maxine Baker, the Honorable Lee Weissenborn, and Mr. John Frederick Thomas, director of the Cuban refugee program welfare, Department of Health, Education, and Welfare.

Also in attendance to lend his support was the Honorable Irving G. McNayr, county manager of Metropolitan Dade County.

Testifying in absentia by the submission of statements were the Honorable Charles R. Hadley, chairman of the Citizens Committee of Dade County, and Mr. John B. Turner, president of the Miami-Dade County Chamber of Commerce.

Unable to be present but represented by a telegram of support was Florida's State representative, the Honorable Mary Ann MacKenzie, from Dade County.

Showing the unanimity of support for immediate legislative action, House Memorial 229 was received from the Florida State Legislature, to wit:

House Memorial 229

Memorial to the Congress of the United States to more fully recognize that the impact of approximately 150,000 Cuban refugees has created a substantial and persistent unemployment and social problem, which has and does exist in the heavily populated Dade County area and that further and immediate action must be taken and prompt remedies be found to alleviate the harmful conditions that do now exist and will continue to exist and become acute with the continuous heavy influx of these refugees among the residents of this State

Whereas the Congress of the United States has heretofore given recognition to the existence of the large numbers of Cuban refugees in this State and to the problems caused thereby; and

Whereas this large number of refugees who continue to flee from the tyrannical and oppressive conditions of the communistic government of Cuba to seek a haven in a democratic country where human rights and dignity are recognized supreme; and

Whereas it has become obvious that the needs of these refugees who, through no fault of their own, have become a burden on certain local areas of this State and that the local resources and facilities of these areas have been taxed beyond their capacities; and

Whereas the education of Cuban refugee children is now pressing hard on the educational funds and facilities provided by the State of Florida, and

Whereas the present existence of this large number of Cuban refugees has already placed tremendous and herculean economic burdens upon the local residents and the local governments of these areas in that the local labor market has been drastically affected to the detriment of the permanent working population; and

Whereas many of these local residents are being displaced from their regular employment and thus becoming an additional economic burden to the local welfare bureau and in many instances causing the permanent residents in these areas to become a burden on their friends and relatives; and

Whereas the charitable organizations in these areas have also had placed on them an unduly heavy economic burden arising as a result of the tremendous influx of Cuban refugees which has strained their resources to the breaking point; and

Whereas it has become obvious that the needs of these refugees cannot be met from local resources and facilities which have been substantially depleted; and

Whereas regardless of previous measures to alleviate this burdensome problem, the continued increase in the numbers of refugees to be found in the Dade County area, which is the major port of entry for these helpless and unfortunate refugees, due to the existing policy of the U.S. Government, and

Whereas there is the ever-present danger that the problems created by this tremendous influx of Cuban refugees may spread to other areas of Florida and aggravate their problems; and

Whereas this tremendous problem must be immediately alleviated in order to prevent irreparable harm, both to the economic and social well-being of the citizens of this State; and

Whereas these helpless and unfortunate Cuban refugees and local residents who have been displaced from their places of employment because of these problems in these local areas, now have more than doubled in number the unemployment in these local areas and have brought the unemployment situation in these areas to a critical stage; and

Whereas there is pending legislation in the Congress of the United States with a definite purpose to alleviate the acute economic and social problems caused in these local areas by Cuban refugees fleeing the tyrannical and oppressive pressure of the communistic government of Cuba: Now, therefore, be it

Resolved by the Legislature of the State of Florida, That the Congress of the United States be and it is hereby respectfully urged and requested to give full recognition to the fact that the Cuban refugee problem in this State is primarily the responsibility of the Federal Government and of national concern and ask that additional assistance and relief be provided to Dade County and any other counties similarly affected and that other Cuban refugee centers be established in the United States and other ports of entry be established for the entrance of these unfortunate and helpless refugees from Communist tyranny; be it further

Resolved, That copies of this memorial be dispatched to the President of the United States; to the President of the U.S. Senate; to the Speaker of the House of Representatives of the United States; to the Secretary of Commerce of the United States; to the Secretary of Labor of the United States; to the Secretary of Health, Education, and Welfare of the United States; and to each member of the Florida congressional delegation.

Supporting statements and/or formal resolutions supporting the request for the extension of ARA assistance to Dade County were submitted by the Honorable Farris Bryant, Governor of the State of Florida; City Council of Miami Beach; South Dade Council of Miami-Dade Chamber of Commerce; the county commissioners of Dade County, Fla.; City Council of City of North Miami Beach; Dade County League of Municipalities; North Miami Beach Chamber of Commerce; and the City Council of Miami Springs.

In conclusion, Mr. Speaker, I wish to reiterate my previous remarks that for many years now the people of the district which I represent have willingly, courageously, and generously borne the brunt of the problems brought about by the approximately 150,000 non-American refugees living and working with us. We have been and are proud of the part which we have been called upon to play in the longstanding humane concepts of a free society, indicating to the refugees and to the world, proof of its concern for the dignity and the worth of an individual. This principle, among others, separates us clearly from the Communists or any other system which seeks to enslave mankind, and holds individual worth and dignity as secondary or even unnecessary. But, Mr. Speaker, in doing all this, we must also take every step to see to it that our own citizens receive assistance from our Government, particularly and especially when such assistance is within the spirit and intent of laws already enacted by this body.

I wish to remind my colleagues that the situation now existing in Dade County is not the result of the actions or foreign policy of the Floridians, but rather a direct result of American tradition and policy, many times reaffirmed by every administration of the U.S. Government. The burden of responsibility and solution must not remain with the citizens of Dade County, Fla. It must be shared by all.

HOSPITAL INSURANCE ACT OF 1963

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that the gentleman from Rhode Island [Mr. St Germain] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. ST GERMAIN. Mr. Speaker, it is my privilege today to present this companion measure to the Hospital Insurance Act of 1963 which is designed to provide effective medical care for our senior citizens.

The provisions of this bill are too well known to necessitate a further explanation at this time. However, it is impossible to overstress the great need which exists for the prompt enactment of this legislation.

There are now approximately 17.5 million people in this country who are age 65 or over. With few exceptions, these persons lack adequate health protection and are unable to pay for it. These senior citizens have great need for health protection since their medical expenses are 2½ times greater than those of younger people while their incomes are only half as large.

Approximately 90 percent of those who reach 65 will have to be hospitalized at least once during the remainder of their lifetimes. A large number of these persons will require two periods of hospitalization, and many will require three or more hospital stays.

The expenses incurred by such periods of illness can often wipe out a person's life savings which frequently makes it necessary for such a person to look to his children or other relatives for help. Since those who are asked for assistance often have families of their own to raise, the dual burden of helping the older person and caring for their own families is greater than they can reasonably bear.

Pensions and current social security benefits may help an older person to meet his day-to-day expenses, but such payments cannot even come close to taking care of the cost of prolonged major illnesses.

The senior citizens of our country have made outstanding contributions to our national well-being. It is incumbent upon those of us who enjoy the fruits of their efforts to help them in their time of need. The adoption of the Hospital Insurance Act of 1963 will give new hope to the older people of America for a future with dignity and security.

BUFFALO, N.Y.

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. Dulski] may extend his remarks at this point in the Record and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. DULSKI. Mr. Speaker, the city of Buffalo, N.Y., is one of the great milling and railroad centers in the Nation. It can also be proud of its many other industries, and its contributions during World War II and in defense efforts that followed are outstanding. Today our city is playing a key role in nuclear development.

But to keep these industries alive, markets are needed to absorb the products they manufacture. Our Buffalo Chamber of Commerce is most cognizant of this problem, and it has relentlessly directed its efforts to find new markets for our products. Its constant drive to stimulate business—both domestic and overseas—is commendable.

In recent years, the Buffalo chamber has sponsored five foreign trade missions. Its sixth trade mission—a 2-week tour of the Orient—will be undertaken from April 26 to May 12 of this year. The itinerary for this trip contains a listing of meaningful and advantageous travel stops for the American businessman.

Tokyo, the Fifth Tokyo International Trade Fair, Nagoya, Osaka, and Hong Kong will be visited. En route the group will meet with outstanding Japanese representatives of their respective business and professional fields. Mindful of the recent trade liberalization in Japan, plus the continuing rise in its standard of living, the American businessman can look to an increased market for his consumer goods in Japan.

The rapid development of this Japanese consumer market is opening up substantial new opportunities for U.S. exporters. Japanese consumers are greatly interested in American-made products and, in return, Japan is also exporting to the United States a growing volume of all kinds of machinery and technological equipment.

Reservations for this mission have been received from area representatives in the fields of advertising and public relations, banking, electrical design and contracting, cast iron manufacturing, municipal fire apparatus, hospitalization insurance and service organizations. Representatives of these companies include Mr. Baldwin Maull, president director, Marine Midland Corp.; Mr. Lester W. Young, president owner, Young Fire Equipment Corp.; Mr. Edmund J. Felt, president, the Moss-Chase Co. (advertising and public relations firm); Mr. George C. Ostendorf, director, hospital relations, Hospital Service Corp. of Western New York; Mr. Whitworth Ferguson, president and treasurer, Ferguson Electric Construction Co.; Mr. William C. Baird, president, Buffalo Pipe & Foundry Corp.; Mr. George F. Rand, vice president, the Marine Trust Co. of Western New York; Mr. Ray C. Neal, executive director, Buffalo-Niagara Sales & Marketing Executives, Inc.; Mr. Charles F. Light, executive vice president, Buffalo Area Chamber of Commerce.

The benefits to be derived from United States-Japan trade are most promising. During the postwar period, the greatest growth of trade has been between the highly industrialized nations, and Japan's income-doubling program foresees American sales to Japan reaching the $3 billion level by 1970—more than twice as much as the United States sold to Japan last year. The market for industrial machinery and sophisticated technological equipment should be particularly strong.

Because of the close parallel in the industrial development of the Niagara Frontier and Japan, the outlook for American exports to Japan should be of substantial benefit to our area. In particular, the growing Japanese market for capital equipment, chemicals, and the like, is important to Buffalo area firms for it is precisely in these products the Niagara Frontier excels.

According to the Department of Commerce, $136 million of the manufactures of Erie and Niagara Counties went into world trade in 1960. It is not unrealistic to foresee greater expansion of sales and exports in the Orient market for the western New York businessman after this mission is completed.

I take this opportunity to laud the Buffalo Area Chamber of Commerce for its active program to open a wider range of markets to Buffalo area firms. Our products are second to none, and we are prepared to compete anywhere.

THE PRESIDENT'S TAX PROGRAM AND FISCAL RESPONSIBILITY

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that the gentleman from Virginia [Mr. JENNINGS] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. JENNINGS. Mr. Speaker, the Under Secretary of the Treasury, the Honorable Henry H. Fowler spoke to Group 1 of the Virginia Bankers Association at Virginia Beach last Saturday, April 6. His remarks were concerned with the leading economic and financial issue of the day—whether Congress should substantially reduce Federal tax rates on individual and corporate income in 1963.

Secretary Fowler's address merits the attention of this body, and I would recommend that each of my colleagues secure a copy. Under leave to extend my remarks in the Appendix of the RECORD, I am including pertinent excerpts from the address. These follow:

THE PRESIDENT'S TAX PROGRAM AND FISCAL RESPONSIBILITY

It is against the background of continued and intensive Communist challenge throughout the world and in space, and the inadequate performance of our own economy over the past decade, that the Treasury Department supports the President's tax reduction program—in the full knowledge that it will add to a projected deficit. We believe that he was right in refusing to either postpone his tax program or cut into essential national security programs so as to present his tax program in the context of a balanced budget. We believe this was a fiscally responsible decision under the circumstances for the following reasons:

1. One of the primary causes of slow economic growth—our major economic and financial problem—is the existing tax system. It is our belief that the proposed tax reduction will so invigorate the economy that, in a few years, our revenues under the new, lower rate structure will be larger than if we continue our present rate structure, which stifles growth.

2. The tax program was the clearly preferable action course to other alternatives designed to increase the rate of growth. To achieve growth by more massive increases in Federal spending well beyond the limits of the 1964 budget would have risked confidence at home and abroad. And, while increasing demand, it would fail to increase the incentives to private investment and effort that the reduction of taxrates provides. The other alternative, an increased use of credit and monetary tools to provide still lower interest rates and substantially increased supplies of money and credit, was not feasible because, as the President pointed out, "Our balance-of-payments situation today places limits on our use of those tools for expansion."

3. To wait for increasing revenues from slow growth to reach a balanced budget before enacting the President's tax proposals might be costly and self-defeating. In 1959, for example, a planned surplus became a record deficit of $12.4 billion, largely because of a recession. As long as we have slack markets for our goods and services and dampened incentives for investment, the threat of sliding into an unanticipated recession remains. Continued slow growth will not generate the revenue required for fiscal 1964 expenditure levels even at current tax rates of some years. In the interim the additional gross national product, wealth, profits and jobs that are expected to result from the tax stimulus will be lost.

4. The tax program itself is designed to keep budget deficits within manageable proportions. By spacing out the rate cuts over 3 calendar years, and by offsetting a portion of the revenue loss through some measures of structural reform, and putting collections from 12,000 of our largest corporations on a more current basis, the effect of the tax program on the budget is reduced.

5. The President has acted positively on the premise that a large-scale tax reduction calls for strong restraints on spending. Accordingly, his fiscal 1964 budget holds proposed Government spending (other than defense, space and interest outlays) below fiscal 1963 levels—only the fourth time in 15 years that this has been done. In fact, for the past 9 years the average annual increase in this sector of the budget has been 7.5 percent. Nor did the President relax his efforts to cooperate with the Congress in holding down expenditures after the submission of his budget in January. Since then, he has reduced spending requests for 1963 and 1964 by more than three-quarters of a billion dollars.

6. More important—and, perhaps, the most overlooked aspect in discussions of fiscal responsibility—the President, in his 1964 budget message, pledged progressive reduction in the Federal budget deficit as an accompaniment to the tax reduction, proposing, for both the Congress and the executive branch, an entirely new policy and program of disciplined expenditure control. As he stated in the budget message: "The prospect of expanding economic activity and rising Federal revenues in the years ahead does not mean that Federal outlay should rise in proportion to such revenue increases. As the tax cut becomes fully effective and the economy moves toward full employment, a substantial part of the revenue increases must go toward eliminating the transitional deficit. Although it will be necessary to increase certain expenditures, we shall continue, and indeed intensify, our effort to include in our fiscal program only those expenditures which meet strict criteria of fulfilling important national needs."

7. Finally, the new tax program, with related expenditure control, is compatible with, and can be coordinated effectively with, appropriate balance-of-payments policy, monetary policy, and debt management—each of which forms a vital environmental factor in our overall financial plan.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FEIGHAN, for 30 minutes, today, and to revise and extend his remarks.

Mr. DOWDY, for 10 minutes, today, and to revise and extend his remarks.

Mr. CANNON (at the request of Mr. ALBERT) for 1 hour today.

Mr. HALPERN, for 10 minutes, today.

Mr. ASHBROOK, for 15 minutes, today.

Mrs. GREEN of Oregon, for 5 minutes, today, to revise and extend her remarks and to include extraneous matter.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. PATMAN and to include extraneous matter.

Mr. EDMONDSON and to include tables and extraneous matter in Committee on H.R. 3845.

Mr. ASPINALL and to include tables and extraneous matter in Committee on H.R. 3845.

(The following Members (at the request of Mrs. ST. GEORGE) and to include extraneous matter:)

Mrs. FRANCES P. BOLTON.

Mr. GUBSER.

Mr. PILLION.

Mr. KING of New York.

Mr. HARVEY of Michigan.

Mr. MATHIAS.

(The following Members (at the request of Mr. LIBONATI) and to include extraneous matter:)

Mr. BOLAND.

Mr. ROUSH.

Mr. SHELLEY.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 386. An act to consolidate Vicksburg National Military Park and to provide for certain adjustments necessitated by the installation of a park tour road, and for other purposes; to the Committee on Interior and Insular Affairs.

BILL PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 4423. An act permitting the Secretary of the Interior to continue to deliver water to lands in the third division, Riverton reclamation project, Wyoming.

ADJOURNMENT

Mr. LIBONATI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER pro tempore. Pursuant to the provisions of House Concurrent Resolution 134, 88th Congress, the House stands adjourned until 12 o'clock meridian, Monday, April 22, 1963.

Thereupon (at 3 o'clock and 1 minute p.m.), pursuant to House Concurrent Resolution 134, the House adjourned until Monday, April 22, 1963, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

672. A communication from the President of the United States, transmitting proposed amendments to the budget for the fiscal year 1964 in the amount of $80,000 for the special representative of trade negotiations and a decrease of $445,000 for the Department of State (H. Doc. No. 100); to the Committee on Appropriations and ordered to be printed.

673. A communication from the President of the United States, transmitting amendments to the budget for the fiscal year 1964 involving a decrease in the amount of $419,700,000 for foreign assistance (H. Doc. No. 101); to the Committee on Appropriations and ordered to be printed.

674. A communication from the President of the United States, transmitting a draft of a proposed bill entitled "A bill to provide for a National Service Corps to strengthen community service programs in the United States"; to the Committee on Education and Labor.

675. A letter from the Assistant Secretary of Defense (Installations and Logistics), transmitting the February 1963 report on Department of Defense procurement from small and other business firms, pursuant to section 10(d) of the Small Business Act, as amended; to the Committee on Banking and Currency.

676. A letter from the Chairman, Securities and Exchange Commission, transmitting the 28th Annual Report of the Securities and Exchange Commission for the fiscal year ended June 30, 1962, pursuant to section 23 (b) of the Securities Exchange Act of 1934, approved June 6, 1934; to the Committee on Interstate and Foreign Commerce.

677. A letter from the Chairman, Federal Power Commission, transmitting a copy of each of the following publications: (1) "Federal Power Act, Revised March 1, 1963", and (2) "Sales by Producers of Natural Gas to Natural Gas Pipeline Companies, 1961"; to the Committee on Interstate and Foreign Commerce.

678. A letter from the Assistant Secretary of the Interior, transmitting a draft of a proposed bill entitled "A bill to amend the act of May 29, 1958, with respect to payment of moving expenses of owners and tenants of land acquired for the national park system"; to the Committee on Interior and Insular Affairs.

679. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated September 11, 1962, submitting a report, together with accompanying papers and illustrations, on a review of the report on central and southern Florida, Hendry County west of levees 1, 2, and 3, requested by a resolution of the Committee on Public Works, House of Representatives, adopted June 9, 1960 (H. Doc. No. 102); to the Committee on Public Works and ordered to be printed with three illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. RIVERS of South Carolina: Committee on Armed Services. H.R. 5555. A bill to amend title 37, United States Code, to increase the rates of basic pay for members of the uniformed services, and for other purposes; without amendment (Rept. No. 208). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMPSON of New Jersey: Joint Committee on the Disposition of Executive Papers. House Report No. 209. Report on the disposition certain papers of sundry executive departments. Ordered to be printed.

Mr. SMITH of Virginia: Committee on Rules. H. Res. 317. A resolution taking H.R. 4715 from the Speaker's table and agreeing to Senate amendments; without amendment (Rept. No. 210). Referred to the House Calendar.

Mr. MILLS: Committee on Ways and Means. H.R. 4655. A bill to amend title IX of the Social Security Act with respect to the amount authorized to be made available to the States out of the employment security administration account for certain administrative expenses, to reduce the rate of the Federal unemployment tax for the calendar year 1963, and for other purposes; with amendment (Rept. No. 211). Referred to the Commitee of the Whole House on the State of the Union.

Mr. SMITH of Virginia: Committee on Rules. House Resolution 318. Resolution to grant additional travel authority to the Committee on Agriculture; without amendment (Rept. No. 212). Referred to the House Calendar.

Mr. SMITH of Virginia: Committee on Rules. House Resolution 319. Resolution to grant additional travel authority to the Committee on the Judiciary; without amendment (Rept. No. 213). Referred to the House Calendar.

Mr. ELLIOTT: Committee on Rules. House Resolution 320. Resolution providing for the consideration of H.R. 4997, a bill to extend the feed grain program; without amendment (Rept. No. 214). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASHBROOK:

H.R. 5622. A bill to amend section 502 of the Mutual Security Act of 1954 relating to the reporting of foreign currencies expended by Members of Congress; to the Committee on Foreign Affairs.

By Mr. BONNER:

H.R. 5623. A bill to amend the provisions of title 14, United States Code, relating to the appointment, promotion, separation, and retirement of officers of the Coast Guard, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. CLAUSEN:

H.R. 5624. A bill to amend the Tariff Act of 1930 to impose additional duties on cattle, beef, and veal imported each year in excess of annual quotas; to the Committee on Ways and Means.

By Mr. THOMPSON of New Jersey:

H.R. 5625. A bill to provide for a National Service Corps to strengthen community service programs in the United States; to the Committee on Education and Labor.

By Mr. O'HARA of Michigan:

H.R. 5626. A bill to provide for a National Service Corps to strengthen community service programs in the United States; to the Committee on Education and Labor.

H.R. 5663. A bill to eliminate the population limitation as it affects the eligibility of communities in redevelopment areas for certain benefits under title I of the Housing Act of 1949, and title II of the Housing Amendments of 1955; to the Committee on Banking and Currency.

H.R. 5664. A bill to make available to children who are handicapped by deafness the specially trained teachers of the deaf needed to develop their abilities; to the Committee on Education and Labor.

H.R. 5665. A bill to amend subsection (b) of section 512 of the Internal Revenue Code of 1954 (dealing with unrelated business taxable income); to the Committee on Ways and Means.

By Mr. HALL:

H.R. 5666. A bill to amend section 301 of the Foreign Assistance Act of 1961 to limit contributions and other payments by the United States to programs and activities of the United Nations to 33.33 percent of the cost thereof; to the Committee on Foreign Affairs.

By Mr. HALPERN:

H.R. 5667. A bill to amend the Federal Deposit Insurance Act and title IV of the National Housing Act (relating to the insurance of savings and loan accounts) with respect to the maximum amount of insurance which may be provided thereunder; to the Committee on Banking and Currency.

By Mr. HARDING:

H.R. 5668. A bill to amend title 38, United States Code, to provide for the payment of pensions to veterans of World War I and their widows and dependents; to the Committee on Veterans' Affairs.

By Mr. KEITH:

H.R. 5669. A bill to amend the Federal Trade Commission Act to prohibit the use of the term "mahogany" in connection with woods and other products which are not in fact mahogany; to the Committee on Interstate and Foreign Commerce.

By Mr. NYGAARD:

H.R. 5670. A bill to amend the Tariff Act of 1930 to impose additional duties on cattle, beef, and veal imported each year in excess of annual quotas; to the Committee on Ways and Means.

By Mr. OSMERS:

H.R. 5671. A bill to amend the Internal Revenue Code of 1954 to provide for personal and corporate income tax reductions, to liberalize certain deductions and provide deductions for certain additional expenditures, to provide additional personal income tax exemptions for handicapped taxpayers, spouses, and dependents, to repeal certain excise taxes, and for other purposes; to the Committee on Ways and Means.

By Mr. RIVERS of Alaska:

H.R. 5672. A bill to prohibit discrimination on account of sex in the payment of wages by employers engaged in commerce or in the production of goods for commerce and to provide for the restitution of wages lost by employees by reason of any such discrimination; to the Committee on Education and Labor.

By Mr. ROBERTS of Alabama:

H.R. 5673. A bill to prohibit the introduction into interstate commerce of any shipping container manufactured in the United States from imported steel unless the container is marked so as to indicate the country of origin of the steel; to the Committee on Interstate and Foreign Commerce.

By Mr. ROSTENKOWSKI:

H.R. 5674. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of national resources of timber, soil, and range, and of recreational areas; to the Committee on Education and Labor.

H.R. 5675. A bill to prohibit the introduction into interstate commerce of any shipping container manufactured in the United States from imported steel unless the container is marked so as to indicate the country of origin of the steel; to the Committee on Interstate and Foreign Commerce.

H.R. 5676. A bill to amend title II of the Social Security Act to provide that an individual's entitlement to child's insurance benefits shall continue, after he attains age 18, for so long as he is regularly attending high school or college; to the Committee on Ways and Means.

H.R. 5677. A bill to amend title II of the Social Security Act to eliminate the age requirements for entitlement to wife's insurance benefits and widow's insurance benefits, and to eliminate the provisions which reduce a woman's benefits in certain cases where she becomes entitled thereto before attaining age 65; to the Committee on Ways and Means.

By Mr. SAYLOR:

H.R. 5678. A bill to provide for the medical and hospital care of the aged through a system of voluntary health insurance, and for other purposes; to the Committee on Ways and Means.

H.R. 5679. A bill to prevent the importation of flat glass which is the product of any country or area dominated or controlled by communism; to the Committee on Ways and Means.

H.R. 5680. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer increased personal exemptions for his children while they are attending school; to the Committee on Ways and Means.

By Mr. ST GERMAIN:

H.R. 5681. A bill to provide under the social security program for payment for hospital and related services to aged beneficiaries; to the Committee on Ways and Means.

By Mr. UDALL:

H.R. 5682. A bill to establish the Chesapeake & Ohio Canal National Historical Park in the State of Maryland, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WALTER:

H.R. 5683. A bill to grant authority to the President to control the travel abroad of U.S. citizens in time of war or national emergency; to the Committee on the Judiciary.

By Mr. WHALLEY:

H.R. 5684. A bill to amend the Federal Property and Administrative Services Act of 1949 to permit donations of surplus property to volunteer firefighting organizations, and for other purposes; to the Committee on Government Operations.

H.R. 5685. A bill to prevent the importation of flat glass which is the product of any country or area dominated or controlled by communism; to the Committee on Ways and Means.

By Mr. WIDNALL:

H.R. 5686. A bill to provide a percentage deduction for certain expenses paid for the higher education of the taxpayer, his spouse, and his dependents; to the Committee on Ways and Means.

H.R. 5687. A bill to amend the Internal Revenue Code of 1954 to allow an individual to deduct, for income tax purposes, the expenses incurred by him for transportation to and from work; to the Committee on Ways and Means.

H.R. 5688. A bill to amend the Internal Revenue Code of 1954 to extend the coverage of a deduction for expenses incurred by a gainfully employed woman or widower for the care of certain dependents by raising the age limitation for one category of dependent from 11 to 15 years; to the Committee on Ways and Means.

By Mr. GIBBONS:

H.R. 5689. A bill to provide for the designation of a highway from Tampa, Fla., to Miami, Fla., as a part of the National System of Interstate and Defense Highways; to the Committee on Public Works.

By Mr. PUCINSKI:

H.R. 5690. A bill to amend section 302(c) of the Labor-Management Relations Act, 1947, to permit employer contributions for joint industry promotion of products in certain instances or a joint committee or joint board empowered to interpret provisions of collective bargaining agreements; to the Committee on Education and Labor.

By Mr. TEAGUE of Texas (by request):

H.R. 5691. A bill to amend title 38 of the United States Code to allow the Administrator of Veterans' Affairs to delegate to the Chief Medical Director in the Department of Medicine and Surgery, authority to act upon the recommendations of the disciplinary boards provided by section 4110 of title 38, United States Code; to the Committee on Veterans' Affairs.

By Mr. WALTER:

H.R. 5692. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. THOMPSON of Texas:

H.R. 5693. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. BYRNE of Pennsylvania:

H.R. 5694. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. CURTIN:

H.R. 5695. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. DANIELS:

H.R. 5696. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. DENT:

H.R. 5697. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. KING of New York:

H.R. 5698. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. MILLIKEN:

H.R. 5699. A bill to amend the Antidumping Act of 1921; to the Committee on Ways and Means.

By Mr. PHILBIN:

H.R. 5700. A bill to amend the Antidumping Act 1921; to the Committee on Ways and Means.

By Mr. TUPPER:

H.R. 5701. A bill to amend the Antidumping Act 1921; to the Committee on Ways and Means.

By Mr. ADDABBO:

H.J. Res. 380. Joint resolution designating the first Sunday in September after Labor Day in each year as Old Granddad Day; to the Committee on the Judiciary.

By Mr. GUBSER:

H.J. Res. 381. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. HOSMER:

H.J. Res. 382. Joint resolution to forestall intervention, domination, control, and colonization by international communism in the New World, and for other purposes; to the Committee on Foreign Affairs.

By Mr. WHALLEY:

H. Con. Res. 137. Concurrent resolution requesting the President to set aside and proclaim a National Country Music Week; to the Committee on the Judiciary.

By Mr. BOB WILSON:

H. Res. 321. Resolution to amend clause 4 of rule XXII of the Rules of the House of Representatives to require that introduced bills include an estimate of cost, and for other purposes; to the Committee on Rules.

MEMORIALS

Under clause 4 of the rule XXII,

The SPEAKER presented a memorial of the Legislature of the State of Michigan, memorializing the President and the Congress of the United States relative to ratifying the proposed amendment to the Constitution of the United States relating to the qualifications of electors; to the Committee on the Judiciary.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 5702. A bill for the relief of Mildred B. Nodell; to the Committee on the Judiciary.

By Mr. DORN:

H.R. 5703. A bill granting an extension of patent to the United Daughters of the Confederacy; to the Committee on the Judiciary.

By Mr. MULTER:

H.R. 5704. A bill for the relief of the heirs of Dalva Calazans and others; to the Committee on the Judiciary.

By Mr. OLSEN of Montana:

H.R. 5705. A bill for the relief of Kenneth Shek Mah; to the Committee on the Judiciary.

SENATE

THURSDAY, APRIL 11, 1963

The Senate met at 10 o'clock a.m., and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father, from the noise and hurry of the world without and from the tyranny of selfish moods and motives within, we seek the peace of Thy changeless love. In this sacred week which reminds us that there is no gain except by loss, may we fear only to be disloyal to the best we know and to betray those who love and trust us and to disappoint Thy expectations concerning us.

Help us this new day to meet its joys with gratitude, its difficulties with fortitude, its duties with fidelity. Deliver us, we pray, from petty irritations which spoil the music of life and distort our perspectives. As once again in the pilgrimage of the year we come on the morrow to the place called Calvary—

We stand atremble and afraid,
On the small world that we have made;
Afraid lest all our poor control,
Shall turn and rend us to the soul;
Afraid lest we shall be denied
The price we hold our ragged pride;
But in the end we pass all by,
For a lone cross against the sky.

Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, April 10, 1963, was dispensed with.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILL

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries, and he announced that on April 9, 1963, the President had approved and signed the act (S. 1089) to authorize the sale, without regard to the 6-month waiting period prescribed, of cadmium proposed to be disposed of pursuant to the Strategic and Critical Materials Stock Piling Act.

REPORT OF RAILROAD RETIREMENT BOARD—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 27)

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which, with the accompanying report, was referred to the Committee on Labor and Public Welfare:

To the Congress of the United States:

In compliance with the provisions of section 10(b)4 of the Railroad Retirement Act, approved June 24, 1937, and of section 12(1) of the Railroad Unemployment Insurance Act, approved June 25, 1938, I transmit herewith for the information of the Congress, the report of the Railroad Retirement Board for the fiscal year ended June 30, 1962.

JOHN F. KENNEDY.

THE WHITE HOUSE, *April 11, 1963.*

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 4549. An act to amend section 4103 of title 38, United States Code, with respect to the appointment of the Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration;

H.R. 5389. An act to repeal certain legislation relating to the purchase of silver, and for other purposes; and

H.R. 5517. An act making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 4549. An act to amend section 4103 of title 38, United States Code, with respect to the appointment of the Chief Medical Director of the Department of Medicine and Surgery of the Veterans' Administration; to the Committee on Labor and Public Welfare.

H.R. 5389. An act to repeal certain legislation relating to the purchase of silver, and for other purposes; to the Committee on Banking and Currency.

H.R. 5517. An act making supplemental appropriations for the fiscal year ending June 30, 1963, and for other purposes; to the Committee on Appropriations.

AUTHORIZATION FOR MILITARY PROCUREMENT

Mr. MANSFIELD. Mr. President, what is the pending business?

The PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business, which will be read by title.

The LEGISLATIVE CLERK. A bill (H.R 2440) to authorize appropriations, during the fiscal year 1964 for procurement, research, development, test, and evaluation of aircraft, missiles, and naval vessels for the Armed Forces, and for other purposes.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk called the roll; and the following Senators answered to their names:

Mr. HUMPHREY. I announce that the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Florida [Mr. HOLLAND], the Senator from Missouri [Mr. LONG], the Senator from Texas [Mr. YARBOROUGH], and the Senator from Ohio [Mr. YOUNG] are absent on official business.

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Wyoming [Mr. SIMPSON] is absent on official business.

The Senator from Utah [Mr. BENNETT], the Senator from Kentucky [Mr. MORTON], the Senator from Pennsylvania [Mr. SCOTT], and the Senator from Texas [Mr. TOWER] are necessarily absent.

The PRESIDING OFFICER (Mr. METCALF in the chair). A quorum is present.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Subcommittee on Internal Security of the Senate Committee on the Judiciary may be permitted to meet during the session of the Senate today.

Mr. DIRKSEN. Mr. President, in view of the extraordinary circumstances attending the session this morning, I am compelled to object.

The PRESIDING OFFICER. Objection is heard.

Mr. MANSFIELD. Mr. President, then I would assume the objection would apply to all committees which do not now have permission to meet.

Mr. DIRKSEN. The Senator is correct.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. McCLELLAN. Am I to understand that no committees are to be permitted to sit today while the Senate is in session?

Mr. DIRKSEN. We would not quite make that "today," but it would apply so long as there is a closed-door session.

Mr. McCLELLAN. Then, as I understand the situation, there would be objection so long as the Senate is in executive session.

Mr. DIRKSEN. Behind closed doors.

Mr. McCLELLAN. May I have unanimous consent for the Senate Committee on Government Operations to meet while the Senate is in session when the Senate is not in executive session? Would there be objection to that? The committee must meet today, if possible, on a legislative matter.

Mr. DIRKSEN. If the committee is to meet later, that might be different. The closed door session will begin soon.

Mr. McCLELLAN. Tentatively I have set the hearing for 2:30 this afternoon, if permission can be obtained to meet after the Senate concludes its executive session.

Mr. DIRKSEN. I have no objection.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that the Committee on Government Operations may meet at 2:30 this afternoon, provided the Senate is not in closed-door session at that time.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas? The Chair hears none, and it is so ordered.

Mr. FULBRIGHT. Mr. President, I understand that my committee already has been given permission to meet, although it is not meeting this morning. However, I had intended to have the committee meet as soon as the closed-door session is over. Must I ask unanimous consent again?

Mr. DIRKSEN. When was permission granted?

Mr. FULBRIGHT. The day before yesterday.

Mr. DIRKSEN. The Senator applied at that time?

Mr. FULBRIGHT. Yes. Two scheduled executive hearings were held.

Mr. DIRKSEN. I think, with the understanding that the committee will not meet while the Senate is behind closed doors, it would be all right.

Mr. MONRONEY. Mr. President, I ask unanimous consent that following completion of the closed-door session by the Senate, the Aviation Subcommittee of the Committee on Commerce may meet this afternoon.

The PRESIDING OFFICER. Is there objection to the request by the Senator from Oklahoma? The Chair hears none, and it is so ordered.

AUTHORIZATION FOR MILITARY PROCUREMENT

The Senate resumed the consideration of the bill (H.R. 2440) to authorize appropriations, during fiscal year 1964 for procurement, research, development, test, and evaluation of aircraft, missiles, and naval vessels for the Armed Forces and for other purposes.

Mr. MANSFIELD. Mr. President, I had assumed that a Senator would wish to be recognized to make a motion.

Mr. RUSSELL. Mr. President, I had assumed the Senate might take up the bill and have it made the unfinished business, and that I might then make a relatively brief statement as to the overall aspects of the bill. The statement would deal only with unclassified material.

Then I shall make a motion which will bring before the Senate the issue of the amendment which will be the subject of the closed-door session. At that time, undoubtedly, a motion will be made to go into session with closed doors. I see no reason for starting in such a session until I have made a brief overall statement with respect to the bill. That is a decision to be made by the leadership.

Has the bill been laid before the Senate?

Mr. MANSFIELD. Yes. The bill is the pending business.

Mr. RUSSELL. Mr. President, this bill would authorize appropriations for procurement, research, development, test, and evaluation of aircraft, missiles, and naval vessels for the Armed Forces in the amount of $15,147,491,000. By far the largest portion of that amount will apply to the purchase of what is called military hardware.

Under the congressional procedure, an authorization is, in effect, a ceiling upon appropriations to be made subsequently.

The weapons which would be procured and on which research and development would be conducted under this bill will be reviewed again by the Committees on Appropriations in acting on the Department of Defense appropriation bill. In making that statement, I certainly do not wish to be understood as depreciating the significance of the bill, for it represents the views and recommendations of the committees having legislative responsibility for the Department of Defense, a responsibility which is constitutional in nature, as distinguished from the appropriations responsibility.

Historically, the views of the legislative committees have influenced final congressional action on appropriations in a most significant manner.

Mr. President, the pending authorization, as recommended by the committee, is $708,900,000 less than is contained in H.R. 2440 as it came to us from the other body. The recommended authorization is $211,200,000 less than that requested by the Department of Defense.

Since the committee added authorizations for two programs not sought by the Department of Defense—$363,700,000 for the RS–70 and $196 million for Nike-Zeus—it follows that the programs proposed by the Department of Defense were reduced by the committee in the amount of $770,900,000.

Mr. President, I hope that I may be clearly understood in stating most emphatically that the committee's action in reducing some of the items proposed by the Department of Defense is not predicated on any attitude of complacency or any unrealistic thought that our enemies have relented in their hostility toward us and in their determination to destroy us. The programs approved are substantial, and they are an integral part of a 1964 defense budget involving more than $52 billion.

The committee is confident that the reductions it has recommended are in areas which would not constitute a crucial difference, even in the event of an unexpected conflict. The reductions are largely stretchouts in the periods over which the weapons would be procured, and in many instances they are in areas in which we have a large inventory of the specific weapons to be reduced in number under the committee action.

In reducing the authorization the committee has been mindful of the deficit facing us this year and the one that is almost certain to be incurred next year. It is extremely important that we make reductions in every area, including national defense, in which we safely may do so.

Of course, the committee is human, and thus it is certainly not infallible. Before the conference with the other body on this bill we shall have an opportunity to consider the views of the Department of Defense, the so-called "reclama." For reasons it is not necessary to go into now, that is a word which was not found in the English language before it was introduced by the Department of Defense.

If the Department follows the practice of the past, it will contend that none of the cuts which have been made are acceptable.

The committee will not accept that contention out of hand; but, of course, we will consider any suggestions that may be made for shifting a part of the reductions by the Defense Department to other programs if valid reasons for such a transfer can be given.

Although this is the third year that the committee has considered a specific authorization for the procurement of aircraft, missiles, and naval vessels, this is the first year in which the authorization bill has applied to research, development, test, and evaluation programs. As this was a relatively new area, the committee was less confident about making reductions in specific research and development programs.

The bill carries almost $3.4 billion for all items of research and development. We applied to these items a 3 percent across-the-board reduction, in the belief that programs in the amount of the reduction could normally be reoriented during the year and that more careful bargaining and an efficient administration of the research and development program could result in savings of at least 3 percent.

In the procurement area, the committee generally has been more specific in its identification of the weapons to which modest reductions have been applied.

An exception to this specificity in weapon procurement is a recommended 3 percent reduction in certain support areas, such as spare parts and modifications. The reprograming actions submitted to the committees tend to indicate that these "below the line" items are rather flexible, and that they frequently are cited as the source of funds to procure increased quantities of other items not in the programs originally presented to the committee.

That is done through the process that is called reprograming. The Department will come in and request that funds be transferred from one program to the other. Those requests are passed upon by the Armed Services Committees of the two Houses, as well as the Appropriations Committees of the two Houses.

The bill provides the amounts that are set forth in the report for each of the specific categories of weapons for research and development.

The reductions were not applied with absolute uniformity to the three military departments, but they came out surprisingly nearly uniform, in relation to the amounts requested by each.

ARMY

The authorization for Army aircraft is $471,200,000. This is intended to procure 1,485 aircraft, most of which are helicopters. This authorization is $50,900,000 in money and 123 aircraft less than that requested by the Department. The committee has made slight reductions in several of the types proposed for procurement. The reductions and general information on the aircraft to be procured appear on pages 6 and 7 of the committee report.

Let me point out that this increment of Army aircraft is not intended to implement the somewhat controversial recommendations of the so-called Howze Board. This Board has recommended an expansion in the Army's air program and the Secretary of Defense has approved a test of some of the concepts advocated by the Board. The aircraft in the 1964 program, however, are principally for the conversion of Army divisions to the new flexible ROAD concept, which involves increasing the number of aircraft assigned to each of the 16 Active Army divisions.

For missiles the Army authorization is $746,700,000, a larger program than that sought by the Department. The addition results from committee action is providing authorization for the procurement of Nike-Zeus components offset by a recommended $30 million reduction in the Pershing missile procurement program. Later in my remarks I shall comment more extensively on the Nike-Zeus addition.

Pages 7 and 8 of the committee report give information about the missiles included in this year's procurement.

Research and development programs in the Army on aircraft and missiles would be authorized $79,748,000 and $559,301,000, respectively. These amounts reflect a 3 percent reduction in the programs presented to the committee. A great deal of the Army research efforts on aircraft are devoted to improvements of existing aircraft in the development of vertical and short takeoff and landing types. Much of the missile research and development authorization is in the ballistic missile defense field.

NAVY AND MARINE CORPS

The bill provides $1,830,900,000 in authorization for the procurement of aircraft for the Navy and the Marine Corps. This amount is intended to finance the procurement of 644 new aircraft, spare parts and modifications and modernization of aircraft already in inventory. The committee reduced the proposed procurement program by 37 aircraft having a total estimated cost of $127,800,000. Specific reductions by types are shown on page 12 of the committee report. This page also contains a description of the Navy and Marine Corps aircraft types to be procured.

For Navy missiles the bill authorizes appropriations of $1,095,100,000. This is a $12,200,000 reduction in the departmental request.

The amount of the reduction is intended to be applied to the Subroc program. Subroc is a promising missile that will be used by submarines in antisubmarine warfare. The committee made this reduction in an attempt to avoid an excessive commitment to a new system before its effectiveness has been more thoroughly tested. The Navy now is spending substantial sums in improvements on missile systems that were adopted hurriedly.

A very large part of the Navy missile authorization is for the procurement of missiles for Polaris submarines.

The Marine Corps would be provided $14.7 million in authorization for the procurement of Hawk missiles.

For naval vessels the bill carries $2,159,600,000 in authorization for the construction of 36 new ships and the conversion of 36 old ones. The new ship authorization is $150,400,000 below the amount sought by the Department. This reduction is a result of the Committee's eliminating eight vessels from this year's program. The vessels deferred are one amphibious transport dock, one combination oiler and ammunition ship, four motor gunboats, and two surveying ships.

Included within the construction program are six additional Polaris submarines which will complete the presently planned program of 41 ships. Also included are 6 nuclear powered submarines. Two additional nuclear powered submarines were included in the version of the bill as it passed the other body, but the committee recommends only the six proposed by the Department. The senior Senator from Maine intends, I believe, to offer an amendment on this subject.

For research and development by the Navy and Marine Corps on aircraft, missiles, and ships the bill proposes authorization of $1,054,724,000. Again this is 3 percent less than the amounts requested of the committee. Of this sum $198,083,000 is for research and development on aircraft, $572,433,000 is for research and development on missiles, and $284,208,000 is for research and development on naval vessels.

AIR FORCE

The bill provides $3,329 million for the procurement of 879 new aircraft, modifications to aircraft now in service, spares, and other related items. The program approved by the committee is a reduction of 85 aircraft and $230 million in authorization. Page 18 of the committee report indicates the manner in which the reduction is to be applied. Pages 18, 19, and 20 of the committee report give general information on the types of aircraft that will be bought with appropriations based on this authorization.

For Air Force missile procurement the bill provides $2,101,200,000 in authorization. This is $75,800,000 less than the amount requested. The reduction represents a 3 percent cut in the amounts asked for modifications and spares, in addition to an almost token deferment of Minuteman procurement. A great deal of this authorization is for Minuteman. Other Air Force missiles in this authorization are outlined on pages 20 and 21 of the committee report.

The amount provided for reseach and development, test, and evaluation on Air Force missiles and aircraft is $1,705,318,000. Of this total $676,986,000 is for research and development on aircraft, and $1,028,332,000 is for the missile R. & D. effort.

The committee reduced the $322,986,000 requested by the Department by 3 percent, but it also concurred in the House addition of $363,700,000 for use in the further development of the RS–70 weapon system.

This authorization bill involves no program that is strikingly new. Instead, it represents largely the continued procurement of systems and weapons that are known to be essential components of our defense strategy.

In two respects the bill as reported by the committee differs fundamentally from recommendations of the Department of Defense.

The first of these involves the accelerated development of the RS–70 weapon system. All Members of the Senate are familiar with that program. It has been before the Senate for the past 3 years.

The bill contains $336,700,000 in authorization that is a downpayment on the procurement of two more RS–70 prototypes. These prototypes would be equipped with the necessary subsystems, such as a new strike missile, a new radar, and new data display equipment.

Implementation of this recommendation would make possible a full test of the RS–70 as a reconnaissance-strike weapon, and not merely as an aircraft that can fly at a speed three times that of the speed of sound. This addition was made in the other body, and the Senate committee has concurred in it.

Mr. MORSE. Mr. President, will the Senator yield, or would he prefer to complete his statement first?

Mr. RUSSELL. I think it might be well to complete the statement with respect to this item first.

The Secretary of Defense presented a full explanation of his reasons for not proceeding with the full development of the RS–70. The committee carefully considered his views that intercontinental ballistic missiles are a better way to attack targets against which the RS–70 might be used and that there are better ways to obtain the reconnaissance capability that this aircraft would possess. In essence, the committee's view is that the RS–70 would furnish an element of diversity and variety in our strategic capabilities that would cause an enemy great trouble in defending against it, and that it provides a margin of safety that is worth every expense in this era of transition to missiles.

The committee believes the additional cost is a justifiable investment to avoid excessive reliance on missiles alone for our vehicles of delivery of nuclear warheads.

I shall be glad to yield now.

Mr. MORSE. Mr. President, I have agreed to let the Senator from Massachusetts [Mr. SALTONSTALL] proceed first.

Mr. SALTONSTALL. Mr. President, I was about to make a brief statement after the Senator from Georgia had completed his statement.

Mr. RUSSELL. I shall be through in a moment. It is highly doubtful whether the Department of Defense will spend this money, but the committee did not feel absolved from its responsibility of making suggestions to the Department, and giving it the ways and means of keeping our country in the preeminent position it has always occupied in the field of manned aircraft, in case the Department might change its mind.

Last year the Department curtailed the program. It was restored in Congress. At a later period the Department expanded this program with respect to expenditures for the RS–70 beyond that which it had originally justified. Three of these planes are now under development.

The major area of difference in the bill is one with respect to which I regret to find myself in disagreement with the majority of the committee over which I have the honor of presiding. So far as I can recall, this is an unprecedented situation for me to find myself in, because unless it is a matter on which I feel rather deeply, I go along with the majority of the committee, even though I do not agree with its views at the outset.

The matter to which I refer is the 9-to-8 vote of the committee which resulted in adding $196 million to the Army missile procurement authorization. This vote was in the nature of a vote to reconsider the previous vote of 9 to 4, whereby the committee had rejected this amendment. The amendment had been offered in previous years to expedite this particular program, and had been rejected by the committee.

It was not brought to the floor when it was rejected before; but on this occasion, the committee—as it had every right to do and as it properly did, if it suffered a change of opinion—did reconsider its previous vote before the report was filed, and it added this authorization.

I would not have brought this difference to the floor of the Senate if the sum of $196 million were all that is involved. This is a very large sum of money, but it is a very small sum when viewed against what we would be spending ultimately by the downpayment of the $196 million.

If the committee action is agreed to and this recommendation is followed through, it could result in the acquisition of a weapons system that could cost $12 billion at the very minimum. Some of the witnesses before the committee who have knowledge of the facts have testified that it would involve an expenditure of $20 billion.

This authorization, as I have said, would be available only for the procurement of the component parts of the Nike-Zeus system. It would embark us upon a program of acquiring and siting a large number of the Nike-Zeus batteries, the merits of which are very highly controversial and which the Secretary of Defense and others have testified before the committee could not be justified at this time.

As I understand the position of the proponents of this action—and they will state their views at some length, I am sure—it is that the procurement should be begun now on the Nike-Zeus components with a view to deployment as soon as possible of a system incorporating the present state of the art in this field, and later modifying these installations by incorporating improved radar and a new fast reacting missile which has been named Sprint.

In the pending bill, at the request of the Department of Defense, we have included the sum of approximately $335 million for research and development on the Sprint missile, and a new radar in order that the Department of Defense might hope to bring a new and improved and effective missile defense system into production without having to build and resite a weapons system of the Nike-Zeus type.

We have been dealing with this Nike program, in all of its progressions, over many years.

Senators will recall that we started with Nike-Ajax. We put that into production and sited it around the cities of our land. This was done at an expense considerably in excess of $1 billion.

While the pending bill was under consideration, there came to the committee a request from the Army to dispose of some of these missile sites, which had been acquired at very great cost. When real estate is purchased by the Government, sometimes under condemnation in the courts, and then sold within a period of 2 or 3 years, the Government usually suffers great losses in the transaction. That expense, of course, could also be added to the cost.

We then developed the Nike-Hercules system, which is now sited and which is a reasonably effective ground-to-air missile, the purpose of which is to stop enemy attack by manned aircraft on the areas that are defended.

We have expended considerably more than $2 billion on that program, which would be superseded by the Nike-Zeus system, the subject of this amendment.

The Department of Defense did not want to go into the procurement and deployment of this expensive system. Instead, it proposes to eliminate the admitted faults and defects in the system, so that when we incur the expense of production, we will have a reasonably reliable weapons system against an attack by intercontinental ballistic missiles.

This is a subject on which the Joint Chiefs of Staff are in disagreement. Secretary McNamara testified at some length before the committee on that subject. I will not deal with that until the Senate goes into executive session, when we will be able to use the testimony on this subject more fully than it could be used in this open session.

General LeMay is a witness who, in my opinion, can express himself very clearly without dealing with too many technical expressions. General LeMay, in responding to questions proposed by the author of the amendment, summed up his opposition to the execution of the Nike-Zeus system by saying that if it went into production, it would cost $20 billion to defend 26 cities, and that they would not be defended very well. That was his conclusion.

Because of the very substantial expense involved in producing and deploying a ballistic missile defense system, I am sure that every Member of the Senate wants to be reasonably sure that the system which is deployed will be effective. Such a system must be able to intercept and destroy all the missiles directed at a target.

I do not believe that the record made at the hearings, which were very exhaustive in their nature, is sufficient to demonstrate that we should produce and deploy this missile in the present state of the art. That is my own opinion.

Accordingly, I move that the bill be amended——

Mr. SALTONSTALL. Mr. President, will the Senator yield to me before he makes his motion on the other subject?

Mr. RUSSELL. Yes.

Mr. SALTONSTALL. Will the Senator yield for a brief statement?

Mr. RUSSELL. Yes.

Mr. SALTONSTALL. The Senator from Georgia, I assume, is about to move that the Senate go into closed-door session.

Mr. RUSSELL. No. I was about to offer an amendment to rescind the 9-to-8 vote action of the committee in approving this weapons system.

Mr. SALTONSTALL. Then I will wait until the Senator has made that motion.

Mr. RUSSELL. In order that the entire Senate may have an opportunity to express itself on this very important and expensive matter, I move that the bill be amended on page 3, beginning on line 14, by striking out "$746,700,000, of which amount $196,000,000 is authorized only from production of component parts of the Nike-Zeus system" and substituting in place thereof "$550,700,000," the latter being the amount involved in Army missile procurement before the addition of this program.

Mr. SALTONSTALL. Mr. President, as the ranking minority member of the committee, I first wish to commend the chairman of the committee for his fairness and the opportunity he has afforded for a full discussion of this important subject. The bill which was before the Committee on Armed Services was the bill requiring authorization prior to appropriation of funds for missiles, airplanes, ships, and research and development for these objectives.

The Department of Defense recommended $15,358 million for procurement and research. The committee unanimously deducted $770,900,000 from the recommendation of the Department of Defense. There was no difference of opinion in the committee on that question.

In addition, the committee added to the amount recommended by the Department of Defense $363,700,000 for continuing research on two more RS-70 planes, with respect to which the Senator from Georgia has made a brief statement.

As the Senator from Georgia has stated, a divided vote, the committee added $196 million for the development and operation of the so-called Nike-Zeus, or Sprint, missile.

I am in hearty accord with the chairman of the committee that his amendment should be adopted and that this amount should be stricken from the authorization bill.

The other item about which there was divided opinion in the committee concerns the recommendation of the House for two additional nuclear submarines at a cost of $134 million. By a divided vote, the committee reduced the authorization for these submarines to the recommendation of the Department of Defense for six additional nuclear submarines.

So the items which we are considering represent a reduction of $770,900,000, which was the unanimous report of the committee; an amendment to cut out $196 million, which was by a divided vote; and to reduce the House recommendation for two additional submarines in the amount of $134 million, which was by a divided vote.

The report of the committee was unanimous on all items except the $196 million for the Nike-Zeus and the two additional submarines in the amount of $134 million.

It is the responsibility of the Committee on Armed Services to conduct hearings and to report an authorization bill to provide for missiles, airplanes, ships, and research. That is what the bill consists of.

I heartily support the motion of the chairman in support of what the full committee has recommended. I hope that after the debate the Senate will support the amendment of the chairman of the committee. Again, I commend him for his fairness in conducting the hearings.

Mr. DIRKSEN. Mr. President, will the distinguished Senator from Georgia yield?

Mr. RUSSELL. I am glad to yield to the distinguished minority leader.

Mr. DIRKSEN. Is it fair to say that the item of $196 million now in the bill, which the chairman proposes to strike, is in the nature of a downpayment on what will ultimately become a $20 billion obligation?

Mr. RUSSELL. I am not certain about the figure of $20 billion. I want to be meticulous and not exaggerate. The cost suggested for a complete military weapons system, an anti-missile-missile system, ran anywhere from about $11,500 million to $20 billion. Of course, if the amendment should be agreed to, it would lead to the expenditure of many billions of dollars—$10 billion, $11 billion, or $12 billion. But it is believed that if the new Sprint, a new effective weapon, is developed, a large part of that amount can be salvaged. The Department of Defense stated that the direct loss which would be incurred by the adoption of this proposal, following the completion of this system, after it had been turned into an effective system, would be $2,800 million.

Mr. DIRKSEN. That would be the loss?

Mr. RUSSELL. That would be the net loss.

Mr. SALTONSTALL. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. SALTONSTALL. I think this can be stated without having the Senate go into closed-door session. If we carry through with the authorization in the bill and do not adopt the Senator's amendment, we shall be authorizing the development and operation of an antimissile missile which we know can be improved upon and which will not be as effective as it could be made.

Mr. RUSSELL. Even the strongest advocates of this missile system admit that it has definite limitations and can be greatly improved. The Department has launched almost a crash program of research and development to do that.

Mr. MORSE. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. MORSE. For many years the senior Senator from Oregon has followed the leadership of the Senator from Georgia, both on subjects of military authorization and military appropriations. The few times we have differed were when I voted for more funds than the committee recommended.

For the most part, I intend to follow the Senator from Georgia again this year. However, I should like to ask two or three questions concerning items in the committee report which bother me.

The Senator from Georgia himself said, in speaking of the RS-70 program—I think this is what he meant to say—that in all probability the administration might impound the funds if the money were appropriated by Congress.

Mr. RUSSELL. There is nothing secret about that. I think that has been generally understood. The Secretary of Defense has indicated that he proposes to follow that course. I happen not to agree with the Secretary on that point. However, he is not adopting any new policy. Differences concerning appropriations for defense have existed since the birth of our Nation. Any number of Presidents have refused to expend additional appropriations made for defense.

Mr. MORSE. If the probability of impoundment is great, it seems to me we are going through a rather empty gesture by adopting this phase of the committee report. Is it not true that if the situation changed and the administration had new evidence which would cause it to want to change its policy, it could very quickly get the approval of the new policy from Congress, based upon the evidence it might then present?

Mr. RUSSELL. That is true. Undoubtedly the administration could obtain approval of any change it might wish to make. But this matter has been in issue for a long time. For 3 years Congress has expressed the view that manned strategic aircraft should not be phased out of construction. The Senator from Oregon will recall that year before last not only did we carry forward the B-70 program—now it is called the reconnaissance strike 70 program but we also authorized and appropriated funds for the procurement of an entire new wing of the B-52, on the concept that they would carry the Skybolt.

The proposal first presented to the committee by the Department of Defense was that we not have the RS-70, because the Skybolt as carried by the B-52 would be more effective and would be a more reasonable program in cost. Congress finally did not undertake to direct the procurement of the RS-70 plane but provided authorization and appropriations to the Department of Defense. Since that time the Skybolt program has been canceled.

The procurement bill as it came to the committee provided additional authorization not only for the RS-70 program but also for two additional attack submarines. The committee did not feel justified in saying that the Senate had been in error on the other two occasions in undertaking to authorize further development on the RS-70. However, we rejected the proposal which came to us from the other body for two attack submarines in excess of the six which were provided in the bill.

Mr. SALTONSTALL. Mr. President, will the Senator from Georgia yield, in order that the Senate may have a further explanation on this point?

Mr. RUSSELL. I am glad to yield.

Mr. SALTONSTALL. If Senators will refer to page 43 of the hearings, they will find it there stated that, following the approval of $1,300 million for the B-70 development program of three aircraft, it is proposed by the Department to use $50 million of the extra $192 million provided by Congress last year for the RS-70 program, and to use that $50 million to continue the development of selected sensor components. So in authorizing this money, this year, it is not entirely clear that they will not use some of it.

Mr. RUSSELL. That is true, because some of the equipment developed for use on the RS-70 is quite new and revolutionary.

Mr. MORSE. If the Senator from Georgia will yield further——

Mr. RUSSELL. I yield.

Mr. MORSE. I think it is fair to say that, considering the American people as a whole, the presumption they extend is in favor of the believed-in experts in the Defense Establishment, in contrast to the opinion of Members of Congress. I think that attitude is taken by most of the people.

Mr. RUSSELL. But on that score there is a very wide divergence of opinion among the experts in the Department of Defense.

Mr. MORSE. That is the subject of my next question.

Mr. RUSSELL. Oh, yes, indeed.

Mr. MORSE. I wonder what the Senator from Georgia can tell us about that situation in the Defense Establishment.

Mr. RUSSELL. There are four members of the Joint Chiefs of Staff. Three of them favor proceeding with the RS-70 program. The chairman, General Taylor, withheld his approval, I understand. General LeMay, who is an aviator, Admiral Anderson, and General Wheeler all approved proceeding with the development of the RS-70 program; and many experts throughout the Department—those who have been connected for many years with the design of weapons systems—were overwhelmingly in favor of proceeding with the RS-70 program.

A great deal can be said against it; and it has been said very eloquently for the past 2 or 3 years by the Secretary of Defense, Mr. McNamara, who in my opinion is one of the ablest men ever to fill that position. I was in Washington when the separate military services were brought under one Department of Defense. Many Secretaries of Defense have come and gone. Many able men have served in that position. But Secretary McNamara has a mind which is almost startling in its capacity to acquire and retain information about the thousands of items involved in the Defense program.

He has believed that we should make the change now to principal reliance on missiles; but he is not in favor of doing away with the strategic, manned aircraft we have at the present time. He favors utilizing the capacity of the B-52, with the Hound Dog missile; but he has canceled the Skybolt, a missile which was supposed to be fired from the B-52 for as far as a thousand miles—with great accuracy, so its proponents claim. Last year, Secretary McNamara favored the Skybolt; but he changed his mind after viewing the results of the research over this 12-month period, and he has a very able staff of experts to advise him. I am sure he would be one of the first to admit that no one can be absolutely sure, categorically, about decisions in this field. By and large, Senators have taken the position that they were not willing to rely altogether on missiles, rather than manned aircraft. We have favored what we called a mixing of the two—in short, some long-range aircraft, while undertaking to improve our missiles system.

I do not wish to go into that on the floor of the Senate. But this year, since the first of January, there have been some disappointing experiences in connection with tests on missiles under development. They are far from perfect.

However, I do not think our enemy has much better missiles than what we have at the present time. Our enemy has a much more powerful booster to aid in putting large objects into space, but there is no reason for us to conclude that the enemy has a better weapon than the Polaris and the Minuteman.

But we now have a great deal of trouble with improvements on the new Polaris missiles and with tests on the Minuteman. Congress was not willing to risk this gap of 3 or 4 years during the perfection of these weapons.

Therefore, we have tried to persuade Mr. McNamara to go ahead with the RS-70 in the meantime. He has declined to do so. In my opinion, he will continue to decline to do so, unless there is some major reversal in the missile program or some break in the RS-70 program. Of course, he might change his mind—perhaps at a time when Congress was not in session.

He did spend $50 million more in this fiscal year than he expected he would or that he told the committee he would spend.

In view of the opinion which Congress has held, we thought it unwise to abandon completely the one area in which our Nation has been preeminent; namely, with the long-range manned bomber. No one has been able to challenge our preeminence in that field. However, I think we would have been well advised to go ahead with bomber production a little later than the Secretary of Defense believed would be best. I am not critical of him; but, of course, no one is omniscient. I think he can make mistakes, too.

I believe we should have gone ahead with accelerated development and construction of some of the RS-70's. I believe it would be worthwhile for the United States to have some of the RS-70's going around the world and landing at airfields, where the people of various countries could see them. The long-range missiles could be placed in silos all over the United States, and we could have a thousand or 10,000 of them, but that would not impress people all over the world and lead them to believe that we are still the most powerful nation on earth.

On the other hand, if we put RS-70 aircraft all over the world and let the people of other nations see them, they could recognize them as symbols of the great destructive power we possess. But we could not convince them of that by telling them we have in silos in North Dakota or Montana 800 Minuteman missiles which we could use to destroy targets.

So I stress the psychological value of such matters.

I hope that of the three planes we have authorized, one of them will fly this summer. Even if we do not benefit from it in any other way, let us get some value from it by having it fly around the world and let the people of other countries see it. It is a tremendous aircraft, which can fly at three times the speed of sound; and it is sure to make a profound impression on the people of the earth.

Mr. SALTONSTALL. Mr. President, will the Senator from Georgia yield again to me?

Mr. RUSSELL. I yield.

Mr. SALTONSTALL. When there is a very great difference of opinion among the experts—in this case, among the Chiefs of Staff and the Secretary of Defense—I think the Senator from Georgia will agree that it is our responsibility to appropriate sufficient funds to be used in the way we believe best in the interest of the national defense. If the Department of Defense does not want to spend those funds, that will be its responsibility. But at least we shall have fulfilled our responsibility in a situation in which, as civilians, we hear conflicting evidence on very technical subjects.

Mr. RUSSELL. I may say that since I have been in the U.S. Congress, there has not been any controversy regarding missiles or weapons systems, that has generated among the experts as great a difference of opinion as that which has been generated in connection with the RS–70. When I refer to the experts, I mean men of real capability, on both sides—men completely sincere in the position they take.

Senators will remember the controversy that arose several years ago in relation to the B–36 and the carrier. That controversy was nothing in comparison with the difference of opinion among the best minds in this Nation as to what is the best thing to do about the RS–70.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. DOUGLAS. Am I correct in inferring from page 4 of the committee report that the Department, while opposing the added appropriation of $363 million, nevertheless does not intend to abandon the RS–70 program, but intends to spend $81 million to complete the three prototype RS–70's which are now under construction?

Mr. RUSSELL. That is the proposal of the Department of Defense.

Mr. DOUGLAS. So the issue is not whether we shall abandon the RS–70 program. The Department is not so proposing. The issue is whether we shall extend the proposal by the construction of two additional RS–70 planes.

Mr. RUSSELL. No; I wish it were that simple, but it is not. The issue is whether or not we shall proceed with further research and development that would make the RS–70 a weapon instead of merely a shell of an airplane with engines that will permit it to fly. We have reached such a complex stage in weaponry now that the major cost of almost every device, including even tanks, is the electronic systems involved—the radar and supporting devices.

A great deal of money goes into such systems. The program of the Department will not equip one of the planes so that it could be really tested and evaluated as a fighting weapon.

The position taken by the committee—a position which was approved in the other body—would authorize the Secretary of Defense to act. We did not put into the measure any compulsory language. We did not undertake to say that the Secretary was "directed." We made the money and authority available, but available only for that purpose. If the Secretary of Defense does not spend the money, it will be returned to the Treasury of the United States.

Mr. DOUGLAS. Mr. President, perhaps the questions I should like now to ask should not be asked in open session. If the Senator feels that it would be inadvisable to reply, I shall understand.

Do I correctly understand that the question is in relation to equipping the RS–70 planes with weapons?

Mr. RUSSELL. No; it does not go that far. The proposal relates to the radar and electronic systems. It does involve research on a new strike missile.

We now have the Hound Dog with which the Senator is familiar. I do not know how it got that very inelegant name. I suppose it was on the theory that no one could kick us around as long as the B–52's had the weapon. But it is a very effective air-breathing missile, with large capacity for nuclear warheads which the B–52 can launch a considerable distance from its target.

One of the advantages of such a system is that it could knock out the ground fire which now could reach heights that, frankly, are greater than any airplane can reach.

For a time we had the U–2 airplane. It flew over Soviet Russia. The very best antiaircraft batteries that were available could not hit it. Today that is not the case.

So the proposal would involve some study and development of a new missile launching system that could be attached to the RS–70. It would not involve any procurement in that area. It would involve the procurement of two more of the prototypes and a more thorough test of the RS–70.

Generally I agree with the Secretary of Defense. I have the greatest admiration for him. However, I regret that he has seen fit to cut off the program, along with that of the Skybolt. I believe he has transferred our dependence on missiles too rapidly at their present stage of development.

The Secretary of Defense is a very able man. He is acting in the best of faith. He has competent advisers and scientists to assist him.

This is not a question of interservice rivalry. The Army and Navy have agreed that the development should be pursued further. I doubt that it will be. But Mr. McNamara changed his mind to the extent of $50 million last year and took that much from the funds given to him over and above what he said he wanted or would spend, and he did increase the expenditure. I do not want to deny him the opportunity to do the same thing in fiscal year 1964.

Mr. DOUGLAS. If I may be pardoned in asking a further question, Why is it necessary to construct two additional prototypes? Why cannot the work be carried out on at least one of the planes?

Mr. RUSSELL. We have had a very unfortunate experience. I should not say it has been "unfortunate." We have had a remarkable experience in the development of new planes. We almost always lose one or two of the first prototypes that are constructed before we locate the bugs. Very small things sometimes cause trouble in the construction of an airplane.

A very little defect can cause the loss of two or three airplanes.

Provision has been made for the flying of one of the planes. It will be test flown this coming summer, we hope. But it will not have any electronic gear. There will be some little differences in any one of the planes. But each of them, up through five, would have improvements. It is believed that the system can be demonstrated then.

The committee and the Joint Chiefs of Staff, supported by many experts in the field, would like to go through the five.

The Secretary of Defense has said he does not want more than three. Last year he did not want to spend more on the development of the radar but he changed his decision.

There is nothing compulsory in the program. If the money is not spent, there will be no cost except the money required to print the provision in the bill. If it should happen that there was some breakthrough on the planes when they are tried, an opportunity would be available, without further delay, to launch into procurement.

Secretary McNamara is the type of man who would reverse himself in a moment if the planes should demonstrate to him that he had been a little too precipitate in sawing off the development program. We have an enormous investment in the program already. We have invested in it around $1,400 million at the present stage. Certainly we should at least get all the information we can out of it, even if this does cost more money.

Mr. DOUGLAS. Am I correct in inferring that the issue is merely whether we shall carry out the program on three planes or on five planes?

Mr. RUSSELL. No; I wish that were the issue. The existing program will be carried out on three planes. We have authorized two more planes and supporting subsystems. In my opinion the Department will not carry out the proposal in full.

Mr. DOUGLAS. If the Congress were to approve the proposal and if the Department were to carry it out, they would make two tests in addition to those that they had planned to carry out. Is that correct?

Mr. RUSSELL. The Senator is correct. It would at least give us an opportunity to completely analyze the RS-70 as a weapons system; and we cannot fully analyze it and test it on three prototypes.

Mr. DOUGLAS. I notice that toward the bottom of page 4 of the committee report there is the following sentence:

> A superficial examination would cause one to think that each of the fourth and fifth prototypes would cost more than $500 million.

The committee goes on to say that it does not think this is true.

I ask the question: How much additional cost does the committee think the approval of these two additional prototypes would occasion? It was stated before that approximately $364 million was proposed to be authorized in the pending bill.

Mr. RUSSELL. I fear I cannot answer that question; to be perfectly frank with the Senator, I do not know.

Mr. DOUGLAS. I think this is a very crucial question. Apparently what is involved is not merely $364 million, large as that may be, but a further and additional sum which will be needed, which is indefinite; but with respect to which some claims have been made that a total of $1 billion would be required.

Mr. RUSSELL. I cannot give the exact amount in dollars and cents. In my opinion, at least four-fifths of the funds which would be required to complete this system would be expended on the radar and other electronics equipment and supporting systems. Less than one-fifth of it would go into the shell and frame of this aircraft.

Mr. DOUGLAS. That is not quite what I meant. I meant to refer to the total cost.

Mr. RUSSELL. To the total cost of what?

Mr. DOUGLAS. To the total cost of the two additional planes.

Mr. RUSSELL. It would be a little less than $1.1 billion, including a finished weapons systems.

Mr. DOUGLAS. So that what is really involved is not merely $363.7 million but well over a billion dollars?

Mr. RUSSELL. That is true, if the Senator believes that Mr. McNamara is going to reverse himself and spend the money.

Mr. DOUGLAS. I know. We can only make the authorization on the assumption that he will reverse himself.

Mr. RUSSELL. I wish I could say that.

Mr. DOUGLAS. There would be no purpose in passing the proposed authorization and saying, "It will not be carried into effect." We must take responsibility and assume that it will be carried into effect.

Mr. RUSSELL. If we did so, we would mandate him and direct him to spend this money. We do not say that.

Last year I hoped to entice him to do this, with the language in the appropriation bill. He did not get in up to his ankles. He did take a little of the money and expanded the program somewhat.

This year it is put in with a hope—but a very faint hope—that he will develop this plane as a weapons system.

Mr. DOUGLAS. I should like to ask the Senator one further question, and then I will stop.

From the experience in the past, has it been necessary to try out new methods on 5 planes? Have 3 planes in the past proved to be adequate to eliminate the initial errors, to get a better design, with better functioning, or has it been necessary to have 5? Is 5 enough? Must we have 7? Or 9? Or 11?

When will we reach the point of greatly diminishing returns?

Mr. RUSSELL. That is a difficult question to answer. There has never previously been a manned aircraft of the same characteristics of the RS-70. The RS-70 really will be a manned missile. It is to be a missile which is operated by a man. It will travel at 3 times the speed of sound. It will have a vast range. It will be able, among other things, to evaluate what has been done in case of a war, something that another missile cannot do.

I do not know exactly how many prototypes we have constructed in all of the weapons systems of the past. It would run somewhat higher for a fighter bomber or a plane like the RS-70 than it would for a transportation plane, for example. I think we built seven of the U-2's, before we put one of them actually on a flight. That was a plane of a very unusual character, with many peculiar qualities. It was not nearly as fast as the RS-70, nor did it have the range of the RS-70; but I have in my head somewhere the figure of seven that were developed before we put it under procurement.

I think that five would be about the right number in this area. This is an unusual plane. It is different from anything we have ever dreamed of before in this country in the way of an aircraft.

It is not likely to be exceeded.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. RUSSELL. If the Senator will indulge me, I will yield further to the Senator from Oregon.

Mr. MORSE. Mr. President, I have only a few more questions to ask the Senator. I should like to clarify for my own thinking the present status of the three RS-70 planes. They have been authorized and money has been appropriated for them.

Mr. RUSSELL. Yes, but they are in the stage of development. While the plane belongs to the Government, it is not considered a weapon. It is in the development stage. We have passed the research stage.

Mr. MORSE. Has any been flown?

Mr. RUSSELL. One will be flown this year. I stated a moment ago I thought it would be flown this summer; but I now believe, upon reflection, that it will be this fall before one will be flown.

Mr. MORSE. Most of the money needed, then, is for the development of the electronics phase and the radar phase? Why would it not be feasible, as implied by the Senator from Illinois, to authorize only that amount of money and to appropriate that amount of money, to put three planes into final working condition?

Mr. RUSSELL. I can only answer the Senator as I answered a few minutes ago. If the Senate wants to discontinue the development work on the RS-70, the Senate has that right. I think it would be unwise. I should like to see the money made available, in the hope that if the very pathetic record on our missile tests should continue, the Secretary of Defense would say, "We must continue in the manned bomber field."

I stated a few minutes ago that I did not think the Secretary would spend the money, but I hoped that the money would be made available. The Senate has a right to do what the Senator says, but I think it would be a mistake.

Mr. MORSE. The point on which I am confused is this: Would we be cutting it out, if we voted sufficient money to complete the development necessary to put the three planes into operation? Would it not require the same research and development for 3 as it would for 20?

Mr. RUSSELL. A few minutes ago I undertook to make clear to the Senator from Oregon that there is a great deal of difference between having the frame of an aircraft with engines perhaps not nearly as powerful as required for a flight when completed and having an aircraft complete with all electronic gear and other devices that will be necessary on the plane, if ever utilized and put in the operational inventory of the Air Force. There is no doubt in my mind that before we are through with it, if the Secretary proceeds with it, the electronic gear and weapons system of this plane will cost much more than the skeleton airframes.

Mr. MORSE. This is the point we need to clear up for the record. To put these three planes which have already been authorized, and for which at least some money has been appropriated into the final striking force the Senator is talking about, would require a considerable amount of money for research and development, in order to develop the electronics, the radar, and the missile devices necessary to make it the plane which was originally contemplated.

Mr. RUSSELL. I think that is a fair statement. That is what the authorization is intended to do; $363 million is a large sum of money.

Mr. MORSE. If we do that, we can talk about three planes and forget about the five, can we not?

Mr. RUSSELL. That would be true if we had absolutely no misfortune in flying them, in getting the original bugs ironed out of the plane and if the new radar and missiles and other devices could be installed on them. If we did that, it would be something never done with any other plane or any other missile we have ever built in this country.

Mr. MORSE. I have two further questions. If the Senator is correct that the probabilities are great that the Secretary of Defense would impound this money, anyway, and not spend it, and if we should go ahead and vote for it and it should become a part of the total budget, would it not follow, it being a part of the total budget, that it would carry a great weight in the votes in the Congress in respect to including or eliminating other items from the budget, especially on the part of those who feel that the budget should not be permitted to go beyond a certain ceiling?

By following that course of action, would we not run the danger of eliminating some other programs that are vital for the defense of the country, for which the money would be saved?

Mr. RUSSELL. That is a question of psychology that I cannot answer. It might have an effect and might be persuasive on some Members of Congress in their voting. All I can say is that I undertook to go through this bill very carefully and bring the total of the bill below what was requested by the Department of Defense. As presented to the Senate, the bill is below that amount.

I have discussed that subject with officials of the Department. I do not want to bring any names into this debate, but I am confident this bill can be justified as it stands today. But if the Senate wishes to discontinue any further program on the RS-70, the majority of the Senate can vote it out. I will vote against such action, but the Senate can do it.

I think we would be in a stronger position today if we had gone ahead and bought the B-52's, but the Secretary did not see fit to do so.

Mr. MORSE. Will the Senator from Georgia tell us if it is his opinion that the Secretary of Defense holds to the view that we now have in being a sufficient quantity of manned bombers capable of meeting any existing potential of Russia in the air?

Mr. RUSSELL. He stated that, in his judgment, the manned bomber force of this Nation was adequate to deter any action against the United States until we had completed a missile program that could supersede or replace the manned bomber.

Mr. MORSE. My last question: Would it be necessary to build any additional aircraft plant installations to carry out this program, or are adequate installations already in being?

Mr. RUSSELL. They are in being. People are at work in them. I do not know where those RS-70 facilities are. I believe it is in California. It is on the west coast. But the program would not require any additional facilities; and, in my opinion, it would not require the plants to employ additional personnel unless a production program were later approved.

Mr. MORSE. This is my last question. It is a delicate one. I hope it will not be misunderstood. Does the Senator from Georgia feel that there is any drive in support of the amounts requested of the committee on the part of those who are greatly concerned about diminishing the productive activity in existing aircraft plants in the period of time it will take to transfer from a war economy into a peace economy, if such a happy day should ever arrive?

Mr. RUSSELL. No one has broached me on that matter. Human nature would have changed suddenly if there were not those who were eager to see a continuation of the programs for economic reasons. We have a widespread defense production now. A great deal of the work is located in two or three States, but some of it is being done in every State of the Union. When efforts have been made to discontinue those programs, or reduce them to a great extent, I have been amazed to see the dismay that has been caused. Nobody communicated with me about the RS-70 program, largely, I suppose, because 3 years ago I took the position that it should be fully developed to see what it could do. That was not the result of lobbying. I am sure there are groups interested in the program, because there are a number of contractors, of subcontractors, involved. But none of them have communicated with me.

I have felt, and still feel today, that it is a mistake for us to abandon the one weapons system in which this country has been preeminent throughout the world and which has been the symbol of the military might of America since the conclusion of World War II; namely, the manned bombers of Strategic Air Command.

Mr. MORSE. The senior Senator from Oregon wants to vote for every last dollar needed to defend his country. I want to gamble in favor of having more than just enough. That has been my position in all my years in the Senate. At the same time, I am aware of the fact that there is a great deal of waste in the whole field of military expenditures. I am aware there are powerful lobbies of economic forces in this country who do not want to see a single man-hour reduced or a single war plant closed. Yet I am satisfied that a great many man-hours can be reduced and a great many plants closed in the interest of the economy of this country, and those man-hours put to work in pursuits of peace rather than war production. How to strike that balance, I do not know. At the same time, when I go through such a report as this, I must be on guard as to whether or not we could take action to support a move for reduced war plants and have those men put to work in other pursuits.

I hope, at least, that world conditions will change so that in the next decade we can be closing airplane plants, and not enlarging them, and not be voting for wasted expenditures to produce war equipment not needed for the defense of our country.

That is why I raised the question earlier. We have a Secretary of Defense whose patriotism is certainly beyond question and, who, as the Senator from Georgia said, is one of the most able men in public service today. He thinks we do not need the expenditures. Of course, there are those on the Joint Chiefs of Staff who do not agree with him, although, as a former member of the Armed Services Committee and as a member of the Foreign Relations Committee, I know something about the military mind and how it can become fixed and set for the continuation of previous practices long after their usefulness is past.

I am raising the question to suggest that we must be on guard and satisfied that the expenditures are needed.

Mr. RUSSELL. What the Senator has just said has caused me more frustration than anything else in my public career. The problem is to be sure we are getting full value for each dollar spent on these gigantic programs for weapons systems, many of which cannot be let through the process of awarding the contract by formal advertising. There has been great waste, running into the millions of dollars, and perhaps billions of dollars, in our weapons systems contracts. We have complex weapons today. We will let a contract to one company for one weapon. Then we will award another contract to another company for a different weapons system. The two of them require men with certain skills. What happens is that contractor A immediately advertises in the newspapers for electrical engineers and electronics engineers and others whom he needs to employ to help carry out the contract.

He raises the payments somewhat because of the competition of the contractor in the next block—it could be in the next block in some areas where these companies are so thick—and I have seen whole pages of advertising competing for people with these skills in the same areas in one State.

I do not see how that is the play of free enterprise, when contractors bid against one another for the services of these people, who are going to be paid out of the same pocket, the pocket of the taxpayer of the United States. We have greatly added to the vicious spiraling of costs to the Federal Government, by permitting the award of these contracts without proper restrictions on the expenditures, even if the people involved are perfectly honest and anxious to complete the job and get the weapon into production. All this runs up the cost.

It got so bad the Government had to create private corporations, which were not subject to civil service laws, to be able to retain enough scientists to be able to check properly on some of these developments.

There may be some answer to that problem. I have told Secretary McNamara that if he applied his genius to this subject, he could save more money in the long run than by banishing any one weapons system. He is applying himself to it. He said that he hoped to increase by $5 or $6 billion, I believe, the amount of contracts that were let on a fixed price or incentive price basis rather than on a cost-plus type.

If we can solve that problem and still produce the best weapons on earth, he will be entitled to the acclaim of the country. However, we must have the best weapons on earth. We hope to devise means by which we can hold down the cost.

But cost is not the most important consideration. You cannot place a monetary value on the life of any American boy or compensate his family in dollars if his life is snuffed out. I do not propose to vote to take any American away from his home and peaceful pursuits and to send him into what could be the inferno of a nuclear war unless he is supplied with the finest weapons on earth. I hope that we can provide these weapons at a reasonable cost, but in the final analysis, they must be the best. Ours is the richest and most powerful country on earth. This imposes on us an obligation to see that the American serviceman is equipped with the finest weapons that the American industrial machine can produce. It must be the best even if the cost in dollars is great, and whether it be a rifle, an airplane, a tank, or a flamethrower.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. MANSFIELD. I have listened to what the senior Senator from Oregon has said with great interest, because I believe it concerns a significant point and ties in with what the distinguished chairman of the Armed Services Committee has been saying on the floor of the Senate this morning.

First, before I get to my question, I believe I can corroborate, at least in part, some of the evidence presented by the Senator from Georgia this morning in certain areas.

Yesterday I heard on the radio, while going home late at night, that there had been a Polaris missile failure off Cape Canaveral. This was, I believe, though I'm not absolutely certain, either the eighth failure in 11 tries or the fifth failure in 8 tries. That, of course, indicates that the missiles which we have at the present time are not absolutely dependable, and therefore, contrary to the publicly expressed views of the Secretary of Defense, Mr. McNamara, it would appear to me that the day of the manned bomber is not immediately at hand, and that missiles still need to be developed to a greater extent and of greater accuracy; and that, therefore, there is room for both manned bombers and improved missiles in the foreseeable future. That is only my personal opinion. I could be wrong, and Mr. McNamara could be right.

The Senator has said that the Secretary of Defense, whom he praised very highly, is not omniscient. I venture to state that the Secretary of Defense would be the first to endorse that statement. However, he does have the power of decision, which he has not taken arbitrarily unto himself, but which was given to the office of the Secretary of Defense under the Reorganization Act, which brought about a combination of the Armed Forces into one Department.

There have been differences—and still are—between the Joint Chiefs of Staff; there have been differences—and still are—among Senators, both on and off the Armed Services Committee, as to whether the RS-70 ought to be built or not built, and as to whether this or that should be done in the field of defense.

Sometimes those differences have been influenced by the particular affinity which an individual Senator may have for a particular service. I am speaking of no one but myself, because I do have a particular affinity for the Marine Corps. I do go a little out of my way to do what I can, along with the Senator from Illinois [Mr. DOUGLAS], the Senator from Florida [Mr. SMATHERS], the Senator from Maryland [Mr. BREWSTER], and others, to see that its interests are protected. Not that the interests of the Marine Corps need any protection, but we are always ready, able, and willing, to go to bat for the corps.

Mr. RUSSELL. I might say that those efforts are most effective. It is the only service that has a floor under it; its strength cannot be reduced below three divisions and three wings. The marines have taken care of their own.

Mr. MANSFIELD. For which we are thankful to the distinguished Senator from Illinois [Mr. DOUGLAS] the author and, may I say, the successful advocate of the legislation making this possible as well as distinguished chairmen of the Armed Services Committees in both Houses, the Senator from Georgia [Mr. RUSSELL], and the Representative from Georgia [Mr. VINSON].

There are the differences which have been mentioned. We have a responsibility in committee, in the Senate, and in the Congress. The Congress believes that additional funds should be made available to further the development and research on the RS-70. We are exercising that responsibility, despite the fact that differences do exist. In the Department of Defense there are differences also. There are differences among the Joint Chiefs of Staff. On occasion they are not unanimous on matters of great importance, because here again, I have the idea, people naturally are looking out for the interests of their own services. Being human, they cannot avoid it. They try to be impartial. No matter what one does in life, no matter how hard one tries to be impartial, it is practically impossible because prejudices and aversions and predilections must be taken into consideration.

However, when there is a difference among the Joint Chiefs of Staff, it is the duty of the Secretary of Defense to take over and make his decision. It is not only his duty, but his responsibility to do that. I wish to say publicly that in my opinion this country has never had a better or a greater Secretary of Defense than Mr. McNamara. I am glad to know that even though Senators may have differences with him on particular points, they all have a great respect for him, and do not question in any degree his honesty, or his sense of responsibility. It is my belief that we are extremely fortunate as a Nation to have a man of his character and capacity in the office of Secretary of Defense.

Getting down to the question I wish to raise, I should like to ask the Senator whether there were differences among the Joint Chiefs of Staff as to whether or not this additional money for the Nike-Zeus should be appropriated or should be authorized this year?

Mr. RUSSELL. I believe there were. I know that the Army Chief of Staff, who is a member of the Joint Chiefs of Staff, favored this authorization and appropriation. General Taylor, the chairman, had adopted a similar attitude.

Mr. MANSFIELD. The other Joint Chiefs of Staff, even though they did not oppose, did not express support for it. Is that correct?

Mr. RUSSELL. I am sorry that I cannot answer that question categorically. I know that General LeMay was very much opposed to it. He thought it would be an extremely wasteful program to be approved. I cannot state from my own knowledge what the Chief of Naval Operations had recommended about it. He was asked no questions about it that I remember.

Mr. MANSFIELD. On the basis of this difference, the question was referred to the Secretary of Defense to make a decision.

Mr. RUSSELL. That is correct.

Mr. MANSFIELD. He made it. He said it was not needed, and he so reported to the committee?

Mr. RUSSELL. He stated that it would be wasteful to proceed with a procurement program until research and development had produced an adequate system. That was the Secretary's position, in as few words as I can state it.

Mr. MANSFIELD. And that was in relation to the Nike-Zeus and the development of other missiles?

Mr. RUSSELL. That was only one generation. We started with the Nike-Ajax. We positioned many batteries of it. They were scattered around the Nation. Then we went to Hercules and did the same thing. Now it is Nike-Zeus. But it would not be effective against a sophisticated attack by ballistic missiles.

The Secretary took the position before the committee that he favored a research and development program for a new missile system rather than to go into the production of one which General LeMay said even the Army felt had its weaknesses and was not an effective weapon against many intercontinental ballistic missiles.

Mr. MANSFIELD. Did I correctly understand the Senator from Georgia to say that the additional $196 million which is being requested would be only the forerunner of a program which would ultimately cost anywhere between $12 billion and $20 billion?

Mr. RUSSELL. The Senator is correct; but I wish to make it perfectly clear that it is intended to build a system sometime. Expense will have to be incurred in order to develop an improved system which will do the job.

The Department of Defense said that the amount of waste which would be involved in rebuilding the Nike-Zeus if it were deployed before the completion of Sprint and the improved radar would be $2,800 million.

Mr. SALTONSTALL. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. SALTONSTALL. In further answer to the Senator from Montana, the majority leader, it is my understanding that there are four developments in the so-called Nike-Zeus, leading to what we know can be done. If we now spend $196 million as a start to put into operation Nike-Zeus, we will be putting it in with two of these four developments. So we shall be putting into operation a weapon which we know can be improved if more time is given.

The other side of the question is that these two developments are an improvement and can be used as an effective weapon in 2 or 3 years, rather than waiting 4 years to attain any such development and have a more perfect, more useful instrument. As I see it, that is the difference from the RS-70, so far as laymen like the Senator from Georgia and me and other members of the committee can determine. We can go forward with a weapon which we know is not as perfect as it can be made, whereas the RS-70 is the only airplane that is now a strategic bomber. It is the only airplane for the future. Until we are secure with missiles, we should, in my opinion, go forward with research on the airplane.

As I see it, that is the difference from the Nike-Zeus. We know we can develop that instrument to greater advantage without spending so much money on putting into operation one which we know is not perfect.

Mr. RUSSELL. Senators may turn to page 67 of the printed hearings, where the Secretary of Defense deals with this subject in about two pages in his unclassified testimony.

Mr. CURTIS. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. CURTIS. I thank the distinguished chairman of the Committee on Armed Services, who has for many years labored for this Republic and its defense.

The junior Senator from Nebraska has an open mind concerning the decision which should be reached in regard to Nike-Zeus. I have a question; but first permit me to say that as I view certain problems in foreign policy, in defense procurement, in what is taking place with respect to disarmament, and the testimony to which I listened in the Committee on Government Operations involving military decisions on contracts, it is an understatement to say that I am not greatly disturbed. For that reason, I believe the Senate should go into closed-doors session and explore this issue to the fullest extent.

My question involves certain figures which I believe should be developed before the Senate goes into closed-doors session. The distinguished chairman mentioned the figures $20 billion, $10 billion, $12 billion, and $2.8 billion in connection with the long range. I should like to have each of those figures set in proper perspective. I realize that $196 million is the figure for the first year. But what is meant by the $20-billion figure; the $10-billion and $12-billion figures; and the $2.8 billion figure?

Mr. RUSSELL. As to the first two figures which the Senator suggested, perhaps it would be better to answer his question in detail in closed-door session. The $2.8 billion is not classified. That is the amount which would be required to modernize the Nike-Zeus system, if it were adopted as proposed in the amendment.

Mr. CURTIS. I am not asking for classified information. A while ago, the Senator mentioned $20 billion.

Mr. RUSSELL. I did.

Mr. CURTIS. What does that amount relate to?

Mr. RUSSELL. I stated that the cost of the complete system, whether it be Nike-Zeus or Sprint—Sprint will be the next successor to the Nike-Zeus missile—had been estimated to be anywhere between $12 billion and $20 billion. I believe we shall have to buy a system before we are through. The question is whether it is wiser to embark on this system, with its imperfections, or to push as vigorously as we can a research and development program that will eliminate the weaknesses in the Nike-Zeus system, and then install the sort of system that we believe will be effective.

Mr. CURTIS. Is the Senator saying that we are about to spend between $12 and $20 billion on some system?

Mr. RUSSELL. I think we will.

Mr. CURTIS. So that sum of money is not involved in the narrow decision as to what system to select.

Mr. RUSSELL. I tried to make it clear that the Department of Defense had estimated that it would be a waste of $2,800 million to push into this program rather than to wait for the perfection of the next class of missile and radar.

Mr. CURTIS. The term "waste" was used. Also the term "loss" was used. Neither is quite accurate, is it?

Mr. RUSSELL. No.

Mr. CURTIS. If something requires trial and error, and the evolvement of it leads to the defense of our country, it is neither waste nor loss, is it?

Mr. RUSSELL. No. It would all depend on how much protection Nike-Zeus would give over and above that afforded by the Nike-Hercules, which is now in position.

Mr. CURTIS. It is somewhat similar to my insuring my house last year. Although I did not have a fire, my insurance premium was neither loss nor waste.

Mr. RUSSELL. To that extent, the Senator is correct. I do not know how to determine what value would be received from the Nike-Zeus system.

Mr. CURTIS. Our responsibility as Senators is to try to find the best answer to the question whether to have Nike-Zeus from the standpoint of the defense of the country, and not an earlier system.

Mr. RUSSELL. I think that is true. If I were convinced that Nike-Zeus were an effective weapon, its cost would not disturb me in the slightest degree. I would support this amendment today as vigorously as I was capable of supporting it.

Mr. CURTIS. Yes.

As I understand, there are well-qualified experts on both sides of this controversy.

Mr. RUSSELL. I suppose that is correct. I have not heard the testimony of the scientists or technicians who favor the Nike-Zeus, but I assume such testimony can be obtained.

Mr. CURTIS. If the proponents are correct—although I do not know that they are—this course would not be any more expensive than the alternative course, would it?

Mr. RUSSELL. Yes; if the proponents of the Nike-Zeus program are correct, Congress should authorize it now.

Mr. CURTIS. And if they are right, that would be the most economical thing to do, would it not?

Mr. RUSSELL. No; I cannot say it would be the most economical, because everyone—including the Army personnel who are pushing this most vigorously—admits that there are defects in this system, and that they will have to be corrected before it will be an effective weapon. I think the Army estimates that cost at $1,500 million.

Mr. CURTIS. Of course, history proves that that has occurred in connection with many complicated weapons.

Mr. RUSSELL. Of course it has. This will be the fourth generation of these Nike weapons. We began with the Nike-Ajax; then the Nike-Hercules; then the Nike-Zeus, which has been in the process of development for some years. We have had considerable test firings with it. Some of them have been very successful—when there were no complications.

The question is whether we shall proceed with this system, even with all its defects, or whether we shall emphasize the development of the improved system and deploy it.

Mr. CURTIS. I thank the distinguished chairman of the committee. My observation has been that in all walks of life, those who develop strength are the ones who do the impossible, and keep on doing the impossible.

Mr. YOUNG of North Dakota. Mr. President, will the Senator from Georgia yield to me?

The PRESIDING OFFICER (Mr. KENNEDY in the chair). Does the Senator from Georgia yield to the Senator from North Dakota?

Mr. RUSSELL. I yield.

Mr. YOUNG of North Dakota. First, I wish to say that I share completely the viewpoint of the Senator from Georgia that we should have the most modern weapons system in the world. I also share his frustration at times as to how this can be done without vast expenditures of money, with much of it wasted. This great cost was brought home vividly, recently, when we offered to give the Skybolt missile to the British, after we had spent approximately $650 million on research on it; but the British could not even afford to finish the research on this one missile.

But we are trying to develop all kinds of costly weapons.

From the report, I note that the bill would cover approximately $15,147 million of expenditures for procurement. Does the Senator from Georgia have any figures he can disclose as to the amount of money the several military services have asked for in their requests to the Secretary of Defense?

Mr. RUSSELL. Yes. It was slightly over $67 billion.

Mr. YOUNG of North Dakota. For the same purposes?

Mr. RUSSELL. No; that was for the entire budget. Secretary McNamara reduced it; in making his budget request, he reduced the total from $67 billion to slightly less than $52 billion.

Mr. YOUNG of North Dakota. I think the Secretary of Defense performed a good service in cutting down these requests.

Mr. RUSSELL. I agree. However, that is not unusual. For the last 10 or 15 years the armed services have requested much more of the Secretary of Defense than he has approved for the budget. Secretary Gates rejected a number of requests, and Secretary McElroy turned down some of them.

Mr. YOUNG of North Dakota. Yes.

If we were to appropriate all the money that all the people in the Pentagon request as well as all other departments of Government want there would not be enough money in the United States to pay for it.

Mr. RUSSELL. Of course not. James Forrestal, a man of great ability, who served as Secretary of Defense once referred to a saying of a wise man; namely, that "if you left it to the generals and the admirals, they would fortify the moon."

At that time, everyone thought the statement quite fantastic. However, today we are seriously thinking about fortifying the moon.

Mr. HARTKE. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. HARTKE. I wish to ask a question in connection with the present difference of opinion between the Department of Defense and the committee concerning the procedure for the followup on the RS–70. In the report it is indicated that the Defense Department intends to spend $81 million of available funds for the completion of prototypes which I understand they say they will never use. I do not know why they intend to keep on producing something which they will never use.

Mr. RUSSELL. Mr. President, it is rather difficult to answer that question. I understand that they wish to continue with the programs they now have underway. Furthermore, I do not think any of these aircraft will be put into inventory in the Department of Defense, for military use. I would be less than frank if I did not make that statement. I think we will learn something from this; I think we always learn something when we complete the development of prototypes.

Mr. HARTKE. But that is rather expensive education.

Mr. RUSSELL. Yes; but we are trying to defend something that is very valuable. There is nothing more valuable than the American way of life. If a man has a fine, expensive house, he has to carry more insurance on it than the amount of insurance he would carry on a shack.

We in the United States have a better civilization and a better way of life than anyone else under the canopy of heaven has ever known. We must be prepared to spend the amount of money required to defend it.

Mr. HARTKE. Those are very beautiful words, of course. However, let me ask this question: Did they not junk the Skybolt?

Mr. RUSSELL. Yes. But it was not related to the RS–70 program. It was to be attached to the B–52.

Mr. HARTKE. Yes. However, they spent a great deal of money on it.

Mr. RUSSELL. Yes, more than $500 million.

Mr. HARTKE. And even if they had spent more millions on it, it would still have been unsuccessful, would it not?

Mr. RUSSELL. But this recommendation on the RS–70 program occurred after the Skybolt program was killed.

Mr. HARTKE. And if Congress decides that it should eliminate it, Congress should also eliminate additions to the $81 million, should it not?

Mr. RUSSELL. I think a strong argument can be made for that. Of course, I oppose the elimination of any of it.

Mr. HARTKE. I understand.

Mr. RUSSELL. But if an irrevocable decision is made to abandon the manned bomber and to concentrate solely on the missiles, I do not think any case can be made for continuing with this development program.

Mr. HARTKE. I understood the Senator to state that the Secretary of Defense has decided that the manned bomber program should not be continued.

Mr. RUSSELL. I said that he has already spent $50 million more this year than he had planned to spend on the RS–70.

Mr. MILLER. Mr. President, will the Senator from Georgia yield?

Mr. RUSSELL. I yield.

Mr. MILLER. I should like to return to the subject of the RS–70. I understood the distinguished chairman of the committee to state that the position of the Secretary of Defense is that we now have an adequately manned bomber fleet which will be adequate until the time when the missile force is sufficient to replace and to supersede our manned bomber force.

Mr. RUSSELL. Yes, until the time when it will give us sufficient retaliatory strength to deter aggression against our country. I understand that to be the position of the Secretary of Defense. I do not see how in any other way he could justify curtailing the RS–70 program.

Mr. MILLER. I turn now to page 43 of the hearings:

> The next issue I had to face was the development of the B–70, or the RS–70 as it was later called. The issue here was not the future of manned strategic aircraft in general. Rather, it was whether this particular aircraft, in either of its configurations, could add enough to our already programed capabilities to make it worth its very high cost.

If I correctly understand what is stated there, it seems to me that the position of the Secretary of Defense is that he is not opposed to continuing the manned bomber capability of our country in the future.

Mr. RUSSELL. He said manned aircraft. He drew a distinction. If the Senator will read the testimony before the Senate committee he will see that the Secretary drew a distinction between the bomber and the tactical fighter and interceptor. We are getting ready to embark on a program which has been the subject of extensive hearings in the Committee on Government Operations. Under that program we would buy several hundred manned aircraft, but they would be tactical fighters and interceptors in nature and not a part of the strategic air force.

Mr. MILLER. In other words, the understanding of the chairman is that the position of the Secretary is that the issue here is not the future of manned strategic aircraft which are not of the bomber category.

Mr. RUSSELL. No. That is a little too restrictive. If the Senator will pursue the subject, he will find, when he reaches a further section of the Secretary's testimony, that the Secretary was asked about that subject. He stated he had never been in favor of doing away with manned aircraft. The Secretary said he could not foresee when we would not need large numbers of tactical aircraft in the fighter-bombers. Of course, today a one-man plane can carry a larger payload than could the B–17 of World War II days. We have made tremendous strides in the development of aircraft.

Time and again the Secretary asserted that he was in favor of pursuing the development of manned tactical aircraft and fighter-bombers. Indeed, the entire TFX contract revolves around the tactical aircraft. But he said that he did not now believe in adding to our inventory any new strategic bombers.

The Senator is an Air Force officer. He understands the difference between a strategic plane and a tactical plane. We shall acquire thousands of tactical planes. We have no plans now to acquire any new strategic planes after the B–52's have been exhausted by attrition.

Mr. MILLER. I appreciate the chairman making that point, because that is what I was trying to establish. We observe the Secretary of Defense stating that the issue is not the future of manned strategic aircraft at all. Rather, it is whether or not this particular RS–70, with its configurations, could add enough to already programed capabilities to make it worthwhile. If that is his position—and he is not denying the desirability of having manned strategic aircraft in the future, and has said that the RS–70 does not have the capabilities or potentials which he feels are desirable—then the question is, What does he have to suggest as a replacement?

Is the Air Force doing nothing in that area but sitting, hoping, and praying that the Secretary will expend the funds that we appropriate? Or is the Air Force seeking, under the guidance of the Secretary of Defense, to develop something which the Secretary of Defense could determine would offer sufficient potential, as distinguished from the RS–70, to warrant going ahead with it?

Mr. RUSSELL. Mr. President, I did not understand that the Secretary of Defense advocated construction of a strategic manned bomber to replace the planes which are now in inventory. The transition would be from planes now in inventory into reliance upon missiles. That is why I parted company with the Secretary of Defense because, in my opinion, it would be too early to take the risks that would be involved in relying upon missiles that have demonstrated their unreliability in the past, and have been failures week after week.

Mr. MILLER. Would the chairman say that the issue on that point is whether the Congress thinks there should be a future development of manned bombers or manned strategic aircraft as distinguished from the position of the Secretary of Defense, which is apparently not agreed to by several members of the Joint Chiefs of Staff, that there should not be such a future?

Mr. RUSSELL. My position—and I think I express the view of the majority of the Committee on Armed Services—is that I would not be willing to take the chance of abandoning deterrent power in bombers in view of the state of the art in missiles today. I still think that the aircraft is maintaining peace on earth today. It has been the greatest deterrent to world war III. It is the greatest deterrent to an atomic holocaust that the Communists would not hesitate one moment to perpetrate if they were sure that they themselves would not be destroyed in the process. I refer to the Strategic Air Command and its manned bombers.

I could go into that question in detail. I would prefer to do so in a closed-doors session.

I am not willing to hazard the security of the United States on missiles when our present bombers are exhausted. I would prefer to run the risk of the waste of $300 million, $400 million, $500 million, or $600 million to develop an effective manned strategic aircraft.

Mr. MILLER. I thank my friend from Georgia.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. MAGNUSON. I wish to ask a very practical question relating to the RS-70 program. As the Senator from Georgia knows, the Senate Subcommittee on Independent Offices of the Committee on Appropriations has, for about 4 years, proposed the appropriation of substantial sums of money for research for the development of a supersonic airplane for the Federal Aviation Administration.

I believe that last year the amount appropriated was $32 million. I shall place the exact figure in the RECORD. I am not sure.

The purpose of the research was to develop a commercial airplane of the same type as the RS-70. Constantly we have asked the question of the FAA: Is not the military developing the same plane? Why is there any duplication? Do the programs overlap?

The administration, including the Bureau of the Budget, has always approved X number of millions of dollars to proceed with the same development we are now talking about.

Now a suggestion is made by the committee that the executive branch is unlikely to obligate appropriations that may be made based on the authorization unless the Department of Defense changes its views. Why, on the one hand, do we appropriate money for the Federal Aviation Agency to proceed toward the same general objective—the RS-70—while, on the other hand, the money for the project is not spent? Is there a conflict, a duplication, or an overlapping? Should we proceed to approve the amount requested every year, or should we cease doing so?

Mr. RUSSELL. Mr. President, I cannot answer that question. I believe the question will be pretty well settled this year. Very frankly, I would not favor adding the authorization to the bill if the Secretary of Defense had not utilized in the present fiscal year more than he said he would use at the beginning of the year. We allowed him more than he said he needed, and he has utilized $50 million of that amount this year.

I did not want to deny to him the opportunity to utilize more of the money next year. I cannot answer the Senator's question as to where the Department of Commerce spends its money.

Mr. MAGNUSON. I have referred to the Federal Aviation Agency.

Mr. RUSSELL. The Federal Aviation Agency. I do not remember where I read this, but it has been stated that the development of the RS-70 would have some value in determining the future characteristics of commercial planes. As the Senator knows, the commercial companies until now have utilized for commercial purposes all of the larger type aircraft built by the Department of Defense for military purposes.

Mr. MAGNUSON. They have utilized the jets and everything else.

Mr. RUSSELL. They have had an indirect subsidy through the use of the research and development money. I do not complain about that, because this also has been of real military value.

Mr. MAGNUSON. I wish to ask the Senator a practical question. Does the Senator from Georgia see any conflict between having the Federal Aviation Agency going ahead with its research and the controversy over the RS-70?

Mr. RUSSELL. I do not.

Mr. MAGNUSON. Very well.

Mr. RUSSELL. Judging from what I know. I am not familiar with the details of the Federal Aviation Agency program.

Mr. MAGNUSON. The Senator has of course approved money to permit the Federal Aviation Agency to go into its research program. I shall put the exact figure in the RECORD. It involves millions of dollars.

Mr. RUSSELL. Unfortunately, I was probably engaged on the defense appropriation bill at the time and was not present when the Senator from Washington held hearings on the Federal Aviation Agency.

Mr. MAGNUSON. The Senator from Oklahoma and I have been faced with the request every year. We think the Congress feels we should go ahead with the research.

Mr. SYMINGTON, Mr. FULBRIGHT, and Mr. PROXMIRE addressed the Chair.

Mr. RUSSELL. Mr. President, I had promised the Senator from Missouri I would yield to him.

Mr. MAGNUSON. I think this is a serious matter.

Mr. RUSSELL. I agree with the Senator from Washington.

Mr. MAGNUSON. We are talking, on the one hand, of going ahead; and, on the other hand, of not doing so. The Appropriations Committee has been giving the Federal Aviation Agency millions of dollars a year to go ahead with research for the same thing. I do not mean it is exactly the same thing. They are two different airplanes, but the objective is the same.

Mr. RUSSELL. The objective is the same. If the RS-70 is developed even to the limited stage now proposed for it, it should have great value in assisting with the development of commercial planes of the mach 3 type.

Mr. MAGNUSON. I thank the Senator from Georgia.

Mr. McCLELLAN, Mr. PROXMIRE, Mr. FULBRIGHT, and Mr. SYMINGTON addressed the Chair.

Mr. RUSSELL. I will yield briefly to the Senator from Arkansas.

Mr. McCLELLAN. Mr. President, do I correctly understand that the Secretary of Defense does not want this authorization?

Mr. RUSSELL. The Secretary of Defense did not request the money.

Mr. McCLELLAN. Has he stated he does not want it, before the committee?

Mr. RUSSELL. I believe he did. He did not ask for the money. I do not know whether he stated he did not want it. I received the impression he was not at all enthusiastic about enlarging the program.

Mr. McCLELLAN. What I wish to clarify is that although the Secretary possibly does not want it, at least we know he did not request it.

Mr. RUSSELL. He did not request it.

Mr. McCLELLAN. We do not know whether he will spend it. We are merely placing ourselves in the position of making possible the appropriation, so that the Congress will not have the responsibility, and the responsibility will be entirely on the Secretary as to whether to spend the money and whether the program is processed or not.

Mr. RUSSELL. In my opinion, the motivating factor in the Committee on Armed Services at least of the Senate—and I would undertake to say of the other body—was the fact that we were not willing to assume the responsibility of jumping from manned aircraft to missiles at their present rather ineffective stage of development.

Mr. McCLELLAN. Without passing on the merits in my own mind at the moment, I wish to make it clear that what we would do, in effect, if we put this into the bill, is say, to the Secretary, "We do not wish to take the responsibility. We are going to make the money available to you, so that ultimately you may decide."

Mr. RUSSELL. I would go a bit further than that. By my vote I would say that I think he should go ahead and develop the RS-70.

Mr. McCLELLAN. We would say we think he should.

Mr. RUSSELL. I do not believe he will, but in my opinion he should do so. There is a difference of opinion between us on this.

Mr. McCLELLAN. In voting for it not only would we say that we think he should, that we hope he will, but also we would make the money available.

Mr. RUSSELL. We would make it available.

Mr. McCLELLAN. It would be his responsibility ultimately, if he refused to do this.

Mr. RUSSELL. I think the Senator is correct.

Mr. McCLELLAN. I thank the Senator from Georgia.

Mr. RUSSELL. Mr. President, I yield to the Senator from Missouri.

Mr. SYMINGTON. Mr. President, I must go to my State later this afternoon. I have a short statement I would like to make.

Mr. STENNIS. Mr. President, may we have order in the Chamber?

The PRESIDING OFFICER. The Senate will be in order.

Mr. RUSSELL. Mr. President, I yield to the Senator from Missouri to make his statement. Then I shall be glad to yield to any other Senator who has a question with respect to this issue.

Mr. SYMINGTON. I thank the chairman of the committee.

Mr. President, first I should like to associate myself with the remarks made by the distinguished Chairman of the Senate Committee on Armed Services with respect to the RS-70 and Skybolt programs.

Mr. President; I present a few thoughts with respect to proposed increase in the Nike-Zeus program.

Two approaches have been carefully considered in the past few years which the United States can use to provide itself with an anti-intercontinental ballistic missile capability as quickly as possible.

One approach would be to start production of the currently developed Nike-Zeus system, while continuing the development of some very major and essential improvements to the system, including an advanced radar and a high performance missile.

These two components are the essential parts of the Nike-X. The initial Zeus deployment would then be followed by a Nike-X deployment, and the original Zeus batteries would be replaced by Nike-X batteries.

The second approach would be to develop, with all available resources, the Nike-X, which would be available for initial deployment some time after the year in which the Nike-Zeus system could begin to be deployed. However, the time of full deployment of Nike-X in the second approach would be the same as that which in the first approach, the Nike-Zeus, would see full deployment.

The limitations of Nike-Zeus bear on its inability to cope with a threat, whose technology is already well in hand, and which is designed to penetrate the Zeus system.

The Nike-X system, which is designed to overcome most of the Zeus limitations by use of more advanced radar and interceptor technology, would have a far greater capability against decoys, jammers, nuclear blackout, multiple warheads, and other penetration devices, than Nike-Zeus.

The Defense Department decided not to request authorization of funds for Nike-Zeus deployment because of the following considerations:

First. Deployed Nike-Zeus batteries would be ineffective against the kind of penetration aids already planned for our own strategic systems, and at a date earlier than Zeus could be deployed.

Second. An AICBM of much greater capability than Nike-Zeus could be made available soon after Nike-Zeus.

Third. The overall Nike-Zeus engineering and deployment effort would interfere with the development of the essential changes to the system to make it into the Nike-X type.

Fourth. To establish some batteries of Zeus, and then replace them later with the improved Nike-X, would cost $2.8 billion additional—a very great deal of money.

The earlier, or additional protection the Zeus batteries would provide would be very small against the threats designed to overcome Zeus.

Fifth. The issue of whether Nike-Zeus should be deployed has arisen every year since 1958; and has been decided consistently in the negative because of its poor performance characteristics. Although the original system has been modified several times, its basic limitations have not been overcome.

As I see it, the Department of Defense should not embark on a $20-billion expenditure to deploy a system of capabilities greatly inferior to those of a system—the Nike-X—now under design.

As many of my colleagues know, for many years, along with other Senators senior to me on the Armed Services Committee, I have been consistently skeptical about these Nike programs up to the Nike-X.

On page 584 of the hearings, Senators will note what already has been spent on these efforts. I read the totals:

Nike-Ajax $1,250,900,000.
Nike-Hercules, $2,171,400,000.
Nike-Zeus, $1,372,200,000.
Nike-X, the Sprint, $62.6 million.

Under any truly modern concept of how a possible enemy would attack, the Nike-Ajax is worthless.

Therefore, we have put $1,250.9 million down the drain on that development.

Nor do I believe in the ability of the somewhat improved Nike-Hercules to stop a modern attack.

Therefore I believe there may be another $2,171.4 million down the drain from the standpoint of what is true defense today.

Again, because of developments in offensive capacity, I am skeptical about the Nike-Zeus.

So we have another $1,372.2 million which also may well be down the drain.

Of this some $4.8 billion, therefore, it would appear that our hope now lies with the Nike-X, which has cost us so far a little over 1 percent of the cost of the total Army ground-to-air missile effort.

But it goes further than that. The Air Force has spent $2,160 million on the ground-to-air Bomarc; and I am confident this unit is not adequate either with respect to required modern defense as against offensive developments.

In addition, it should be noted that we are not being niggardly in our current efforts with respect to ICBM defense, in that today we are asking for over $450 million in this field in the current budget, of which a large proportion is for the Nike-X and an additional amount to continue the Nike-Zeus test program.

Therefore, the total of all the money expended by this country in the ground-to-air effort, which would seem to be down the drain, from the Nike-Ajax through the Nike-Hercules and the Bomarc to the Nike-X, is about $7 billion.

The Nike-X may do the job. The others, in my opinion, will not. If I am correct, in this question of effective anti-ICBM's, there is a maginot line concept here which somewhat disturbs me.

For these reasons, I cannot support the request for the additional authorization of this large amount of money for statutory procurement of parts for the Nike-Zeus.

I believe our Nation is running into serious fiscal problems.

Therefore, I urge the Senate not to add this additional amount for the procurement of Nike-Zeus parts.

Mr. STENNIS. Mr. President, will the Senator yield at that point, before leaving those figures?

Mr. SYMINGTON. I yield.

Mr. STENNIS. Let me say to the Senator from Missouri that I agree with him in his lucid, forceful statement, in which he is giving a brilliant, brief analysis of the situation.

Mr. SYMINGTON. I thank the Senator.

Mr. STENNIS. As I understand, the Senator from Missouri is strongly in favor of pushing an antimissile missile program and is supporting the Sprint feature, which is the ultimate one planned now, but does not think it wise to go into procurement now of the Nike-Zeus, which he considers inadequate and thinks will not do the job.

Mr. SYMINGTON. The Senator is correct. We have offensive missiles that could not be stopped by the Nike-Zeus.

Mr. STENNIS. So the point made by the Senator with respect to the amendment involving $196 million is that it does not involve research and development for either system, because we have money in the bill for that, but it solely involves money for procuring for the Nike-Zeus missile, which the Senator has described as being inadequate. Is that correct?

Mr. SYMINGTON. The Senator is entirely correct. The money would be for procurement of Nike-Zeus.

We have in the bill several hundred million dollars for Nike-X development and more millions for a Nike-Zeus test program, which will be useful to the Nike-X program.

Mr. STENNIS. May I ask the Senator another question about the Nike-Zeus being adequate now? The Senator from Missouri has already stated he has followed this matter over the years. Does the Senator know of any scientist, outside the scientists who are promoting the Nike-Zeus, who judges it to be adequate to do the job?

Mr. SYMINGTON. I do not know of any independent scientist who expects the Nike-Zeus to do the job. In addition, many of the great scientists working in great corporations, assigned to study and design systems of this character, as, for example, Bell Laboratories, believe that while there may be something in the Nike-Zeus, they are unanimous in believing that the Nike-X is a major improvement over the Nike-Zeus, and that the Nike-X will do the job which we all agree that the Nike-Zeus cannot do.

Mr. STENNIS. I will come to that later. I understood the Senator from Missouri to say the Nike-Zeus is inadequate to do the job in its present state and therefore we should not go into procurement now. When he says it is inadequate, he illustrates that it is inadequate by pointing out that we have already gone beyond the Nike-Zeus intercepting capacity.

Mr. SYMINGTON. The Senator is correct. He and I were opposed to Nike-Ajax many years ago. We spent over $1 billion on that. It is clear that it is useless, from the standpoint of modern nuclear attack. He and I were also opposed to the Nike-Hercules, because we thought it would not be developed in the time period where it could defend the country from attack. We have put over $2 billion in Nike-Hercules.

We were extremely skeptical of the Bomarc, because we did not regard it as a modern defense effort. But over $2 billion was spent on Bomarc because we were overruled and it was decided to go on with the project.

My position is that the Nike-X may be able to do the job. There is always a danger that it may not, because of the concepts involved. On the other hand, expenditures on the Ajax have gone down the drain. Expenditures on the Hercules, the Bomarc, and on the Nike-Zeus may be down the drain. So there is $7 billion.

Mr. STENNIS. While we do not know too much about the subject, just to show that we are not newcomers to it, several years ago, with reference to our position on the military authorization bill, and the Senator from Missouri backed that effort, I have figures to show that, because the Senate refused to approve construction of a site, we saved $1½ billion on those programs. Secretary McNamara testified just last year, in the open hearings, that his estimate of the amount saved every year in the operation of the missile, because we had cut that item out, was $500 million a year.

I cite that fact, not with any pride, but to show that we have been following this matter for years.

I think that fact is highly significant now because of the Senator's opinion that Nike-Zeus is not able to do the job.

May I quote General LeMay? I point out that, after all, he is the Chief of Staff of the Air Force. He is the one who will give the bombers the orders. The Air Force will have the responsibility for the missiles, if the order is given. It is the responsibility of the Air Force.

I refer to page 928 of the hearings, when General LeMay was testifying. He made several points, but I will read just one or two of them. The Senator from South Carolina [Mr. THURMOND] had asked some very good questions.

The Senator asked:

> You mean you do not think it is worth the effort to develop it at all?

Talking about the Nike-Zeus.

General LeMay said:

> No, only not to go into production—

And that is what we are talking about, production—

> at this time with what we can do with the Nike-Zeus.

In other words, it would not do for us to go into production.

General LeMay said, further:

> I want to continue on with the development at the fastest possible speed.

That is what the money is in the bill for—development, what the scientists can use. Is that not correct?

Mr. SYMINGTON. The Senator is correct.

In this connection, I would like to read from a letter I received from the No. 1 scientist in the Pentagon Building. He said he believed Nike-Zeus batteries would be ineffective against the kind of penetration aids which are already planned for our own strategic systems at a date earlier than Zeus could be deployed.

I do not say that, if conditions were just right, Zeus could not knock down some ICBM's, as they have done in tests. But tests are different from actual operations. As General LeMay has pointed out, the losses from an actual attack would be different from what they are in theoretical or test raids.

What I am saying is that, according to the Department of Defense, even though it might be effective today, Nike-Zeus batteries would be ineffective against the kind of penetration aids which are already planned for our own strategic systems at a date earlier than Zeus could be deployed.

I thank the Senator from Mississippi for his contributions to this discussion.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield.

Mr. SALTONSTALL. I have listened to the Senator from Missouri and the Senator from Mississippi. I repeat and ask the Senator if he does not agree with the testimony which appears on page 67 of the hearings, which is the testimony with relation to the subject we are discussing now.

The Senator mentioned the three choices:

> The first alternative was rejected because it would not be a system which would be effective against the kind of attack we could be faced with by the time the system could be built.
>
> The second alternative would lead to a final system which is very similar to the Nike-X in both time and performance, but with an initial configuration only slightly better than that furnished by alternative 1.
>
> It was considered that the marginal protection offered by the early limited capability would not be sufficient to offset the additional costs which would be involved.

Is that the position of the Senator from Missouri?

Mr. SYMINGTON. That is correct. I thank the Senator for his contribution. That was stated by the Secretary of Defense, I believe.

Mr. SALTONSTALL. Yes. If we add the $196 million we would be adopting an alternative which in the opinion of the Department of Defense would not give the additional capability that would be worthy of the cost.

Mr. SYMINGTON. That is correct.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield.

Mr. LAUSCHE. I read from page 5 of the report. The statement appears on that page that by a vote of 9 to 8 the committee reconsidered its earlier vote to adopt an amendment to add $196 million to the Army missile procurement authorization. It states that the original vote was 9 to 4 against the amendment, and that the additional $196 million is intended to authorize appropriations only for procurement of component parts of the Nike-Zeus system.

It is my understanding that the Senator from Missouri and the Senator from Mississippi feel that this does not give the improved efficiency of the Sprint system and that it is inadvisable to authorize the added expenditure of $196 million for Nike-Zeus. Is that correct?

Mr. SYMINGTON. That is correct. We have great respect for those who differ with us on this subject, but this is our considered opinion after following for many years the ground-to-air program.

Mr. LAUSCHE. General LeMay expressed the opinion that inasmuch as Sprint was so much more efficient, it was not advisable to spend more on Nike-Zeus. Did other representatives of the Air Force testify to a different opinion?

Mr. SYMINGTON. I do not remember their being asked. But for some time the Army has favored the ground-to-air missile.

In one way, I deeply regret the consistent effort of the Army in the missile picture. There have been years when more than 90 percent of the Army's research and development budget was for missiles. I have felt, especially since the Navy was doing work in this field, on missiles like Talos, which is ground-to-air system, and the Air Force was doing work in this field on missiles like the Bomarc, that the research and development of the Army could have been better used.

Not too long ago, according to the commanding general, a very competent officer, our ground troops in Berlin had radios that weighed 20 pounds, whereas the children on the streets had radios just as good that weighed only 2 pounds.

As many Senators know, I have been skeptical about the whole ground-to-air Nike program. A reason for General LeMay's apprehension about much of the program may be that all the theories of defense, as to how many planes would be knocked out in raids in World War II, were invariably knocked into a cocked hat when we got into actual operations; many more planes always got through than the estimates indicated.

In addition, I think it is very important to realize that if 20 missiles are sent against a target and if the defense is successful in knocking down 19 of them, and not successful in knocking down the 20th, one city is still lost.

Therefore it is extremely important that we utilize the best possible system we can in our defense effort.

Mr. LAUSCHE. What is the present status of the Nike-Ajax and Nike-Hercules missiles?

Mr. SYMINGTON. I am not an authority on that subject, but I know—and I am sure the able Senator from Ohio also knows—that the Nike-Ajax has an extremely limited range. The Nike-Hercules is more advanced. The Nike-Zeus is a very much greater advancement in the art than either Ajax or Hercules. However, from the standpoint of a missile attack, Ajax, Hercules, and Bomarc are not capable of doing the job.

Mr. DODD. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield.

Mr. DODD. I have great respect for the opinion of the Senator from Missouri, whose name is so properly associated with the security and defense of this country.

Mr. SYMINGTON. I thank the Senator.

Mr. DODD. Was the Nike-Ajax an efficient weapon at the time it was produced? Did it become inferior later? Did it serve our needs at one time?

Mr. SYMINGTON. I personally feel that it was not an efficient weapon. Of course it was not a weapon for use against missiles and was not effective against any air-to-ground missile.

The number of the Nike-Ajax that was needed to defend a city against airplanes was very large. We had a thousand B-17's over Berlin in 1 night and over 300 B-29's over Tokyo in 1 night.

Mr. DODD. Was it the best that could be produced at that time to give us the best available defense?

Mr. SYMINGTON. I believe that Bomarc was the better system. It was better than Nike-Ajax or Nike-Hercules. I believe that Talos was a better instrument than Nike-Ajax or Nike-Hercules. However, the usual situation prevailed that the Pentagon compromised by making everything.

Mr. DODD. Am I in error in understanding that these weapons came in succession? I understood from the Senator that we had Ajax and then Hercules and then Zeus. I had been under the impression that this was a kind of progressive development, and that each time we were making a better weapon than the one before.

Mr. SYMINGTON. That is true. Nike-Hercules was a definite improvement over Nike-Ajax, especially in range. Bomarc was always a longer range weapon than Nike-Ajax or, for that matter, Nike-Hercules. Talos was designed primarily for ship operation, but it was a very good weapon. However, great advances have been made in the offensive ballistic missile field.

Most, if not all, of these weapons are either obsolete or obsolescent. Possibly—and I emphasize the word "possibly"—the only weapon that could do a real job of defense, because in this business we are trying to defend ourselves against a vehicle going many thousands of miles an hour, which is quite a problem for the best scientists—is the Nike-X.

Mr. DODD. I read in the press that General Taylor said that if we had gone ahead with the Nike-Zeus when the Army asked for it, we would be in a better defense posture today. Does the Senator care to comment on that point?

Mr. SYMINGTON. I believe that is true. It would be better to have them than not to have them. But as to whether or not it would have been a justifiable expenditure of our treasure, as against what the enemy could do in this particular offensive weaponry field, I do not know.

We delayed a long time with Nike-Zeus, and that unquestionably has hurt Nike-Zeus because in the delay we have the same type and character of problem that we have with the B-70. If years ago we had gone ahead with the B-70, we would have them flying now, and we would not have the problem of whether they are or are not capable of being effective in the time period in which they can be brought into production.

Mr. DODD. Is the Nike-Zeus competitive with Nike-X, or not?

Mr. SYMINGTON. Many people working on the Nike-X worked on the Nike-Zeus. People who are working on Nike-Zeus, as well as on the Nike-X, naturally believe in the Nike-Zeus. But, to the best of my knowledge, all of them recognize that the Nike-X is superior. There is a problem; and anyone having shop experience knows what it is. If we go ahead with the production of Nike-Zeus, we can only halt the development which is necessary for the production of Nike-X.

Mr. DODD. Why is that so?

Mr. SYMINGTON. Because there are only so many engineers who are skilled in this field. There are only so many design engineers, tool engineers, and production engineers that can do this work.

Mr. DODD. It occurs to me that those people ought to work together. If the Nike-Zeus men are working to perfect their weapon, and the Nike-X people are working to perfect theirs, and they are not competitive, why should they not get together?

Mr. SYMINGTON. It is such a rarified atmosphere, from the standpoint of scientific capacity, that only a few companies in the country can do the work. It is probably as complicated as any kind of work that is done for the Defense Department today.

Mr. DODD. Does the Senator feel that perhaps it was an overstatement to say that the development of Nike-Ajax was money down the drain?

Mr. SYMINGTON. No. I think the Nike-Ajax was worthless.

Mr. DODD. It was never worth anything at any time?

Mr. SYMINGTON. I never thought it was. It is not an overstatement so far as I am concerned, but there may be those who think it was worthwhile. One advantage of being a Senator is that one can give his honest opinion. I think the Ajax is worthless. I never thought much of Hercules and Bomarc.

The record will show that over the years there has been an extended discussion, in which the Senator from Mississippi [Mr. STENNIS] always joined, as to whether or not we were not fooling ourselves on a Maginot Line basis by thinking we could put up these limited range missiles, and destroy incoming offensive weapons.

The Nike-Zeus is entirely different from the Nike-Ajax and the Nike-Hercules. I have suggested to the Army many times that they not designate these missiles with the same word. The demarcation between systems is not clear when one name is used consistently.

However, Nike-Zeus is certainly a better weapon. Actually, Nike-Ajax and Nike-Hercules are used against manned bombers, whereas Nike-Zeus is used against ballistic missiles.

Mr. ERVIN. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I am glad to yield to the Senator from North Carolina.

Mr. ERVIN. The Senator stated that Nike-Zeus is inadequate. I ask the Senator if Nike-X or Sprint is not nonexistent.

Mr. SYMINGTON. That is correct.

Mr. ERVIN. Is it not entirely within the realm of possibility that it will be possible to develop a better antimissile missile than Nike-Zeus, which may fail of realization?

Mr. SYMINGTON. Yes; that is possible. I respectfully say to the Senator from North Carolina that, to the best of my knowledge, Nike-Zeus is not a reality either. No Nike-Zeus units and no Nike-X units are in production.

Mr. ERVIN. Is it not true that Nike-Zeus has reached the point where it could be put into production?

Mr. SYMINGTON. That is correct, with this reservation: There are certain items on the Nike-Zeus which are not yet developed to the point where the Department of Defense feels that Nike-Zeus can be put into production without further development.

Mr. ERVIN. But does not the Senator agree with me that there is a difference of view on this point between the Department of Defense and the Department of the Army?

Mr. SYMINGTON. That is correct; and that difference has existed for some time.

Mr. ERVIN. Does not the Senator agree with me that the only possible defense that we can have, that can be visualized against hostile intercontinental ballistic missiles, is an antimissile missile which will destroy the hostile missile in the air before it reaches our territory?

Mr. SYMINGTON. One of the best antimissile missiles could be neutralization through some form of ionization with an attack weapon, which would make it impossible for the offensive weapon or retaliatory ICBM to operate. With that reservation, I believe the statement of the able Senator from North Carolina is correct.

Mr. ERVIN. Does not the Army have the clearest responsibility in respect to the defense of this continent against hostile attacks of any kind?

Mr. SYMINGTON. I say most respectfully to the able Senator that I would rather say that the Department of Defense has the responsibility. I do not believe the Army has any particular mission as distinguished from the Navy or the Air Force. I believe the mission should be a defense mission, and that the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, and the Chiefs of Staff should change it as they see fit, from the standpoint of what is best for the country and what can be done on a most efficient and effective basis for the country.

Mr. ERVIN. Does not the Senator agree with my thought that the Army is one of the salient agencies by which the Department of Defense will undertake to defend our country?

Mr. SYMINGTON. I certainly do. Forty-five years ago I was a private in the Army. I have always felt very friendly toward the Army. But sometimes the Army—as do the other services—gets into fields and programs which I question. For example, the Army developed an atomic cannon. Some of us who are members of the Committee on Armed Services were opposed to it. The atomic cannon was soon shown to be pretty ridiculous.

I do not limit my statement to the Army. The Navy and the Air Force also get into programs which I question and oppose.

Mr. ERVIN. Does not the Senator from Missouri agree with the thoughts which were advanced a moment ago by the able and distinguished Senator from Connecticut [Mr. DODD] in his questions that the whole subject of the development of weapons of offense and defense is one of constant changes and improvements and evolution?

Mr. SYMINGTON. I do.

Mr. ERVIN. While we would scorn the bow and arrow today, the bow and arrow were a very decided improvement over the rocks and clubs which were used before the bow and arrow were developed. Is that not true?

Mr. SYMINGTON. Yes, indeed.

Mr. ERVIN. Also, when gunpowder came into existence, it was a vast improvement over the bow and arrow, was it not?

Mr. SYMINGTON. The able Senator from North Carolina is now talking about offensive weapons. What worries me is that we have seen a very rapid development of offensive weapons. At the end of World War II, the speed of the fastest airplane, which was the best offensive weapon, was well under 500 miles an hour. Now we are talking about vehicles which travel at 9,000 miles an hour. I agree that from an offensive standpoint there has been a gigantic development. What worries me is the possibility of a Maginot line type of thought in this country. If we decide to have an AICBM, which we think will work, we might find, unfortunately, if the balloon went up, which I hope will not happen, that it would not work. Therefore, I think the Department of Defense should be listened to carefully when they say that we now have under development offensive weapons which the Nike-Zeus could not stop.

Mr. ERVIN. Does not the Army maintain that it has conducted sufficient experiments with the Nike-Zeus to establish the fact that the Nike-Zeus has a capability to destroy a hostile intercontinental ballistic missile?

Mr. SYMINGTON. Certainly. The Army is very strong for its position in the missile field. In my opinion, it had at Huntsville, Ala., under the supervision of Werner Von Braun, a missile organization not surpassed anywhere in the world.

On the other hand, the Army is only one component part of the Department of Defense; and the Secretary of Defense, the No. 1 scientists in the Department, and the Chief of Staff of the Air Force, who has probably had more experience in the field of offense and defense in the air than any five people who are still around, combined, do not agree.

Mr. ERVIN. It is quite possible, since all men are fallible—we are not infallible—that the Army may be right and the Secretary of Defense wrong.

Mr. SYMINGTON. That is true; and the Chief of Staff of the Air Force may be wrong. But I respectfully say to the able Senator from North Carolina that the Army would be the first to agree that Nike-X is a vastly superior weapon to the Nike-Zeus.

Mr. ERVIN. If it were in existence—if the dreams of what the Nike-X may be were already realized—I would go along with that proposal.

I should like to ask several other questions.

Mr. SYMINGTON. There is no Member of this body for whom I have more respect than for the able Senator from North Carolina, with whom I have served for many years on the committee.

I should like to read this statement from the Department of Defense:

> The issue of whether the Nike-Zeus should be employed has arisen every year since 1958—

That, in itself, shows that—unfortunately—5 years of delay has occurred—

> and has been decided in the negative, because of its poor performance characteristics. Although the original system has been modified several times, its basic limitations have not been overcome.

That letter was written on April 9, 1963; and we are talking about a potentially $20 billion program.

Mr. ERVIN. The Senator from Missouri says there is a difference between the Nike-Ajax, the Nike-Hercules, and the Nike-Zeus. Is there not a very substantial difference between their respective functions, in that the Nike-Ajax and the Nike-Hercules were designed to afford defense against aircraft, whereas the Nike-Zeus is designed only to afford defense against intercontinental missiles?

Mr. SYMINGTON. Yes; and I have already stated that fact for the record.

Mr. ERVIN. I should like to call the attention of the Senator from Missouri and the attention of the Senate as a whole to the testimony of Lt. Gen. Dwight E. Beach, Chief of Research and Development, Department of the Army—testimony given before the Armed Services Committee, as set forth on pages 646 and 647 of the hearings. Does the Senator from Missouri have a copy of the record of hearings?

Mr. SYMINGTON. Yes; and I have turned to those pages.

Mr. ERVIN. Does not the Senator from Missouri agree with me that General Beach advocated going into the production and deployment of the Nike-Zeus?

Mr. SYMINGTON. If the Senator from North Carolina says so, I am sure that is true. I have that page before me, but I do not know the line to which the Senator from North Carolina is referring.

Mr. ERVIN. As set forth in the middle of that page, we see that General Beach testified as follows:

> We recommended that the Nike-Zeus be deployed—

When he said "we," he referred to the Department of the Army.

I shall not read the other part of that statement, because there was a deletion because some question of security was involved, and that part is not very intelligible.

Mr. SYMINGTON. I see the part to which the Senator from North Carolina refers.

Mr. ERVIN. Yes. He then said:

> We—

Meaning the Army—

> recommended that the Nike-Zeus be deployed—

I ask the Senator from Missouri to observe whether I correctly read the following question and answer:

> Senator ERVIN. The Nike-Zeus is the only antimissile missile that we have proceeded with far enough to know that it would work, isn't it?
>
> General BEACH. It is the only one in existence in the free world that has ever demonstrated actual capability of shooting down a reentry body.

I have read that correctly, have I not?

Mr. SYMINGTON. Yes.

Mr. ERVIN. Does the Senator from Missouri also agree that I then asked the following question, and received the following answer from General Beach:

> Senator ERVIN. It is on that basis that you think it would be better to have it than to take the chance on having none, due to the length of time in developing the Nike-X.
>
> General BEACH. That is correct.

Mr. SYMINGTON. Yes.

Mr. ERVIN. Does not the Senator from Missouri agree with me that in stating that view, in effect General Beach was stating the viewpoint of the Army?

Mr. SYMINGTON. There is no question about that. The Army has been very strongly in favor of the Nike-Ajax and very strongly in favor of the Nike-Hercules and very strongly in favor of the Nike-Zeus.

Let me say to the Senator from North Carolina that I have always felt that the Nike-Zeus was a more significant weapon than either Nike-Ajax or Nike-Hercules. I was against them when they began, but I have supported the Nike-Zeus.

Mr. ERVIN. I thank the Senator from Missouri for yielding. Despite the fact that he and I disagree with respect to this particular proposal, I wish to state that, based on my long service with the Senator from Missouri on the Armed Services Committee, he has been completely devoted to the defense of our country, and he has rendered what I conceive to be great and inspiring public services as a member of the Armed Services Committee.

Mr. SYMINGTON. Mr. President, I am deeply grateful to the senior Senator from North Carolina. There is no one who is more patriotic or more capable or more devoted to his country than is the Senator from North Carolina; and there is no one from whom I would rather have that undeserved commendation.

He and I do not entirely disagree on this question—we partially agree. Both of us want to see the most effective system developed as soon as possible—this is the first time I can remember when he and I have not been in full agreement on what was essential for the security of the United States.

Mr. CANNON. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield.

Mr. CANNON. Is it not a fact that offensive-type weapons, in their development throughout the years, have consistently been able to maintain a lead over defensive types?

Mr. SYMINGTON. That has been especially true in recent years. I agree with the distinguished Senator from Nevada, who was a great combat pilot in World War II, and has a great combat record.

But it is a fact that in aerial warfare, the capacity for defense has, in theory, been consistently overrated; and the capacity for offense has, in actual operation, been consistently underrated. The Senator from Nevada knows at least as much about that as I do—based upon his experience in combat.

Mr. CANNON. One of the reasons for that is that defensive-type weapons are based on the offensive-type weapons then in existence, whereas offensive-type weapons are developed with future operations in mind.

Mr. SYMINGTON. There is no question about that.

Mr. CANNON. I thank the Senator from Missouri for his remarks. He has made some excellent points.

Although I do not agree entirely with him when he says the Nike-Ajax and the Nike-Hercules were useless—for I think they served a purpose at the time, because if we had been subjected to attack by manned aircraft, which they were designed to meet, they would have provided us with some kind of protection—yet, as things turned out, no such attack was made.

Therefore, I agree that today the Nike-Ajax is, in my opinion, worthless. So I think we are wasting money by continuing those sites at the present time.

But I do think that the Nike-Hercules has a very valid part in our mission in that, if we have an attack of manned aircraft in the reasonably near future, the Nike-Hercules would give us an added capability insofar as protecting the areas around which the Nike-Hercules is sited.

But I agree with the Senator that it is not worth the additional expenditure of from $1.5 billion to $2 billion to attempt to bring the Zeus in at a slightly earlier date than the Nike-X, particularly in view of the testimony of all the experts in this field who have testified before our committee, and whom I have heard. As the Senator knows, there is a very great division of opinion. But I respect the judgment of the Secretary of Defense and also that of the Secretary of the Army in their final decisions. I concur completely with the Senator from Missouri.

Mr. SYMINGTON. I thank the Senator. I desire only to make one point. I agree that the Nike-Ajax could have been effective and the Nike-Hercules would have been effective if the attack had a relatively small number of planes. But based upon our concept of the bomber forces of the Soviet—the number of planes that we used to have over targets and the number of planes we believed the Soviets could have over targets—I did not see, inasmuch as they operated in battery formation against single planes, how we could ever stop a really determined desire to destroy a city.

As the Senator knows better than I, during World War II, if we got 5 percent of the attackers, it was considered a very fine job. In the present situation, if we should get 95 percent of the attackers and miss 5 percent, a city would be lost.

I thank the Senator for his statement. If it is satisfactory with the distinguished Senator from Georgia, I should like to yield the floor.

Mr. RUSSELL. I thank the Senator for his very fine statement. I share the views expressed by the Senator from Nevada [Mr. CANNON] that the Ajax served a purpose when it was first installed. It was an antiaircraft missile. When it was first used, it was a short-legged weapon. I believe its range was about 40,000 feet. Its present range is classified, but the range has been lengthened considerably.

The big mistake we made with the Ajax was that we installed a great many of them after they had become obsolete. We installed many Ajax batteries after they were no longer effective even against high-flying aircraft. Hercules would be a rather effective weapon against most aircraft.

Mr. SYMINGTON. One of the two greatest generals, if not the greatest general, of the War Between the States, Gen. Nathan Bedford Forrest, once said, "I git thar fustest with the mostest."

I have always believed that the way things were going in offensive weapons development, offensive weapons were surpassing any possible defense.

I am impressed by what was said by the able chairman of the committee, who, I have said a great many times, and am glad to repeat, is the wisest man on the subject in our country today. I am impressed with what he has said and what the able junior Senator from Nevada has said. I shall be more tender in my opinion about the Nike-Ajax. As the chairman knows, in the committee I was very strongly opposed to it.

Mr. RUSSELL. The Senator not only opposed it, but he also opposed the Bomarc, which the Air Force was building for the same purpose.

Mr. SYMINGTON. The Senator is correct.

Mr. RUSSELL. The Senator was fair and impartial in his position. He did not think that either would do the job.

Mr. SYMINGTON. The Senator is correct.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. PROXMIRE. I apologize for asking questions at this late hour. I know that the Senator from South Carolina [Mr. THURMOND] has been waiting a long time. The Senator from Georgia has been patient in answering questions. I shall make my questions brief.

I wonder how the committee accomplished what I believe was a unique action in reducing the proposed expenditures in the way it did. On page 3 of the report appears the following language:

> The defense program was reduced by $770,900,000. A reduction of this amount was accomplished by applying a uniform 3-percent reduction in the amount sought for research, development, test and evaluation, by a 3-percent cut in certain support areas such as spare parts and modifications, and by selectively reducing the proposed procurement quantities of specified aircraft, missiles, and ships.

I think that statement is most heartening to those who have confronted the problem of reducing Government spending and who have felt that if expenditures are to be reduced in a big way, they would have to be reduced in the area of defense.

We all know that we should spend as much as we possibly can afford to spend to make our defenses as strong as possible.

In view of the fact that the Secretary of Defense had previously reduced the requests submitted by the Army, Navy, and Air Force by between $13 billion to $14 billion, I wonder how this year, for the first time, the Committee on Armed Services was able to arrive at the conclusion which it reached.

Mr. RUSSELL. This year is only the third year that the Committee on Armed Services has operated under a new law which requires authorization for appropriations for the current year. It is the first year in which we have authorized certain appropriations for research and development. So research and development has not been before the committee prior to the present year.

Mr. PROXMIRE. Nevertheless there were opportunities before when appropriations came back.

Mr. RUSSELL. Yes; and we have reduced them.

Mr. PROXMIRE. They were reduced, but not in that particular way.

Mr. RUSSELL. Yes. We once reduced them in one category by 2 percent. We did it to provide money for the acceleration of the Polaris submarine program. That was in the appropriation bill. It was not in the authorization.

Mr. PROXMIRE. I understand.

Mr. RUSSELL. Two or three years ago we were operating under a general World War II authorization that was open ended. There was practically no limit to the weapons that were authorized. We thought we should study the program each year to see if some savings could not be made without impairing the country's defense.

I shall tell the Senate why I think we can stand the proposed 3-percent reduction in modifications and the replenishment of spare parts.

When the Department has reprogramed funds, it has always been able to find a surplus in those accounts. There is no doubt in my mind that in the course of the next fiscal year the Department will find some money for reprograming by refining or redetermining requirements in those accounts.

Mr. PROXMIRE. The bill involves $15 billion, does it not?

Mr. RUSSELL. More than that. I think it is $15.1 billion.

Mr. PROXMIRE. $15 billion plus. The committee's recommended cuts far exceed 3 percent of $15 billion.

Mr. RUSSELL. All of the reductions did not come from the 3-percent cuts. We deferred the production of a number of planes. In other words, where we determined, for instance, that we had 1,500 of a certain type of plan in inventory, 800 in procurement, and 700 provided in the bill. We removed 10 or 12 there, feeling that the reduction would not injure the program in any way. That minor deferment could not affect our defense posture.

Mr. PROXMIRE. As far as the bill is concerned, that was more than a 5-percent cut.

Mr. RUSSELL. The Senator is correct. We labored arduously to try to get it to 8 percent. There were certain items I felt we could cut in excess of 5 percent.

Mr. PROXMIRE. Considering the example of the Armed Services Committee, in activating economy following the excellent record of the Department of Defense, this should be very encouraging for those who would work for economies in other programs. If we can make this kind of cut across the board, the 5-percent cut in this bill, with respect to which all Members consider there should be high priority, it would seem quite sensible that we could make cuts elsewhere.

I understand, also, that the Secretary of Defense was the only head of a department in our Government who succeeded in reducing his civilian personnel for the coming year. He will reduce his civilian personnel by several thousand, and will reduce personnel by 10,000 next year. Every other agency of the Government has increased its personnel, in some cases greatly.

I asked the Secretary about this when he appeared before the Joint Economic Committee. He said he is reducing personnel because with hundreds of thousands of people employed, one can assume that there must be a possibility of greater productivity, and there must be available improvements in efficiency if that efficiency is forced to come into play by a personnel cut. Therefore, he says, "You can cut personnel and find ways to do the job more efficiently." It was not on the basis of eliminating service, but on the basis of saying that the Secretary thinks the job can be done more efficiently.

I presume, judging from the explanation given by the Senator from Georgia, that he is following the same philosophy and psychology with respect to achieving economies in this particular way.

Mr. RUSSELL. I did not hear the testimony to which the Senator adverts and have not had an opportunity to read it.

Mr. PROXMIRE. I shall place that in the RECORD later today.

Mr. RUSSELL. That philosophy was one of the things which convinced me that a 3-percent reduction could be handled without any impairment in our defense posture.

I have always given priority to the Department of Defense. Time and again I have urged the Congress to appropriate more than the Department has requested. For that I have no apologies, particularly with respect to the Polaris submarine. For 2 or 3 years the Congress increased that program above what the Department requested.

That does not mean that there never comes a time when it might be possible to find items that can be reduced. This is the largest request which has ever been made by the Department of Defense of the Congress in peacetime for the maintenance of the military forces and the acquisition of military hardware.

The Committee concluded that these very modest reductions or stretchouts of procurement would not impair this country's defense preparedness.

I do not wish my attitude with respect to other appropriation bills to be based upon the fact that this reduction is limited to about 5 percent. I am quite confident that with respect to the operations of some of the other agencies which are not so vital to our survival as a free people much more substantial reductions can be made, and I hope they will be made.

Mr. PROXMIRE. That is exactly the point I wished to bring out.

I have one other question to ask the Senator. It seems to this Senator that the Secretary of Defense has made a very conclusive argument with respect to the RS-70. I do not intend to offer any amendment to eliminate the RS-70 from the authorization bill. I think that would be repetitious. Possibly I would lose. Later the Senate will consider the appropriation bill. I shall defer until that time any amendment to eliminate the RS-70. The Appropriations Committee should have as broad a discretion for decision as possible.

Mr. RUSSELL. The Senator will have another opportunity, when the appropriation bill comes before the Senate. The Senator will not be precluded from bringing this matter to the attention of the Senate and having the Senate pass upon it.

Mr. PROXMIRE. I merely wish to say for the record that I think the Secretary of Defense is correct; and if the amendment were before the Senate, I would vote to eliminate the RS-70.

Several Senators have talked about the position taken by the Secretary of Defense. I ask unanimous consent, with the permission of the Senator from Georgia, to insert in the RECORD at this point some 3, 4, or 5 pages from the hearings, in which the Secretary of Defense states his position first with respect to the RS-70 and why he thinks it should be eliminated; and, second, with respect to the bomber forces and the necessity for bomber forces and the role they play.

With the Senator's permission, I ask unanimous consent to have pages 42 to 44, on the RS-70, and pages 47 to 49, on the bomber forces, of the Senate hearings, printed in the RECORD.

Mr. RUSSELL. Of our hearings?

Mr. PROXMIRE. Yes.

Mr. RUSSELL. I have no objection to that.

Mr. PROXMIRE. That is all I ask.

Mr. RUSSELL. I should be happy to have the Senator include in the RECORD any part of our hearings, so long as it would not encumber the RECORD unduly.

Mr. PROXMIRE. This is a relatively brief amount of testimony.

Mr. RUSSELL. I am glad to have that done.

There being no objection, the excerpts from Secretary McNamara's testimony were ordered to be printed in the RECORD, as follows:

B. THE RS-70

The next issue I had to face was the development of the B-70, or the RS-70, as it was later called. The issue here was not the future of manned strategic aircraft in general. Rather, it was whether this particular aircraft, in either of its configurations, could add enough to our already programed capabilities to make it worth its very high cost.

Many of the arguments that have been advanced in support of the RS-70 actually support the case for postattack reconnaissance in combination with an improved ICBM force. We believe that there are more promising ways of performing this mission than the RS-70, when both cost and effectiveness are considered. Other than this, the RS-70 is said to have two distinct capabilities: (1) transattack reconnaissance; that is, reconnaissance during our missile attack, and (2) the ability to examine targets and attack them on the spot with strike missiles, if required. Quite apart from the technical feasibility of developing, producing, and deploying such a system within the time frame proposed by the Air Force (which we do not think possible), there are better ways, when one considers both cost and effectiveness, to obtain both of these capabilities.

The principal advantage of having a "reconnaissance" and a "strike" capability in an aircraft is one of timeliness. That is, it may be possible to process and interpret enough of the "recon" data in the few minutes the aircraft is still within range of the target to permit an effective air-to-surface missile strike, keeping in mind that the aircraft would be moving at a speed of over 30 miles per minute and that the missile would have a relatively short range—i.e., a few hundred miles. If this can be done "effectively" there is the advantage of being able to deal with the target within minutes instead of an hour (or more) if the "strike" had to be accomplished by some other weapon system. Quick attack is not always important, but to the extent that it is and can be accomplished effectively, a strike capability in the aircraft is an advantage. However, postattack reconnaissance and subsequent strike—whether by air-to-surface missiles or ICBM's—is important in two principal cases:

1. Where fixed targets whose location was not known precisely must be attacked.

2. In "mopup" operations against fixed targets of known location that have been programed for initial attack by ballistic missiles, but which may not have been destroyed.

Initial attack on targets of known location can be accomplished effectively with

ICBM's, which have the important advantages of shorter time-to-target, lower cost, and higher survival potential. Mobile targets simply cannot be successfully attacked with an RS-70 and, in fact, such a role has not been proposed for that aircraft.

The issue, therefore, resolves itself to the question: How much could we gain from a capability to attack the two types of targets I referred to earlier, with air-to-surface missiles instead of ICBM's?

With regard to the first case, if a target is known to be somewhere within a relatively small area, usually its exact location can eventually be established. Moreover, such targets can be attacked by ICBM's after postattack reconnaissance. With regard to the second case, other means are expected to be available to determine whether targets previously attacked by ICBM's have been destroyed. These targets, too, once it is known that they have not been destroyed, could be attacked again with ICBM's.

The RS-70, by carrying air-to-surface missiles, would provide only a very small increase in overall effectiveness. In my judgment, this increase is not worth the large additional outlay of funds estimated at more than $10 billion above the $1.35 billion already approved.

Accordingly, we propose to complete the presently approved $1.3 billion B-70 development program of three aircraft and, in addition, continue the development of selected sensor components using, in the current fiscal year, $50 million of the extra $192 million provided by the Congress last year for the RS-70 program. The Air Force has not yet completed its analysis of the effect on development costs of the 3-month delay already encountered in the flight testing of the first B-70.

Senator Case. When is that scheduled for now, Mr. Secretary?

Secretary McNamara. There is no firm estimate at the moment, Senator Case. It was scheduled to fly in December. At the time I prepared this text it was estimated it would fly late March or early April, hence the 3-month delay. At the present time the contractor is inclined to believe it can fly in May.

The Air Force estimates, however, that its delay could extend as far as October. I should say there is about a 50-50 chance it will fly in May or June.

Now, turning to Skybolt——

Senator Engle. May I ask a question there?

Secretary McNamara. Yes.

Senator Engle. What is the use of building a prototype if you are not going to fly it?

Secretary McNamara. This was a question we faced 2 years ago and again last year. We had spent about $1 billion up to that point without achieving a flyable airplane. It seemed wise to us to spend the small amount of funds required to, in effect, translate the billion dollar's worth of development work up to that point into metal, and achieve the advantages from test flight that we will achieve—knowledge of mach 3 flight in an airplane of this size. It will add definitely to our knowledge of aeronautics, and it seems worth while to me to proceed with the small expenditures required to achieve that knowledge.

Senator Engle. That is to go the rest of the distance——

Secretary McNamara. Yes, sir.

Senator Engle. And to preserve for you the alternative in case you might be wrong in this decision?

Secretary McNamara. Yes, sir.

Senator Engle. Thank you.

Senator Case. Not the weapons system.

Secretary McNamara. Not the weapons systems, just the airplane and the associated systems, which include a bomb navigation system in a prototype form and which includes substantial development of associated sensor equipment that can be used on that or other planes.

Senator Stennis (presiding). All right, Mr. Secretary, proceed.

2. BOMBER FORCES

We plan to continue a mixed force of missiles and manned bombers throughout the entire planning period—1964-68. Although most of the aiming points in the Soviet target system can be best attacked by missiles, the long-range bombers will still be useful in followup attack, particularly on certain hardened targets. Accordingly, all 14 of the B-52 wings will be maintained in the force.

Senator Goldwater. Will you yield at that point?

Senator Stennis. All right, Senator.

Senator Goldwater. Is this figure 615 in 1962 the total inventory?

Secretary McNamara. No. The next sentence states that advance attrition aircraft have been procured with prior year funds to support this force. The B-47 subsonic medium bombers will be completely phased out of the forces by the end of fiscal year 1966 on the same schedule I presented last year. We still have about 700 B-47's in the force, operational force.

Senator Goldwater. How many would that be?

Secretary McNamara. I do not know how many we have on hand estimated for 1968. I will be happy to check them for you for the record.

(The material requested is classified and has been furnished separately to the Committee on Armed Services.)

Senator Goldwater. Would it be 200 or 300?

Secretary McNamara. Oh, no, nothing like that. There might be enough to cover attrition; attrition on B-52's is not great, and I would guess it would be on the order of [deleted]; something on that order.

Senator Goldwater. I will get that later?

Secretary McNamara. [Deleted], I am told.

Senator Goldwater. I doubt very seriously that you can reach 1968 with the figure you have today, even with [deleted] coming into the inventory.

Secretary McNamara. This is 1968 we will have [deleted] left above the 630 or did I give [deleted] in the attrition reserve for 1968.

Senator Goldwater. You will have [deleted] left?

Secretary McNamara. Yes.

Senator Goldwater. How many do you have now?

Secretary McNamara. We have procured a total of 744 aircraft. I would like to check this figure for the record, Senator Goldwater. These are the Air Force figures, and I believe they are calculated correctly.

Senator Goldwater. The reason I rather questioned it was that General Powers last year in testimony before the Preparedness Subcommittee gave the life of this aircraft from 10 to 15 years, and by 1968 some of them will already have gone through their 10-year period.

Secretary McNamara. Yes, but not the 15-year period.

Senator Goldwater. Yes. Well, that is true. But the normal rates of attrition, I do not think will support this table. I will be ready to argue that this afternoon.

Secretary McNamara. I think the Air Force is the one to argue it with because they prepared the figures and they consider them on the conservative side.

Senator Stennis. All right, Mr. Secretary, proceed.

Secretary McNamara. Proceeding then in the middle of the page, the B-47 subsonic medium bombers will be gradually phased out of the forces over the next several years. Some of these aircraft could be continued in operation for a longer period of time than now planned if the need should arise over the next year or two Two wings of the B-58 supersonic medium bombers will be continued in the force throughout the program period.

Some of these aircraft could be continued in operation for a longer period of time than now planned if the need should arise over the next year or 2. The B-58 supersonic medium bombers, of which two wings totaling 80 operational aircraft are now in the force, will also be retained at least through our 5-year planning period. [Deleted.]

Senator Goldwater. What is your total of attrition aircraft at the present time?

Secretary McNamara. I would like to insert that in the record, if I may, Senator Goldwater, for the B-58.

(The material requested is classified and has been furnished separately to the Committee on Armed Services.)

Senator Goldwater. Isn't 80 about the total force structure?

Secretary McNamara. Eighty is the total authorized unit equipment aircraft.

Senator Goldwater. And we are not building any more?

Secretary McNamara. We are not building any more. [Deleted.]

Senator Goldwater. And 10 years is about the life expectancy of this?

Secretary McNamara. Yes; it may be less. We have so much trouble with it that it is possible that its life expectancy would be less than 10 years, not because of the factors associated with life per se but rather because of poor operational experience with it, although I am told that many of our problems have been corrected and that it is anticipated the aircraft will function satisfactorily.

In summary, by the end of fiscal year 1968 we would still have a total of about 700 operational bombers in the force.

Since July 1961 we have maintained approximately 50 percent of the manned bomber force on a 15-minute ground alert. Because this measure is essential to the survival of the force in a ballistic missile attack, we plan to continue it throughout the program period. But I should caution that a 15-minute ground alert may not be sufficient to safeguard the bomber force—particularly during the latter part of this decade. By that time the Soviet Union could have a large number of missile-firing submarines on station within reach of most of our bomber bases. The increasing missile threat underscores both the importance of maintaining our on-the-shelf airborne alert capability and the value of the special provisions contained in section 512b of the fiscal year 1963 Defense Appropriation Act. This is the section which authorizes the Secretary of Defense, upon determination by the President that such action is necessary, to provide for the cost of an airborne alert as an excepted expense. This provision should be retained in the law.

Although we are planning to continue the present airborne alert training program and the maintenance of an on-the-shelf capability to fly one-eighth of the force for 1 year, we must always be ready to increase promptly the scale of this operation. Indeed, during the early phases of the Cuban crisis last year, we did just that. We may be able to finance the additional cost of that action from our current year's appropriations, in which case we may not have to resort to section 512b this year; provided, of course, that no new crisis again forces us to expand our airborne alert operations.

Senator Symington. What is the amount of money involved in that section 512b, Mr. Secretary?

Secretary McNamara. It is an unlimited authorization to carry out an airborne alert.

Senator Symington. There is no limitation on the money?

Secretary McNamara. No, sir; I do not believe there is.

Senator Stennis. That was put in the appropriation bill, was it not?

Secretary McNamara. That is correct.

Senator Stennis. That was a compromise on the way the argument was met about the unforeseen possibilities and need for an alert.

Secretary McNamara. Although we did put a one-eighth alert in effect in the Cuban crisis, as I mentioned earlier, we hoped to be able to cover the cost of all the incremental costs associated with the Cuban crisis in our regular budget without a deficiency appropriation.

Senator Symington. I remember when it came up before the Appropriations Subcommittee. But it said "incurred deficiencies," and I was wondering if there was any limitation on the deficiencies you are allowed to handle unless there is a formal recognition of trouble.

Secretary McNamara. No; I do not believe there are.

Senator Symington. Thank you.

Secretary McNamara. Now, turning to ICBM's and Polaris missiles.

Senator Stennis. Just a minute. Have you finished down to there?

Secretary McNamara. Yes, sir.

Senator Stennis. I believe this will be a good stopping place.

Are there any special questions now or brief questions from any member?

Senator Goldwater. Mr. Chairman, when he finishes page 64, we will review the whole thing?

Senator Stennis. Certainly, no one is precluded from asking questions.

All right, without any questions at this time, the committee will resume at 2:30.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. MONRONEY. I compliment the distinguished Senator for finding economies in the bill, particularly with reference to the 3-percent reduction made below the line, but I am very much concerned about a 3-percent reduction, or an amount similar to that, in respect to funds for repair and improvement of the bomber forces.

As the distinguished Senator knows, nothing in the bill before the Senate would provide anything that even looks like a bomber within the next fiscal year.

The flying platform and the development of the RS-70 may produce a bomber in 5 years. The other planes which we are considering are either tankers, cargo planes, fighters, trainers, or helicopters.

I am in favor of this program; but I feel that, in the absence of any availability of a new bomber for us to put into the inventory this year, we should be very careful. The distinguished Senator has often said that he does not like to rely solely on missiles, and that we should have a man-piloted bomber force. I feel that it is incumbent upon us, since there will be no new bombers produced this year, to see to it that the repair, maintenance, and improvement possible for the B-52's, the B-47's, the B-58's, and B-66's, or other existing bombers, be made, in order to protect us during the period when there will be no new models of long-distance strategic bomber aircraft.

I wonder if the bill is so tightly written, on the 3-percent reduction, that the modification of, and improvement of the existing bomber fleet would be hampered, so that we could not maximize the utilization of the aircraft we have on hand.

Mr. RUSSELL. Mr. President, that same question occurred to me when the committee was considering this item and before it was approved by the committee.

In the first place, a very large sum of money is involved. The figure is classified, but it is considerably more than a half billion dollars for the modification, repair, and improvement of all types of aircraft.

The Senator is well aware that the Strategic Air Command, in numbers, is a very small portion of the total air fleet which is operated by the Department of the Air Force. In my opinion, there is not the slightest possibility of the Bomber Command suffering in any way.

Another thing which led me to conclude that there was not any reason for writing language in the bill to set aside a special amount for the bombers is that the Department of Defense is phasing out the B-47's much faster than it thought it would at the time of the Berlin crisis. The Department is phasing out that bomber, which is the oldest in service, with very great rapidity. Frankly, I think it is being done too rapidly.

The bill provides an amount which would afford adequate funds to take care of the B-52's, the B-58's, and the tanker fleet.

Mr. MONRONEY. And the B-66's? That is a very fast plane, reconnaissance and bomber.

Mr. RUSSELL. Yes. That is very limited in the inventory.

Mr. MONRONEY. There is a limited number. I do not wish to retire those aircraft too early, because of lack of availability of funds to keep them modern, up to date, and safe. Experience in the past has always seemed to be that the Department has run out of funds and postponed for 3 or 6 months the work with respect to modification and improvement of the planes which are available today.

Mr. RUSSELL. Mr. President, I did not know that there had been any great deferment for lack of funds in this area in the past several years, because, generally speaking, we have allowed the amount of money the Defense Department has sought. As I said before, the Department of Defense has dipped very liberally into this fund and transferred money for the purpose of acquiring other military equipment which is not in anywise related to the Strategic Air Command. There is no doubt that the funds are adequate. If they are not, the Secretary of Defense has emergency authority in the Defense Appropriations Act and he could transfer for this purpose.

Mr. MONRONEY. The distinguished Senator from Georgia is not only chairman of the Armed Services Committee, but also chairman of the Armed Services Appropriations Subcommittee, and when the matter comes before his committee, may we be sure that there will be enough money provided for modernization of our existing air fleet?

Mr. RUSSELL. I shall be glad to see to that. We have an understanding with the Department of Defense on that score. I do not anticipate any difficulty in securing an understanding that the Strategic Air Command should have priority. A greater difficulty is the speed of eliminating B-47's from the active forces and the storing of the aircraft in cocoons out in Arizona.

Mr. MONRONEY. It is because they are worn out. I hope Senators realize that there is nothing in the inventory plans beyond the B-52, which is 4 or 5 years beyond the design stage, or the B-47, which reaches to before that period. We have nothing in the way of inventory. The Air Force is not encouraging the replacement of a long-range bomber. The bill carries no funds for long-range bombers, because there is none in being.

Sure, the RS-70 may be a weapons system in 5 years, if we are lucky, but we should be looking for improvements of the B-52 or the B-58, and we should get improvements off the shelf to modernize our bomber fleet, which is rapidly becoming obsolescent.

Mr. RUSSELL. I agree with the Senator, but the only point on which I could disagree is that he is apprehensive that the 3-percent reduction will cripple that effort.

Mr. MONRONEY. I am not apprehensive.

Mr. RUSSELL. I think the Department has enough money to keep those planes flying if they want to apply the money for that purpose.

Mr. MONRONEY. I thank the Senator.

Mr. SALTONSTALL. To support the committee's position, I think the modernization and spare parts funds have been used quite extensively for reprograming, and that the estimates are of a generous size.

Mr. MONRONEY. I am not concerned with spare parts, but with the actual work.

It would be the Senator's feeling that all funds necessary should be available to keep in the Strategic Air Command the most modern and recent bombers?

Mr. RUSSELL. They should have priority—not only the most recent bombers, but all the planes of our Strategic Air Command capable of performing their mission, whether they are in the last category or the first. I am one who believes that the B-47 has considerable use in that command.

Mr. SALTONSTALL. I agree, as a member of the committee.

Mr. HARTKE. Mr. President, will the Senator yield for a question?

Mr. RUSSELL. I yield.

Mr. HARTKE. Did the Defense Department continue the program on the mobile midrange ballistic missile program?

Mr. RUSSELL. Is that the mobile program for the intercontinental missile?

Mr. HARTKE. No; the mobile midrange ballistic missile.

Mr. RUSSELL. There is money provided in the program for research and development.

Mr. HARTKE. Did the Defense Department request it?

Mr. RUSSELL. Yes.

Mr. HARTKE. They approved of it?

Mr. RUSSELL. We have approved of that, with the 3 percent reduction that applies to all research and development items.

Mr. HARTKE. I am not questioning whether the committee approved it, but whether the Department of Defense did.

Mr. RUSSELL. Yes. The Department of Defense made a request for it. I hope the Department will follow through better than they did on the mobile intercontinental ballistic missile program. We were convinced that was a very promising deterrent, and yet that program was phased out before it was developed.

Mr. HARTKE. Is any money being spent on it?

Mr. RUSSELL. No; not for research and development.

Mr. DIRKSEN. Mr. President, I ask for recognition.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. DIRKSEN. I do so only to make the suggestion to the distinguished Senator from South Carolina [Mr. THURMOND] that perhaps his motion is now in order. I thought we ought to expedite the business of the Senate, because I anticipate that after he makes his statement there will be a good deal of discussion.

I respectfully suggest to the majority leader that the motion be made, because the distinguished Senator from Nebraska will second the motion, as I understand, and that will automatically resolve the Senate into closed session. We can then hear the Senator's statement. But prior to that, perhaps we should have a quorum call.

Mr. MANSFIELD. Mr. President, what is the business before the Senate?

The PRESIDING OFFICER. The question is on the amendment of the Senator from Georgia.

Mr. THURMOND. Mr. President——

The PRESIDING OFFICER. The Senator from South Carolina.

Mr. THURMOND. Mr. President, I rise in support of the Senate Armed Services Committee amendment to authorize the appropriation of $196 million to put the component parts of the Nike-Zeus system in production.

Before asking that the doors be closed, on account of the classified material that will be brought out, I should like to refer to a couple of matters.

One is as to the cost of this weapons system. I think we may as well get the figures straight now. Figures have been brought out on this matter. I should now like to give the correct figures for this system.

The Department of Defense estimates that the Nike-X system will cost $17,607 million.

The Department of Defense estimates that advancing the Nike-Zeus and the Nike-X system will cost $20,370 million.

In other words, the Department of Defense estimates that, to go forward with the Zeus system along with the X system, will cost $2.8 billion more.

The Army estimates that the X system will cost $12,625 million, and that advancing the Zeus with the X system will cost $14,124 million.

In other words, the Army estimates it will cost, to advance the Zeus system along with the X system, $1½ billion more.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. THURMOND. I yield.

Mr. RUSSELL. The Senator from South Carolina said he wanted to get the accurate figures into the record. Those are the exact figures I gave in differentiating the two. I said the Defense Department estimated it would cost $2,800 million.

Mr. THURMOND. I may say that these figures were checked yesterday by the Department of the Army representative and the Defense Department. So, the only question here is not whether or not we are going forward with a $20 billion system. The plan is to develop a system. The Army is developing the system. The plan is to go forward with the system, and it is simply a question of whether or not we are going to agree today to put $196 million in the bill to put the component parts in production, with a total increase in cost of advancing this system. As I shall go into more detail after the doors are closed, the additional cost will be somewhere between $1½ billion, as estimated by the Army, and $2.8 billion as estimated by the Department of Defense.

I believe that the Chief of Staff of the Air Force has been quoted as not favoring this system. On Air Force matters the Chief of Staff of the Air Force would certainly be a great authority. This, however, is an Army matter. I would assume that the Army people would be the best authorities on this question. Notwithstanding the fact that the Secretary of Defense prefers to delay on this question of Zeus, the Chief of Staff of the Army, General Wheeler, answered clearly and succinctly as to where he stands on this question in the hearings on the military procurement authorization for fiscal year 1964 of the Senate Armed Services Committee, at the bottom of page 547 and going over to page 548. I asked General Wheeler whether his thinking was in line with the Army on the Nike-Zeus. General Wheeler answered "Yes, sir."

I quote further from the testimony:

> Senator THURMOND. The Nike-Zeus should be developed?
>
> General WHEELER. Yes, sir.
>
> Senator THURMOND. What is your feeling if Nike-Zeus is not developed, is not made available as early as possible, do you think there might be a defense gap?
>
> General WHEELER. This, of course, is where you get into a judgment factor, Senator THURMOND.
>
> My own feeling is that the advantages in protection of a goodly number of millions of people, and a large segment of our economy by deploying as early as possible is worth the additional cost of about $2.8 billion, as I recall. The Army proposal basically is to deploy as soon as possible what the state of the art will permit now and then move toward the Nike-X concept as R. & D. and production will let us do so.
>
> The figures, there is a gap of about [deleted]. I would say if nothing happens in those [deleted], why delaying until [deleted] perhaps is wise. But if something does happen, I think it would be deplorable.

Mr. President, that is the position of the Chief of Staff of the Army, a four-star general. This is an Army system, not an Air Force system.

On Friday, March 29, 1963, there appeared an article on the front page of the Evening Star, which I hold in my hand. The headline reads: "Taylor Sees Red Victory in Antimissile Race—Hearing Shows Rift in Pentagon Over Developing Nike-Zeus Defense." The article was written by Richard Frykland. It states:

> "We face the possibility of a cold war defeat," Gen. Maxwell D. Taylor, Chairman of the Joint Chiefs of Staff, believes, because the Russians may beat this country to an antimissile missile.
>
> General Taylor also told Congress that he disagrees with a decision by Secretary of Defense McNamara to further postpone installation of the first American defense against enemy ICBM's.
>
> The dispute was revealed today in a transcript of testimony by high Defense officials before the House Armed Services Appropriations Subcommittee. Congressmen questioned Mr. McNamara and General Taylor on the new defense budget in closed sessions in February.

Then General Taylor refers to the propaganda victory in connection with this matter. The article states:

> Despite the technological problems, General Taylor told the subcommittee, the first side to get an antimissile missile into operation will at least score a propaganda victory.
>
> If the Zeus had been put into production when General Taylor first recommended it, in the Army's fiscal year 1959 budget request, the first units would have been installed this year.
>
> "We would have had a technological triumph over the Soviets," General Taylor told the subcommittee.
>
> * * * * *
>
> The censored transcript does not reveal whether General Taylor told the subcommittee about Russian progress in missile defense, but Defense officials do believe the Reds may be installing the weapons today.
>
> Intelligence reports say the Russians are building a complex of missile sites around Leningrad. It is possible, according to intelligence analysts, that they are a Zeus-type antimissile missile.

That is a portion of the article which appeared in the Evening Star. It shows clearly where the Chairman of the Joint Chiefs of Staff stands on this subject. He is a former Army general. He went out of service and came back. He takes the same position today, even though it is contrary to the Secretary of Defense, as he took when he was Chief of Staff of the Army some years ago.

Mr. President, in order to discuss this matter and the really pertinent facts which bear on the issue, reference must be made to facts which are classified, the divulgence of which would affect the security of the Nation. If anyone doubts that the pertinent facts are classified, he need only examine the hearings in the Senate Armed Services Committee on the pending bill, the hearings on the same matter before the House Armed Services Committee, and the House Appropriations Committee hearings on the Defense Department's appropriations, and it will be obvious that the major part of the testimony, and even some of the questions, are deleted for security reasons. Senators have not had an opportunity to read the classified transcript of the hearings, and no knowledgeable decision can be made without a consideration of all the facts which bear on this admittedly technical and vital issue. The discussion of this subject, therefore, requires secrecy.

Mr. President, I therefore move, under the provisions of standing rule of the Senate XXXV that the doors of the Senate be closed.

Mr. CURTIS. Mr. President, I second the motion.

The PRESIDING OFFICER. The motion has been made and seconded that the Senate go into closed session. Pursuant to rule XXXV, the Chair now directs the Sergeant at Arms to clear the galleries and to close the doors, and that all officials of the Senate not cleared for secrecy be excluded from the Chamber.

Mr. MANSFIELD. Mr. President, before the Chair makes that ruling——

Mr. RUSSELL. Mr. President, I ask unanimous consent that Mr. William H. Darden, of the professional staff of the Armed Services Committee, and the only member of that staff who attends the hearings when the CIA presents its matter to the committee, be permitted to stay in the Chamber. He is charged with secret documents and records which pertain to this matter. I might be handicapped in finding them if he were excluded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SALTONSTALL. Mr. President, I ask the same privilege for Mr. Fred B. Rhodes, Jr., a member of the Appropriations Committee——

Mr. THURMOND. Mr. President, I cannot hear what the Senator is saying. Will the Senator repeat his request?

Mr. SALTONSTALL. I ask the same privilege for Mr. Fred B. Rhodes, Jr., who is the senior clerk of the minority staff of the Appropriations Committee, and who has worked on this subject in the Armed Services Committee and Appropriations Committee. I ask that he be permitted to remain in the Chamber. He has the highest secrecy clearance.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, do I correctly understand that the Chair has ordered that the Sergeant at Arms clear the galleries?

The PRESIDING OFFICER. The Senator is correct.

Mr. MANSFIELD. And also that the Chamber is to be cleared except for those persons who are to be in the Chamber by right?

The PRESIDING OFFICER. The Senator is correct; other than those persons who are sworn to secrecy.

Mr. MANSFIELD. Has the Chair indicated that he intends to order the Sergeant at Arms to place guards at all entrances to the Chamber, so that no person who is not entitled to access will be in a position to come in or to go out?

The PRESIDING OFFICER. That is the customary procedure; and it is so ordered.

Mr. MANSFIELD. I thank the Chair.

Mr. THURMOND. Mr. President, after the doors have been closed, I suggest that there be a quorum call.

The PRESIDING OFFICER. The bells are ringing now.

(At 1 o'clock and 51 minutes p.m. the doors of the Chamber were closed.)

At the conclusion of the closed-door session, the doors were reopened, at 6:10 o'clock p.m., and the Senate was called to order by Hon. DANIEL B. BREWSTER, a Senator from the State of Maryland.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. Will the Chair state the pending question?

The PRESIDING OFFICER. The question before the Senate is on agreeing to the amendment of the Senator from Georgia [Mr. RUSSELL] to strike out on page 3, lines 14 to 16, the following: "$746,700,000 of which amount $196,000,000 is authorized only for production of component parts of the Nike-Zeus system," and to insert in lieu thereof the figure "$550,700,000," so that the section will read as follows:

> MISSILES
>
> For the Army, $550,700,000; for the Navy, $1,095,100,000; for the Marine Corps, $14,700,000; for the Air Force, $2,101,200,000.

Mr. MANSFIELD. Mr. President, the yeas and nays have been ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virigina (when his name was called). On this vote I have a pair with the senior Senator from Missouri [Mr. SYMINGTON]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." Therefore I withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from Pennsylvania [Mr. CLARK], the Senator from Mississippi [Mr. EASTLAND], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Louisiana [Mr. ELLENDER], the Senator from Alabama [Mr. HILL], the Senator from Florida [Mr. HOLLAND], the Senator from Missouri [Mr. LONG], the Senator from Michigan [Mr. MCNAMARA], the Senator from Missouri [Mr. SYMINGTON], the Senator from Texas [Mr. YARBOROUGH], the Senator from Ohio [Mr. YOUNG], and the Senator from Tennessee [Mr. KEFAUVER] are absent on official business.

I further announce that, if present and voting the Senator from Pennsylvania [Mr. CLARK], the Senator from Mississippi [Mr. EASTLAND], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Louisiana [Mr. ELLENDER], the Senator from Florida [Mr. HOLLAND], the Senator from Missouri [Mr. LONG], the Senator from Ohio [Mr. YOUNG], and the Senator from Tennessee [Mr. KEFAUVER] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Wyoming [Mr. SIMPSON] is absent on official business.

The Senator from Vermont [Mr. AIKEN], the Senator from Utah [Mr. BENNETT], the Senator from Kentucky [Mr. MORTON], the Senator from New Mexico [Mr. MECHEM], the Senator from South Dakota [Mr. MUNDT], the Senator from Pennsylvania [Mr. SCOTT], and the Senator from Texas [Mr. TOWER] are necessarily absent.

The Senator from Maryland [Mr. BEALL], the Senator from Kansas [Mr. CARLSON], and the Senator from Arizona [Mr. GOLDWATER] are absent to attend the funeral of a friend.

If present and voting, the Senator from Vermont [Mr. AIKEN], the Senator from Pennsylvania [Mr. SCOTT], and the Senator from Kentucky [Mr. MORTON] would each vote "yea."

On this vote, the Senator from Colorado [Mr. ALLOTT] is paired with the Senator from New Mexico [Mr. MECHEM]. If present and voting, the Senator from Colorado would vote "yea" and the Senator from New Mexico would vote "nay."

On this vote, the Senator from Wyoming [Mr. SIMPSON] is paired with the Senator from South Dakota [Mr. MUNDT]. If present and voting, the Senator from Wyoming would vote "yea," and the Senator from South Dakota would vote "nay."

On this vote, the Senator from Kansas [Mr. CARLSON] is paired with the Senator from Maryland [Mr. BEALL]. If present and voting, the Senator from Kansas would vote "yea," and the Senator from Maryland would vote "nay."

The result was announced—yeas 58, nays 16, as follows:

So Mr. RUSSELL's amendment was agreed to.

Mr. DODD. Mr. President, I would like, first of all, to commend the distinguished junior Senator from South Carolina [Mr. THURMOND] for the splendid presentation he has made today. He has presented in a forthright, candid, dedicated manner crucial facts which every Senator ought to know. I believe he has opened some eyes here today. I congratulate him for what he has done and I am proud to support the position he has taken.

I also wish to express my deep regard, respect, and, if I may say so, my affection for the great senior Senator from Georgia [Mr. RUSSELL] who has once again shown his characteristic mastery of the factors involved in our national defense. Watching him today has been an inspiration and an education to me and to all of us. Because of my vast respect for his judgment, I am deeply disturbed over the fact that I might take an opposite view on this issue.

I have for some years now been concerned over the lag in our anti-missile missile program.

Speaking about this matter on the floor of the Senate, on May 12, 1960, I said that the development of the antimissile missile by either side would have strategic implications comparable to the development of the A-bomb or H-bomb.

I pointed out that the corps of exceptionally competent scientists and engineers who had been working on the Nike-Zeus project for the U.S. Army were completely convinced that the problems of guidance and of a suitable warhead could be solved. Indeed, they believed their project was far enough along at that time to warrant the advanced procurement of vital components.

I said that I was sufficiently impressed by the progress of the project and by the confidence of the men responsible for it, to favor a full-speed-ahead program.

But for some strange reason, the responsible authorities ruled that there should be no procurement until the Nike-Zeus had been completely tested and proved as a weapons system.

I want to point out that the Nike-Zeus project has from the beginning had the unqualified backing of the Army Chief of Staff. Only several weeks ago, Gen. Maxwell Taylor, Chairman of the Joint Chiefs, told the House Armed Services Appropriations Subcommittee that we face the possibility of a cold war defeat if the Russians beat this country to an antimissile missile. General Taylor pointed out that if the Zeus had been put into production when he first recommended it in 1959, the first unit would be installed this year.

The Nike-X system on which the Army is now working may ultimately prove to be more effective than the Nike-Zeus. But the research on the Nike-X system is still in its infancy and it will probably be a number of years, at the best, before we are in a position to construct Nike-X installations to defend our cities.

Even admitting the imperfections in the Nike-Zeus, I think that we would have been in a far stronger position today and in the critical years ahead of us, if we had followed the Army's recommendations in 1959.

Obviously, some kind of antimissile system, even an imperfect one, is better than none. And clearly it is our duty to provide ourselves at every juncture with the most effective weapons our technology makes possible—knowing that such weapons may be superseded within the decade by weapons systems of greatly improved effectiveness.

I know that in certain scientific quarters there is a psychological opposition to the antimissile missile because they believe that this would upset the precarious balance of power between the United States and the Soviet Union.

In his speech at Cornell University last January 5, Dr. Hans Bethe reiterated his oft-stated opinion that the anti-ICBM is "virtually hopeless." Dr. Bethe has by no means been alone in the expression of such negative opinions. I am certain that all of these opinions have represented honest estimates. But their net effect has been to create so much doubt in the minds of the responsible authorities that the Defense Department refused to engage in procurement for an anti-missile-missile program until it had passed all the tests. In consequence, even if further developments demonstrate the capability of an antimissile missile beyond any possibility of doubt, several precious and irretrievable years will have been lost in providing our people with the protection of an antimissile defense.

I find it difficult to understand Dr. Bethe's persistently negative attitude on the question of the antimissile missile, just as I find it difficult to understand the persistent tendency of the school of scientific advisers to which he belongs to discount the importance of all potential developments in the field of nuclear weapons technology.

In the case of Dr. Bethe and the anti-ICBM, I have reason to believe that his negativism may be another manifestation of his tendency to tailor his scientific opinions to conform with his political views.

Dr. Bethe, as I have already pointed out, believes that we are all safer if the Soviets enjoy near-parity with the United States in nuclear weapons. This situation in his opinion creates a "stable deterrent." In an article written for the Christian Science Monitor last March 3, Dr. Bethe, after again stating his belief that there is no effective anti-ICBM system, concluded with the words: "But I believe that this is good because after all we want the stable deterrent to remain stable."

I note with satisfaction that Secretary of Defense McNamara, in his recent presentation to Congress, asked for funds for the development of the Nike-X, an advanced derivation from the Nike research.

As I did three years ago when I first addressed myself to this subject, I would again urge that the development of the antimissile missile be given top priority and that, in the light of the highly encouraging progress recently made, we honor the Army's request for advance procurement in the interest of expediting the program.

The prospect of an effective antimissile missile again brings us back to the importance of the neutron bomb. Because, of all the developments now on the horizon, the neutron bomb offers perhaps the greatest promise for use as an antimissile warhead in the Nike-X system on which the Army is now working.

Mrs. SMITH. Mr. President, I offer the amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The CHIEF CLERK. On page 3, line 20, it is proposed to strike out "$2,159,600,000" and to insert in lieu thereof "$2,293,600,000."

Mrs. SMITH. Mr. President, I am offering this amendment, which would add $134 million authorization for two additional nuclear submarines which were included in the bill as it passed the House. I feel that the House took very wise action on this, and the House fully justified the action taken as explained in the House committee report.

Mr. President, I read from the House report No. 62 the section on "Attack Submarines":

ATTACK SUBMARINES

As indicated under "Explanation of Amendments," the committee added two attack or "killer" submarines to the six which were requested in the bill as submitted to the Congress. The committee wishes to point out that the Department of the Navy had requested the Secretary of Defense to include not six, but eight, of these submarines in the bill. The Secretary of Defense, however, made the decision that six was the proper number.

Historically the submarine has always been strictly a weapon of opportunity because of its extremely low speed submerged and because of the short range of its weapons. Its targets have been limited necessarily to those ships which happen to come within its small combat range. Nuclear power has transformed the submarine into a ship able to operate submerged for unlimited periods at speeds in excess of all except the few very fastest surface ships. There is now almost no target which cannot be overtaken and destroyed. This makes the submarine a tremendously more vital ship in future naval warfare than its diesel-electric predecessor.

The Soviets represent the main threat to our security. Our ability to contain and defeat that threat will depend on our sea power and its ability to protect our own sea lanes and to deny portions of the sea to the Soviets.

The primary threat to our sea power is the Russian submarine. While Russia today does have a significant numerical advantage in the total size of her submarine forces, we have an advantage in the number of nuclear powered submarines. However, current trends indicate that it will not be too far in the future when the Soviet nuclear submarine strength will approximate the entire U.S. attack submarine force level.

Our present inventory of attack submarines contains a large number of conventional submarines, some post-World War II, but a large number are World War II ships.

Further modernization or conversion of World War II submarines is not practicable either from a cost effectiveness or operational standpoint. No conventional submarine can be modernized to give it a significant combat capability against nuclear submarines. The most that can be accomplished by modernizing conventional submarines is an increased interim ASW capability against other conventional submarines. Our World War II submarines are 20 years old and plagued with material difficulties. The most that can be accomplished for these submarines is some improvement in material condition and a marginal increase in combat capability. However, by the early 1970's the World War II submarines will be approximately 30 years old and they can expect to have problems of reliability and safety even if modernized.

The nuclear attack submarine represents a weapons system with a capability several orders of magnitude greater than the conventional submarine (modernized or otherwise) in almost every area essential to combatant capability: increased maximum and sustained speed, vastly increased endurance, increased test depth, greatly improved passive and active sonar, large reduction in radiated noise with resultant low detectability by passive sonar system, increased detection and search capability, and increased kill capability. These effectiveness factors are true whether SSN's are deployed in forward areas acting independently in area patrols, or are units of a barrier acting in concert with other ASW forces. The kill capability of the SSN in either deployment is manifold that of the conventional submarine against conventional submarine targets. Against nuclear submarine targets they are effective, while the conventional submarines are relatively ineffective regardless of the scheme of employment. Against future enemy nuclear submarines, contacts will be less frequent and therefore enemy contact must be exploited to insure a kill to the maximum extent possible. A barrier must live up to its name. Detection and kill is the object, not solely early warning.

With the increasing threat of enemy nuclear submarines, conventionally powered submarines will progressively become inadequate to the task. Moreover, as Soviet capabilities increase, the long submerged endurance and high submerged speed of nuclear submarines become primary requisites. With respect to Soviet SSN the United States has a 4- to 5-year lead. This lead has been developed at great expense and effort and can be maintained only through a shipbuilding program which modernizes our submarine forces at a rate commensurate with the threat. Construction of eight SSN per year is the minimum program to insure the modernization of our submarine force against the developing threat.

I yield to the senior Senator from New Hampshire [Mr. Cotton].

Mr. COTTON. Mr. President, I wish to commend the Senator from Maine for her amendment and to associate myself with her in supporting the amendment. She has always been a champion of the very necessary and vital submarine as a weapon.

Our sympathy goes out to the loved ones of those who have lost their lives in the service of their country, however, many of us still believe the *Thresher* will be to the submarine, in its future development, what the Alamo was to Texas. It will be a tragic inspiration to improve the safety and efficiency of nuclear submarines and make them what they are destined to be—the effective right arm of America's striking powder.

I am heartily in favor of the amendment of the Senator from Maine. I think the people of this Nation should realize and appreciate the long, hard fight that she has made for this effective weapon.

Mrs. SMITH. I thank the distinguished senior Senator from New Hampshire.

I now yield to the distinguished junior Senator from Connecticut [Mr. Ribicoff].

THE LOSS OF THE SUBMARINE "THRESHER"

Mr. RIBICOFF. Mr. President, I think I speak the sentiment of every Member of the Senate in expressing sadness at the loss of the submarine *Thresher*. The *Thresher* operated out of the Connecticut submarine base. Many of the brave men who went down with that ship were residents of the State of Connecticut, many coming from the New London and Groton area.

Those men and the people who live in the New London-Groton area have always been aware of the hazards faced by the men who go out in submarines, whether in peace or war. Yet there are many others who forget these hazards.

It just so happens that from my front porch, overlooking New London Harbor, one can always see the submarines going down the Thames River, out of the harbor, and into the sea, and coming back again.

It was also my great privilege, when I was Governor of Connecticut, to have participated in many celebrations that took place when the nuclear submarines were racking up the fantastic records they made, indicating the new era of the nuclear-powered submarine.

It was also my privilege to know many officers and men who operated out of the submarine base in the New London-Groton area. I think there is no group of men in the Nation, whether in the Armed Forces or out, who represent more intellectual qualities, physical courage, and emotional balance than do the men who operate the submarine force of the United States of America. They are all hand picked.

The loss of this submarine is a great tragedy and a great loss to our country.

I express, on behalf of myself, and I know I do for all the other Members of the Senate, deep sympathy to the families of those men who were lost when the *Thresher* went down.

Mr. MORSE. Mr. President, will the Senator yield?

Mrs. SMITH. I yield to the Senator from Oregon.

Mr. MORSE. This is another example where we had better err in the direction of too much rather than too little, when there is requested an increase of six to eight of these submarines, and when we realize that in certain parts of the world it is reported to us that our submarine force is the best defensive weapon we have, as well as the best offensive weapon.

I am thinking, for example, of the waters of the Alaska area, so close to Russia. I am thinking of the waters of Latin America, where we are greatly concerned about the potential influx of Russian submarines, particularly if they are able to get a submarine base nearer to us than they have at the present time. I know we are apparently ahead of them in the quality of our submarines, but we certainly are not ahead of them yet in quantity.

Therefore, we should not take a chance. I would rather make a mistake in the direction of providing too much than too little, in providing submarines. Therefore, I am happy to vote for the amendment of the Senator from Maine.

Mrs. SMITH. I am grateful to the distinguished Senator for his support and for his kind remarks.

Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. LAUSCHE. Mr. President, I feel I would be remiss if I did not express my commendation to the Senator from South Carolina [Mr. Thurmond] for the motion he made last night that the Senate go into executive, or closed, session, in order to discuss the subject which he proposed to the Senate today.

Debates are intended to analyze, synthesize, inform, eliminate the chaff, and produce the grain, so that intelligent judgment can be achieved. I did not vote in conformity with the views of the Senator from South Carolina, but I can definitely state that, in my 6 years and 3 months in the Senate, at no time has an issue been discussed with the clarity, with the concept of full information and sincerity, as was the issue this afternoon.

We sat here, I think, for about 3 hours, with no time wasted, no distraction from the discussion, on the floor or in the galleries, and no distraction from people moving back and forth.

I learned today, more than I learned before in 6½ years, certain aspects about our military posture.

I owe my thanks for the information thus acquired to the Senator from South Carolina.

I want to say to the Senator that frequently, as important issues arise, I hope we shall again have the same type of meeting we had today. I, of course, would not subscribe to the general proposition that there be private meetings without the public's knowing what was going on; but there are times when confidential matters have to be discussed. This afternoon's meeting showed the effectiveness of a discussion such as we had.

I commend the Senator from South Carolina for his thoughtfulness, and I thank him for making available to me today information that will aid me in the future. I also thank the Senator from Georgia [Mr. Russell] for his help in guiding my course in the future.

Mr. THURMOND. I thank the Senator for his kindness.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. MANSFIELD. I wish to join the distinguished Senator from Ohio in what he has said. It was a most interesting afternoon. The audience to the discussion was very much interested in what went on. I believe it was a beneficial couple of hours in a discussion of very important subjects.

I wish to commend not only the distinguished Senator from South Carolina, who in my opinion has performed a real public service, but also the Senator from Georgia [Mr. RUSSELL], who ably defended the point of view which he advocated. The matter is now settled. I express the hope that we will not have another meeting of this kind for at least a quarter of a century.

Mr. RUSSELL. Mr. President, I wish to associate myself with the words of condolence and sympathy which have been expressed to the next of kin and friends and survivors of the men who went down in the atomic-powered submarine *Thresher*. It is always a great tragedy when men go down to the sea in ships and do not return. It is especially true in the case of these men, who went out on this trial run, testing the diving capability of this atomic-powered submarine.

I may say, Mr. President, that we have been rather fortunate in years gone by in not having lost an atomic-powered submarine. We have a large number of the *Thresher* class, and many more in production.

This is the first such submarine we have lost through an accident of this kind, and I pray a benign Providence will vouchsafe it the last.

I should like to be in a position to accept the amendment offered by the distinguished Senator from Maine. I cannot in good conscience do so, however, because I do not believe that the addition of these two attack submarines to the six that are already included in the bill, is justifiable at this time.

The amendment does not refer to a Polaris-type submarine, but to an antisubmarine submarine. As the committee report indicates, 39 nuclear-powered attack submarines have been authorized in previous programs, 19 of which will have joined the fleet by the end of this fiscal year. Others will be added through the year 1968.

The fact that we have lost a submarine of this type should cause us to defer action on the amendment if for no other reason. The submarines that are involved in the amendment and involved in the bill are the same class as the one lost, the *Thresher* type. Until we have some report from the board of inquiry on what caused this submarine to fail and to bring about this tragic result, we can very well defer the addition of these two submarines.

The bill provides authorization of appropriations for the construction of 6 of these nuclear-powered attack submarines, in addition to the 39 that are already authorized. Senators will bear in mind that this is not the Polaris-type submarine, but is in the nature of an antisubmarine submarine. It is a very expensive submarine. It costs about $67 million.

In view of the tremendous additions that we have made to the fleet by way of construction and contract for the next few years, we can defer this proposal for these two additional submarines of this type until we find out what caused the catastrophe to the *Thresher* submarine.

Mr. DODD. Mr. President, I wish to join the distinguished Senator from Georgia, in his splendid tribute to the men of the *Thresher*. I was born and raised a few miles from the submarine base at New London. I still have a home nearby. I have known many, many people in the submarine service. They are very fine and wonderful people, and they have served our country for a long period of time with devotion, courage, and self sacrifice. This tragedy came as a numbing shock to the people of Connecticut and the people of the country. It is a reminder to all of us that these men of the submarine service, and their families, live in the shadow of death at all times, in peace and in war. I offer no opinion on the merits of the amendment, but I did not want this occasion to pass without joining in the tribute to the men of the submarine *Thresher*, and expressing my deep sorrow to their families.

Mr. RUSSELL. I did not discuss this subject at any great length. We all know that the bravest men and the most active and venturesome young men volunteer for this type of duty. None of these men is conscripted. Everyone of them is a volunteer. They are the finest men we have. When we lose this many men in one submarine, there is no way to calculate the value that we have lost. We know the submarine costs $67 million, but that does not approximate the cost of the loss to the Nation.

The attack submarine program recommended by the President and the Secretary of Defense in the fiscal year 1964-68 program submitted to Congress in January contemplates a force of over 100 ships excluding 41 Polaris types. When this program is completed, well over half of the force will be nuclear-powered and nearly all of the remainder would be modernized conventional-powered submarines.

While the nuclear-powered attack submarine is a very important element in our Nation's antisubmarine warfare capability, it is not the only one that is important. Some authorities believe the Navy is better off in the size of its nuclear-powered attack submarine force than it is in other elements of a well balanced antisubmarine capability.

The committee labored earnestly and valiantly to make some reductions in the bill this year. Since this committee amendment involves a difference with the House, the matter will be in conference if the Senate rejects the amendment of the Senator from Maine. If the Senate were to make this addition, I am sure the other programs that are not justified by the budget estimates that have been recommended by the President and by the Secretary of Defense could prove to be equally appealing.

Much as I dislike to do so, I must reluctantly urge the Senate to accede to the budget recommendations of the President and the Secretary of Defense, which have been very generous in this submarine field, and to stand by the committee's action.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Maine.

Mrs. SMITH. Mr. President, I wish to join other Senators who have spoken so highly of the distinguished chairman of the Committee on Armed Services, the senior Senator from Georgia [Mr. RUSSELL]. I have the privilege of serving on that committee. I appreciate his patience and tolerance in his dealings with all of us throughout the hearings.

I fully acknowledge the right of our distinguished chairman to his opinion. I respect him and his opinions even though I differ with him on the subject dealt with in my amendment.

I think that the headlines in the papers today illustrate the wisdom of this amendment. I refer to the tragic loss of the submarine *Thresher*.

In my opinion, we would be wise to authorize the two additional submarines that this amendment proposes. It does not mean that the President would have to order their construction, but it would give him the authority. And that authority would give him greater flexibility with which to cope with such tragic losses as that of the *Thresher*.

This amendment would carry no mandatory obligation. Instead it would give the President greater latitude on meeting our defense requirements—requirements that can quickly change as a result of such developments as the tragedy of the *Thresher*.

Mr. President, I move the adoption of my amendment.

Mr. McINTYRE. Mr. President, will the Senator from Maine yield?

Mrs. SMITH. I yield to the Senator from New Hampshire.

Mr. McINTYRE. I wish to associate myself with the remarks of the distinguished senior Senator from Georgia [Mr. RUSSELL]. At the same time, I should like to join with the distinguished Senator from Maine [Mrs. SMITH], my neighbor and friend, in support of the amendment.

The tragic event which has occurred in what appears to be one of the greatest of peacetime naval disasters has saddened all of us in New Hampshire. At the same time, we are proud of the outstanding record of the Navy and of our submarine fleet.

We are proud that the type of submarine involved in this tragedy has already proved itself to be one of the greatest fighting submarines in the world. I urge the Senate to add to our growing strength in this nuclear type of submarine. I commend the senior Senator from Maine for offering the amendment.

Mrs. SMITH. I thank the distinguished junior Senator from New Hampshire. Throughout the years, it was my privilege to work with our beloved former colleague, the late Styles Bridges, who was long a Senator from New Hampshire. It is gratifying to know that we have with us in the Senate Senator COTTON and Senator McINTYRE, who are following in the footsteps of Senator Bridges in doing all that it is possible to do to make our submarine fleet a credit to our Nation.

Mr. STENNIS. Mr. President, will the Senator from Maine yield?

Mrs. SMITH. I yield.

Mr. STENNIS. Mr. President, I wish to join in the sentiments of great sorrow expressed by the Senator from Georgia and the Senator from Maine upon the recent loss of the submarine *Thresher*. Together with other Senators, I am proud to say to the parents and loved ones of the men who were lost that they gave their lives as truly as anyone ever did for their flag and their Nation. Among all military men, the crews of the submarines are at the very top and are among the finest.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Maine [Mrs. SMITH]. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from Virginia [Mr. BYRD], the Senator from Pennsylvania [Mr. CLARK], the Senator from Mississippi [Mr. EASTLAND], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Louisiana [Mr. ELLENDER], the Senator from Arizona [Mr. HAYDEN], the Senator from Florida [Mr. HOLLAND], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Missouri [Mr. LONG], the Senator from Michigan [Mr. MCNAMARA], the Senator from Missouri [Mr. SYMINGTON], the Senator from Texas [Mr. YARBOROUGH], the Senator from Ohio [Mr. YOUNG], the Senator from Alaska [Mr. BARTLETT], the Senator from Alaska [Mr. GRUENING], the Senator from Alabama [Mr. HILL], and the Senator from Washington [Mr. MAGNUSON], are absent on official business.

I further announce that, if present and voting, the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Oklahoma [Mr. EDMONDSON], the Senator from Louisiana [Mr. ELLENDER], the Senator from Arizona [Mr. HAYDEN], the Senator from Florida [Mr. HOLLAND], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Missouri [Mr. LONG], the Senator from Missouri [Mr. SYMINGTON], the Senator from Ohio [Mr. YOUNG], the Senator from Alaska [Mr. BARTLETT], the Senator from Alaska [Mr. GRUENING], the Senator from Alabama [Mr. HILL], and the Senator from Washington [Mr. MAGNUSON] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT] is absent because of the death of his mother.

The Senator from Wyoming [Mr. SIMPSON] is absent on official business.

The Senator from Vermont [Mr. AIKEN], the Senator from Utah [Mr. BENNETT], the Senator from Kentucky [Mr. MORTON], the Senator from New Mexico [Mr. MECHEM], the Senator from South Dakota [Mr. MUNDT], the Senator from Pennsylvania [Mr. SCOTT], and the Senator from Texas [Mr. TOWER] are necessarily absent.

The Senator from Maryland [Mr. BEALL], the Senator from Kansas [Mr. CARLSON], and the Senator from Arizona [Mr. GOLDWATER] are absent to attend the funeral of a friend.

If present and voting, the Senator from Colorado [Mr. ALLOTT], the Senator from Maryland [Mr. BEALL], the Senator from Kansas [Mr. CARLSON], the Senator from Arizona [Mr. GOLDWATER], the Senator from Kentucky [Mr. MORTON], and the Senator from Wyoming [Mr. SIMPSON] would each vote "nay."

If present and voting, the Senator from Vermont [Mr. AIKEN], and the Senator from Texas [Mr. TOWER] would each vote "yea."

On this vote, the Senator from Pennsylvania [Mr. SCOTT] is paired with the Senator from New Mexico [Mr. MECHEM]. If present and voting, the Senator from Pennsylvania would vote "yea," and the Senator from New Mexico would vote "nay."

The result was announced—yeas 22, nays 48, as follows:

So Mrs. SMITH's amendment was rejected.

The PRESIDING OFFICER. Are there further amendments to be proposed to the committee amendment?

If not, the question is on agreeing to the committee amendment, as amended.

The amendment, as amended was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 2440) was read the third time and passed.

Mr. MANSFIELD. Mr. President, I move that the vote by which the bill was passed be reconsidered.

Mr. HUMPHREY. Mr. President, I move to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, under the agreement, I understand the Senate will now take up morning-hour business.

The PRESIDING OFFICER. That is correct.

CERTAIN STREETS IN VILLAGE OF HEYBURN, IDAHO

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Committee on Interior and Insular Affairs be discharged from further consideration of House bill 1087, to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve, and that the Senate proceed to consider the bill.

There being no objection, the bill (H.R. 1087) to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve was considered, ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that Senate bill 22 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to consider the measures on the calendar, beginning with Calendar No. 97, and continuing with the following calendar measures in sequence.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered; and the measures on the calendar, beginning with Calendar No. 97, will be stated.

CONVEY CERTAIN PUBLIC LANDS IN NEVADA TO COUNTY OF LINCOLN

The Senate proceeded to consider the bill (S. 873) to direct the Secretary of the Interior to convey certain public lands in the State of Nevada to the county of Lincoln, State of Nevada, which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 2, line 4, after the word "approximately", to strike out "2,920" and insert "2,844"; after line 5, to strike out:

> Range 67 east, township 3 south, northwest quarter of section 2; west half, southwest quarter section 2; all of section 3; northeast quarter and northwest quarter and southwest quarter and northeast quarter of southeast quarter and northwest quarter of southeast quarter and southwest quarter of southeast quarter of section 10. Northeast quarter and northwest quarter and southwest quarter of section 15. Also, northeast quarter of southeast quarter of the northwest quarter of southeast quarter and southeast quarter of southeast quarter of section 15. All of section 14. All of southeast quarter of section 11 and southeast quarter of northeast quarter of section 11, and northwest quarter of northwest quarter of section 11.

And, in lieu thereof, to insert:

The northwest quarter, west half of southwest quarter section 2; all section 3; north half, southwest quarter, west half of southeast quarter, northeast quarter of southeast quarter section 10; southeast quarter of northeast quarter, northwest quarter of northwest quarter, southeast quarter, section 11; all section 14; north half, southwest quarter, northeast quarter of southeast quarter of northwest quarter of southeast quarter, southeast quarter of southeast quarter section 15, all in township 3 south, range 67 east, Mount Diablo meridian, Nevada.

On page 4, after line 8, to insert a new section, as follows:

Sec. 6. This Act shall not preclude the county of Lincoln from acquiring title or leases to any lands described in this Act for public or recreational purposes under the Act of June 14, 1926 (44 Stat. 741), as amended (43 U.S.C. 869, et seq.).

And, after line 13, to insert a new section, as follows:

Sec. 7. Any patent issued under this Act shall contain a reservation to the United States of any of the following named minerals for which the land is deemed valuable or prospectively valuable: coal, native asphalt, solid and semisolid bitumen, and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried), oil, gas, oil shale, phosphate, sodium, and potassium, together with the right of the United States, its lessees, permittees, or licensees to prospect for, mine, and remove them under applicable provisions of law.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior shall issue to the county of Lincoln, State of Nevada, upon the payment of the purchase price by the county into the Treasury of the United States, not more than five years after the Secretary has notified the county of such price, which shall be an amount equal to the sum of the costs of extinguishing any adverse claims to the lands to be patented, the costs of any necessary survey, and the fair market value of the lands as determined by the Secretary after the appraisal of the lands by contract appraisal or otherwise, a patent for the following-described lands, situated in the State of Nevada and comprising approximately 2,844 acres (all range references are to the Mount Diablo base and meridian):

The northwest quarter, west half of southwest quarter, section 2; all section 3; north half, southwest quarter, west half of southeast quarter, northeast quarter of southeast quarter section 10; southeast quarter of northeast quarter, northwest quarter of northwest quarter, southeast quarter, section 11; all section 14; north half, southwest quarter, northeast quarter of southeast quarter of northwest quarter of southeast quarter, southeast quarter of southeast quarter section 15, all in township 3 south, range 67 east, Mount Diablo meridian, Nevada.

Sec. 2. The conveyance authorized by this Act shall be made subject to any existing valid claims against the lands described in the first section of this Act, and to any reservations necessary to protect continuing uses of those lands by the United States.

Sec. 3. Nothing contained in the preceding provisions of this Act shall be construed to preclude the county of Lincoln, State of Nevada, from purchasing, in accordance with such preceding provisions, only such portion or portions, by legal subdivision of the public land surveys, of the above-described lands as such county elects, nor shall the purchase by such county of only a portion or portions of such lands be construed to constitute a waiver or relinquishment of any of its rights under this Act to purchase, in accordance with such preceding provisions and by legal subdivisions of the public land surveys, the remainder of such lands, or any portion thereof.

Sec. 4. All moneys received from the conveyance of lands under the terms of this Act shall be disposed of in the same manner as moneys received from the sale of public lands, except that moneys received as reimbursement for costs of appraisal, surveys, and extinguishing adverse claims may be used by the Secretary for said purposes without appropriation.

Sec. 5. The lands described in section 1 of this Act shall be segregated from all forms of appropriation under the public land laws, including the mining and mineral leasing laws, from the date of approval of this Act until the Secretary shall provide otherwise by publication of an order in the Federal Register.

Sec. 6. This Act shall not preclude the county of Lincoln from acquiring title or leases to any lands described in this Act for public or recreational purposes under the Act of June 14, 1926 (44 Stat. 741), as amended (43 U.S.C. 869, et seq.).

Sec. 7. Any patent issued under this Act shall contain a reservation to the United States of any of the following-named minerals for which the land is deemed valuable or prospectively valuable: coal, native asphalt, solid and semisolid bitumen, and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried), oil, gas, oil shale, phosphate, sodium, and potassium, together with the right of the United States, its lessees, permittees, or licensees to prospect for, mine, and remove them under applicable provisions of law.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 119), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

The Committee on Interior and Insular Affairs, to whom was referred the bill (S. 873) to direct the Secretary of the Interior to convey certain public lands in the State of Nevada to the county of Lincoln, State of Nevada, having considered the same, report favorably thereon with amendments and recommend that the bill as amended do pass.

The amendments are as follows:

On page 2 line 4, strike out "2,920" and substitute "2,844". This amendment corrects an error in the acreage description in the bill.

On page 2, strike lines 6 through 18 and substitute the following language:

"The northwest quarter, west half of southwest quarter section 2; all section 3; north half, southwest quarter, west half of southeast quarter, northeast quarter of southeast quarter section 10; southeast quarter of northeast quarter, northwest quarter of northwest quarter, southeast quarter section 11; all section 14; north half, southwest quarter, northeast quarter of southeast quarter of northwest quarter of southeast quarter, southeast quarter of southeast quarter section 15, all in township 3 south, range 67, east, Mount Diablo meridian, Nevada."

This is a technical amendment more accurately describing the legal subdivisions described in the bill.

On page 3, following line 23, add a new section, as follows:

"Sec. 6. This Act shall not preclude the county of Lincoln from acquiring title or leases to any lands described in this Act for public or recreational purposes under the Act of June 14, 1926 (44 Stat. 741), as amended (43 U.S.C. 869, et seq.)."

The purpose of this amendment is to assure that this legislation does not diminish the opportunity for Lincoln County to acquire lands under the Recreation and Public Purposes Act.

Add a new section 7 as follows:

"Sec. 7. Any patent issued under this Act shall contain a reservation to the United States of any of the following named minerals for which the land is deemed valuable or prospectively valuable: coal, native asphalt, solid and semi-solid bitumen, and bituminous rock (including oil-impregnated rock or sands from which oil is recoverable only by special treatment after the deposit is mined or quarried), oil, gas, oil shale, phosphate, sodium, and potassium, together with the right of the United States, its lessees, permittees, or licensees to prospect for, mine, and remove them under applicable provisions of law."

The purpose of this amendment is to reserve minerals to the United States.

PURPOSE

The county of Lincoln has excessively heavy Federal land holdings, and it has desired to develop a broader industrial base. In recent years its rural development committee has been working in cooperation with the Nevada Area Development Committee to achieve this goal. The lands involved are located in Meadow Valley Wash, 6 miles north of Caliente, within an area designated as depressed. It is principally open land of little value for livestock grazing, recreational, or subdivisional use, and of unknown value for agriculture. This legislation will permit Lincoln County to attempt to develop industrial or other uses in this area.

COST

No budgetary increase is involved. The legislation requires that Lincoln County pay the fair market value of the lands plus the cost of necessary surveys and the cost to the Government of extinguishing any adverse claims on the lands involved. In setting the fair market value, the Secretary will be expected to guard against speculative practices and assure that the price paid to the Federal Government is representative of the value of the property and that it will not be resold in a manner disadvantageous to either the Federal Government or to the county of Lincoln.

The legislation provides that the revenue received by the Federal Government will be deposited in the Treasury in the same manner as other public land revenues, but does make available to the Secretary the moneys received from Lincoln County to cover the cost of appraisal, surveys, and extinguishing adverse claims.

AMENDMENT OF ACT RELATING TO TRANSFER OF CERTAIN LANDS TO COLORADO RIVER COMMISSION OF NEVADA

The bill (H.R. 277) to amend the act of April 22, 1960, relating to the transfer of certain lands to the Colorado River Commission of Nevada was considered, ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 120), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE

H.R. 277 will extend, for 5 years (i.e., until April 22, 1968), the time within which the Nevada-Colorado River Commission may submit its plan for development of certain areas of public land previously authorized for purchase, and extend for 10 years (i.e., until April 22, 1970) the time within which the State may complete the purchase.

NEED

The act of April 22, 1960 (74 Stat. 74), provides for the conveyance of certain public lands by the Department of the Interior to the State of Nevada. Under the terms of the act it was provided that the Secretary should segregate from all forms of entry under the public land laws, for a 5-year period, approximately 15,000 acres of public lands.

Within 3 years after the effective date of the April 22, 1960, act, the Colorado River Commission is required to submit to the Secretary of the Interior a proposed plan of development for the area referred to above. In the meantime, the Secretary was required "at the earliest practicable date" to have an appraisal made of the fair market value of the lands. Finally, it is provided that, within the 5-year segregation period referred to above, the State of Nevada, acting through the Colorado River Commission, would have a continuing option to purchase the lands involved.

In May 1962, the Department of the Interior advised the Governor of the State of Nevada of the appraised fair market value of the land as of January 1962. Although work by the commission has been proceeding, the development plan has just recently been completed and it may or may not be feasible to have it submitted to the Department by April 22, 1963. Review of the plan will take time, and orderly procedure indicates the desirability of extending the time for submission of the plan, as well as the period in which the option to purchase must be exercised.

COST

There will be no increase in budgetary requirements as the result of enactment of H.R. 277.

AUTHORITY TO BRING SUIT AGAINST the UNITED STATES BY DAVID H. AND JULIA FORMAN

The bill (H.R. 1544) to authorize David H. Forman and Julia Forman to bring suit against the United States to determine title to certain lands in Maricopa County, Ariz., was considered, ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 121), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE

H.R. 1544 grants the consent of the United States to the institution of a civil suit for the purpose of quieting title to a portion of a 0.9-acre parcel of land of which the remaining portion is utilized in connection with the Salt River Federal reclamation project. The act is the substitute bill submitted by the Department of the Interior.

NEED

The land described in H.R. 1544 was acquired by the Grand Canal Co. in 1890 from a Mr. and Mrs. F. W. Smith. Thereafter, most of the works and property of the canal company were acquired in 1906 by the United States in connection with the Salt River irrigation project. In 1919, Mr. W. H. Forman purchased from the Smith heirs the property described in H.R. 1544. The Government acknowledges that the Forman family retained possession of the land until 1947 when the Salt River Valley Water Users' Association took possession of a portion of the land and developed an irrigation well thereon.

When use of the property by the Salt River Valley Water Users' Association on behalf of the United States became necessary, the conflicting claims became known. The United States took the position that it had acquired the real estate as part of the property it acquired from the Grand Canal Co.; the Formans took the position that they had acquired the land from the Smith heirs.

The committee is convinced that it is necessary to have a judicial determination of the rights involved.

COST

No increase in budgetary requirements is involved in H.R. 1544.

BILL PASSED OVER

The bill (S. 1007) to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes, was announced as next in order.

Mr. MANSFIELD. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

AUTHORIZE SURVEY AND ESTABLISHMENT OF TOWNSITE FOR JUNEAU INDIAN VILLAGE IN ALASKA

The bill (S. 247) to authorize survey and establishment of a townsite for the Juneau Indian Village, in Alaska, was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of May 25, 1926 (44 Stat. 629; 48 U.S.C. 355a–355d) is hereby extended and made applicable to all lands of the Juneau Indian Village of Alaska, including uplands and filled in tidelands occupied on the date of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 124), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE OF THE BILL

The Native Townsite Act does not apply to tidelands, and this village is located largely on filled-in tidelands. The legislation will permit survey of the tideland areas which are an integral part of this town.

COST

No increase in budgetary requirements is involved.

DEPARTMENTAL RECOMMENDATIONS

A favorable report was submitted by the Department of the Interior; which follows:

Department of the Interior,
Office of the Secretary,
Washington, D.C., March 22, 1963.

Hon. Henry M. Jackson,
Chairman, Committee on Interior and Insular Affairs, U.S. Senate, Washington, D.C.

Dear Senator Jackson: This is in response to your request for a report on S. 247, a bill to authorize survey and establishment of a townsite for the Juneau Indian village in Alaska.

We recommend that the bill be enacted.

The bill makes the Native Townsite Act of May 25, 1926 (44 Stat. 629, 48 U.S.C. 355a-d), applicable to all lands of the Juneau Indian village of Alaska, including uplands and filled-in tidelands occupied on the date the bill is enacted.

Under the Native Townsite Act a townsite patent can be issued to a townsite trustee conveying nonmineral public lands in Alaska that are claimed or occupied by natives. The Secretary can survey the townsite into lots, and the trustee can convey the lots to the native occupants or claimants. A title conveyed to a native is inalienable without approval of the Secretary, and is not subject to taxation, sale to satisfy debts, or claims of adverse possession. Upon sale by a native, with the approval of the Secretary, the title becomes unrestricted. The Secretary can also remove restrictions upon application of the native.

The Native Townsite Act does not apply to tidelands, and a substantial portion of the Juneau native village is located on filled-in tidelands. Although the present law could be used to establish a townsite on the part of the village that is located on the uplands, legislation along the lines of this bill is needed in order to permit the townsite patent to include the entire village site.

We are not aware of any dispute about the use or occupancy by the natives of the tideland portion of the village. Native occupancy predates the founding of the city of Juneau, and the native occupancy is protected against disturbance by the Alaska Organic Act of May 17, 1884 (23 Stat. 24). In the early case of *Heckman* v. *Sutter*, 119 F. 83 (1902), it was decided that tidelands are included in the organic act's protection against disturbance, and this Department has consistently acknowledged and respected the native use and occupancy.

In an opinion dated September 16, 1960 (M–36604) the Solicitor of this Department concluded that the tidelands occupied by natives at the Juneau Indian village were not transferred to the territory of Alaska by the act of September 7, 1957 (71 Stat. 623), or to the State by the Statehood Act of July 7, 1958 (72 Stat. 339). The lands are still subject to the control of the United States and can be made subject to the townsite law.

Although the Native Townsite Act of 1926 applies only to nonmineral public lands, in 1962 (by Public Law 87–742) the act was made applicable to coal, oil, and gas lands with an appropriate reservation of the coal, oil and gas to the United States.

The Bureau of the Budget has advised that there is no objection to the presentation of this report from the standpoint of the administration's program.

Sincerely yours,
John A. Carver, Jr.,
Assistant Secretary of the Interior.

VALIDATION OF HOMESTEAD ENTRIES OF LEO F. REEVES

The Senate proceeded to consider the bill (S. 394) to validate the homestead entries of Leo F. Reeves, which had been reported from the Committee on Interior and Insular Affairs, with an amendment, on page 2, at the beginning of line 7, to strike out "on the basis of the most recent sales of similar land in the vicinity of the lands to be patented under the provisions of" and insert "as of the date of approval of"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of American in Congress assembled, That, notwithstanding the status of lots 3 and 4, section 1, township 4 north, range 11 west and lot 12 and the south twenty acres of lot 13, section 31, township 5 north, range 10 west, Seward meridian, Alaska, and the requirements of the homestead laws relating to settlement on entered lands, the Secretary of the Interior is hereby authorized and directed to consider that the homestead entries of Leo F. Reeves of Soldatna, Alaska, Anchorage 031423 and 034503 became valid and subsisting as to the above-described lands as of the date of said Reeves' actual settlement on any portion thereof and to issue patent for the lands to the entryman upon the entryman's compliance with, and subject to, the homestead laws applicable to public lands in Alaska, and upon the entryman's payment to the Secretary of the Interior of the fair market value of lot 12 and the south twenty acres of lot 13, as determined by the Secretary of the Interior as of the date of approval of this Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 125), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to patent certain lands under the Homestead Act and to permit the sale of other land entered under the Homestead Act, both exclusive of mineral rights, to the entryman, Leo F. Reeves, a homesteader in the State of Alaska. Reason and equity indicate that Mr. Reeves deserves the consideration contemplated by the legislation.

NEED

Leo F. Reeves properly filed and was allowed homestead entry Anchorage 031423 on lots 3 and 4 and S½NW¼ sec. 1, T. 4 N., R. 11 W., Seward meridian, Alaska. He moved on the land and commenced cultivation, residing in a trailer. Subsequently, he relinquished S½NW¼ sec. 1 and made an additional entry (034503) on lot 12 and the south 20 acres of lot 13, sec. 31 T. 5 N., R. 10 W., Seward meridian, Alaska, and proceeded subsequently to construct a residence and to live in it.

This additional entry was rejected and Mr. Reeves was placed in the position where his original entry upon which he was farming, was now endangered for failure to meet residence requirements, while his additional entry on which his house stood was held invalid.

Testimony before the committee, including an examination of verified copies of the land office records clearly established that Mr. Reeves was a homesteader proceeding in good faith. His subsequent entry was contiguous to the portion of the original entry he retained. He waited 4 months for notice on the allowance of his additional entry before commencing home construction, but feared waiting longer because of the need to house his wife and three children in a healthier winter residence than a trailer.

It is a fact that his original entry was allowed, and he proceeded in good faith thereunder.

It is also a fact that Mr. Reeves was advised not to occupy his additional filing. It is equally a fact that Reeves was told the land upon which he filed his additional entry was open to entry and it was not until the records were modernized later that a clear typewritten note was made to the effect that the Reeves lands under the additional entry and others nearby were not open to homesteading.

Reeves was the victim of an innocent error for the tract book at the time did not reveal the unavailability of the additional land for homestead entry. Reeves relinquished a part of his earlier entry at the time he filed his additional entry. Reeves proceeded as a homestead entryman in good faith as to the requirements of the Homestead Act.

To cancel Reeves out, as the law contemplates, would be to take from Reeves the fruits of his labor in agricultural work and home construction, the latter which is estimated to here involve a cash expenditure of over $5,000.

The Department cannot change existing law, but the Congress can. To amend the Homestead Act would involve departures not deemed advisable, therefore, the committee has selected a course based upon reason and equity. Under the Homestead law, Reeves would receive title upon meeting requirements as to cultivation and residence with only minor payments. Under this bill, Reeves will receive a patent to the unrelinquished part of his original entry and the opportunity to purchase lot 12 and the south 20 acres of lot 13 at the fair market value as of the date of approval of the act based upon the value less improvements by Reeves. The patents will contain the usual reservations of oil, gas, and other mineral rights to the United States.

COSTS

No costs are involved. The Government will receive revenue from the sales of the portion of the lands to be sold.

HOMESTEAD ENTRY OF LEWIS S. CASS

The bill (H.R. 2291) regarding a homestead entry of Lewis S. Cass was considered, ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 126), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

H.R. 2291 directs the Secretary of the Interior to reinstate the homestead entry of Lewis S. Cass so that it may be processed in accordance with provisions of the Homestead Act, other than time requirements.

NEED

The homestead entry referred to in H.R. 2291 (Anchorage No. 031055) was allowed by the acting manager of the Anchorage Land Office on September 20, 1955. Nearly 2 years later it was determined by the land office that the land was not subject to homestead entry because it had been withdrawn in 1949 for "classification and examination, and in aid of proposed legislation" and the Department of the Interior canceled the entry made by Mr. Cass.

The Department of the Interior has advised the committee that the land involved is not needed for any Federal purpose and, in fact, has been made available for disposition. Since the entryman, Mr. Cass, acted in good faith and made improvements to the property between the time of his initial entry and the time that it was disallowed, the committee believes that he should have a preference in obtaining the lands for private development.

H.R. 2291 does not modify the Homestead Act in any way. The bill provides for reinstatement of the homestead entry and authorizes the Secretary of the Interior to afford Mr. Cass a reasonable period of time within which to meet the requirements of the homestead law.

COST

No increase in budgetary requirements is involved in H.R. 2291.

CONVEY CERTAIN LAND IN VICINITY OF UNALAKLEET, ALASKA, TO MRS. WILLIAM E. BELTZ

The bill (H.R. 2294) to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Unalakleet, Alaska, to Mrs. William E. Beltz, was announced as next in order.

Mr. MORSE. Mr. President, may we have an explanation?

Mr. MANSFIELD. Mr. President, this bill was passed last year. I ask that the bill go over while the Senator from Oregon is considering the report on it.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE subsequently said: Mr. President, may I have the attention of the majority leader in regard to Calendar No. 104, House bill 2294?

The committee report shows that the market value will be paid for the property involved; therefore, I have no objection.

Mr. MANSFIELD. I thank the Senator from Oregon.

Mr. President, I move that we return now to Calendar No. 104, House bill 2294.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (H.R. 2294) was considered, ordered to a third reading, was read the third time, and passed.

ADDITIONAL FUNDS FOR COMMITTEE ON THE JUDICIARY

The resolution (S. Res. 119) to provide additional funds for the Committee on the Judiciary was considered and agreed to, as follows:

Resolved, That the Committee on the Judiciary is hereby authorized to expend from the contingent fund of the Senate, for obligations incurred during the Eighty-seventh Congress, $300 in addition to the amount, and for the same purposes specified in section 134(a) of the Legislative Reorganization Act approved August 2, 1946.

REPRINTING OF COPIES OF COMMITTEE PRINT, 87TH CONGRESS, ENTITLED "PART 1 OF CONCENTRATION RATIOS IN MANUFACTURING INDUSTRY, 1958"

The concurrent resolution, Senate Concurrent Resolution 30, to reprint copies of the committee print, 87th Congress, entitled "Part 1 of Concentration Ratios in Manufacturing Industry, 1958" was announced as next in order.

Mr. MANSFIELD. Mr. President, I move that the concurrent resolution be re-referred to the Committee on Rules and Administration. The concurrent resolution was reported by accident.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to.

PRINTING FOR USE OF SENATE SELECT COMMITTEE ON SMALL BUSINESS OF ITS HEARINGS OF THE 87TH CONGRESS ON "SPACE SATELLITE COMMUNICATIONS"

The concurrent resolution (S. Con. Res. 32) authorizing the printing for the use of the Senate Select Committee on Small Business of its hearing of the 87th Congress on "Space Satellite Communications" was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Senate Select Committee on Small Business one thousand additional copies of its hearings of August 2, 3, 4, 9, 10, and 11, 1961, Eighty-seventh Congress, entitled "Space Satellite Communications."

PRINTING OF ADDITIONAL COPIES OF PART 1 OF HEARINGS OF JOINT ECONOMIC COMMITTEE ON JANUARY 1963 ECONOMIC REPORT OF THE PRESIDENT

The concurrent resolution (S. Con. Res. 35) authorizing the printing of additional copies of part 1 of the hearings of the Joint Economic Committee on the January 1963 Economic Report of the President was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed for the use of the Joint Economic Committee fifteen hundred additional copies of part 1 of its hearings on the January 1963 Economic Report of the President, current Congress.

PRINTING AS HOUSE DOCUMENT THE PAMPHLET ENTITLED "OUR FLAG"

The concurrent resolution (H. Con. Res. 86) to authorize the printing as a House document, the pamphlet entitled "Our Flag" was considered and agreed to.

PRINTING OF WALL MAP OF THE UNITED STATES

The concurrent resolution (H. Con. Res. 98) to authorize the printing of a wall map of the United States was considered and agreed to.

PRINTING AS HOUSE DOCUMENT OF "HOW OUR LAWS ARE MADE"

The concurrent resolution (H. Con. Res. 108) to provide for the printing of "How Our Laws Are Made" as a House document was considered and agreed to.

PRINTING AS HOUSE DOCUMENT OF CONSTITUTION OF THE UNITED STATES

The Senate proceeded to consider the concurrent resolution (H. Con. Res. 119) to print as a House document the Constitution of the United States, with an analytical index and ancillaries regarding proposed amendments, which had been reported from the Committee on Rules and Administration with amendments in line 6, after the word "that", to strike out "twenty-five" and insert "one hundred", and in line 7, after the word "which", to strike out "five" and insert "fifteen".

The amendments were agreed to.

The concurrent resolution, as amended, was agreed to.

ACCEPTING STATUE OF THE LATE JOHN BURKE, OF NORTH DAKOTA, AND TENDERING THANKS OF CONGRESS THEREFOR

The Senate proceeded to consider the concurrent resolution (S. Con. Res. 6) accepting the statue of the late John Burke, of North Dakota, and tendering thanks of Congress therefor, which had been reported from the Committee on Rules and Administration with an amendment in line 3, after the word "Dakota", to strike out "now in the Capitol Building,"; so as to make the concurrent resolution read:

Resolved by the Senate (the House of Representatives concurring), That the statue of the late John Burke, presented by the State of North Dakota, is accepted in the name of the United States, and that the thanks of Congress be tendered to the State for the contribution of the statue of one of its most eminent citizens, illustrious for his historic renown and distinguished civic services; and be it further

Resolved, That a copy of these resolutions, suitably engrossed and duly authenticated, be transmitted to the Governor of North Dakota.

The amendment was agreed to.

The concurrent resolution, as amended, was agreed to.

TEMPORARY PLACEMENT AND HOLDING OF CEREMONIES OF STATUE OF THE LATE JOHN BURKE, OF NORTH DAKOTA, IN ROTUNDA OF CAPITOL

The concurrent resolution (S. Con. Res. 7) authorizing the temporary placement in the rotunda of the Capitol of a statue of the late John Burke, of North Dakota, and the holding of ceremonies incident thereto was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the North Dakota National Statuary Hall Commission is hereby authorized to place temporarily in the rotunda of the Capitol a statue of the late John Burke, of North Dakota, and to hold ceremonies in the rotunda on said occasion; and the Architect of the Capitol is hereby authorized to make the necessary arrangements therefor.

PRINTING OF PROCEEDINGS OF CEREMONIES IN CONNECTION WITH ACCEPTANCE OF STATUE OF THE LATE JOHN BURKE, OF NORTH DAKOTA

The concurrent resolution (S. Con. Res. 8) to print the proceedings in connection with the acceptance of the statue of the late John Burke, of North Dakota, was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the proceedings at the presentation, dedication, and acceptance of the statue of John Burke, to be presented by the State of North Dakota in the rotunda of the Capitol, together with appropriate illustrations and other pertinent matter, shall be printed as a Senate document. The copy for such Senate document shall be prepared under the supervision of the Joint Committee on Printing.

SEC. 2. There shall be printed five thousand additional copies of such Senate document, which shall be bound in such style as the Joint Committee on Printing shall direct, and of which one hundred copies shall be for the use of the Senate and one thousand six hundred copies shall be for the use of the Members of the Senate from the State of North Dakota, and five hundred copies shall be for the use of the House of Representatives and two thousand eight hundred copies shall be for the use of the Members of the House of Representatives from the State of North Dakota.

CEREMONIES IN ROTUNDA OF CAPITOL IN CONNECTION WITH STATUE OF THE LATE JOSEPH WARD, OF SOUTH DAKOTA

The concurrent resolution (S. Con. Res. 9) for ceremonies in the rotunda in connection with the statue of the late Joseph Ward, of South Dakota, was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the South Dakota State Historical Society of South Dakota is hereby authorized to place temporarily in the rotunda of the Capitol a statue of the late Joseph Ward, of South Dakota, and to hold ceremonies in the rotunda on said occasion; and the Architect of the Capitol is hereby authorized to make the necessary arrangements therefor.

TENDER THANKS TO SOUTH DAKOTA FOR STATUE OF JOSEPH WARD, TO BE PLACED IN STATUARY HALL

The concurrent resolution (S. Con. Res. 10) to tender thanks of Congress to South Dakota for the statue of Joseph Ward, to be placed in Statuary Hall, was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the statue of Joseph Ward, presented by the State of South Dakota, to be placed in the Statuary Hall collection, is accepted in the name of the United States, and that the thanks of the Congress be tendered said State for the contribution of the statue of one of its most eminent citizens, illustrious for his leadership as author of the State's motto, framer of the Territorial school law, founder of the first college, and outstanding churchman in the founding of Christian churches among whites and Indians: And be it further

Resolved, That a copy of these resolutions, suitably engrossed and duly authenticated, be transmitted to the Governor of South Dakota.

PRINTING OF PROCEEDINGS OF CEREMONIES IN CONNECTION WITH ACCEPTANCE OF STATUE OF JOSEPH WARD TO BE PLACED IN STATUARY HALL

The concurrent resolution (S. Con. Res. 11) to print as a Senate document the proceedings at the acceptance of the statue of Joseph Ward, to be placed in Statuary Hall, was considered and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the proceedings at the presentation, dedication, and acceptance of the statue of Joseph Ward, to be presented by the State of South Dakota in the rotunda of the Capitol, together with appropriate illustrations and other pertinent matter, shall be printed as a Senate document. The copy for such Senate document shall be prepared under the supervision of the Joint Committee on Printing.

SEC. 2. There shall be printed three thousand additional copies of such Senate document, which shall be bound in such style as the Joint Committee on Printing shall direct, and of which one hundred copies shall be for the use of the Senate and one thousand two hundred copies shall be for the use of the Members of the Senate from the State of South Dakota, and five hundred copies shall be for the use of the House of Representatives and one thousand two hundred copies shall be for the use of the Members of the House of Representatives from the State of South Dakota.

PRINTING AS SENATE DOCUMENT "A REPORT ON THE ALLIANCE FOR PROGRESS, 1963," BY SENATOR HUMPHREY

The resolution (S. Res. 113) to print, as a Senate document, with additional copies, a report on the Alliance for Progress, 1963, by Senator HUBERT H. HUMPHREY, was considered and agreed to, as follows:

Resolved, That there shall be printed as a Senate document a report entitled "A Report on the Alliance for Progress, 1963", submitted by Senator HUBERT H. HUMPHREY to the Senate Committee on Appropriations and the Committee on Foreign Relations and that seven thousand additional copies be printed for the use of those committees.

PRINTING OF "MISSION TO SOUTHEAST ASIA"

The resolution (S. Res. 117) relating to printing of "Mission to Southeast Asia" was considered and agreed to, as follows:

Resolved, That there be printed, as a Senate document, a report entitled "Study Mission to Southeast Asia", submitted by Senator GALE W. MCGEE to the Senate Committee on Appropriations and that twenty thousand additional copies be printed for the use of that committee.

MATTIE V. GRUBBS

The resolution (S. Res. 122) to pay a gratuity to Mattie V. Grubbs was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Mattie V. Grubbs, sister of James O. Martin, an employee of the Senate at the time of his death, a sum equal to eleven months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

EDDIE H. NORWOOD

The resolution (S. Res. 123) to pay a gratuity to Eddie H. Norwood was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Eddie H. Norwood, widow of Thomas E. Norwood, an employee of the Senate at the time of his death, a sum equal to seven months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

FANNIE HILL, LEONARD M. HILL, AND LAWRENCE A. HILL

The resolution (S. Res. 124) to pay a gratuity to Fannie Hill, Leonard M. Hill, and Lawrence A. Hill was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Fannie Hill, sister, and to Leonard M. Hill and Lawrence A. Hill, brothers of Elijah B. Hill, an employee of the Architect of the Capitol assigned to duty in the Senate Office Buildings at the time of his death, a sum to each equal to two months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

CAROLYN P. MERIWETHER

The resolution (S. Res. 125) to pay a gratuity to Carolyn P. Meriwether was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Carolyn P. Meriwether, widow of Yancey D. Meriwether, an employee of the Senate at the time of his death, a sum equal to one year's compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

TRANSFER OF COTTON ALLOTMENTS

Mr. HUMPHREY. Mr. President, the Senator from Kentucky wishes to make a unanimous-consent request which I understand has been cleared on both sides of the aisle.

Mr. COOPER. Mr. President, I ask unanimous consent that the Committee on Agriculture and Forestry be discharged from the further consideration of House bill 5067, to amend the Agricultural Adjustment Act of 1938, as amended, and that the Senate proceed to consider the bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

There being no objection, the Senate proceeded to the consideration of the bill (H.R. 5067) to amend the Agricultural Adjustment Act of 1938, as amended.

Mr. MORSE. Mr. President, may we have an explanation of the bill?

Mr. COOPER. Certainly.

The bill was introduced in the House by Representative STUBBLEFIELD, of Kentucky. The bill has been passed by the House. A descriptive title of the bill is "Transfer of Farm Allotments for Flooded Acres." Similar bills have been passed in previous years.

Certain cotton lands and cotton acreage—some in my State along the Mississippi River and, I understand, some in other States along the Mississippi River—have been flooded, and still are flooded. This acreage must be planted in the next week or two, or it will be too late, so I am informed.

In past years when this situation developed, these farmers were permitted to plant their cotton quotas on lands other than their own farm lands, in order to maintain their planting history.

I may say the Department of Agriculture approves of this bill.

Mr. MORSE. I have no objection.

The PRESIDING OFFICER. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill (H.R. 5067) was ordered to a third reading, was read the third time, and passed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 1989. An act to authorize the government of the Virgin Islands to issue general obligation bonds; and

H.R. 3845. An act to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766).

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred to the Committee on Interior and Insular Affairs:

H.R. 1989. An act to authorize the government of the Virgin Islands to issue general obligation bonds; and

H.R. 3845. An act to amend the Lead-Zinc Small Producers Stabilization Act of October 3, 1961 (75 Stat. 766).

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following communication and letters, which were referred as indicated:

NATIONAL SERVICE CORPS ACT

A communication from the President of the United States, transmitting a draft of proposed legislation to provide for a National Service Corps to strengthen community service programs in the United

States (with accompanying papers); to the Committee on Labor and Public Welfare.

Report on Department of Defense Procurement From Small and Other Business Firms

A letter from the Assistant Secretary of Defense, Installations and Logistics, transmitting, pursuant to law, a report of that Department on procurement from small and other business firms, for the 8-month period ended February 28, 1963 (with an accompanying report); to the Committee on Banking and Currency.

Publications of Federal Power Commission

A letter from the Chairman, Federal Power Commission, Washington, D.C., transmitting, for the information of the Senate, a copy of the publications entitled "Federal Power Act, Revised March 1, 1963" and "Sales by Producers of Natural Gas to Natural Gas Pipeline Companies, 1961" (with accompanying documents); to the Committee on Commerce.

Amendment of Act Relating to Payment of Moving Expenses of Owners and Tenants of Land Acquired for the National Park System

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to amend the act of May 29, 1958, with respect to payment of moving expenses of owners and tenants of land acquired for the National Park System (with an accompanying paper); to the Committee on Interior and Insular Affairs.

Audit Report of the Foundation of the Federal Bar Association

A letter from the Secretary, the Foundation of the Federal Bar Association, Washington, D.C., transmitting, pursuant to law, an audit report of that Association, for the fiscal year ended September 30, 1962 (with an accompanying report); to the Committee on the Judiciary.

Disposition of Executive Papers

A letter from the Acting Archivist of the United States, transmitting, pursuant to law, a list of papers and documents on the files of several departments and agencies of the Government which are not needed in the conduct of business and have no permanent values or historical interest, and requesting action looking to their disposition (with accompanying papers); to a Joint Select Committee on the Disposition of Papers in the Executive Departments.

The PRESIDENT pro tempore appointed Mr. Johnston and Mr. Carlson members of the committee on the part of the Senate.

PETITIONS AND MEMORIALS

Petitions, etc., were presented, and referred as indicated:

A joint resolution of the Legislature of the State of Utah; to the Committee on the Judiciary:

"Power To Apportion Membership in Legislatures—1963

"A joint resolution of the Senate and House of Representatives of the State of Utah memorializing the Congress of the United States to provide legislation designed to preserve to the respective States their power to apportion among their citizens their representation in the various State legislatures

"Whereas the representation enjoyed by the citizens of the State of Utah, as well as by the citizens of the various States of the Union in their respective State legislatures, is best determined by consideration of local importance; and

"Whereas the courts of the United States are construing the Constitution of the United States so broadly as to empower them to intervene in the rights of the respective States to determine the membership of their respective legislatures; and

"Whereas it is the considered opinion of this legislature that the power of determination of problems relating to apportionment of legislative representation is best exercised by the direct representatives of the people of the States: Now, therefore, be it

"*Resolved by the Legislature of the State of Utah,* That it is fitting and proper for the citizens of this State and of their representatives in the Legislature of the State of Utah to determine the membership of their senate and of their house of representatives, and to apportion representation therein among the various portions of the State; and be it further

"*Resolved,* That we believe that this power of legislative determination and apportionment therein is best exercised by the people and the legislatures of the respective States of the Union; be it further

"*Resolved,* That we respectfully petition the Congress of the United States to take all necessary legislative steps including the possibility of initiating a constitutional amendment to protect and preserve the powers of the various States of the Union to determine the membership of their respective legislatures and the apportionment of representation therein; be it further

"*Resolved,* That the secretary of state of the State of Utah is hereby authorized and directed to send copies of this memorial to the Senate and to the House of Representatives of the United States and to the Senators and Congressmen representing the State of Utah in the National Congress."

A concurrent resolution of the Legislature of the State of Utah; to the Committee on Interior and Insular Affairs:

"A Resolution of the Senate and the House of Representatives of the Legislature of the State of Utah Memorializing the Congress of the United States To Maintain the Name 'Flaming Gorge Dam and Reservoir' for the Dam and Reservoir That Now Bears That Name

"Whereas the dam and reservoir which has been constructed on the Green River in northeastern Utah is presently known as the Flaming Gorge Dam and Reservoir; and

"Whereas the proposal has been made before the Congress of the United States to change the name of this dam and reservoir to "O'Mahoney Lake and Recreation Area"; and

"Whereas in view of the location of this dam and reservoir in relationship to the States of Utah and Wyoming, it would seem desirable to retain its present name: Now therefore, be it

"*Resolved by the Legislature of the State of Utah (the Governor concurring therein),* That we respectfully urge the Congress of the United States to maintain the presently existing name of the Flaming Gorge Dam and Reservoir as to said dam and reservoir; be it further

"*Resolved,* That the secretary of state of Utah be, and he hereby is, directed to send copies of this resolution to the Senate and the House of Representatives of the United States, to the Secretary of the Department of the Interior, and to the Senators and Congressmen representing the State of Utah in Congress."

By Mr. MOSS:

A concurrent resolution of the Legislature of the State of Utah; to the Committee on the Judiciary:

"A Concurrent Resolution of the Senate and House of Representatives of the 35th Legislature of the State of Utah Petitioning the Congress of the United States To Call a Convention for Proposing an Amendment to the Constitution of the United States, Unless Congress Shall Sooner Have Submitted Such an Amendment, To Provide for the Election of the President and Vice President in a Manner Fair and Just to the People of the United States

"Whereas under the Constitution of the United States, presidential and vice presidential electors in the several States are now elected on a statewide basis, each State being entitled to as many electors as it has Senators and Representatives in Congress; and

"Whereas the presidential and vice-presidential electors who receive the plurality of the popular vote in a particular State become entitled to cast the total number of electoral votes allocated to the State irrespective of how many votes may have been cast for other elector candidates; and

"Whereas this method of electing the President and Vice President is unfair and unjust in that it does not reflect the minority votes cast; and

"Whereas the need for a change has been recognized by Members of Congress on numerous occasions through the introductions of various proposals for amending the Constitution: Now, therefore, be it

"*Resolved,* That application is hereby made to Congress under article V of the Constitution of the United States for the calling of a convention to propose an article of amendment to the Constitution providing for a fair and just division of the electoral votes within the States in the election of the President and Vice President; and be it further

"*Resolved,* That if and when Congress shall have proposed such an article of amendment this application for a convention shall be deemed withdrawn and shall be no longer of any force and effect; and be it further

"*Resolved,* That the proper officer of this State be and he hereby is directed to transmit copies of this application to the Senate and House of Representatives of the United States, and to the several members of said bodies representing this State therein; also to transmit copies hereof to the legislatures of all other States of the United States."

REAPPOINTMENT OF JOHN NICHOLAS BROWN AS CITIZEN REGENT OF SMITHSONIAN INSTITUTION—REPORT OF A COMMITTEE (S. REPT. NO. 140)

Mr. PELL. Mr. President, it is with great pleasure that I report to the Senate, without amendment, House Joint Resolution 234, which will provide for the reappointment of John Nicholas Brown as Citizen Regent of the Board of Regents of the Smithsonian Institution, and I submit a report thereon.

As chairman of the Subcommittee of the Smithsonian Institution, I am particularly pleased that I have been designated by the Rules and Administration Committee to report this joint resolution because I can think of no citizen of Rhode Island or of the United States who is more qualified to be on the

Board of Regents of the Smithsonian Institution than is Mr. Brown.

He has long played a leading role in the arts and has manifested his abilities in this direction during the past as a Smithsonian Regent. Furthermore, throughout his life he has occupied positions of very real responsibility and public service. I know that he will continue to do this during his 6-year statutory term.

The **PRESIDING OFFICER.** The report will be received and printed, and the joint resolution will be placed on the calendar.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BURDICK:

S. 1311. A bill for the relief of Alice Schonberger; to the Committee on the Judiciary.

By Mr. SALTONSTALL (for himself and Mr. KENNEDY):

S. 1312. A bill to amend paragraph 368(a) of the Tariff Act of 1930 with respect to electrical indicating instruments; to the Committee on Finance.

(See the remarks of Mr. SALTONSTALL when he introduced the above bill, which appear under a separate heading.)

By Mr. HART:

S. 1313. A bill for the relief of Tim L. Yen; to the Committee on the Judiciary.

By Mr. BIBLE:

S. 1314. A bill for the relief of Claudita C. Plavnous; to the Committee on the Judiciary.

By Mr. HAYDEN:

S. 1315. A bill to incorporate the Young Engineers and Scientists of America, for the purposes indicated by Public Law 85–875; to the Committee on the Judiciary.

By Mr. HUMPHREY (for himself, Mr. PELL, Mr. JAVITS, Mr. CLARK, and Mr. RIBICOFF):

S. 1316. A bill to provide for the establishment of a National Council on the Arts and a National Arts Foundation to assist in the growth and development of the arts in the United States; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. McCARTHY:

S. 1317. A bill to amend the Agricultural Adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, and to encourage adjustments in milk marketing, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. HUMPHREY (for himself, Mr. SCOTT, Mr. McCARTHY, Mr. RANDOLPH, Mr. CASE, and Mr. MORTON):

S. 1318. A bill to amend the Antidumping Act 1921; to the Committee on Finance.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. DODD:

S. 1319. A bill to amend chapter 35 of title 18, United States Code, with respect to the escape or attempted escape of juvenile delinquents; to the Committee on the Judiciary.

(See the remarks of Mr. DODD when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY:

S. 1320. A bill to amend the Federal Trade Commission Act to provide for the regulation of cooperative advertising activities of certain small business concerns, and for other purposes; to the Committee on Commerce.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. WILLIAMS of New Jersey (for himself, Mr. KENNEDY, Mr. MORSE, Mr. CLARK, Mr. RANDOLPH, Mr. PELL, Mr. JAVITS, Mr. HUMPHREY, Mr. INOUYE, Mr. RIBICOFF, Mr. BARTLETT, Mr. GRUENING, Mr. HART, Mr. PASTORE, Mr. NELSON, Mr. HARTKE, Mr. McGOVERN, Mr. YARBOROUGH, and Mr. BAYH):

S. 1321. A bill to provide for a National Service Corps to strengthen community service programs in the United States; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. WILLIAMS of New Jersey when he introduced the above bill, which appear under a separate heading.)

By Mr. MUSKIE:

S. 1322. A bill to authorize and direct the Secretary of the Treasury to cause the vessel *Eugenie II*, owned by J. C. Strout, of Milbridge, Maine, to be documented as a vessel of the United States with full coastwise privileges; to the Committee on Commerce.

RESOLUTIONS

CREATION OF STANDING COMMITTEE ON VETERANS' AFFAIRS

Mr. **WILLIAMS** of New Jersey submitted a resolution (S. Res. 126) to create a Standing Committee on Veterans' Affairs, which was referred to the Committee on Rules and Administration.

(See the above resolution printed in full when submitted by Mr. WILLIAMS of New Jersey, which appears under a separate heading.)

AMENDMENT OF RULE XXXV, RELATIVE TO CLOSED SESSION OF THE SENATE

Mr. **MORSE** submitted a resolution (S. Res. 127) to amend rule XXXV, relative to closed session of the Senate, which was referred to the Committee on Rules and Administration.

(See the above resolution printed in full when submitted by Mr. MORSE, which appears under a separate heading.)

AMENDMENT OF TARIFF ACT RELATING TO CLASSIFICATION OF ELECTRICAL MEASURING INSTRUMENTS

Mr. **SALTONSTALL.** Mr. President, on behalf of my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], and myself, I introduce, for appropriate reference, a bill to amend the Tariff Act with respect to the classification of electrical measuring instruments.

For nearly 50 years electrical indicating instruments such as ammeters and voltmeters have been imported at a duty of approximately 50 percent under paragraph 368(a) of the Tariff Act, which covers, among other things, devices suitable for measuring the flowage of electricity. Recently the Court of Customs and Patent Appeals upheld a Court of Customs ruling that these instruments should be classified under paragraph 353, as articles having as an essential feature an electrical element, rather than under paragraph 368(a). This ruling has the effect of reducing the duty on these instruments to approximately 12½ percent.

The recent tariff classification study which was undertaken as a result of the Tariff Classification Act of 1962 recognized that there was no satisfactory paragraph describing electric indicating instruments and proposed that paragraph 368(a) be split into two parts with one specifically covering electric indicating instruments at the historical duty of 50 percent. Thus the study recommended retaining the duty that has been in effect for half a century. The purpose of this bill is to maintain that duty level.

Instrumentation to measure electrical quantities is vital to the Nation, to our industrial development, and to our products for defense. Its production involves operations which require skilled handwork and which do not lend themselves to a high degree of mechanization. This makes these products particularly vulnerable to Japanese and European imports.

The reduction of tariff rates on imports from the historic level of 50 percent to the newly established level of 12.5 percent places the electrical indicating instrument business in the United States in jeopardy.

The **PRESIDING OFFICER.** The bill will be received and appropriately referred.

The bill (S. 1312) to amend paragraph 368(a) of the Tariff Act of 1930 with respect to electrical indicating instruments, introduced by Mr. SALTONSTALL (for himself and Mr. KENNEDY), was received, read twice by its title, and referred to the Committee on Finance.

THE NATIONAL ARTS AND CULTURAL DEVELOPMENT ACT

Mr. **HUMPHREY.** Mr. President, on behalf of myself and Senators PELL, JAVITS, CLARK, and RIBICOFF, I introduce, for appropriate reference, the "National Arts and Cultural Development Act of 1963." This proposed legislation will establish a National Council on the Arts and a National Arts Foundation.

I would like to set forth briefly the interesting history of this legislation. In the 87th Congress I introduced S. 741 to establish a Federal Advisory Council on the Arts. Under the chairmanship of the distinguished Senator from Rhode Island [Mr. PELL], the Special Subcommittee on the Arts of the Committee on Labor and Public Welfare held 3 days of public hearings on S. 741; S. 785, to establish a program of grants to States for the development of programs and projects in the arts as introduced by the Senator from Pennsylvania [Mr. CLARK]; and S. 1250, to establish a U.S. Arts Foundation as introduced by the Senator from New York [Mr. JAVITS].

The full committee reported my bill, S. 741, as amended, which combined the principal features of S. 785 and S. 1250 and deleted the original provision to establish a Federal Advisory Council on the Arts. I believe S. 741 would have passed the Senate if it had come to a vote. But since approval by the House of Representatives was impossible, the legislation remained on the Senate calendar. Nevertheless, the fact that S. 741 had been reported favorably by the Labor and Public Welfare Committee constituted a significant step forward in securing long-overdue support for and recognition of the cultural and artistic activities of this country.

I wish to compliment the Senator from Rhode Island [Mr. PELL] for his outstanding efforts that brought S. 741 to the Senate calendar last year. I am confident that he will continue to provide such effective leadership in the 88th Congress.

Early in the present session of Congress the Senator from New York [Mr. JAVITS] introduced a proposal which was almost identical to the reported version of S. 741. I was privileged to appear as a cosponsor of S. 165 that proposed a U.S. Arts Foundation. Since January, I have been developing a revised and expanded version of this legislation that establishes both a National Council on the Arts and a National Arts Foundation in separate titles.

NATIONAL COUNCIL ON THE ARTS

Title I of this bill creates a National Council on the Arts in the Executive Office of the President. This proposal has been before the Congress in various forms since 1955. Members of both political parties have advocated its establishment.

Recently it has been noted in the New York Times and the Washington Post that President Kennedy is considering establishing a National Arts Council by executive order. I profoundly hope the President will take precisely such action. It is clearly within his authority as Chief Executive and there is great need for such a council. Congress has had ample opportunity to act on such a proposal but has repeatedly postponed taking any action. It is my further hope that the legislation I introduce today will provide a vehicle for subsequent action by Congress to establish the Arts Council permanently by statute.

My bill proposes that this 25-member Advisory Council be established within the Executive Office of the President. Members would be appointed by the President, by and with the advice and consent of the Senate. The President's Special Consultant on the Arts would serve as chairman of the National Arts Council.

The Council would recommend ways to maintain and increase the cultural resources of the United States, propose methods to encourage private initiative in the arts, advise and consult with private and public groups and bodies concerned with the arts, and conduct research and surveys in the arts. The Council would be called upon to file an annual report with the Congress. This document should prove extremely valuable in providing the entire country with an annual inventory of major artistic and cultural activities in this country.

In effect, the Arts Council would serve as a national focal point for bringing together the most qualified and knowledgeable persons in the arts and as a vehicle whereby these persons could bring their thinking to the attention of Congress, the President, the States, and general public.

NATIONAL ARTS FOUNDATION

Title II of this bill establishes a National Arts Foundation to provide grants-in-aid to private groups and States in support of programs and projects which will make a significant public contribution in the arts. The Foundation is charged with encouraging and assisting the development of the arts in this country. This legislation is patterned after the committee version of S. 741 of the 87th Congress. I am indebted to the Senator from New York [Mr. JAVITS] and the Senator from Pennsylvania [Mr. CLARK] for working out the basic principles that are incorporated in this title.

There are, however, significant differences from earlier proposals to establish such a Foundation. Principally, earlier versions were limited to the "visual and performing arts"; this legislation has been broadened to include "the arts" generally.

For example, in addition to encouraging artistic and cultural production, this legislation provides for the support of projects by private groups or States that will encourage and assist artists domiciled in the United States, including the training of artists, the commissioning of works, artistic and cultural presentations, and research, surveys and planning in the arts. The bill has been drafted to include the activities of museums, such as artistic appreciation courses, public lectures, training classes, as eligible to receive assistance.

I wish to emphasize that all such activities assisted by the National Arts Foundation would be undertaken by private groups demonstrating highest professional standards and appropriate State agencies concerned with the arts. The Federal Government would not be directly involved in any of the artistic endeavors that might receive support.

The Foundation would be subject to the supervision and direction of a board of 21 trustees appointed by the President, by and with the advice and consent of the Senate. The administrative activities of the Foundation would be supervised by a director.

Grants to private groups could not exceed one-half of the total cost of any project or production. A small percentage of the Foundation's funds would be kept aside for nonmatching grants in those few cases where all efforts by the private groups to raise matching funds had failed. Grants to States or State agencies could not exceed 50 percent under any circumstances. The bill authorizes funds not to exceed $5 million in the first fiscal year of operation and not to exceed $10 million thereafter.

Mr. President, I think it is essential to take a moment to outline once again why passage of this legislation would be so much in the public interest. It is often said that Government support of artistic and cultural activities will result in Government control of these activities. It is interesting to note that the United States is the only major nation in the Western World where the Government offers no financial assistance to the arts.

Great Britain, on whose institutions' concepts so many of ours are modeled, had a long tradition of private patronage of the arts. But during World War II, when faced with annihilation, when all her energies and resources were taxed to the utmost in a struggle for survival, it was discovered that danger and hardship could be better endured by people who came to know the finer things that free men could create. The British Government—to provide solace and encouragement to its embattled citizens—began to support such enterprises as music and the theater. The theory that the Parliament should appropriate funds for the arts has won consistent approval from both Conservative and Labor Governments. The Royal Opera and Ballet are thus supported. Orchestras, repertory theaters, museums, painters, sculptors, and composers enjoy the patronage of the British Government. The artistic talent of England is encouraged and developed in a manner befitting the precious resource that it is.

Has this stultified the talent of England? Howard Taubman, music critic of the New York Times, had this to say: "There is a ferment in the British creative world. New young voices are raised in the theater, music, graphic arts. Sometimes they are angry and derisive; sometimes they probe quietly. They are sources of stimulation and provocation."

In France, the Opera, the Opera Comique, the Comedie Francaise, are French national institutions known throughout the world. France is proud of their contributions to the world of art and rightfully so.

West Berlin, beleaguered and only recently resurrected from the debris of the last war, has erected a 1,900-seat opera house at a cost of $7 million in Federal and city tax moneys. Its performances are subsidized at the rate of $4 per seat per performance. The Berlin Philharmonic Orchestra receives Federal and city subsidies of more than $625,000. Indeed, the arts are the sharpest weapons in the competition for men's minds and are fully recognized and appreciated as such by all governments in this border city.

Throughout the Western World, many of the great artistic achievements today are being accomplished with the support of government. The Bayreuth Wagner Festival, the Scala Opera of Milan, the Vienna State Opera, the Amsterdam Concertgebouw are all government supported and are flourishing.

Why is it that their governments can encourage art and it is not retarded—instead it is enjoyed within each of these countries and admired throughout the world?

Art has not been stifled in these lands—it has not been subjugated—and neither shall it be in the United States. The contention that Government support for the arts in our country would lead to the ruination of our art forms is a counsel of fear born of a strange lack of faith in the American people and their institutions—both governmental and artistic.

We only do harm to ourselves by accepting the thesis that art and democratic government are natural enemies. Other nations and freedom-loving peoples know that is not so. And while many of our artists of great ability find it difficult to earn a living and many of our art institutions fail for lack of funds—ironically—governments with far less financial resources have come to the aid of American art. It is worthy of note that in recent years the Italian Government has granted a subsidy to the Chicago Lyric Opera Co. and the West German Government has pledged $2,500,000 for the new Lincoln Center Opera House in New York.

Therefore, Mr. President, I view this legislation as providing the United States with an opportunity to take the first step in catching up with policies that have existed throughout the Western World for years and that have greatly stimulated artistic and cultural development in these nations.

In 1788, our first President, George Washington, wrote:

> The arts and sciences are essential to the prosperity of the State and to the ornament and happiness of human life. They have a primary claim to the encouragement of every lover of his country and of mankind.

President Washington was aware that the goal of every great society is to encourage the creative abilities of its members in those peaceful activities that make our lives rich and meaningful. To encourage enjoyment of and participation in the arts which make our life meaningful and worthwhile—and also pleasant—has been a primary purpose of every great civilization since the dawn of time.

This proposed legislation essentially represents a continuation of this human tradition within this great country.

Mr. President, I ask unanimous consent that the full text of this bill be printed in the RECORD at the conclusion of my remarks. I also ask unanimous consent that the bill remain at the desk for an additional 2 weeks if other Senators desire to become cosponsors.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and will lie on the desk, as requested by the Senator from Minnesota.

The bill (S. 1316) to provide for the establishment of a National Council on the Arts and a National Arts Foundation to assist in the growth and development of the arts in the United States, introduced by Mr. HUMPHREY (for himself and other Senators), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "National Arts and Cultural Development Act of 1963".

DECLARATION OF POLICY

SEC. 2. The Congress hereby finds and declares—

(1) that the encouragement and support of the arts, while primarily a matter for private and local initiative, is also an appropriate matter of concern to the Federal Government;

(2) that the Nation's prestige and general welfare will be promoted by providing recognition that the arts are a valued part of the Nation's resources;

(3) that it is in the best interests of the United States to maintain, develop, and disseminate the Nation's artistic and cultural resources; and

(4) that, in order to implement these findings, it is desirable to establish a National Council on the Arts and a National Arts Foundation to provide such recognition and assistance as will encourage and promote the Nation's artistic and cultural progress.

TITLE I—NATIONAL COUNCIL ON THE ARTS

SEC. 101. This title may be cited as the "National Council on the Arts Act of 1963".

Establishment of the Council

SEC. 102. There is hereby established in the Executive Office of the President a National Council on the Arts (hereinafter referred to as the "Council").

Membership of the Council

SEC. 103. (a) The Council shall be composed of the Chairman provided for in section 104 of this title, and twenty-four members appointed by the President, by and with the advice and consent of the Senate. Such members shall be selected (1) from among private citizens of the United States who are widely recognized for their knowledge of or experience in, or for their profound interest in, one or more of the arts; (2) so as to include practicing artists, civic and cultural leaders, members of the museum profession, and others who are professionally engaged in the arts; and (3) so as collectively to provide an appropriate distribution of membership among the major art fields including music, drama, dance, folk art, literature, architecture and allied arts, painting, sculpture, photography, graphic and craft arts, costume and fashion design, motion pictures, radio, and television. The President is requested in the making of such appointments to give consideration to such recommendations as may from time to time be submitted to him by leading national organizations in these fields.

(b) Each member of the Council shall hold office for a term of six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (2) the terms of the members first taking office shall expire, as designated by the President at the time of appointment, eight at the end of the second year, eight at the end of the fourth year and eight at the end of the sixth year after the date of enactment of this Act. No member of the Council shall be eligible for reappointment during the two-year period following the expiration of his term.

(c) Any vacancy in the Council shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

Special consultant on the arts

SEC. 104. (a) The President shall appoint, by and with the advice and consent of the Senate, a Special Consultant on the Arts (hereinafter referred to as the "Special Consultant") from among private citizens of the United States who are widely recognized for their knowledge of or experience in, or for their profound interest in, the arts. The Special Consultant shall serve as chairman of the Council. In addition, he shall advise the President with respect to the activities of the Federal Government in the arts. If a vacancy occurs in the Office of Special Consultant, the President shall fill the vacancy in the same manner in which the original appointment was made.

(b) The Special Consultant shall serve at the pleasure of the President, but not in excess of eight consecutive years, and shall not be eligible for reappointment during the four-year period following the expiration of his last period of service as a Special Consultant. The provisions of this subsection shall apply to any person appointed to fill a vacancy in the Office of Special Consultant.

(c) The Special Consultant shall receive compensation at the rate of $22,500 per annum, and shall be reimbursed for travel and subsistence expenses incurred by him while away from his home or regular place of business in accordance with the Travel Expense Act of 1949, as amended (5 U.S.C. 836–842), and the Standardized Government Travel Regulations.

Duties and responsibilities of the Council

SEC. 105. (a) The Council shall meet at the call of the Special Consultant but not less often than twice during each calendar year. Thirteen members of the Council shall constitute a quorum.

(b) The Council shall (1) recommend ways to maintain and increase the cultural resources of the United States, (2) propose methods to encourage private initiative in the arts, (3) advise and consult with the National Arts Foundation, and other local, State and Federal departments and agencies, on methods by which to foster artistic and cultural endeavors and the use of the arts both nationally and internationally in the best interests of our country, and (4) conduct studies and make recommendations with a view to formulating methods or ways by which creative activity and high standards and increased opportunities in the arts may be encouraged and promoted in the best interests of the Nation's artistic and cultural progress, and a greater appreciation and enjoyment of the arts by our citizens can be encouraged and developed.

(c) In selecting subjects to be studied pursuant to subsection (b) of this section, the Council (1) shall consider requests submitted to it by the chairman of the National Arts Foundation, and the heads of departments and agencies of the Federal Government, and (2) may obtain the advice of any interested and qualified persons and organizations. In making its studies pursuant to such subsection, the Council may obtain assistance from such committees and panels as may be appointed by the Special Consultant from among those persons professionally qualified in the fields of art with which such studies are concerned, who are recommended to him by the Council.

(d) Not later than ninety days after the end of each fiscal year, the Council shall submit to the President and the Congress an annual report setting forth its activities pursuant to subsection (b) of this section. In addition, the Council shall submit to the President reports and recommendations with respect to its activities at such time or times as the President shall request or the Council deems appropriate. The President shall transmit such recommendations as he may deem fit, together with his comments thereon, to the Congress.

Compensation of members of the Council

SEC. 106. Members of the Council, and persons appointed to assist the Council in making its studies, while attending meetings of the Council, or while engaged in duties related to such meetings, or while engaged in the conduct of studies authorized by this title, shall receive compensation at a rate to be fixed by the Special Consultant, but not exceeding $75 per diem and shall be paid travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently.

Staff of the Council

Sec. 107. (a) There shall be an Executive Secretary of the Council who shall be appointed by the Special Consultant after consultation with the Council. The Executive Secretary shall receive compensation at a rate prescribed by the Special Consultant, but not in excess of the scheduled rate of basic compensation provided for grade GS–18 in the Classification Act of 1949.

(b) The Special Consultant is authorized to appoint, subject to the civil service laws, such secretarial, clerical, and other staff assistance as is necessary to enable the Special Consultant and the Council, its Executive Secretary, and its special committees, to carry out their functions and duties, and to fix the compensation of persons so appointed in accordance with the Classification Act of 1949.

(c) The Special Consultant is authorized to procure in accordance with such policies as the Council shall from time to time prescribe, without regard to the civil service laws and the classification laws, temporary and intermittent services to the same extent as is authorized for the departments by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), but at rates for individuals not in excess of $75 a day.

Donations of funds or gifts

Sec. 108. The Council is authorized to receive and use funds or marked gifts donated by others, if such funds are donated without restriction other than that they be used in furtherance of one or more of the general purposes of the Council. Moneys received by the Council under this section shall not be covered into the Treasury as miscellaneous receipts, but shall be kept in a special account, maintained by the Treasury Department, or kept by the Council in commercial banking institutions, or invested in securities eligible for trust funds in the District of Columbia, and shall be available to the Foundation for the purposes of this title.

Expenses of the Council

Sec. 109. There are hereby authorized to be appropriated to the Council such sums as may be necessary to carry out the purposes of this title.

General provision

Sec. 110. This title shall not be deemed to invalidate any provision in any Act of Congress or Executive order vesting authority in the Commission of Fine Arts.

TITLE II—NATIONAL ARTS FOUNDATION

Sec. 201. This title may be cited as the "National Arts Foundation Act of 1963".

Establishment of Foundation

Sec. 202. There is hereby established in the Executive Branch of the Government an independent agency to be known as the National Arts Foundation (hereinafter referred to as the "Foundation").

Trustees of Foundation

Sec. 203. (a) The Foundation shall be subject to the general supervision and policy direction of a Board of Trustees which shall consist of twenty-one members to be appointed by the President, by and with the advice and consent of the Senate. Such members shall be selected (1) from among private citizens of the United States who are widely recognized for their knowledge of or experience in, or for their profound interest in, one or more of the arts; (2) so as to include practicing artists, civic and cultural leaders, members of the museum profession, and others who are professionally engaged in the arts; and (3) so as collectively to provide an appropriate distribution of membership among the major art fields listed in section 211(a) of this title. The President is requested in the making of such appointments to give consideration to such recommendations as may from time to time be submitted to him by leading national organizations in these fields and the National Council on the Arts.

(b) The term of office of each trustee of the Foundation shall be six years; except that the terms of the trustees first taking office after the enactment of this title shall expire, as designated by the President at the time of appointment, seven at the end of two years after the date of enactment of this title, seven at the end of four years after such date, and seven at the end of six years after such date. If a vacancy occurs in the term of office of a trustee, such vacancy shall be filled only for the unexpired portion of such term. Any person who has been a trustee of the Foundation for twelve or more consecutive years shall be ineligible for appointment during the two-year period following the termination of his duties as such a trustee.

(c) Any vacancy in the Foundation shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(d) A majority of the trustees of the Foundation shall constitute a quorum.

(e) The President shall call the first meeting of the trustees of the Foundation, at which the first order of business shall be the election of a Chairman and a Vice Chairman, who shall serve until two years after the date of enactment of this title. Thereafter each Chairman and Vice Chairman shall be elected for a term of four years in duration and each such election shall take place at the annual meeting occurring at the end of each such term. The Vice Chairman shall perform the duties of the Chairman in his absence. In case a vacancy occurs in the chairmanship or vice chairmanship, the Foundation shall elect an individual from among the trustees to fill such vacancy for the remainder of such term.

(f) The trustees of the Foundation shall meet at the call of the Chairman, but not less than four times each year. The Chairman shall also call a meeting whenever one-third of the trustees so request in writing. Each trustee shall be given notice, by registered mail mailed to his last known address of record not less than fifteen days prior to any meeting, of the call of such meeting.

Director of Foundation

Sec. 204 (a) The Director of the Foundation shall be appointed by the President, by and with the advice and consent of the Senate. In the appointment of the Director the President is requested to give due consideration to any recommendations submitted to him by the Board of Trustees. The Director shall serve as an ex officio trustee of the Foundation. In addition, he shall be the chief excutive officer of the Foundation. The Director shall receive compensation at the rate of $22,500 per annum and shall serve for a term of six years unless previously removed by the President.

(b) The Director may appoint, with the approval of the Board of Trustees, a Deputy Director, who shall perform such functions as the Director, with the approval of the trustees, may prescribe, and shall be Acting Director during the absence or disability of the Director. In the event of a vacancy in the office of the Director, the Deputy Director shall serve as Acting Director until the President shall fill such vacancy. The Deputy Director shall receive compensation at a rate not to exceed the scheduled rate of basic compensation provided for grade GS–18 in the Classification Act of 1949.

(c) The Director shall have general authority to carry out and execute the programs of the Foundation on a full-time, continuous basis, to recommend programs to the Foundation, and to discharge such other functions as the Foundation may delegate to him consistent with this title.

(d) The Director and the Deputy Director shall be reimbursed for travel and subsistence expenses incurred by them while away from their homes or regular places of business in accordance with the Travel Expense Act of 1949, as amended, and the Standardized Government Travel Regulations.

(e) The Director and the Deputy Director shall be appointed without regard to the civil service laws and regulations.

(f) The Director and the Deputy Director shall not engage in any other business, vocation, or employment than that of serving as Director or Deputy Director, or hold any office in, or act in any capacity for, any organization, agency, or institution with which the Foundation makes any contract or other arrangement under this Act.

Grants to groups and States

Sec. 205. (a)(1) The Foundation is authorized to establish and conduct a program of grants-in-aid in a manner consistent with the Declaration of Policy set forth in the National Arts and Cultural Development Act of 1963, from the funds appropriated to the Foundation or otherwise obtained pursuant to section 207(a) (3) or (4) of this title, to nonprofit professional groups (and nonprofit groups meeting professional standards) engaged in or concerned with the arts, for the purpose of enabling such groups to provide (1) productions which have substantial artistic and cultural significance, giving preference to works of persons domiciled in the United States, (2) productions of significant merit that, without such assistance, would otherwise be unavailable to our citizens in many areas of the country, (3) projects that will encourage and assist artists domiciled in the United States, (4) projects that will encourage and develop the appreciation and enjoyment of the arts by our citizens, and (5) other relevant projects including surveys, research, and planning in the arts. No portion of any moneys granted under this subsection shall be applied to the purchase, erection, preservation, or repair of any building or buildings, or for the purchase or rental of any lands.

(2) No payment may be made to any group under this section except upon application therefor which is submitted to the Foundation in accordance with regulations prescribed by the Foundation.

(3) The amount of any grants allotted to any group pursuant to this subsection shall not exceed 50 per centum of the total cost of such project or production, except that not more than 20 per centum of the funds appropriated to the Foundation for the purposes of this section for any fiscal year may be available for allotment by the Foundation in such fiscal year without regard to such limitation in the case of any group which submits evidence to the Foundation that it has attempted unsuccessfully to secure an amount of funds equal to the grant applied for by such group, together with a statement of the proportion which any funds it has secured represent of the funds applied for by such group.

(4) Any group shall be eligible for financial assistance pursuant to this section only if (A) no part of its net earnings inures to the benefit of any private stockholder or stockholders, or individual or individuals, and (B) donations to such group are allowable as a charitable contribution under the standards of subsection (c) of section 170 of the Internal Revenue Code of 1954.

(b)(1) The Foundation is authorized to establish and conduct a program of grants-in-aid, in a manner consistent with the Declaration of Policy set forth in the National Arts and Cultural Development Act of 1963, from the funds appropriated to the Foundation or otherwise obtained pursuant to section 207(a) (3) or (4) of this title, to assist the several States in supporting existing projects and productions which are making a significant public contribution in one or more of the arts, and in developing projects and productions in the arts in such a manner as will furnish adequate programs, facilities, and services in the arts to all the people and communities in each of the several States. No portion of any monies granted under this subsection shall be applied to the purchase, erection, preservation, or repair of any building or buildings, or for the purchase or rental of any lands.

(2) In order to receive such assistance in any fiscal year, a State shall submit an application for such grants prior to the first day of such fiscal year and accompany such application with a plan which the Foundation finds—

(A) designates a State agency (hereinafter in this title referred to as the "State agency") as the sole agency for the administration of the State plan;

(B) provides that funds paid to the State under this title will be expended solely on projects and productions approved by the State agency which carry out one or more of the objectives of this title; and

(C) provides that the State agency will make such reports, in such form and containing such information, as the Foundation may from time to time require.

(3) Each State which has a plan approved by the Foundation in effect on the first day of the fiscal year beginning July 1, 1964, or any succeeding fiscal year, shall be entitled to a maximum allotment in any such fiscal year of an amount equal to half the total amount appropriated to the Foundation for the purposes of this section for such fiscal year divided by the total number of States. In the event that any sum is remaining out of the maximum allotment available for grants to each State in any fiscal year after all allotments are made to States with approved plans in effect on the first day of such fiscal year, the Foundation, in its discretion, may grant the aggregate of such remaining sums or any portion thereof to any group eligible for financial assistance under subsection (a) of this section or State agency for projects and productions which the Foundation finds will encourage the arts in areas where such assistance will be of value. In making grants to any group pursuant to this subsection, the Foundation shall require matching funds in accordance with the provisions of subsection (a)(3) of this section.

(4) The amount of any grants allotted to any State or State agency pursuant to this subsection for any project or production shall not exceed 50 per centum of the total cost of such project or production.

(c) Whenever the Foundation, after reasonable notice and opportunity for hearing to any group or State agency, finds that—

(1) any such group is not complying substantially with the provisions of this title;

(2) any such agency is not complying substantially with the terms and conditions of its State plan approved under this title; or

(3) any funds granted to such group or agency under this title have been diverted from the purposes for which they were allotted or paid the Foundation shall immediately notify the Secretary of the Treasury and the group or State agency concerned that no further grants will be made under this title with respect to such group or State agency until there is no longer any default or failure to comply or the diversion has been corrected, or, if compliance or correction is impossible, until the group or State repays or arranges the repayment of the Federal funds which have been improperly diverted or expended.

Advisory committees, councils, or panels

SEC. 206. The Foundation may appoint persons other than trustees of the Foundation to committees, councils, or panels concerned with particular regions of the country or with particular aspects of the arts, or both, to advise and consult with the Foundation with respect to the duties of the Foundation and the projects and productions for which financial assistance is sought by groups and States. Such appointments shall be made without regard to the civil service laws and regulations.

Administrative powers and duties of the foundation

SEC. 207. (a) The Foundation is authorized to—

(1) prescribe such rules and adopt such bylaws as it deems necessary governing the manner of its operation and its organization and personnel;

(2) make expenditures, and enter into contracts or other arrangements, as may be necessary for administering the provisions of this title, without regard to the provisions of section 3709 of the Revised Statutes (4 U.S.C. 5);

(3) acquire by loan or gift, and to hold and dispose of by sale, lease, or loan, real and personal property of all kinds necessary for, or resulting from, the exercise of authority granted by this title;

(4) receive and use funds or marked gifts or property donated by others, if such funds are donated without restriction other than that they be used in furtherance of one or more of the general purposes of the Foundation;

(5) accept and utilize the services of voluntary and uncompensated personnel;

(6) pay fees for and enter into contracts with persons for the performance of services required by the Foundation;

(7) pay to persons rendering services to the Foundation on an uncompensated basis or on a fee or contract basis, as provided in paragraphs (5) and (6) of this subsection, travel and subsistence expenses while away from their homes or regular places of business in accordance with the Travel Expense Act of 1949, as amended, and the Standardized Government Travel Regulations; and

(8) maintain an office in the District of Columbia.

(b) The Foundation is authorized to procure assistance, as specified herein, from any department, agency, and instrumentality of the executive branch of the Government, or any independent agency of the United States. with the consent of the head thereof, and each such department, agency, or instrumentality is authorized to render such assistance to the Foundation by the donation or loan of employee services and by the donation or loan of supplies, office or building space, or other property, either on a reimbursable or nonreimbursable basis, upon request made by the Director or Deputy Director of the Foundation.

(c) The Foundation shall not itself produce or present any project or production.

(d) Not later than ninety days after the end of each fiscal year, the Foundation shall submit to the President and the Congress an annual report summarizing the activities of the Foundation and making such recommendations as it may deem appropriate.

Staff of the Foundation

SEC. 208. The Director shall, in accordance with such policies as the Foundation shall from time to time prescribe, appoint and fix the compensation of such personnel as may be necessary to carry out the provisions of this title. Such appointments shall be made and such compensation shall be fixed in accordance with the provisions of the civil service laws and regulations and the Classification Act of 1949, as amended, except that the Director may, in accordance with such policies as the Foundation shall from time to time prescribe, employ such technical and professional personnel or personnel with experience in or relating to any of the arts, and fix their compensation without regard to such laws, as he may deem necessary for the discharge of the responsibilities of the Foundation under this title.

Compensation of the trustees of the Foundation and the members of its councils, committees, and panels

SEC. 209. The trustee of the Foundation, and the members of the councils, committees, and panels shall receive compensation at a rate to be fixed by the President in the case of the trustees, and by the Foundation in the case of the members, but not to exceed $75 for each day in which they are actually engaged in the business of the Foundation pursuant to authorization of the Foundation, and shall be allowed travel and subsistence expenses while away from their homes or regular places of business in accordance with the Travel Subsistence Act of 1949, as amended, and the Standardized Government Travel Regulations.

Appropriations

SEC. 210. (a) For the purpose of making grants authorized in section 205 of this title, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1964, such sum, not exceeding $5,000,000, and for each fiscal year thereafter such sum, not exceeding $10,000,000 annually, as the Congress may determine. The moneys appropriated to the Foundation shall remain available for expenditure for two years following the expiration of the fiscal year for which appropriated.

(b) Moneys received by the Foundation under section 207(a) (3) and (4) of this title, shall not be covered into the Treasury as miscellaneous receipts, but shall be kept in a special account, maintained by the Treasury Department, or kept by the Foundation in commercial banking institutions, or invested in securities eligible for trust funds in the District of Columbia, and shall be available to the Foundation for the purposes of this title.

(c) The Director shall determine any payments to be made under this title and certify to the Secretary of the Treasury the amounts thereof. Upon receipt of such certification, the Secretary of the Treasury shall, prior to audit or settlement by the General Accounting Office, pay in accordance with such certification. Sums alloted to any group or State for any fiscal year under this title and not transferred during that fiscal year shall remain available to such group or State for the same purposes for the next fiscal year in addition to the sums allotted for such next fiscal year.

(d) There are hereby authorized to be appropriated such sums as are necessary to administer the provisions of this title.

Definitions

SEC. 211. As used in this title—

(a) The term "the arts" means (1) the major art fields including music (instrumental and vocal), drama, dance, folk art, literature, architecture and allied fields, painting, sculpture, photography, graphic and craft arts, costume and fashion design, motion pictures, television, and radio; and (2) the arts related to the presentation, performance, execution, and exhibition of such major art fields.

(b) The term "production" means plays (with or without music), ballet, dance and choral performances, concerts, recitals, operas, exhibitions, readings, motion pictures, radio, and television, and any other activities involving the execution or rendition of the arts and meeting such standards as the Foundation may establish.

(c) The term "project" means programs organized by groups, States, and State agencies to carry out the purposes of this Act, including educational programs, artistic and cultural appreciation courses, training of artists, commissioning of works, artistic and cultural presentations, and research, surveys, and planning in the arts.

(d) The term "group" includes any society, institution, organization, association, museum, or establishment, whether or not incorporated.

Mr. JAVITS. Mr. President, as a cosponsor of the National Arts and Cultural Development Act of 1963 which Senator HUMPHREY is introducing today, I believe we can get this bill through the Congress. This is the most important question before us as I believe a national program for the arts to be vital to our country at home and in the cold war. This bill combines the proposal for a National Council on the Arts with my bill to establish a U.S. Arts Foundation.

As far back as 1949, I introduced in the House of Representatives a resolution calling for the establishment of an American national establishment for theater, opera, and ballet. Last year the Senate Committee on Labor and Public Welfare on which I serve reported favorably the bill for a U.S. Arts Foundation which I had been advocating since I came to the Senate in 1957 and which also included the program of assistance to the States sponsored by Senator JOSEPH CLARK. I introduced this combined bill early this year with Senators CLARK, PELL, and HUMPHREY as cosponsors.

An effective Government support of the arts consistent with our traditions is essential in the national interest. I believe the time has gone by when the optimum need exists for an Advisory Committee on the Arts as called for by this bill. I believe we are ready for and need a definitive plan like the U.S. Arts Foundation. But I see no harm in the Advisory Committee and believe it more important to get together on a bill that has a chance; hence I cosponsor this bill.

The U.S. Arts Foundation legislation which I have proposed in the Senate, the essential features of which are now incorporated in this bill, would encourage through matching grants and subvention to nonprofit groups, the distribution of live performances and exhibits in cities and towns which could not otherwise receive and support them. It would help stimulate a revival of the arts in entire regions through the work of nonprofit groups, municipalities, and State agencies able to provide cultural services because of the subvention available from the Foundation to cover the difference between production and operating costs and admissions. Within the framework of free enterprise and with no Federal control, the Foundation would help in the development and training of new talent in the fields of all the arts, and also make it possible for many more people in many more places to see and hear the best in American culture.

The Foundation would require in its first year an appropriation from the Federal Government of $5 million for the entire country and $10 million in succeeding years, half of which would be available for grants to the States. This would serve essentially as seed money with the largest amount of its expenditures anticipated to come from funds contributed by private foundations and other benefactors interested in the advancement of the arts. I expect that this modest Federal appropriation could stimulate the expenditure of as much as $50 million a year in non-Government support for the arts. New talent as well as going programs in all the arts could be assisted.

This proposal has the support of a great many artists of international fame as well as Actors' Equity and many organizations in the academic and cultural world. It would supplement and enhance other Federal Government activities, such as our international cultural exchange program; and expand the areas served by theater, opera, ballet, music—in fact, all the arts—and other cultural resources so that no populated place in the United States would have to be culturally starved.

This legislation is not the first in which the Federal Government concerns itself with assistance to the arts. In 1891, the National Conservatory of Music was incorporated by an act of Congress, and men like Chauncey DePew, Fitz Hugh Lee, John Hay, and Enoch Pratt served as trustees. ANTA, the American National Theater and Academy, operates under a congressional charter granted in 1935. In July 1956, the Senate did adopt a bill (S. 3419) providing for the establishment of a Federal Advisory Council on the Arts, although the House of Representatives took no action on it.

AMENDMENT OF ANTIDUMPING ACT OF 1921

Mr. HUMPHREY. Mr. President, on behalf of myself, the junior Senator from Pennsylvania [Mr. SCOTT], the junior Senator from Minnesota [Mr. MCCARTHY], the senior Senator from West Virginia [Mr. RANDOLPH], the senior Senator from New Jersey [Mr. CASE], and the junior Senator from Kentucky [Mr. MORTON], I introduce for appropriate reference a bill to amend the Antidumping Act of 1921.

Antidumping acts exist in virtually every major trading country in the free world. They are designed to prohibit unfair international trade practices, are expressly authorized by the 1947 General Agreement on Tariffs and Trade, and are consistent with the 1962 Trade Expansion Act.

The objective of the U.S. Antidumping Act is to prevent foreign manufacturers from injuring American industries by dumping surplus merchandise here at prices below those charged in the exporting country. If the Treasury Department finds a price differential, and the Tariff Commission finds an American industry is injured, the foreign manufacturer must pay the differential to the Treasury in dumping duties.

The basic philosophy and purpose of the act is as essential today as when first enacted in 1921. However, procedural and technical overhaul is now urgently needed.

Segments of many industries have in the past expressed concern regarding the effective operation of the act—cement, chemicals, copper and brass, manmade fibers, pharmaceuticals, steel, wire and cable, and others. Labor representatives, such as the United Cement, Lime and Gypsum Workers of the AFL–CIO, have stressed the need to improve the act.

Last session I introduced legislation (S. 3606) to amend the Antidumping Act of 1921. The bill was introduced so late in the session that full consideration by the Committee on Finance was impossible.

The amendment I introduce today does not alter the philosophy or purpose of the Antidumping Act in any way. Its only purpose is to make the act more effective in achieving its original purpose and to help insure that international trade will be conducted in a fair and equitable fashion.

The proposed amendment deals with the following situations that have hampered the effective administration of the existing act or have permitted certain foreign companies to evade the act's original intent.

First. Treasury's proceedings in cement dumping cases have averaged 17 months, and one took more than 3 years. Uncertainties caused by such delay hurt importers and foreign manufacturers as much as American industry. In 1954 Congress limited the Tariff Commission's investigations to 3 months. The amendment imposes a limitation of 6 months on Treasury's proceedings; however, an escape valve is available permitting additional time when needed.

Second. Congress amended the Antidumping Act in 1958 to require Treasury and the Commission to state reasons for their findings. The proposed amendment further specifies the content of Treasury's opinions in order to carry out the intent of Congress.

Third. American manufacturers, as well as importers, presently have little opportunity to participate in Treasury's proceedings. The amendment would require Treasury to issue proposed findings, prior to its final determinations, for the parties' reaction. This is analogous to the standards contained in the Administrative Procedure Act of 1946.

Fourth. The Administrative Procedure Act also provides that all agencies' actions can be reviewed by courts, but there is confusion as to whether courts can review the Treasury's findings in antidumping cases. The amendment would make clear that judicial review is available.

Fifth. Some importers have attempted to evade the act by creating dummy foreign export corporations. One provision plugs this loophole.

Sixth. Dumping from Communist countries not only injures American industry, but prevents manufacturers in friendly countries from selling in the United States. The present act is ineffective in preventing dumping from Communist countries, which can control their home prices by state fiat. The amendment will help solve this problem.

Seventh. Other provisions deal with the problem of importers, exporters, and foreign manufacturers who refuse to provide the Treasury Department with pricing information, or who file false information. The present act is ineffective in this regard.

Eighth. To enable the Tariff Commission to make more meaningful investigations of injury to American industry, it is proposed that the Treasury Department aggregate complaints regarding the dumping of the same class of merchandise. Treasury now sends cases to the Commission on a country-by-country basis.

Ninth. A final provision provides that when Treasury calculates price differentials it can consider the quantity discounts foreign manufacturers give American importers only if the discounts are justified by the foreign manufacturer's reduced costs, similar to the quantity discount provisions applicable to U.S. manufacturers under the Robinson-Patman Act.

In summary, this legislation is a moderate and constructive attempt to amend the existing statute without in any way altering its basic philosophy, purpose, or function. It has been designed to: First, improve the substance of the act through elimination of loopholes; and, second, provide for more effective procedures.

Mr. President, I am pleased to join with the distinguished Senator from Pennsylvania [Mr. Scott] and the other cosponsors of this important legislation. I ask unanimous consent that the bill remain at the desk for 2 additional weeks so that other colleagues who desire to do so may join as cosponsors. I also ask unanimous consent that the full text of this proposed legislation be printed in the Record at the conclusion of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record, and will lie on the desk, as requested by the Senator from Minnesota.

The bill (S. 1318) to amend the Antidumping Act of 1921, introduced by Mr. Humphrey (for himself and other Senators), was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 201 (a) of the Antidumping Act 1921 (19 U.S.C. 160(a)), is amended by inserting in the first sentence after "determines" the words "in accordance with the procedure prescribed in section 214", and after "value" the words "(hereinafter called an affirmative 'fair value finding' or findings)", and after "United States" the words "from the country or countries with respect to which the Secretary has made an affirmative fair value finding or findings". Section 201(a) of such Act is further amended by inserting in the second sentence after "Secretary shall" the words "forthwith publish in the Federal Register", and for "finding" the words "dumping finding", and after "of his determination" the words "the existence of his fair value finding", and by deleting from the second sentence the words "make public" and the words "his determination". Section 201(a) of such Act is further amended by inserting in the fourth sentence after "Secretary's" the word "dumping".

Sec. 2. Section 201(b) of the Antidumping Act 1921 (19 U.S.C. 160(b)), is amended by inserting after both occurrences of "made public a" the word "dumping".

Sec. 3. Section 201(c) of the Antidumping Act 1921 (19 U.S.C. 160(c)), is amended by deleting after the word "The" the words "Secretary, upon determining whether foreign merchandise is being, or is likely to be, sold in the United States at less than its fair value, and the", and by deleting after the word "shall" the word "each".

Sec. 4. Section 201 of the Antidumping Act 1921 (19 U.S.C. 160), is amended by adding the following subsection: "(d) Section 592 of the Tariff Act of 1930 (19 U.S.C. 1592) shall be applicable to any merchandise as to which a complaint has been filed in accordance with section 214(a) of this Act."

Sec. 5. Section 202(a) of the Antidumping Act 1921 (19 U.S.C. 161(a)), is amended by substituting for the words "has made public a finding", the words "has published a dumping finding", and substituting for the words "so made public, if the" the words "so published, if either the", and by inserting before the period the words ", *Provided,* That if both the purchase price and the exporter's sales price are less than the foreign market value (or, in the absence of such value, than the constructed value), such special dumping duty shall be an amount equal to the greater difference". Section 202(a) of such Act if further amended by substituting "dumping finding" for "finding".

Sec. 6. Subsections 202(b)(1) and 202(c)(1) of the Antidumping Act 1921 (19 U.S.C. 161(b)(1) and 161(c)(1)) are both amended by inserting before "the fact that" the words "differences in the cost of manufacture, sale, or delivery resulting from".

Sec. 7. Section 204 of the Antidumping Act 1921 (19 U.S.C. 163) is amended by inserting after the words "(2) the amount of the commissions" the words "and profits", and by inserting before "(4)" the words "(4) an amount equal to the expenses and profits of the exporter in the foreign country (unless (a) the exporter is the foreign manufacturer or is owned or controlled by the foreign manufacturer, or (b) the foreign market value includes such expenses and profits), and (5)", and by deleting "and (4)".

Sec. 8. Section 205 of the Antidumping Act 1921 (19 U.S.C. 164) is amended by inserting before the first sentence "(a)", and by adding the following subsection:

"(b) If any of the imported merchandise is manufactured or produced in a country or area dominated or controlled by Communism the foreign market value for such merchandise may be determined by reference to alternative values, such as (1) the price at which such merchandise is sold or offered for sale for exportation to countries other than the United States from such country or area, (2) the foreign market value of merchandise of the relevant class or kind in appropriate non-Communist countries, and (3) the constructed value of merchandise of the relevant class or kind in appropriate non-Communist countries."

Sec. 9. Sections 208 and 209 of the Antidumping Act 1921 (19 U.S.C. 167 and 168) are amended by substituting for all occurrences of the word "finding" the words "dumping finding".

Sec. 10. The Antidumping Act 1921 (19 U.S.C. 160–172) is amended by adding the following section:

"Sec. 214. Procedure for fair value proceedings.

"(a) Initiation of fair value proceedings. The inquiry or inquiries of the Secretary of the Treasury or any person to whom authority under this section has been delegated (hereinafter in this section called "the Secretary"), to determine whether a class or kind of merchandise is being, or is likely to be, sold in the United States or elsewhere at less than its fair value (hereinafter called a "fair value proceeding") shall be initiated by him at the earliest practicable time after receiving from any customs officer or other person (hereinafter called the "complainant") a communication of his belief or suspicion that a class or kind of merchandise is being, or is likely to be, sold in the United States or elsewhere at less than its fair value (hereinafter called a "complaint"), together with such supporting information as the Secretary may require by regulation and is available to the complainant. *Provided,* That if the Secretary determines within fifteen days after receiving a complaint that there is no evidence to support it supplied by the complainant and no evidence to support it available to the Secretary from customs forms or other sources, and that any differential between the prices at which the imported merchandise and domestic merchandise of the relevant class or kind are offered for sale in the United States cannot reasonably be attributed in whole or in part to the possible existence of sales below fair value, he shall forthwith notify the complainant of his determination, and of such supporting information of the character required by subsection (c) of this section as is available to the Secretary, without initiating a fair value proceeding or publishing any document in the Federal Register, and such determination shall be considered a negative fair value finding or findings for purposes of subsection (g) of this section. The Secretary shall consolidate in a single fair value proceeding (hereinafter called a "consolidated fair value proceeding") initiated as a result of a complaint, or complaints received together, all of his inquiries regarding the same class or kind of merchandise regardless of the number of importers, exporters, foreign manufacturers, and countries involved. The Secretary shall make reasonable effort to give notice to all known interested parties of the initiation of a fair value proceeding, and shall publish such notice in the Federal Register. The notice shall identify the complainant and the date and nature of his complaint. Such notice may be published in conjunction with the notice required to be published by section 201(b) (19 U.S.C. 160(b)) prior to the withholding of appraisement reports.

"(b) Fair value investigation. The Secretary shall obtain, by investigation or other means (hereinafter called a "fair value investigation"), sufficient information to enable him to determine whether a class or kind of merchandise is being, or is likely to be, sold in the United States or elsewhere at less than its fair value, and to enable him to prepare the proposed fair value finding or findings required by this section.

"(c) Proposed fair value finding. The Secretary shall prepare a proposed fair value finding or findings for each of the inquiries he conducts in a fair value proceeding at the earliest practicable time and shall publish it, or them together, in the Federal Register: *Provided,* That the Secretary may prepare and publish a negative proposed fair value finding or findings and negative fair value finding or findings regarding an inquiry or inquiries in a consolidated fair value proceeding prior to the preparation and publication of the proposed fair value finding or findings for the consolidated fair value proceeding. The Secretary shall make reasonable effort to send copies to all known interested parties. The proposed fair value finding shall state the Secretary's conclusion regarding fair value. It shall also indicate the specific data (such as manufacturers, dates, prices, discounts, quantities, home consumption, cost of containers, taxes, duties and commissions, as well as delivery, selling, advertising, technical service, and other expenses, but not including confidential costs used in ascertaining constructed value in the absence of foreign market value) used by the Secretary, and his computations and reasoning in arriving at the concepts used in the Act (such as foreign market value, such or similar merchandise, purchase price, exporter's sales price, and constructed value). If, in a particular fair value proceeding, the disclosure of some of the detailed information required by this subsection would, in the judgment of the Secretary, impede his obtaining similar information in confidence in the future, he may so declare in his proposed fair value finding and omit that information. If the Secretary does withhold such confidential information, however, he shall prepare for the use of the complainant a confidential statement of the information required by this subsection which has been so withheld, and the reasons for so withholding. The information in such confidential statements shall not be published or otherwise be made public by the complainant, subject to such sanctions as may be established by the Secretary, but may be considered in confidence by a reviewing court as if otherwise a part of the record.

"(d) Fair value hearing. The Secretary shall accord fair value hearings by permitting any interested party to communicate in writing with the Secretary regarding a proposed fair value finding or findings within thirty days after publication in the Federal Register. This communication may include such matters as factual or legal argument, additional factual information in the form of affidavits or other documents, and requests for informal conferences or an oral fair value hearing. The Secretary may call for an oral fair value hearing on his own motion, or on the request of any interested party. Any denial of a request for such hearing shall be in writing with reasons. Notice of an oral fair value hearing, or denial of a request or requests for one, shall be given to all known interested parties and shall be published in the Federal Register. Notice of an oral fair value hearing shall state the time and place of such hearing, and summarize or refer to the Federal Register publications of the notice of the initiation of the fair value proceeding, and the proposed fair value finding. All interested parties will be accorded at an oral fair value hearing the rights to counsel, to present evidence, and to conduct such cross-examination as may be required for a full and fair disclosure of the facts. A transcript shall be made of all oral fair value hearings, and the Secretary may prescribe such regulations as he deems necessary for their fair and orderly conduct. The record in fair value hearings shall consist of the notice of initiation of a fair value proceeding, the proposed fair value finding or findings, any written communications between interested parties and the Secretary regarding the proposed fair value finding or findings (unless the Secretary has made a judgment regarding a given document, or part thereof, under the standard of subsection (c) of this section, which shall then be made available, in confidence, only to interested parties and a reviewing court), the transcript of any oral hearing, the fair value finding or findings, and any other relevant documents the Secretary chooses to include on his own motion or the request of any interested party.

"(e) Fair value finding. The Secretary shall prepare a fair value finding or findings and shall publish it, or them together, in the Federal Register. The Secretary shall make reasonable effort to send copies to all known interested parties. The contents of the fair value finding or findings shall comply with the standards for proposed fair value findings contained in subsection (c) of this section. In addition, it shall contain the Secretary's reply to any new facts or arguments advanced during the fair value hearing. The Secretary shall make his fair value finding or findings at the earliest practicable time after receiving a complaint, but in no event more than six months after such date, unless, within the said six months, he shall have submitted a report to the chairman of the Committee on Ways and Means of the House of Representatives and to the chairman of the Committee on Finance of the Senate stating the reasons why a longer period is required within which to reach such fair value finding or findings and the estimated extent of such longer period.

"(f) Failure or refusal to furnish requested information. Subsections (c), (d) and (e) of this section shall be modified in accordance with this subsection if the Secretary determines that the importer, exporter or foreign manufacturer has failed or refused to funish information which the Secretary has requested and deems necessary to make his proposed fair value or fair value findings under subsections (c) or (e), and which the Secretary shall not have obtained from other sources. Upon such determination it shall be presumed that the class or kind of foreign merchandise under question is being, or is likely to be, sold in the United States or elsewhere at less than its fair value, and the Secretary shall forthwith publish an affirmative fair value finding or findings.

"(g) Judicial Review. (1) Any interested party shall be entitled to seek judicial review in the United States Customs Court and the Court of Customs and Patent Appeals of (A) the Secretary's fair value finding or findings that a class or kind of foreign merchandise is not being, or is not likely to be, sold in the United States or elsewhere at less than its fair value (hereinafter called a negative "fair value finding" or findings) within thirty days after publication in the Federal Register, and (B) the Secretary's affirmative fair value finding, or findings, the United States Tariff Commission's determination under section 201(a) of this Act, and the dumping finding, within thirty days after the publication of the dumping finding. (2) Such judicial review shall be in accordance with section 10(e) of the Administrative Procedure Act (5 U.S.C. 1009(e)), and shall be independent of that provided in section 516 of the Tariff Act of 1930 (19 U.S.C. 1516). Any reviewing court may, in its discretion, order the withholding of appraisement reports as to the merchandise in question. (3) The United States Customs Court and the Court of Customs and Patent Appeals shall establish rules of procedure necessary to effectuate this subsection."

Sec. 11. The Antidumping Act 1921 (19 U.S.C. 160–172) is amended by adding the following section:

"Section 215.

"(a) Except as provided in subsection (b), the 1963 amendments to this Act shall apply with respect to all merchandise as to which no appraisement report has been made on or before the date of the enactment of such amendments: *Provided*, That with respect to such merchandise as to which, on or before such date, the question of dumping shall have been raised by or presented to the Secretary he shall determine within six months from the date of the enactment of such amendments whether the merchandise is being, or is likely to be, sold in the United States or elsewhere at less than its fair value.

"(b) The 1963 amendments shall not apply with respect to any merchandise which—

"(1) was exported from the country of exportation before the date of the enactment of such amendments, and

"(2) is subject to a finding under the Antidumping Act, 1921, which (A) is outstanding on the date of the enactment of such amendments, or (B) was revoked on or before the date of the enactment of such amendments, but is still applicable to such merchandise.

Mr. HUMPHREY. Mr. President, I also ask unanimous consent that a statement by the principal cosponsor of this bill, the distinguished Senator from Pennsylvania [Mr. Scott] be printed at this point in the Record. Senator Scott is absent today on official business but did want to be recorded as heartily in favor of this bill.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement by Senator Scott

I am most pleased to join today with the distinguished majority whip, Senator Humphrey, in introducing this vitally important amendment to the Antidumping Act.

Senator Humphrey and I joined together last session in S. 3606, which was also designed to produce needed reform of the Antidumping Act, and have continued our joint interest in this subject. Our present bill, as he has said, represents further intensive study and review of the Antidumping Act in an even broader effort to remove loopholes and provide appropriate procedures for the administration of this act.

In a statement in the Record only last week I pointed out the tragic impact of the dumping of foreign steel upon the steel workers and companies in our country. The cement industry is another which has been severely damaged by the dumping of foreign cement. And, of course, few, if any, industries and unions are free from the potential threat of unemployment and economic injury brought about by these unfair international trade practices.

All major trading countries have antidumping acts. They are expressly authorized by the General Agreement on Tariffs and Trade, known as GATT, which explicitly condemns dumping. Our Antidumping Act does not prevent foreign manufacturers from selling in the United States at prices below those charged by American producers. American manufacturers have never feared legitimate competition. It does prevent, however, the dumping of large surpluses at distress prices far below the price the foreign manufacturer charges in his home market.

Senator Humphrey has described the problems in our present Antidumping Act which our amendment is designed to relieve. As he has said, our amendment in no way affects the basic purpose of our act and its compatibility with the Trade Expansion Act of 1962 and our present foreign-trade relations. The amendment is urgently needed, however, in order to insure the fair and effective operation and administration of our act. The amendment represents a matter of urgent importance to those industries in this country which have suffered millions of dollars in losses as the result of unfairly dumped foreign merchandise, and we are anxious for a thorough consideration of these problems and passage of the bill this session.

THE HANDLING OF FEDERAL JUVENILE DELINQUENTS

Mr. DODD. Mr. President, I introduce, for proper reference, a proposed amendment to title 18 of the United States Code which would provide penalties for juvenile offenders who escape or attempt to escape from custody.

Mr. President, although section 751 of title 18 now prescribes strong penalties for adult escapees detained or committed in connection with a criminal proceeding, the Justice Department has refused to allow prosecution of juvenile escapees under these provisions because the latter are not subjected to a criminal proceeding and are not convicted of a crime.

The point is well taken that juveniles should not be exposed to penalties applicable to adult felons. It is imperative that rehabilitation and treatment, rather than punishment, always remain the basic goals and the main substance of any handling procedures directed against minors.

This does not mean, however, that punishment and penalties have no value or place in the treatment and control of juvenile offenders. Indeed, some penalties as disciplinary measures are very much a part of any rehabilitative process.

A case in point is the need for such penalties to discourage young offenders from attempting to escape after detention or commitment in an institution.

We must recognize here that by their very nature as treatment centers rather than penal institutions, juvenile detention and commitment facilities are operated with minimum security provisions, both in terms of personnel exercising guard functions and in terms of the mechanical security measures of the physical plant.

On the other hand, we know that many delinquents exhibit the same kinds of disturbances as adult offenders.

A juvenile delinquent is often equally as hostile, equally as aggressive, and equally as anxious to escape from an institution as his adult counterpart. Indeed, with the enthusiasm, the energy, and the rebellion against authority characteristic of the delinquency-prone segment of our youth population, a juvenile offender may often be more escape-minded than the most vicious adult inmates of penitentiaries.

The present lack of legal penalties allows a juvenile to plan and attempt escapes time after time without jeopardizing his release from an institution at the predetermined time, but often at the risk of physical violence, at the risk of physical harm to the institution's personnel or himself, and at the expense of rehabilitation and treatment programs beneficial to all juvenile offenders.

The following records submitted to my committee indicate that several correctional officers have been either killed, have suffered permanent brain damage, or have been otherwise seriously injured in the course of attempts to escape by youthful inmates.

In April of 1958 three boys escaped from the Natural Bridge Camp in Virginia after assaulting an officer. The officer underwent a 5-hour operation requiring 50 stitches to close his head wounds. Even after a long period of hospitalization and convalescence, he was unable to return to duty and had to be retired.

In May of 1958 two boys assaulted an officer in an attempt to escape, striking him with a heavy metal object. The officer sustained serious injuries.

In December of 1959 five juveniles trying to escape from the National Training School for Boys struck an officer with a baseball bat and knocked him unconscious. The officer was seriously injured and in a coma. In spite of the long period of hospitalization and treatment, he never completely recovered from the injuries and had to be transferred to a position where he could function at a reduced level of effectiveness.

In September of 1960 an officer at the National Training School was attacked by four boys attempting to escape and struck in the head with a desk lamp, the end of a broomstick handle, and fists. He died from multiple skull fractures and resultant complications.

In November of 1961 four boys attempted to escape from the National Training School after hitting an officer over the head with a heavy wastebasket.

In January of 1962 two escaping boys attacked an officer at the youth center in Ashland, Ky. The officer suffered severe injuries.

In January of 1962 a senior officer at the National Training School was attacked by a number of boys, garroted with a towel, and as a result was injured seriously.

These are only the most dramatic and the most tragic examples of escape attempts staged by young delinquents in Federal institutions. The records of the Federal Bureau of Prisons show that from January of 1961 to November of 1962 over 600 boys either escaped or attempted to escape from the several juvenile institutions under the Bureau's jurisdiction. Some months the combined total of both successful and unsuccessful escapees is as high as 45 individuals. But even these figures do not tell the whole story, because they may not reflect all attempts to escape, nor do they reflect the damage done to the rehabilitative programs by continuous preoccupation with plans to escape by a large number of young inmates.

In a letter to me concerning the above information and concerning the amendment I propose today, Mr. James V. Bennett, Director of the Bureau of Prisons, made the following statement:

> As you can readily understand from the attached tabulation, the number of escapes and attempted escapes involving juvenile delinquents seriously interferes with the orderly administration of our institutional programs, particularly at the National Training School for Boys. The juveniles are aware that they will incur no penalties for trying to escape and therefore give little thought to the possible consequences of such acts. Further, many of the juveniles who are involved in these episodes are 18 and 19 years old and should be held accountable for their actions.
>
> It is our opinion that the enactment of this amendment, which would authorize the imposition of a sentence of up to 1 year on juvenile delinquents who escape or attempt to escape, would greatly reduce the number of such incidents. Many of the juveniles contemplating escape would be effectively deterred by the knowledge that they would be subject to prosecution.

Mr. President, the physical and emotional health, safety, and general well-being of the juvenile offender and of persons associated with him dictate that preoccupations with plans and attempts to escape be discouraged among the inmate population of juvenile institutions.

The proposed amendment to section 751 of title 18 of the United States Code would substantially contribute to solution of the problems I have outlined.

This measure would subject juvenile offenders who attempt to escape to the penalty of 1 year's imprisonment, a $1,000 fine, or both.

I respectfully ask that this bill be given favorable consideration by the appropriate committee of the Senate and by the Members of this legislative body.

Mr. President, I ask that the bill be printed in the Record.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the Record.

The bill (S. 1319) to amend chapter 35 of title 18, United States Code, with respect to the escape or attempted escape of juvenile delinquents, introduced by Mr. Dodd, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the Record, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 751 of title 18, United States Code, is amended by inserting the subsection symbol "(a)" at the beginning thereof, and by adding, immediately following subsection (a) of such section as hereby so designated, a new subsection to read as follows:

"(b) Whoever escapes or attempts to escape from the custody of the Attorney General or his authorized representative, shall, if the custody or confinement is by virtue of a lawful arrest for a violation of any law of the United States not punishable by death or life imprisonment and committed before such person's eighteenth birthday, and as to whom the Attorney General has not specifically directed the institution of criminal proceedings, or by virtue of a commitment as a juvenile delinquent under section 5034 of this title, be fined not more than $1,000 or imprisoned not more than one year, or both. Nothing herein contained shall be construed to affect the discretionary authority vested in the Attorney General pursuant to section 5032 of this title."

Sec. 2. Section 752 of such title is amended by inserting the subsection symbol "(a)" at the beginning thereof, and by adding, immediately following subsection (a) of such section as hereby so designated, a new subsection to read as follows:

"(b) Whoever rescues or attempts to rescue or instigates, aids, or assists the escape or attempted escape of any person in the custody of the Attorney General or his authorized representative, shall, if the custody or confinement is by virtue of a lawful arrest for a violation of any law of the United States not punishable by death or life imprisonment and committed before such person's eighteenth birthday, and as to whom the Attorney General has not specifically directed the institution of criminal proceedings, or by virtue of a commitment as a juvenile delinquent under section 5034 of this title, be fined not more than $1,000 or imprisoned not more than one year, or both."

SMALL BUSINESS ADVERTISING

Mr. HUMPHREY. Mr. President, I introduce a bill to amend the Federal Trade Commission Act to permit small independent retailers to advertise cooperatively the prices of their merchandise.

This morning the Washington Post carried an article commenting on a recent decision of the Federal Trade Commission holding that the cooperative advertising of a common price by independent retailers was violative of the antitrust laws. This decision, which was concurred in by the Justice Department, makes necessary the bill I am offering.

I speak from personal experience when I say that this method of advertising is the most effective way that small business can compete with the giant chainstores and discount houses. Because of FTC opinion, small business retailers could be put in jail for engaging in this traditional and widespread method of advertising. How can we expect small independent merchants to compete against the giant chains and discount houses if they are not permitted to pool their limited advertising resources?

I should not have to remind the Federal Trade Commission or the Justice Department that our antitrust laws were designed as a protective shield, as a means of preserving small business competition—not as a sword to cripple independent merchants.

It is pertinent to refer to Commissioner Anderson's concurrence with the majority opinion, where he states:

> It offends my sense of justice to find that the small industry members are unable to avail themselves of the same benefits as do their big brothers and so, for that reason, I would very much like to join Commissioner Elman in his dissent hereto, but I believe that the law and the decisions as they now stand preclude such "junction." It is, therefore, with reluctance that I am compelled to subscribe to the view that the program of cooperative advertising as contemplated by the inquirants would probably be in violation of law.

When a member of the majority makes such a statement, it indicates a clear need for legislation to correct this misapplication of our law.

I think, Mr. President, that the statement of Mr. Elman, who issued the dissenting opinion, deserves great consideration by this body, and I quote from his dissent at this point:

> As everyone knows, it is becoming more and more difficult for small retailers, particularly in the drug and food industries, to withstand the overwhelming competition of chain stores and supermarkets. The chains have all the advantages of mass buying power, large capital resources, and choice locations in busy shopping centers. In addition, and this is most pertinent here, a large food and drug chain can take a single ad in a newspaper to advertise products sold at the same price in all of its stores. Under cooperative advertising arrangements, the cost of these advertisements is largely borne by manufacturers of the advertised products.
>
> Preservation of small independent businessmen is a central objective of every statute that Congress has directed this Commission to enforce; and unlike my colleagues, I find nothing manifestly illegal per se in the proposals submitted.

I also wish to call attention to an explanatory memorandum issued on this subject by the National Association of Retail Druggists to its 36,000 independent drugstore members. I find this pertinent analysis indicative of the vital need to pass this legislation as soon as possible.

I ask unanimous consent that the article in the Washington Post of this morning, the full opinion of the Federal Trade Commission dated March 29, 1963, and the April 1, 1963, Bulletin of the National Association of Retail Druggists be printed at this point in my remarks.

Mr. President, I introduce this bill with the firm belief that it is necessary in order to permit small business to compete with the giants of our economy.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the article, opinion, and bulletin will be printed in the RECORD, as requested.

The bill (S. 1320) to amend the Federal Trade Commission Act to provide for the regulation of cooperative advertising activities of certain small business concerns, and for other purposes, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Commerce.

The article, opinion, and bulletin ordered to be printed in the RECORD are as follows:

[From the Washington (D.C.) Post, Apr. 11, 1963]

FTC AIMS BLOW AT COOPERATIVE ADVERTISING

(By Edward S. Cohen)

The small businessman is about to be pushed farther onto the sidelines if the Federal Trade Commission and Justice Department have their way.

The latest ruling by the FTC, an advisory opinion, holds that independent small businessmen who join together in a cooperative advertising program may not publish retail selling prices without risking criminal prosecution under the antitrust laws.

That businessmen may be sent to jail for listing prices in cooperative advertising was concurred in by the Department of Justice.

Cooperative advertising, as it is practiced, is an attempt by small retailers to compete more effectively with larger retail chains or discount stores.

Typically, a group of small businessmen will join together, pool their advertising funds and buy joint ads in newspapers. The objections raised by the Commission concern the listing of the prices in these ads, which the FTC majority holds is price fixing per se, and therefore subject to prosecution.

The strongly worded but unpublicized opinion was issued just over a week ago and contained a vigorous dissent by Commissioner Philip Elman.

Copies of the Commission's opinion were sent to those parties requesting FTC sentiments in the matter, including Representative WRIGHT PATMAN, Democrat, of Texas, small business watchdog, and the National Association of Retail Druggists (NARD). The latter at its convention passed a resolution directing that advice on the legality of various cooperative advertising schemes be sought from the FTC.

Later, Marketing Programs, Inc., of New York, advertising consultants, asked the Department of Justice to advise whether a cooperative advertising program created for the Iowa Pharmaceutical Association was legal. The Iowa group then asked the FTC for an opinion. PATMAN forwarded the Marketing Programs proposal to the FTC.

The proposed Iowa plan, as described by Earl W. Kintner, NARD's special antitrust counsel and former FTC Commissioner, contemplated full-page newspaper ads listing the names and addresses of all participating pharmacies. Each ad would list specific prices for specific products, thus allowing the inference that the stores would charge the same price for each product advertised. A slight variation of this plan was also submitted.

Letters to the parties from the FTC stated that a cooperative advertising program by the druggists "would be subject to question under the laws administered by the Commission unless * * * use of the program would not involve any understanding or agreement, express or implied, among the members of the group concerning the retail selling price or the terms or conditions of any item advertised * * *."

In other words, the FTC went on, this meant "among other things, that no prices, terms or conditions of sale of any of the items should appear in the advertising."

If the Justice Department and FTC decide to back up this broad policy statement with antitrust enforcement, many other advertising plans are likely to be open to attack.

In a typical case independent liquor stores buy cooperative advertising and feature particular stores sponsoring a particular product at a special price. The ads are divided into distinct boxes with each store represented in a box.

Another form of joint advertising occurs when cooperatives are formed by small retailers such as grocers, who buy their merchandise, distribute and advertise as a group.

So far these ads have not been challenged.

Commissioner Elman's dissent, reportedly the subject of a controversy within the Commission pointed out that small independent retail businessmen can compete effectively against large chainstores and discount houses only by placing point advertisements which quote selling prices.

"What is proposed here (the Iowa plan), Elman argued, "is not an agreement among competing retailers to prices, which of course is a per se violation of the antitrust laws, but an agreement among independent retailers in different neighborhoods, and who do not compete with each other in any practical sense, to combine their advertising allowances, to which they are legally entitled under the Robinson-Patman Act, for the purpose of advertising cooperatively.

"I think the Commission is making a great mistake." Elman wrote. "Preservation of small independent businessmen is a central objective of every statute that Congress has directed this Commission to enforce."

PATMAN, author of the Robinson-Patman Act, designed to protect the small entrepreneur, would not comment on the FTC opinion. He said he could not "remember it." When he did recall the Marketing Programs proposal, he said he would "need more time to look into it."

If the Government decides to base future antitrust prosecution on this opinion, it was pointed out, the big chains will be given a competitive advantage. They will be able to list prices in their large ads.

But those who depend on cooperative promotion for survival will have to resort to institutional advertising or quit the cooperative effort and take out smaller ads of their own.

Thus, the antitrust laws have come full circle. Once designed to preserve competition, they may now limit rivalry.

FEDERAL TRADE COMMISSION,
OFFICE OF THE SECRETARY,
Washington.

EARL W. KINTNER, Esq.,
Arent, Fox, Kintner, Plotkin & Kahn,
Washington, D.C.

DEAR MR. KINTNER: This is with reference to your letter dated October 24, 1962, concerning the legality of various cooperative advertising schemes proposed to groups of retail druggists by Marketing Programs, Inc., New York, N.Y. We interpret your letter to be primarily concerned with the legality of the participation in this program by the various local associations which belong to the National Association of Retail Druggists.

You are advised that the Commission, as provided for in its advisory opinion procedures, has given careful consideration to the proposed plan. The Commission has concluded that there are several aspects of the plan which should be referred to separately. They include the following:

1. We comment upon that aspect of the plan which provides for the members of local associations to combine advertising allowances legally made available to them by suppliers and to utilize such advertising allowances in buying advertising space and in advertising through the utilization of that space the names and addresses of the cooperating members and the items, including brand names of the items they are offering for sale. To the extent this aspect of the plan would involve nothing more than is stated in the preceding sentence, the Commission has concluded that it sees no reason to challenge that aspect of the plan under the laws entrusted to the Commission.

2. To the extent that any aspect of the plan would involve a common understanding, agreement or approval by members of the group, express or implied, of any price, term, or condition of sale of any item advertised by the group, the plan would contravene laws entrusted to the Commission for enforcement. In this connection, it is the Commission's opinion that the group publication of an advertisement containing any selling price raises a serious question whether the members of the group have agreed to and will sell at those prices. Consequently, the cooperative consideration of any advertisement which would contain any price or prices or other terms or conditions of sale as indicated on the mockup which has been submitted would be open to challenge as part and parcel of price fixing by agreement. Thus, the Commission is in no position to give its approval to any plan which would contain a basic flaw such as that.

3. Another aspect of the plan which is worthy of comment is the amount of the advertising allowances involved and the manner in which they are secured. If the agent for the members of the group should induce or knowingly receive advertising allowances which from the viewpoint of the supplier would contravene either subsection 2(a), 2(d), or 2(e) of the Clayton Act, as amended by the Robinson-Patman Act, then all members of the group, as well as their agent, would be liable to charges of violation of either subsection 2(f) of the Clayton Act, as amended, or section 5 of the Federal Trade Commission Act, or of violation of both.

In other words, the Commission is of the opinion that a program of cooperative advertising by the members would be subject to question under the laws administered by the Commission unless:

(a) The fund used by or on behalf of the participating group to purchase advertising space should consist solely of the aggregate of advertising allowances properly available to the members individually under the terms of section 2(d) of the Clayton Act, as amended by the Robinson-Patman Act;

(b) Use of the program would not involve any understanding or agreement, express or implied, among the members of the group concerning the retail selling price or the terms or conditions of sale of any item advertised, which would mean, among other things, that no prices, terms or conditions of sale of any of the items should appear in the advertising; and

(c) Use of the program would not involve the inducement or knowing receipt by any of the members of the group, or by their agent, of prices or allowances, the granting of which by the suppliers would be unlawful under subsections 2(a), 2(d) or 2(e) of the Clayton Act, as amended by the Robinson-Patman Act.

We appreciate your interest in this matter and if any questions remain we hope that you will feel free to contact us.

By direction of the Commission, Commissioner Elman dissenting.

Joseph W. Shea,
Secretary.

STATEMENT OF COMMISSIONER ANDERSON

It goes without saying that the many small members of an industry should be able to compete on equal footing with its larger competitors. Unfortunately, there seem to be instances where that is not possible. I wish that I could dissent from what appears to be the majority in this case. I fear that for the individual industry members to join in an advertisement which would set out a single price to be charged by all those who participate in the advertisement would be looked upon with some suspicion. I call attention to the fact that the Special Counsel for the National Association of Retail Druggists has heretofore indicated his reluctance in the matter by stating to the annual meeting of the National Drug Trade Conference at New York, N.Y., on January 22, 1963, as follows:

"I venture the prediction that the antitrust enforcement agencies may frown upon a straightforward advertisement which lists a single price for a product that will be charged by all stores participating in the advertisement."

It offends my sense of justice to find that the small industry members are unable to avail themselves of the same benefits as do their big brothers and so, for that reason, I would very much like to join Commissioner Elman in his dissent hereto, but I believe that the law and the decisions as they now stand preclude such "junction " It is, therefore, with reluctance that I am compelled to subscribe to the view that the program of cooperative advertising as contemplated by the inquirants would probably be in violation of law.

STATEMENT OF COMMISSIONER HIGGINBOTHAM

This request today evokes a moment of truth for this Commission. With unquestioned sincerity, the able and distinguished dissenting Commissioner beseeches us to cast aside years of precedent in price fixing cases. It was in 1940, and thus after its decision in *Appalachian Coals, Inc., et al.* v. *United States,* 288 U.S. 344 (1933), that the Supreme Court stated:

"Thus for over 40 years this Court has consistently and without deviation adhered to the principle that price fixing agreements are unlawful per se under the Sherman Act and that no showing of so-called competitive abuses or evils which those agreements were designed to eliminate or alleviate may be interposed as a defense." *United States* v. *Socony Vacuum Oil Co., Inc.*

The holding of this case remains undisturbed.

We are not unaware of the legal maximum "Cessante ratione legis, cessat et ipsa lex," nor of the cases which rest on such reasoning. But the function of an advisory opinion is to declare the applicability of the present state of the law to novel and sometimes disturbing facts. To chart the future course of the law is not its task. Neither the thin subtleties of semantics nor the sharp but barren thrust of logic will much warm a businessman subject to the wintry blast of possible criminal prosecution.

Commissioner Elman does not dispute that price fixing is a per se offense. Rather he says that the plan involved herein does not factually amount to price fixing. We are constrained to note our exception.

The fact that the businessmen involved may have unhampered discretion to depart from the scheme involved does not mitigate the offense:

"The fact that no penalties are imposed for deviation from the price schedule is not material." *United States* v. *National Association of Real Estate Boards,* 399 U.S. 485, 489 (1950).

2. The agreements, even if only "incidentally" affecting price may still be offensive under the antitrust laws. In *Socony Vacuum, supra,* the court asserted that:

"Prices are fixed * * * if the range within which purchases or sales will be made is agreed upon, if the prices paid or charged are to be at a certain level or on ascending or descending scales, if they are to be uniform, or if by various formulas they are related to the market prices." *United States* v. *Socony Vacuum, supra,* at 222.

3. There is no doubt that retail drug stores operating in the same city may be held to be in competition. In *Brown Shoe Co., Inc.* v. *United States,* 370 U.S. 294, 338 (1962), the court held:

"We believe, however, that the record fully supports the district court's findings that shoe stores in the outskirts of cities compete effectively with stores in central downtown areas * * *."

See also, *United States* v. *Cunningham Drugstores* (complaint filed June 30, 1960, Civil Act No. 20266, D.C., E.D. of Mich., Southern Division), complaint charging violation of section 7 of the Clayton Act by Cunningham's acquisition of other retail drug stores, both being located in Detroit.

4. No one could quarrel with the dissent's assertion that particular cases pivot on particular facts. And once allowed to frame the question in terms of the facts as it sees them the dissent's answer is inescapable. Thus, Commissioner Elman declares that the proposed plan has "neither the purpose nor effect of restraining competition and involves no agreement by participating retailers to adhere to advertised prices." Obviously if all these assertions were inescapably true, or were the only permissible inference from the "facts," a different result might be reached. But that is the very issue—whether in fact the purpose and effect of the plan could be construed to restrain competition.

In sum, if one assumes price fixing, one need not examine all the relevant factors. Conversely, if one assumes no price fixing, one may examine all the relevant factors. To employ such reasoning is to become encased in conundrums. Moreover, it is clear from the differing opinions within the Commission itself that the plan at best is on the periphery of violative behavior, and that reasonable men differ concerning its impact. And as Mr. Justice Holmes asserted in *Nash* v. *U.S.,* 229 U.S. 373, 376, 377 (1913):

"The statute contains in its definition an element of degree as to which estimates may differ, with the result that a man might find himself in prison because his honest judgment did not anticipate that of a jury of less competent men * * *.

"But * * * the law is full of instances where a man's fate depends on his estimating rightly, that is, some matter of degree."

In view of the uncertainties and the substantial risk inherent in civil or criminal prosecution, no administrative agency should give this plan the "green light."

The function of this Commission—as I see it—is not to resolve a lover's quarrel over who loves the small businessman more. Hopefully, it is evenhanded justice we dispense—not bouquets for or vendettas against one class or group.

STATEMENT OF COMMISSIONER MACINTYRE

The Commission's advisory opinion in this important matter correctly advises the representatives of small business organizations regarding the application of Federal antimonopoly laws to their proposed plans. It is the duty of the Commission to so advise the representatives of these small business firms. We would do them a disservice if we should advise them otherwise. Of what benefit would we be to small business firms if we should advise them that the course of action they propose to take is approved and then they should find themselves in the toils of the law for having followed that course of action? Our duty is to assist business firms in avoiding any such result.

The Supreme Court of the United States in recent cases brought by the U.S. Department of Justice against firms for engaging in price fixing in violation of the Sherman Act have made it clear that such course of action constitutes per se violation of the Sherman Act (see *U.S.* v. *Socony Vacuum Oil Co., et al.*, 310 U.S. 150, decided in May 1940). In more recent cases in which small business firms were charged with violating the Sherman Act, the Department of Justice has insisted that prison sentences be given to those found guilty. As a result, some small businessmen in Ohio in recent years were ordered to serve prison terms for violation of the Sherman Act. We should do all possible to assist small businessmen in avoiding such a predicament.

DISSENTING STATEMENT OF COMMISSIONER ELMAN

As everyone knows, it is becoming more and more difficult for small retailers, particularly in the drug and food industries, to withstand the overwhelming competition of chainstores and supermarkets. The chains have all the advantages of mass buying power, large capital resources, and choice locations in busy shopping centers. In addition, and this is most pertinent here, a large food and drug chain can take a single ad in a newspaper to advertise products sold at the same price in all of its stores. Under cooperative advertising arrangements, the cost of these advertisements is largely borne by manufacturers of the advertised products.

Congress has recognized the need for giving small independent neighborhood retailers the opportunity to meet this kind of competition from the large chains. Under section 2(d) of the Robinson-Patman Act, a manufacturer who grants cooperative advertising allowances to some of his customers is obligated to make them available on proportionally equal terms to all of his customers. As a practical matter, however, a small neighborhood retailer cannot afford, by himself, to take a large ad in the local newspaper. The only realistic way for him to take advantage of the benefits of section 2(d) is to join with other small retailers, pool the advertising allowances to which each is legally entitled, and publish joint advertisements containing prices of the products which they sell. Obviously, a joint advertisement by small retailers which does not quote selling prices would be a waste of money. The owner of a corner grocery store is not interested in "institutional" advertising. That kind of advertising would hardly attract business away from his larger rivals, whose ads invariably feature "weekend specials" and the like.

What is proposed here, as I understand it, is not an agreement among competing retailers to fix prices, which of course is a per se violation of the antitrust laws, but an agreement among independent retailers in different neighborhoods, and who therefore do not compete with each other in any practical sense, to combine their advertising allowances, to which they are legally entitled under the Robinson-Patman Act, for the purpose of advertising cooperatively. In its advisory opinion here, the Commission flashes a red light on such cooperative advertising by small businessmen. I think the Commission is making a great mistake. Preservation of small independent businessmen is a central objective of every statute that Congress has directed this Commission to enforce; and unlike my colleagues, I find nothing manifestly illegal per se in the proposals submitted.

Per se violations of the antitrust laws comprise those restraints of trade which inherently have no function other than the stifling of competition. As the Supreme Court stated in *Northern Pacific Railroad Co.* v. *U.S.*, 356 U.S. 1, 5, per se violations are "agreements or practices which because of their pernicious effect on competition and lack of any redeeming virtue are conclusively presumed to be unreasonable and therefore illegal without elaborate inquiry as to the precise harm they have caused or the business excuse for their use."

Although an agreement to fix or maintain prices is unquestionably illegal per se, this does not mean that every agreement or arrangement which has incidental effects on prices can similarly be condemned by a per se test. *Appalachian Coals, Inc.* v. *U.S.*, 288 U.S. 344; *Chicago Board of Trade* v. *U.S.*, 246 U.S. 231, 238. In his opinion for the Court in the latter case, Mr. Justice Brandeis stated:

"The true test of legality is whether the restraint imposed is such as merely regulates and perhaps thereby promotes competition, or whether it is such as may suppress or even destroy competition. To determine that question the court must ordinarily consider the facts peculiar to the business to which the restraint is applied; its condition before and after the restraint was imposed; the nature of the restraint, and its effect, actual or probable. The history of the restraint, the evil believed to exist, the reason for adopting the particular remedy, the purpose or end sought to be attained, are all relevant facts."

As the Supreme Court held in *Brown Shoe Co.* v. *U.S.*, 370 U.S 294, 330, and *White Motor Co.* v. *U.S.*, decided March 4, 1963, slip opinion pp. 9–10, a restraint of trade cannot be condemned as a per se violation if "(w)e do not know enough of the economic and business stuff out of which these arrangements emerge to be certain. They may be too dangerous to sanction or they may be allowable protections against aggressive competitors or the only practicable means a small company has for breaking into or staying in business * * * and within the 'rule of reason'."

It begs the question, the answer to which necessarily depends on the particular facts, to hold that the appearance in a joint advertisement of any "prices, terms, or conditions of sale of any of the items" establishes, without more, the per se illegality of the advertising plan. Plans for joint advertising by retailers are not necessarily, and in all circumstances, the equivalent of price-fixing conspiracies. Where, as is represented here, a plan has neither the purpose nor the effect of restraining competition, and involves no agreement by participating retailers to adhere to advertised prices, a per se test is inapplicable. Such a simple yardstick may be used only—as the Supreme Court pointed out in the Northern Pacific Railroad case—in dealing with practices whose "pernicious effect on competition and lack of any redeeming virtue" have been conclusively shown. Here, however, the Commission cannot escape the necessity for determining the legality of a joint advertising plan by examining it in the light of all the relevant factors stated by Mr. Justice Brandeis in the Chicago Board of Trade case and reiterated the other day by the Supreme Court in White Motor.

It seems to me that the Commission, charged as it is with the duty to promote rather than discourage competition and to strengthen rather than impair the ability of small businessmen to survive, should take a more positive and encouraging attitude toward programs for joint advertising by retailers. As has recently been pointed out, "Prosecuting a practice of this kind would injure rather than preserve competition, and encourage instead of preventing monopoly." (Henry Bison, Jr., general counsel, National Association of Retail Grocers, Nargus Bulletin, Feb. 1963, p. 92.) The notion that small businessmen should be sent to jail for engaging in such a practice seems to me too fantastic to be taken seriously.

THE NATIONAL ASSOCIATION
OF RETAIL DRUGGISTS,
Chicago, Ill., April 5, 1963.

To: Presidents and secretaries of all State and metropolitan city pharmaceutical associations.

At the 1962 NARD meeting in New York a resolution was adopted directing that advice be sought from the Federal Trade Commission with regard to the legality of various cooperative advertising schemes proposed to groups of independent retail druggists. Thereafter, Marketing Programs, Inc., of New York sought the advice of the Department of Justice as to the legality of a cooperative advertising program designed by that firm for the Iowa Pharmaceutical Association. In view of the NARD convention resolution, the Iowa association requested that the NARD have the same program reviewed by the Federal Trade Commission. As a result the Federal Trade Commission reviewed the proposed program, in consultation with the Department of Justice.

Several other proposed cooperative advertising programs have been sent to me for advice by retail drug groups. I have referred these programs to Earl W. Kintner, NARD's special antitrust counsel, for study and comment. Mr. Kintner has made preliminary observations in each instance but withheld final comment until the Federal Trade Commission should complete its review of the Marketing Programs-Iowa proposal.

We have just received the Federal Trade Commission's advisory opinion on the Marketing Programs-Iowa plan.

The advisory opinion contains these principal rulings:

1. Joint institutional advertising by local associations or groups of independent retail pharmacists is lawful under the antitrust laws.

2. Members of local associations or groups of independent retail pharmacists may combine advertising allowances legally made available to them by suppliers to publish advertisements promoting specific brands of products offered for sale without violating the antitrust laws, provided that no reference is made to the prices, terms, or conditions of sale of a product in such advertisements.

3. Over the vigorous dissent of Commissioner Elman, a majority of the Commissioners ruled that the dissemination of an advertisement by a group of retail pharmacists containing any selling price for a specific product "raises a serious question whether the members of the group have agreed to and will sell at those prices" and that any such group may be charged with price fixing.

Some knowledge of the proposal submitted on behalf of the Iowa Pharmaceutical Association is required in order properly to assess the impact of the ruling on price advertising by the Commission majority. The proposed program developed for the Iowa Pharmaceutical Association by Marketing Programs, Inc. of New York City contemplated full-page newspaper advertisements listing the names and addresses of all pharmacies participating in the advertising program. The proposal contemplated that such advertisements shall list specific prices for specific products, thus permitting the inference that all participating stores would charge the same price for all advertised products. Under one variation of the program proposed to the Iowa Association, it was contemplated that the following disclaimer would appear in each advertisement: "Prices shown on this page are only manufacturers' suggested selling prices. In each store listed in the column at left, your pharmacist sets his own price—usually lower, never higher." This, then, is the ambit of the proposal placed before the Federal Trade Commission on behalf of the Iowa Association.

The proposal submitted did not include the method of advertising that Earl W. Kintner, Special Antitrust Counsel for the NARD, refers to as the "Thrifty Liquor Stores" plan. Under that plan, a voluntary group of independent liquor stores in the Washington, D.C., area has engaged in extensive advertising programs featuring prices for commodities for some time. So far, this group has not been challenged by the Antitrust Division of the Department of Justice or the Federal Trade Commission. The advertisements of the Thrifty Liquor group do not suggest a unified pricing system because each item featured in each advertisement is sponsored by an independent store in the group. The advertisements are divided into distinct boxes and the name of a store sponsoring a particular commodity appears in the box in which the commodity appears.

The language of the Federal Trade Commission majority with respect to price advertising by groups of independent retail pharmacists is quite broad. The majority opinion stated that "a program of cooperative advertising by (group) members would be subject to question under the laws administered by the Commission unless * * * use of the program would not involve any understanding or agreement, expressed or implied, among the members of the group concerning the retail selling price or the terms or conditions of sale of any item advertised, which would mean, among other things, that no prices, terms or conditions of sale of any of the items should appear in the advertising * * *."

Commissioner Elman forcefully dissented from this ruling. After pointing out that small independent retail businessmen can compete effectively against large chains only by placing joint advertisements which quote selling prices, Commissioner Elman goes on to state that "It begs the question, the answer to which necessarily depends on the particular facts, to hold that the appearance in a joint advertisement of any 'prices, terms or conditions of sale of any of the items' establishes, without more, the per se illegality of the advertising plan" Commissioner Elman stated his understanding of the issues in this manner:

"What is proposed here, as I understand it, is not an agreement among competing retailers to fix prices, which of course is a per se violation of the antitrust laws, but an agreement among independent retailers in different neighborhoods, and who therefore do not compete with each other in any practical sense, to combine their advertising allowances, to which they are legally entitled under the Robinson-Patman Act, for the purpose of advertising cooperatively. In its advisory opinion here, the Commission flashes a red light on such cooperative advertising by small businessmen. I think the Commission is making a great mistake. Preservation of small independent businessmen is a central objective of every statute that Congress has directed this Commission to enforce; and unlike my colleagues, I find nothing manifestly illegal per se in the proposals submitted."

Commissioner Higginbotham, in a separate statement, opined that on the facts presented, it must be assumed that pharmacists engaging in joint price advertising are engaging in price-fixing and that once this assumption is made, the conclusion follows from established legal principles that such joint price advertising is illegal per se. In the opinion of Commissioner Higginbotham, this conclusion precludes any examination into competitive circumstances or the laudable motives of the participating pharmacists. He concludes that: "In view of the uncertainty and the substantial risks inherent in civil or criminal prosecution, no administrative agency should give this plan the 'green light'."

Commissioner MacIntyre has expressed his agreement with the ruling of the Federal Trade Commission majority on the price advertising question in a separate statement. In his view, the Commission's duty to assist small businessmen is best served by a warning that engagement in joint price advertising programs may result in prosecution.

Commissioner Anderson explained his reluctant adherence to the majority view with respect to price advertisting by pharmacists groups in a separate statement. Commissioner Anderson stated that his sense of justice was offended by the fact that small businessmen are unable to avail themselves of the benefits enjoyed by their large competitors but he feels that the program of joint price advertising submitted would probably be in violation of law. Commissioner Anderson quotes a cautionary comment by Mr. Kintner before the recent meeting of the National Drug Trade Conference in his statement. Careful attention must be given to the broad context of Mr. Kintner's remarks, which are printed in full in the April 1, 1963, issue of the NARD Journal. He referred only to advertisements which list a single price for a product that will be charged by all participating stores with no explanation or disclaimer as to price variations between stores. Nor did Mr. Kintner's comment embrace the so-called Thrifty Liquor Stores example.

I refer again to Commissioner Elman's dissent. It appears to me that the ultimate question that must be resolved is whether joint price advertising by a group of independent pharmacists necessarily implies that such pharmacists are engaging in a price-fixing conspiracy. It seems clear to me that independent small businessmen who have no desire to fix prices but who do desire to compete effectively against giant chains which conduct massive advertising campaigns with cooperative advertising allowances furnished by manufacturers should have effective means of joint advertising available to them. This goal is consistent with the spirit and purpose of the Robinson-Patman Act.

In summary, the Federal Trade Commission advisory opinion appears to hold:

1. Any joint advertising sponsored by independent retail pharmacists which states specific uniform prices, terms, or conditions of sale for products subjects the participating pharmacist to danger of prosecution for price fixing.

2. The Federal Trade Commission is not disposed otherwise to challenge joint institutional advertisements by groups of retail pharmacists.

3. In addition to avoiding inferences of price-fixing, groups of retail pharmacists participating in joint advertising programs must be careful to comply with the Robinson-Patman Act prohibitions against inducing discriminatory allowances from manufacturers.

Mr. Kintner is now actively considering many requests for advice on particular joint advertising programs which were placed in suspense pending receipt of the Federal Trade Commission advisory opinion. The NARD will undertake to refer any additional requests for advice to Mr. Kintner as a part of its service to its members.

Mr. Kintner is now preparing a special bulletin for NARD members commenting upon certain specific alternatives in other plans which were not submitted to the Federal Trade Commission for its opinion, and which may be available to pharmacists desiring to participate in joint advertising programs. He also will elaborate upon the Robinson-Patman aspects of such plans.

The advisory opinion of the Federal Trade Commission does not mark the end of the search for effective competitive weapons for small businessmen but rather a beginning. The advisory opinion of the Federal Trade Commission leaves many questions unresolved. We at the NARD have embarked on an exhaustive study of the implications of the Federal Trade Commission opinion and the statements of the various Commissioners. Copies of the Federal Trade Commission opinion and the statements of the various Commissioners are attached to this bulletin for your study. You may be sure that the NARD will continue to exert every effort in this area of concern on behalf of the best interests of independent pharmacists, including seeking amendatory legislation, if such is necessary to permit the independent retail druggists to compete successfully against the cooperative advertising programs of the giant chains.

Sincerely,

Willard B. Simmons,
Executive Secretary.

NATIONAL SERVICE CORPS ACT

Mr. WILLIAMS of New Jersey. Mr. President, on behalf of myself and Senators Kennedy, Morse, Clark, Randolph, Pell, Javits, Humphrey, Inouye, Ribicoff, Bartlett, Gruening, Hart, Pastore, Nelson, Hartke, McGovern, Yarborough, and Bayh, I introduce, for appropriate reference, a bill to establish a National Service Corps, which will alleviate the serious and extensive problems that confront so many of our fellow Americans. I ask unanimous consent that the bill lie on the desk through April 24 so that other Senators may join as cosponsors.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from New Jersey.

The bill (S. 1321) to provide for a National Service Corps to strengthen community service programs in the United States, introduced by Mr. Williams of New Jersey (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

Mr. WILLIAMS of New Jersey. Mr. President, the vitality of our Nation depends upon the productivity and well-being of its citizens. We have made great progress in this country, and we can be proud of our achievements. Today, our Nation has the highest standard of living ever attained by any nation anywhere at any time in history. But we must not allow our strengths to conceal our weaknesses. Many millions of our fellow citizens needlessly suffer from economic deprivation, sickness, and neglect. When we realize that we have tolerated for so long the neglect of so many, our achievements have a hollow, dissonant ring. The needs of no single segment of our society can be forgotten or ignored. It is, therefore, up to an enlightened public to see to it that the progress of man in each century benefits all men, as is basic in a democracy.

The National Service Corps program is one of the most realistic programs developed to eliminate the problems that confront so many of our citizens. In essence, the National Service Corps is a program for Americans to help Americans. The volunteer corps, patterned after the oversea Peace Corps, will help to consolidate the talents and idealism of our citizens to assist those who are socially and economically handicapped. Service Corps volunteers will work with deprived groups including migrant farm families, American Indians, and refugees. Other areas of corpsman activity include mental health, education, welfare services in low-economic areas, and correctional institutions.

Volunteer corpsmen will not displace or interfere with local personnel, nor would they require the establishment of complicated new machinery for social programing. The corpsmen would merely augment the efforts of local public and private agencies already grappling with existing problems. The activities of the volunteer corpsmen would be under the direction and supervision of local sponsoring agencies requesting corpsmen. In short, the National Service Corps program will merely provide volunteers where they are wanted and where they are needed.

The National Service Corps will begin functioning with 150 to 300 men and women in early Fall. The number of corpsmen will gradually expand to 1,000 during fiscal year 1964, and eventually in 3 years the program might utilize as many as 5,000 volunteers.

We must realize that this modest number of volunteers will only be able to accomplish a limited amount of work throughout the Nation, especially when we remember that there are anywhere from 32 to 45 million citizens suffering from serious economic and social handicaps. But although the number of corpsmen is small, and the overall task large, these few corpsmen can make a very real contribution by setting an example for others to follow.

The broad goal of the Service Corps program is to direct public attention to the problems of the deprived American and to spur local public and private organizations to solve these problems. Serving as a pace setter, then, the corpsman volunteer will encourage other citizens to serve their own communities and thereby serve the Nation.

Once a project using corpsmen is underway, every effort will be made to bring it to a point of achievement at which the local agency staff members or local volunteers can take over the tasks originally assigned to corpsmen.

The National Service Corps is eminently realistic. I have seen a similar program in action. Last summer, I helped to develop a summer corps of college students to help migratory workers and their families in New Jersey. The volunteers, students at Douglass College, did a fine job. I said at that time that I hoped the example of the Douglass Summer Corps would be a precursor to a domestic service corps on a more comprehensive national scale. This broad program has been developed, and I consider it one of the most stirring legislative measures ever to come before the Congress.

The National Service Corps will be an invaluable adjunct to the other fine programs now before the Congress that attempt to make possible the fullest development and utilization of each citizen.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

SHORT TITLE

SECTION 1. This Act may be cited as the "National Service Corps Act".

SEC. 2. In the United States there remain critical human needs in this time of general prosperity. In this nation of great human resources, many more of our citizens should be encouraged to serve in their local communities to help meet these needs.

The purposes of this Act are to open new opportunities for full-time service working with those Americans in greatest need; to illuminate those needs, so as to expand the attack on deprivation in the United States; to motivate many more citizens to volunteer their services in their own communities, thus encouraging communities to help themselves; and to inspire more people to choose professions that serve their fellow citizens.

The Congress of the United States declares that it is the policy of the United States to carry out the purposes of this Act through a National Service Corps which will be composed of carefully selected men and women of all ages who shall be made available—upon local invitation and in cooperation with interested governmental and nongovernmental agencies—to serve for a limited time in projects directed toward the critical human needs of our countrymen. These projects may include projects designed to make corpsmen available for work with persons in institutions for the mentally ill and mentally retarded and during their return to normal living; in meeting the health and education needs of migratory workers and their families, Indians living on and off reservations, and residents of depressed areas and rural and urban slums; in care and rehabilitation of the elderly, the disabled, the delinquent young and dependent children; in improving standards of educational opportunity; and in other projects directed toward critical human needs. To the extent possible, each project carried out under this Act shall provide for contributions by the cooperating agencies.

AUTHORIZATION

SEC. 3. (a) The President is authorized to carry out projects in furtherance of the purposes of this Act, on such terms and conditions as he may determine.

(b) Before undertaking a project, the President shall assure himself that it will not displace regular workers or duplicate or replace an existing service in the same locality.

(c) There are hereby authorized to be appropriated to the President for the fiscal year commencing July 1, 1963, not to exceed $5,000,000, and for each succeeding fiscal year such amounts as the Congress may determine to be necessary to carry out the purposes of this Act.

DIRECTOR OF THE NATIONAL SERVICE CORPS AND DELEGATION OF FUNCTIONS

SEC. 4. (a) The President may appoint, by and with the advice and consent of the Senate, a Director of the National Service Corps, whose compensation shall be fixed by the President at a rate not in excess of $20,000 per annum. The President may appoint a Deputy Director of the National Service Corps, whose compensation shall be fixed by the President at a rate not in excess of $19,500 per annum.

(b) The President may exercise any functions vested in him by this Act through such agency or officer of the United States Government as he shall direct. The head of any such agency or any such officer may promulgate such rules and regulations as he may deem necessary or appropriate to carry out such functions, and may delegate to any of his subordinates authority to perform any of such functions.

NATIONAL SERVICE CORPS CORPSMEN

SEC. 5. (a) The President may enroll in the National Service Corps for service in the United States qualified citizens and nationals of the United States (referred to in this Act as "corpsmen"). The terms and conditions of the enrollment, training, compensation, hours of work, benefits, leave, termination, and all other terms and conditions of the service of corpsmen shall be exclusively those set forth in this Act and those consistent therewith which the President may prescribe; and, except as provided in this Act, corpsmen shall not be deemed officers or employees or otherwise in the service or employment of, or holding office under, the United States for any purpose.

(b) Whenever the President determines that it is in the national interest, he may, under such terms and conditions as he may deem appropriate, enroll qualified foreign nationals in the Corps for service in the United States.

(c) Corpsmen shall be provided with such living, travel, and leave allowances, and such housing, transportation, supplies, equipment, subsistence, and clothing as the President may determine to be necessary for their maintenance and to insure their health and their capacity to serve effectively. Transportation and travel allowances may also be provided, in such circumstances as the President may determine, for applicants for enrollment to or from places of training and places of enrollment, and for former corpsmen from places of termination to their homes in the United States.

(d) Corpsmen shall be entitled to receive an adjustment allowance at a rate not to exceed $75 for each month of satisfactory service as determined by the President. The adjustment allowance of each corpsman shall be payable at the termination of his service, or may be paid during the course of his service to the corpsman, to members of his family or to others, under such circumstances as the President may determine. In the event of the corpsman's death during the period of his service, the amount of any unpaid adjustment allowance shall be paid in accordance with the provisions of section 1 of the Act of August 3, 1950 (5 U.S.C. 61f).

(e) Corpsman leaders may be designated from among the corpsmen under this Act and assigned supervisory or other special duties or responsibilities.

(f) Corpsmen shall, for the purpose of the administration of the Federal Employees' Compensation Act (39 Stat. 742, as amended), be deemed to be civil employees of the United States within the meaning of the term "employee" as defined in section 40 of such Act and the provisions thereof shall apply except as hereinafter provided.

(1) In computing compensation benefits for disability or death under the Federal Employees' Compensation Act, the monthly pay of the corpsman shall be deemed to be at the lowest rate provided for grade 7 of the general schedule established by the Classification Act of 1949, as amended.

(2) Entitlement to disability compensation payments and other benefits under the Federal Employees' Compensation Act shall commence on the day after the date of termination of service.

(3) In any case in which the injured corpsman, or his dependents in case of death, receives from the entity to which the corpsman was detailed or assigned or made available pursuant to section 5(j) of this Act any payment (including any allowance, gratuity, payment under an insurance policy for which the premium is wholly paid by that organization, or other benefit of any kind), on account of the same injury or death, the amount of such payments shall be credited against any benefits payable under the Federal Employees' Compensation Act as follows:

(A) payments on account of injury or disability shall be credited against disability compensation payable to the injured corpsman; and

(B) payments on account of death shall be credited against death compensation payable to dependents of the deceased corpsman.

(g) Corpsmen shall be deemed to be employees of the United States for purposes of the Internal Revenue Code of 1954 and of title II of the Social Security Act, and any service performed by an individual as a corpsman shall be deemed for such purposes to be performed in the employ of the United States.

(h) Corpsmen shall receive such health care during their service, and such health examinations and immunization preparatory to their service, as the President may deem necessary or appropriate. Subject to such conditions as the President may prescribe, such health care, examinations, and immunization may be provided for corpsmen in any facility of any agency of the United States Government, and in such cases the appropriation for maintaining and operating such facility shall be reimbursed from appropriations available under this Act.

(i)(1) Any period of satisfactory service of a corpsman under this Act shall be credited in connection with subsequent employment in the same manner as a like period of civilian employment by the United States Government—

(A) for the purposes of the Civil Service Retirement Act, as amended (5 U.S.C. 2251, et seq.), section 852(a)(1) of the Foreign Service Act of 1946, as amended (22 U.S.C. 1092(a)(1)), and every other Act establishing a retirement system for civilian employees of any United States Government agency; and

(B) except as otherwise determined by the President, for the purposes of determining seniority, reduction in force, and layoff rights, leave entitlement, and other rights and privileges based upon length of service under the laws administered by the Civil Service Commission, the Foreign Service Act of 1946, and every other Act establishing or governing terms and conditions of service of civilian employees of the United States Government: *Provided*, That service of a corpsman shall not be credited toward completion of any probationary or trial period or completion of any service requirement for career appointment.

(2) For the purposes of paragraph (1)(A) of this subsection, corpsmen shall be deemed to be receiving compensation during their service at the rate of adjustment allowances payable under section 5(c) of this Act.

(j) The President may detail or assign corpsmen or otherwise make them available to any entity referred to in paragraph (1) of section 7(a) on such terms and conditions as he may determine: *Provided, however*, That any corpsman so detailed or assigned shall continue to be entitled to the allowances, benefits and privileges of corpsmen authorized under or pursuant to this Act.

(k) Corpsmen shall be deemed employees of the United States Government for the purposes of the Federal Tort Claims Act and any other Federal tort liability statute and for the purposes of section 595 of Title 18 of the United States Code, and for the purposes of section 9 of the Act of August 2, 1939, as amended (5 U.S.C. 118i).

(l) The service of a corpsman may be terminated at any time at the pleasure of the President.

(m) Upon enrollment in the National Service Corps, every corpsman shall take the oath prescribed for persons appointed to any office of honor or profit by section 1757 of the Revised Statutes of the United States, as amended (5 U.S.C. 16).

(n) The President shall make provision for such training as he deems appropriate for each applicant for enrollment as a corpsman and each enrolled corpsman. All the provisions of this Act applicable to corpsmen shall be applicable to applicants for enrollment as such during any period of training occurring prior to enrollment, and the term "corpsmen" shall include such applicants during any such period of training.

(o) The number of corpsmen enrolled under this Act shall not exceed one thousand at any given time during the fiscal year commencing July 1, 1963, and shall not exceed five thousand at any time thereafter, unless otherwise authorized by the Congress.

NATIONAL SERVICE CORPS EMPLOYEES

SEC. 6. The President may employ such persons as he deems necessary to carry out the provisions and purposes of this Act. Except as otherwise provided in this Act, such persons (hereinafter sometimes referred to as "employees") shall be employed in accordance with and shall be subject to the laws applicable to personnel employed by the United States Government.

GENERAL POWERS AND AUTHORITIES

SEC. 7. (a) In furtherance of the purposes of this Act, the President may—

(1) enter into, perform, and modify contracts and agreements and otherwise cooperate with any agency of the United States Government or of any State or any subdivision thereof, other governments of places subject to the jurisdiction of the United States and departments and agencies thereof, and educational institutions, nonprofit health, welfare, and rehabilitation agencies, farm organizations, labor unions, and other organizations, individuals, and firms;

(2) accept in the name of the National Service Corps and employ in furtherance of the purposes of this Act—

(A) voluntary services notwithstanding the provisions of 31 U.S.C. 665(b), and

(B) any money or property (real, personal or mixed, tangible or intangible) received by gift, devise, bequest, or otherwise, and dispose of such property in furtherance of the purposes of this Act.

(b) Subject to any future action of the Congress, a contract or agreement for services of corpsmen which entails commitments for the expenditure of funds available for the purposes of this Act, including commitments for purposes of paying or providing for allowances and other benefits of corpsmen authorized by section 5 of this Act, may extend at any time for not more than twenty-four months.

(c) The President may allocate or transfer to any agency of the United States Government any funds available for carrying out the purposes of this Act including any advance received by the United States from any State, local, or other organization under authority of this Act. Such funds shall be available for obligation and expenditure for the purposes of this Act in accordance with authority granted in this Act or under authority governing the activities of the agencies of the United States Government to which such funds are allocated or transferred.

(d) Any officer of the United States Government carrying out functions under this Act may utilize the services and facilities of, or procure commodities from, any agency of the United States Government as the President shall direct, or with the consent of the head of such agency, and funds allocated pursuant to this subsection to any such agency shall be established in separate appropriation accounts on the books of the Treasury.

(e) In the case of any commodity, service, or facility procured from any agency of the United States Government under this Act, reimbursement of payment shall be made to such agency from funds available under this Act. Such reimbursement or payment shall be at replacement cost, or, if required by law at actual cost, or at any other price authorized by law and agreed to by the owning or disposing agency. The amount of any such reimbursement or payment shall be credited to current applicable appropriations, funds, or accounts from which there may be procured replacements of similar commodities, services, or facilities, except that where such appropriations, funds, or accounts are not reimbursable except by reason of this subsection, and when the owning or disposing agency determines that such replacement is not necessary, any funds received in payment therefor shall be covered into the Treasury as miscellaneous receipts.

NATIONAL SERVICE CORPS ADVISORY COUNCIL

SEC. 8. (a) The President may appoint to membership in a board to be known as the National Service Corps Advisory Council twenty-five persons who are broadly representative of health, welfare, and rehabilitation agencies, of education institutions, and of business, farm, labor and other public and private organizations and groups, as well as individuals interested in the programs and objectives of the National Service Corps, to advise and consult with the President with regard to policies and programs designed to further the purposes of this Act.

(b) Members of the Council shall serve at the pleasure of the President and meet at his call. Members who are not officers or employees of the United States Government shall each be entitled to receive out of funds made available for the purpose of this Act compensation at a rate to be fixed by the President, but not exceeding $75 for each day, not to exceed twenty days in any fiscal year in the case of any such member, spent away from his home or regular place of business for the purpose of attendance at meetings or conferences and in necessary travel, and while so engaged may be paid actual travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. Notwithstanding the foregoing or any other provision of law, the President may accept the services of appointed members under this section without payment of compensation therefor (and with or without payment of travel expenses or per diem in lieu of subsistence).

EXPERTS AND CONSULTANTS

SEC. 9. (a) Experts and consultants or organizations thereof may, as authorized by section 15 of the Act of August 2, 1946, as amended (5 U.S.C. 55a), be employed by the President for the performance of functions under this Act, and individuals so employed may be compensated at rates not in excess of $75 per diem, and while away from their homes or regular places of business, they may be paid travel expenses, including per diem in lieu of subsistence, in accordance with the provisions of section 5 of said Act (5 U.S.C. 73b–2), while so employed: *Provided*, That contracts for such employment may be renewed annually.

(b) Service of an individual as a member of the Council authorized to be established by section 8 of this Act or as an expert or consultant under subsection (a) of this section shall not be considered as service or employment bringing such individual within the provisions of section 13 of the Civil Service Retirement Act, as amended (5 U.S.C. 2263), section 212 of the Act of June 30, 1932, as amended (5 U.S.C. 59a), section 872 of the Foreign Service Act of 1946, as amended, or any other law limiting the reemployment of retired officers or employees or governing the simultaneous receipt of compensation and retired pay or annuities.

UTILIZATION OF FUNDS

SEC. 10. Funds available for the purposes of this Act shall be available for the exercise of any authority granted by this Act, including, but not limited to:

(1) rent of buildings and space in buildings in the United States, and for repair, alteration, and improvement of such leased properties;

(2) expenses of printing and binding without regard to the provisions of section 11 of the Act of March 1, 1919 (44 U.S.C. 111);

(3) expenses of attendance at meetings concerned with the purposes of this Act, including (notwithstanding the provisions of section 9 of Public Law 60–328 (31 U.S.C. 673)) expenses in connection with meetings of persons whose employment is authorized by section 10(a) of this Act;

(4) expenses of preparing and transporting to their former homes or places of burial, and of care and disposition of the remains of corpsmen who may die while such persons are away from their homes participating in activities under this Act.

REPORTS

SEC. 11. The President shall transmit to the Congress, at least once in each fiscal year, a report on operations under this Act.

SECURITY INVESTIGATIONS

SEC. 12. All persons employed or assigned to duties and all corpsmen enrolled under this Act shall be investigated to insure that the employment, assignment, or enrollment is consistent with the national interest in accordance with standards and procedures established by the President.

SEAL

SEC. 13. The President may adopt, alter, and use an official seal or emblem of the National Service Corps of such design as he shall determine, which shall be judicially noticed.

MORATORIUM ON STUDENT LOANS

SEC. 14. Section 205 of the National Defense Education Act of 1958 (20 U.S.C. 425) is amended by deleting the word "or" immediately preceding clause (iii) of section 205 (b)(2)(A) and by adding immediately after that clause the following: "or (iv) not in excess of three years during which the borrower is in service as a corpsman under the National Service Corps Act: *Provided*, That this clause shall apply to any loan outstanding on the effective date of the National Service Corps Act only with the consent of the then obligee institution."

AMENDMENT TO CIVIL SERVICE RETIREMENT ACT

SEC. 15. Subsection (j) of section 3 of the Civil Service Retirement Act, as amended (5 U.S.C. 2253), is amended to read as follows:

"(j) Notwithstanding any other provision of this section or section 5(f) of the Peace Corps Act or the National Service Corps Act, any military service (other than military service covered by military leave with pay from a civilian position) performed by an individual after December 1956 and any period of service by an individual as a volunteer under the Peace Corps Act, or as a corpsman under the National Service Corps Act, shall be excluded in determining the aggregate period of service upon which an annuity payable under this chapter to such individual or to his widow or child is to be based, if such individual or widow or child is entitled (or would upon proper application be entitled) at the time of such determination, to monthly old-age or survivors benefits under section 202 of the Social Security Act, as amended (42 U.S.C. 402), based on such individual's wages and self-employment income. If in the case of the individual or widow such military service or service under the Peace Corps Act of the National Service Corps Act is not excluded under the preceding sentence, but upon attaining age sixty-two, he or she becomes entitled (or would upon proper application be entitled) to such benefits, the Commission shall redetermine the aggregate period of service upon which such annuity is based, effective as of the first day of the month in which he or she attains such age, so as to exclude such service. The Secretary of Health, Education, and Welfare, shall, upon the request of the Commission, inform the Commission whether or not any such individual or widow or child is entitled at any specified time to such benefits."

DEFINITIONS

SEC. 16. (a) The term "United States" as used in this Act in a territorial sense, includes the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands and all other places, continental or insular, including the Trust Territory of the Pacific Islands, subject to the jurisdiction of the United States.

(b) The term "health care" includes all appropriate examinations, preventive, curative and restorative health, medical, and dental care, and supplementary services when necessary.

(c) For the purposes of this or any other Act, the period of any individual's service as a corpsman under this Act shall include—

(1) except for the purposes of section 5(h) of this Act, any period of training under section 5(m) prior to enrollment as a corpsman under this Act; and

(2) the period between enrollment as a corpsman and the termination of service as such corpsman by the President or by death or resignation.

(d) The term "United States Government agency" includes any department, board, wholly or partly owned corporation, or instrumentality, commission, or establishment of the United States Government.

CONSTRUCTION

SEC. 17. If any provision of this Act or the application of any provision to any circumstances or persons shall be held invalid, the validity of the remainder of this Act and the applicability of such provision to other circumstances or persons shall be held invalid, the validity of the remainder of this Act and the applicability of such provision to other circumstances or persons shall not be affected thereby.

EFFECTIVE DATE

SEC. 18. This Act shall take effect on the date of its enactment.

CREATION OF A STANDING COMMITTEE ON VETERANS' AFFAIRS

Mr. WILLIAMS of New Jersey. Mr. President, I send to the desk a resolution to create a single standing Committee on Veterans' Affairs and to place under its jurisdiction those important veterans matters now divided between the Labor Committee and the Finance Committee. The important subjects which this committee would deal with include the pensions, the medical care and rehabilitation of veterans and the operation of the Veterans' Administration.

The important problems of veterans are such that they warrant the attention of a permanent committee adequately supported by a full-time staff. It seems to be a matter of simple logic and sound public policy that legislation which affects millions of American citizens—not only veterans but their widows, wives, children, and dependents—receive the continued careful study of a permanent committee. We now have standing committees that deal with legislation affecting farmers, our banks, our judiciary, the District of Columbia, and our post office employees. Certainly no one would argue that veterans are less important. Surely the lives and welfare of our more than 20 million veterans merit the same attention these groups receive.

Mr. President, this resolution is not intended as any criticism of the fine work of either the Labor Committee or the Finance Committee. In fact the new Veterans' Committee would bring together the experience and knowledge of these committees, for three of its members would also serve on the Labor Committee and three on the Finance Committee. The new committee would be strengthened by the addition of three members from the Armed Services Committee. In effect, the present fragmentary approach to veterans legislation would be replaced by a committee whose members would be familiar with the problems of veterans in all their aspects.

The cold war will be with us for a long time to come. As long as it lasts, a large number of our young men will do military service, which is often dangerous even in a cold war, and always a burden on their wives. To these men as well as veterans of past wars we all owe a great debt. A standing Committee on Veterans' Affairs would give these Americans a forum where their views could be heard, and their needs studied; it would serve as an indication of the country's serious and continuing concern for their well-being.

The PRESIDING OFFICER. The resolution will be received and appropriately referred.

The resolution (S. Res. 126) was referred to the Committee on Rules and Administration, as follows:

Resolved, That rule XXV of the Standing Rules of the Senate (relating to standing committees) is amended by—

(1) striking out subparagraphs 10 through 13 in paragraph (h) of section (1);

(2) striking out subparagraphs 16 through 19 in paragraph (l) of section (1); and

(3) inserting in section (1) after paragraph (p) the following new paragraph:

"(q) Committee on Veterans' Affairs, to consist of nine Senators, three who are also members of the Committee on Finance, three who are also members of the Committee on Armed Services, and three who are also members of the Committee on Labor and Public Welfare, to which committee shall be referred all proposed legislation, messages, petitions, memorials, and other matters relating to the following subjects:

"1. Veterans' measures, generally.

"2. Pensions of all the wars of the United States, general and special.

"3. Life insurance issued by the Government on account of service in the Armed Forces.

"4. Compensation of veterans.

"5. Vocational rehabilitation and education of veterans.

"6. Veterans' hospitals, medical care, and treatment of veterans.

"7. Soldiers' and sailors' civil relief.

"8. Readjustment of servicemen to civil life."

Sec. 2. Section 4 of rule XXV of the Standing Rules of the Senate is amended by striking out "and Committee on Aeronautical and Space Sciences" and inserting in lieu thereof "Committee on Aeronautical and Space Sciences; and Committee on Veterans' Affairs."

Sec. 3. Section 6(a) of rule XVI of the Standing Rules of the Senate (relating to the designation of ex officio members of the Committee on Appropriations) is amended by adding at the end of the tabulation contained therein the following new item: "Committee on Veterans' Affairs—For the Veterans' Administration."

Sec. 4. The Committee on Veterans' Affairs shall as promptly as feasible after its appointment and organization confer with the Committee on Finance and the Committee on Labor and Public Welfare for the purpose of determining what disposition should be made of proposed legislation, messages, petitions, memorials, and other matters theretofore referred to the Committee on Finance and the Committee on Labor and Public Welfare during the Eighty-eighth Congress which are within the jurisdiction of the Committee on Veterans' Affairs.

FLYING OF THE AMERICAN FLAG OVER THE REMAINS OF THE U.S.S. "UTAH"—ADDITIONAL COSPONSORS OF BILL

Mr. MOSS. Mr. President, I ask unanimous consent that the names of the Senator from Nebraska [Mr. Hruska] and the Senator from North Dakota [Mr. Young] appear as cosponsors of the measure (S. 703) to provide for the flying of the American flag over the remains of the U.S.S. *Utah* in honor of the heroic men who were entombed in her hull on December 7, 1941, at any future printing.

The PRESIDING OFFICER. Without objection, it is so ordered.

ESTABLISHMENT OF COMMISSION ON REVISION OF THE ANTITRUST LAWS OF THE UNITED STATES—ADDITIONAL COSPONSOR OF BILL

Mr. JAVITS. Mr. President, I ask unanimous consent that the name of the senior Senator from Indiana [Mr. Hartke] may be added as a cosponsor of S. 1255, for the establishment of a Commission on Revision of the Antitrust Laws of the United States which I introduced on April 2, 1963.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF BILLS

Under authority of the orders of the Senate, as indicated below, the following names have been added as additional cosponsors for the following bills:

Authority of April 4, 1963:

S. 1270. A bill to amend the Packers and Stockyards Act, 1921, to strengthen independent competition by providing for competitive enterprise in the retail sales of meat, meat food products, livestock products, and other food items: Mr. Long of Missouri, Mr. McGee, and Mr. Yarborough.

Authority of April 9, 1963:

S. 1283. A bill to enforce constitutional rights, and for other purposes: Mr. Bayh, Mr. Fong, Mr. Moss, Mr. Muskie, and Mr. Proxmire.

NOTICE OF HEARING ON SMALL RECLAMATION PROJECTS ACT

Mr. MOSS. Mr. President, for the benefit of those Senators who might be interested, I would like to announce that the Irrigation and Reclamation Subcommittee of the Interior and Insular Affairs Committee will conduct hearings on S. 283, the Small Reclamation Projects Act on April 23 and on the S. 793 and S. 784, bills to promote the conservation of the Nation's wildlife resources on the Pacific flyway in the Tule Lake and Klamath Wildlife Refuges on April 24.

On May 7, it is my intention to hold hearings on S. 26, the Dixie project located in the State of Utah.

All of these hearings will be held in room 3110, New Senate Office Building, commencing at 10 a.m.

SOVIET OIL MENACE

Mr. DIRKSEN. Mr. President, the weapons of Communist conquest are many and diverse. The Kremlin pushes its expansion vigorously and with every means at its command.

As the Soviet Union has continued to broaden its industrial capabilities, international trade has become one of the most subtle, yet effective and dangerous instruments of Red aggression. As members of this Senate are aware, one of the most serious examples of the Kremlin's use of international trade in furthering Red influence is the invasion of free world petroleum markets by Russia.

This is indeed a serious feature of the continuing struggle against communism, because the Kremlin understands full well that oil is a vital and indispensable requirement of every nation. Having developed a large oil producing capacity, the Soviet Union is literally and figuratively flooding selective and sensitive free world markets. Not only does this endanger a healthy economy in these nations, but it gives Communist trade representatives an entree into these areas which otherwise would not be accessible, were it not for the below-the-market prices at which Soviet oil is being offered.

If we are to meet and overcome this Red oil offensive, we must have a full understanding of its meaning in terms of Soviet capability, intentions, and limitations with respect to oil production and distribution.

What is probably the most comprehensive, authoritative, and understandable analysis of the Russian oil situation, both in the Soviet Union, and as an instrument of international trade, appeared in the Washington Sunday Star of Sunday, March 31, 1963. The article was an extensive reprint of excerpts from a recent speech delivered in Fort Worth, Tex., by Mr. George F. Getty of Los Angeles, Calif., president of the Tidewater Oil Co.

This is a particularly valuable contribution to our understanding of Communist oil export for two reasons. First, Mr. Getty is recognized as one of the most progressive and capable figures in the oil industry today. Secondly, he bases his report upon personal observations made by him in the course of an extended tour of important oil producing areas in the Soviet Union. Thus his first-hand observations, coupled with his vast experience in the oil industry, serve to make this speech both authoritative and informative.

I believe that after reading this speech, reprinted from the Washington Star, Members of this Senate will share my opinion that this is a most valuable contribution to our understanding of Russian techniques of expansion through the use of trade. It underlines the seriousness of the problem confronting us, and the necessity of keeping our Nation's petroleum industry technologically advanced and economically sound.

I ask unanimous consent to have the speech of Mr. Getty printed in the Record.

There being no objection, the speech was ordered to be printed in the Record, as follows:

U.S. Expert Sees Rising Soviet Oil Offensive

(Editor's Note.—George F. Getty II, president of the Tidewater Oil Co., recently returned from an inspection tour of the Soviet oil industry. Here are excerpts from a report he made to the American Petroleum Institute meeting in Fort Worth, Tex., earlier this month.)

We meet today as the oil industry is threatened on many fronts. Such a confrontation is not unusual for us, but today's threats are possibly the most ominous to date in our industry's history.

Most of you are concerned mainly with exploration and production work. Your work is challenging and difficult. It would be doubly challenging—in fact, confounding—if you had to work amidst violent revolutions, border wars or Communist subversion. Yet this was the case recently for our oilmen in Iraq and Yemen; while those working in Venezuela are in the middle of communism's No. 1 target in Latin America.

Added to the oil operators' troubles these days is the cut-throat competition of the largest oil organization in the world—the government-controlled Soviet oil industry. We think our domestic oil business is competitive. Well, many of you may be familiar with an example of really tough competition. In a recent "price war," the Russians forced free world companies to lower prices by offering India Soviet oil at 10 to 20 percent below prevailing world prices—which were already somewhat depressed.

THE BATTLE AND THE WAR

They were shrewd. They dealt the free world a blow merely by cutting prices on a bid; they didn't have to use up even one barrel of oil to win a trade war victory. To keep the business, Western companies were forced to make the sale at Soviet prices. Isn't that called winning the battle but losing the war?

The Soviet oil industry is unique. From the seismograph to export marketing it is operated—perhaps inefficiently, and often dangerously—with only one goal in mind: defeating the aims and ideals of everyone in this room.

As you may know, I was a member of the U.S. petroleum delegation that spent a month getting a first-hand, on-the-spot view of certain Soviet oil operations. Although there is a great temptation when one comes back from a foreign country to be an expert, even a Russian would have difficulty being an expert in the U.S.S.R. The Soviet Union is a difficult, complex country.

WHAT U.S. OILMEN SAW

Nevertheless, our tour of Russia gave us a reasonable opportunity to observe the Soviet oil industry at work. Let me sketch for you what our visiting oilmen saw in the Soviet Union.

We like to pride ourselves on our accomplishments in oil development. But the agency running the Soviet exploration and production is a hard-working crew that cut our time in half. In 15 years, from 1946 to 1962, they increased oil production from only 432,000 barrels a day to 3.3 million barrels. That's quite a jump. Some time ago, we made the same increase in our own production, but it took us 31 years, from 1907 to 1939.

Even though the Soviets had all the technical advances since 1907 working in their favor, their record is an obvious accomplishment. With 3.3 million barrels, in world production they are second only to our own 7 million barrels daily. For the end of their present 7-year plan, in 1965, they have targeted production at 4.8 million barrels daily.

NO LABOR PROBLEMS FOR THEM

Oil field development is controlled carefully under the 7-year plan. The nation itself owns the land and the minerals, of course. There are no leases, no royalties. There are no labor problems—despite the fact that 25 percent of the oil industry workers are women. The government just goes ahead and does as it pleases. Labor, for example, is freely transferred from one region to another to balance quality and quantity.

The Soviet production objective is maximum recovery of reserves in the shortest period of time. They have a use for all the oil and gas that they can get their hands on. They want to get the oil out and use it, not to produce it over a long period of time; the latter would be better oil field engineering practice, but poor overall economic and political practice for the Soviets. About 10 percent of Soviet wells are wildcats.

Our trip had many surprises. For example, counter to our thinking that Baku was the great source of Soviet oil, this region produces only 22 percent of the Soviet's total. After World War II, the Soviets began exploring other regions. They were handed an energy gift on a silver platter when they discovered the Volga-Urals fields, strategically located between Moscow and their tremendous, newly industrialized area east of the Urals. The Soviets couldn't have gotten a more economic supply of oil if they had designed the situation in one of their own 7-year plans.

Under the present 7-year plan, they are constructing huge petroleum pipelines. These amounted to 19,700 miles of oil line and 18,300 miles of gas line in 1961; about twice their trunk pipeline mileage in 1958. This doesn't sound like much compared with what we're doing here in the United States. On the other hand, when you consider that the average diameter of these pipes is 40 inches, their carrying capacity is tremendous. These pipelines carry oil to the satellite countries, the Black Sea, and may eventually carry it to the Sea of Japan—all places where their export potential is greatest.

The Soviet Union also is expanding its merchant fleet. Soviet officials stated that luckily they don't have to build tankers because the free world has been so nice and built so many extra ones which are available at low charter rates. But we gathered from several conversations and recent reports that large tankers, 25,000 to 35,000 tons, are being constructed on the Black Sea. We also know they have contracted for large ships in Japan and Italy.

This tanker and pipeline expansion certainly adds to the free world's increasing problems with Soviet oil exports, as you have seen pointed up by the newspaper accounts of a possible Soviet deal with England for ships.

Refinery capacity has been a bottleneck in their plans. Refinery runs in 1958 totaled a shade over 2.6 million barrels a day. These increased to 4.25 million barrels daily in 1962 and are scheduled to reach 5 million in 1965. With this capacity, it is possible that after satisfying home requirements, they will have about 440,000 barrels of refined products daily for free world export.

THE MODELS ARE IMPRESSIVE, BUT—

We visited the Novo Ufa refinery. It employs about 5,000 people, 600 of these are engineers and technicians. It's basically a large topping plant with limited cracking and reforming facilities. But don't forget, the Soviets primarily require fuel oil and middle distillates, not high octane gasoline. They see no point in putting in a lot of octane and gasoline building equipment.

Characteristically, Soviet industry in most areas lags substantially behind the United States. At the permanent exhibition of Soviet achievement in Moscow, where they have a Hall of Geology, a Hall of Oil and Gas, and a Hall of Petroleum Science, we saw models of wonderful drilling rigs, bits, refineries, and petro-chemical plants. But the actual equipment we saw in the field was nothing to get excited about.

We trekked through four oilfields, toured four of their largest refineries, visited the four best research institutes, but we saw little evidence of this wonderful equipment. It just wasn't in operation where we were.

NOT VERY IMPRESSED

After we had seen Soviet oil operations we put our heads together to compare notes. We were not particularly impressed. But realistically, we had to recognize their tremendous potential. You cannot deny their great oil and gas fields, their vast reserves. You can't deny their successful, almost explosive development of oil and gas resources and oil export opportunities.

At this point it might be well to see what kind of conclusions can be drawn from this sketch of what we saw of the Soviet oil industry.

I am convinced that the Soviets have used and will continue to use their abundant oil resources to expedite their own industrial expansion and to extend their political influence, undermine freedom, and spread communism in the free world.

The Soviets' crude oil production allowed them in 1953 to export 35,000 barrels a day to the free world. In 1961, this jumped to a 610,000-barrel-a-day average, or 3 percent of the free world oil demand. They flatly told us they intend to up that 3 percent to 4 percent, and you know they aren't going to spend the rest of their lives doing it. Their present 7-year plan calls for exports of 1 million barrels a day to the free world in 1965. To do this, they're going to use their system of moving into oil markets, upsetting them, withdrawing from them and moving into others.

We face a massive, aggressive competitor who can cut prices at will and barter, accept soft currencies, and do business in ways that would stymie or ruin a Western oil company. In 1961, this competiton cost traditional exporting countries, particularly Venezuela and certain Middle Eastern States, $486 million in lost revenue. And the competition will get tougher.

WHAT THE SOVIET NEEDS

The Soviet oil industry is in dire need of exploration, production, and transportation equipment. To an important extent, the success of the Soviet oil threat depends on how successful they are in obtaining line pipe, drilling rigs, pumps, oil country tubular goods, and so on. They also need tankers and complete refinery units, petrochemical plants, and electronic gear in order to fulfill their 7-year goal.

Let's not kid ourselves. They are going to trade their oil for this equipment and these facilities, as well as for raw materials, food, chemicals, and other commodities from manufacturers and producers in the free world. One can't get around the fact that this trade with the Communists has been, and will be, freely entered into by many nations because, as in all enduring commercial relationships, both parties expect to benefit. Over a billion dollars' worth of plant, equipment, and metal goods were sold to the Communist bloc by the free world in 1960.

Take Italy, for example, the Soviets bartered 100,000 barrels of crude oil a day over a 5-year period—about 20 percent of the Italian oil requirements—in return for specific quantities of much needed 40-inch pipe, pumps, synthetic fibers and other essentials. Italy picks up the oil at Black Sea ports at a price equivalent to $1 a barrel. At that price, it's hardly worth taking oil out of the ground in Texas.

It could be said that all of your work in finding reserves, to meet future production requirements will be a waste of time if the Soviets are allowed to carry out this threat and to undermine the security of the free world. However, while I am completely convinced of the Soviet threat, I am equally convinced that the free world's oil companies can be counted on to resist to their utmost in any struggle for the world's oil markets.

SOVIET EXPORTS HAVE LEVELED OFF

Already there is evidence supporting this conviction. After increasing at an annual rate of about 40 percent for the past 3 years, Soviet oil exports have leveled off. Remember, oil export potential does not necessarily mean sales, even for as aggressive a competitor as the Soviets.

But let's not drop our guard. The leveling off might just be due to a lack of present capacity in Soviet pipelines and tankers.

My conviction that Western oil companies can resist Soviet competition is not based on blind faith. It is based on the expectation that certain things must happen.

To meet Soviet competition, American oil companies must at least remain as strong and healthy as they are today. They must effectively supply a steadily growing demand in the United States and in the free world. They must continue to operate a vast distribution and marketing network which guarantees delivery of petroleum products where and when they are needed.

The Soviets don't yet have such a network and can't guarantee delivery. Most important, American oil companies must continue to develop present reserves and build future strength by discovering new reserves.

THE FIRST DECADE: CHANGE AND CHALLENGE

Mr. WILLIAMS of New Jersey. Mr. President, the Department of Health, Education, and Welfare is 10 years old this month. In its first decade the Department has faced new problems that were foreseen only by a very few farsighted persons during the 30-year struggle to estabish such a Department. Our school population, for example, has increased from 37 million in 1952 to 52 million in 1962, and the number of persons 65 years or over has increased from 13 million to 17 million in the same decade. Great numbers of our citizens are moving from farm to city; our economy has grown from $365 billion in 1953 to $544 billion in 1962.

These changes have brought social and economic problems of vital concern to HEW, and the Department has become more and more concerned about the impact of such change upon the citizens of our Nation. The present Secretary, Anthony Celebrezze, has said that it will be the responsibility of the Department in the next decade, as it was during the first 10 years, to help make available to all citizens full opportunities for the development of their talents and abilities.

The Secretary's words were printed in an introduction to the April 1963 edition of the HEW Indicators. The same introduction also summarizes the history and importance of the Department. I ask unanimous consent to have it printed in the CONGRESSIONAL RECORD.

There being no objection, the introduction was ordered to be printed in the RECORD, as follows:

THE FIRST DECADE: CHANGE AND CHALLENGE

This year marks the 10th anniversary of the Department of Health, Education, and Welfare—the newest Federal agency to be represented in the President's Cabinet. However, the responsibilities it bears for the well-being of the American people date back to the early years of our Republic.

They began in 1785, when the Congress of the Confederation made grants of public lands to the States for public schools.

They were added to in 1798, when the Fifth Congress established the Marine Hospital Service—forerunner of today's Public Health Service.

In 1867 the Federal Office of Education was established; in 1907 the Food and Drug Administration began as the Bureau of Chemistry in the Department of Agriculture; in 1912 the Children's Bureau was established; in 1920 the predecessor of the present Vocational Rehabilitation Administration began its important work; and in 1935 the Social Security Board was organized.

All these agencies were brought together in 1939 under the framework of the Federal Security Agency, and 14 years later the Agency was given Cabinet status when it became the Department of Health, Education, and Welfare.

In this chronology of the Department's growth, we can trace the Nation's growing recognition of the need for Federal participation in promoting the general welfare of the American people. Through periods of prosperity and depression, through civil strife and world conflict, the Federal Government has shared in the national concern for the well-being of every citizen.

We are now in an era of change and challenge which in many ways eclipses those critical periods of our past.

We are in the midst of a technological revolution which is changing the pattern of life and work of the American people.

As our national strength and prosperity have increased, we have grown more and more aware of pressing problems within our society which cry out for solution—problems of great magnitude and complexity that are beyond the resources of the individual and his local and State governments.

Some of these problems have long been with us and require solution even more urgently today; some are the outgrowth of the technological forces which are altering our society; others have arisen as a natural consequence of the higher human expectations of larger numbers of citizens.

In education, for example, we have a shortage of facilities and well-trained teachers at the same time that we face increasing demands for more schooling for more people. We have millions of young people and millions of adults whose lack of adequate education prevents them from enjoying a full measure of the Nation's prosperity and from making their full contribution to society.

Our aged men and women, those in the lowest income group and most subject to illness, have tragically inadequate insurance against the high cost of hospital care and related health services.

Other problems in our society represent an appalling waste of human lives and human potential: mental illness and mental retardation, drug addiction, accidents, juvenile delinquency.

Increasingly we are concerned with problems of air and water pollution, and the proliferation of chemicals in the production and processing of foods.

In the following pages are summarized the progress this Department has made during the past decade in carrying out its responsibilities for the well-being of the American people.

As we review the successes of the Department's first 10 years, let us look forward to a second decade of helping to make available to all citizens full opportunities for the development of their talents and abilities. These are our most precious resources—our hope for the future.

ANTHONY J. CELEBREZZE,
Secretary of Health, Education,
and Welfare.

THE BALANCE OF PAYMENTS—PAYMENT IN GOLD FOR U.S. ASSETS ABROAD

Mr. **MORSE**. Mr. President, on February 14, I spoke in the Senate about reports in the press and on the radio that France might organize with other countries of Western Europe to demand payment in gold for the U.S. assets they hold.

I have already placed in the RECORD the reply I received from Treasury Secretary Dillon to my inquiry about the truth of these allegations. That material, as it relates to France, appears in the CONGRESSIONAL RECORD for February 28.

Today I wish to insert material on this subject sent to me by the Embassy of the Federal Republic of Germany, and I ask unanimous consent to have it printed at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Facts regarding the position of the Federal Republic of Germany with respect to the United States balance of payment

[Millions of dollars]

	German trade with the United States		
	1960	1961	1962
Imports	1,422.5	1,515.8	1,758.3
Exports	886.6	870.1	965.7
U.S. surplus	535.9	645.7	792.6

NOTE.—The above mentioned figures include German purchases of United States military equipments

(2) The German Government agreed in buying U.S. military equipment for approximately $700 millions annually. This amount matches the annual military expenditures of the United States in Germany. The Federal Republic of Germany makes anticipated payments for the supply of military equipments generating additional receipts in the framework of the U.S. balance of payments.

(3) In 1961 the Federal Republic of Germany made a debt prepayment in the amount of $587 million, larger than any other prepayment made by any other country.

(4) The "Deutsche Bundesbank" (the independent central bank in Germany) has concluded "swap" agreements in the amount of $150 million with the U.S. monetary authorities in 1962.

(5) The Bundesbank has credited to the Treasury deutsche marks in the amount of $200 million against medium-term bonds in January and February 1963.

(6) During 1962 the Bundesbank has bought practically no gold from the U.S. monetary authorities although the German short-term claims climbed near to the $3 billion mark.

(7) Mr. Blessing, the president of the Bundesbank, and other top ranking German bankers have declared repeatedly and publicly their confidence in the soundness of the U.S. currency thus contributing considerably to the stability of the dollar in the German and the international finance market.

Mr. **MORSE**. Mr. President, while I am somewhat reassured by the cooperation Germany has extended us so far on this financial problem, I do not view with any assurance at all the continuation of such large obligations in the hands of both Germany and France. As this data indicates, West Germany has short-term U.S. claims close to $3 billion in value. France has claims on us of at least $1 billion.

The United States must make every effort to reduce these obligations in Western Europe just as fast as possible. A 1962 report of the Joint Economic Committee on this subject made this observation:

> The tendency for countries like Germany, France, and Italy to continue accumulating gold and dollars rather than to spend more of their rising export income on imports, on capital investment in other countries, and on foreign aid, has been responsible for a large part of the free world's payments imbalance.

The report I have quoted from is entitled, "U.S. Payments Policies Consistent with Domestic Objectives of Maximum Employment and Growth," and is a report of the subcommittee on international exchange and payments.

I shall have more to say on this subject at a future date, but in the meantime, I welcome the statement from West Germany and I hope we can continue to count on her help in easing what has become for us a serious financial problem.

EASTER, 1963

Mr. **KEATING**. Mr. President, with the advent of the joyous season of Easter, it is fitting that we pause in reverent contemplation of the meaning to the Christian world of the momentous event which renders this commemoration so sacred, so historic, so imperishable. Easter is at once a feast of solemnity and joy, a call to the silence of adoration and to the ecstasy of rapture, as the full significance of the Resurrection touches our hearts. As His death was the ultimate expression of Christ's love for man, so was His Resurrection an affirmation of the eternal victory of the spirit over the flesh. This sublime event symbolizes as well the high destiny reserved to God-created man, and reminds us anew of the common brotherhood we share in this mortal world, and of the deep and hallowed obligations such a brotherhood imposes. May the sacred and joyous feast of Easter find voice in our lives as well as in our thoughts, and make us more worthy of the love that has made this moment immortal in the history of Christian man.

PAN AMERICAN DAY, 1963

Mr. WILLIAMS of New Jersey. Mr. President, April 14 marks an anniversary of unusual significance to Americans. It is the 73d anniversary of the inter-American system, and it is called Pan American Day. This system of free and sovereign nations, now formally embodied in the Organization of American States, is the oldest international organization of its type in the modern world. We Americans of the north are proud of this Organization. We are proud of its concepts of equality, peaceful settlement of disputes, and cooperation for mutual social, economic, and cultural betterment for the peoples of the Western Hemisphere.

It was the "George Washington" of South America, Simón Bolívar, who first envisaged and tried to organize the young nations of the Western Hemisphere, newly independent of European colonialism. These earliest efforts failed to crystallize, and it was not until 1890, at the initiative of the Secretary of State, James Blaine, that the First International Conference of American States was held here in Washington, and the pan-American idea took concrete form.

Since that time, this oldest of international organizations has come a long way. One of the fundamental precepts of the pan-American idea was that here, in the New World, we Americans could start afresh on a system of international relations which would differ from the older European habits of wars and entanglements. In these limited aims we have been largely successful. But it is the more recent, positive aims that we Americans have set for ourselves that challenge our concept of peaceful cooperation for progress.

The Alliance for Progress embodies these positive aims of the Organization of American States. We must not weary of the burdens or the complexities of the noble tasks which we have set for ourselves, but on this 73d Pan American Day must dedicate ourselves anew to the accomplishment of hemispheric solidarity, peaceful progress, and justice and equality for all Americans.

THE YOUTH CORPS BILL

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD letters I have received in support of the Youth Corps bill, passed yesterday, from three prominent citizens of my State of Oregon.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CIRCUIT COURT OF
THE STATE OF OREGON,
Salem, Oreg., April 5, 1963.

Hon. WAYNE MORSE,
U.S. Senator,
Washington, D.C.

DEAR SENATOR MORSE: I urge favorable action by this session of Congress on Senate bill 1 and House bill 1890. The immediate development of youth work camps and employment programs are a must in an effective attack on the serious and the increasing problem of delinquency that faces America today.

This proposed legislation is necessary to help youth with problems—problems that are daily becoming more imminent because of the lack of employment for youth and because so many youngsters, who are school dropouts, find themselves walking the streets in idleness and no foreseeable purpose in life.

We must act now to help those unfortunate products of our rapidly changing society accelerated by automation and other aspects of this technological age.

Yours very truly,
JOSEPH B. FELTON,
Circuit Judge.

PARISH OF ST. MARK
THE EVANGELIST,
Hood River, Oreg., April 3, 1963.

Hon. WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: Grace be unto you and peace from God our Father and from the Lord Jesus Christ:

I would add my voice to the several with whom I've had the opportunity to discuss the matter on urging your support of the Youth Employment Act of 1963 (S. 1 and H.R. 1890).

Even in such communities as Hood River, which certainly has a present low youth problem, the situation facing the young men and women who can neither go on to school or find adequate employment; or who are for that matter, potential delinquency candidates, we recognize a definite need for adequate program. We have pioneered the summer work camp, and the benefits of this bill would certainly extend the effectiveness of such programs.

Perhaps the opponents to this measure (and I understand it is being opposed mainly on cost) should see that a few millions of dollars spent in saving youth is better spent than $1 building weapons which could destroy them.

Thank you.

Sincerely,
ALBERT E. ALLEN.

OFFICE OF COUNTY COURT
OF POLK COUNTY,
Dallas, Oreg., April 3, 1963.

Sen. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR WAYNE: I am writing to you in regard to Senate bill 1 that I believe is in committee at this time, and would like to express my interest in this type legislation. Although I do not approve of all provisions of the bill, I think it is a splendid start in the right direction. I believe the original CCC we worked under during the depression would come as near accomplishing the desired results with our many unemployed young men. I also believe the time is at hand when we must realize the seriousness of the unemployed youth in our country and, under our present system of automation, it is impossible for all of them to find jobs. The last report I read in the Juvenile Journal, we have 700,000 youths drop out of high school every year who are ill prepared to meet the challenge of today's living standards. Serving in the capacity of juvenile judge, many young people come before me throughout the year requesting a chance for employment, and, of course, we have nothing to offer them. I am sure if we had something of the YCC program it would give these young people a chance to keep busy and have a tendency to lead them away from a life of delinquency, giving them a good foundation for citizens of our country.

If there is anything I can do on the homefront to help promote this type legislation, feel free to call upon me. At your convenience, please keep me informed as to the status of the bill at this time.

Sincerely yours,
C. M. BARNHART.

P.S.—I intended to include this in my letter too: Many of us in the county are greatly disappointed with the accelerated work program that was inaugurated by Congress. I am sure the people who sponsored this bill had no intention that the Government agencies, such as the Agriculture and Interior Departments, would take advantage of the moneys that were appropriated. They already come under the national budget for large sums and I feel this money should have been, and was intended to be, for local programs and be distributed to take care of the unemployed situation throughout the country. As I understand the bill, it calls for $900 million, but only $400 million was appropriated. I hope Congress sees fit to appropriate the other $500 million and tie it up so that it will be assured it will go to small local projects in communities throughout the United States.

ANTI-SEMITISM WITHIN THE SOVIET UNION

Mr. SALTONSTALL. Mr. President, an article which appeared recently in the Christian Science Monitor presents a short analysis of anti-semitism within the Soviet Union and is illustrative of one aspect of Communist racism which is being called to our attention with increasing frequency. I ask unanimous consent that this article be included in the body of the RECORD at the conclusion of my remarks.

During this week in which the people of the Jewish faith throughout the world are celebrating the religious observance of Passover, I think it is appropriate to take note of the growing worldwide concern over Soviet policy reflected in the discriminatory treatment of certain minority groups within the U.S.S.R. Numerous reports coming out of the Soviet Union make reference to the overt and subtle pressures being exerted against persons of the Jewish faith. The latest manifestation of Soviet policy is the continued prohibition against public baking or sale—or even importing—of matzoth, the sacred wafer so important in the celebration of Passover.

Soviet propagandists have been ready to exploit, especially in the newly emergent lands of Asia and Africa, what they conceive to be evidence of racism within the free world. But today they are becoming subject to embarrassment in these very areas by the growing mass of evidence of racism within the Communist world.

The free world was most recently shocked over the outbreaks in Bulgaria involving young African students studying there. It must be pointed out that when such manifestations are viewed against the backdrop of other similar occurrences within the Red bloc, it becomes evident that racism in the Communist world is not an isolated phenomenon. Anti-Negro disturbances in Bulgaria and elsewhere and persecution of minority groups within the U.S.S.R. form a disturbing pattern.

Evidence has been presented to indicate that Jews in the Soviet Union are subjected to cultural and religious deprivation not applied to any of the other recognized nationalities or religious groups in the U.S.S.R. Although official Soviet policy promotes antireligious ideologies and a continual propaganda campaign against organized religion, many religious privileges are still enjoyed by the Russian Orthodox churches, the Lutheran churches of Latvia and Estonia, and even the Moslem religious groups in the U.S.S.R.; harassment of Jewish religious activities in the Soviet Union is a marked contrast to the selective freedoms of these other groups.

It has been noted that no Jewish cultural or religious exchange activity has been permitted with institutions in the free world. It would appear, therefore, that the Soviet Government's discrimination against the Jews, both as a nationality group and a religious movement, has served to stimulate a "popular" anti-Semitism within the Soviet Union.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Christian Science Monitor, Jan. 31, 1963]

Red Anti-Semitism Scrutinized

(By Judd L. Teller)

During the last year, scores of Soviet Jews were publicly pilloried, tried, and convicted for economic crimes against the state. Some were executed.

Those trials and executions took place mainly in the Ukraine and in the former Romanian territory annexed by the Soviet Union after World War II. In addition, the Moscow synagogue has been threatened with closing as an alleged center of black marketing and pro-Israel agitation.

An analysis of these reports, undertaken by this writer last summer in personal interviews with Soviet Jews from all walks of life, shows that there are two kinds of anti-Semitic discrimination at work in the Soviet Union.

ASSIMILATION RESISTED

One is at the seat of power in Moscow, the other in the Ukraine.

The Moscow bias is ideological and geopolitical. It is based on Jews' resilience to total assimilation which at least partially has been due to a Soviet reluctance to assimilate them. It is based on suspicion of Jews as an element with international affinities—5 million Jews in the United States and the pro-Western State of Israel.

The press attacks on the Moscow synagogue, which is only nominally a symbol of Jewry, since the majority are not religious, are probably intended as an oblique warning to all Soviet Jews to avoid nationalistic digression.

This ideological anti-Semitism at the power center is counterbalanced by a genuine feeling of penance among the Soviet intelligentsia for the anti-Semitism of the Stalin period and collaboration in the Nazi-occupied territories of the U.S.S.R.

HISTORIC TRADITION

This penance is evident less among technologists and managers than among writers and artists. The poet Evgeny Yevtushenko has not been the only one to raise his voice on the subject. Penance has also been evident in works of fiction.

Popular anti-Semitism in the Ukraine and the annexed former Rumanian territory has a long historic tradition. Moscow is compelled to compromise with Ukraine nationalism. That nationalism is directed largely at the Jews as Jews, as "Russifiers," preferring Russian to Ukraine schools, and as competitors, solely on merit, for high posts in education, the economy, and the civil service.

Discrimination against Jews follows a spiral pattern in the Ukraine. Both Jewish faculty and students are unhappy at its universities. It is difficult for a Jew to obtain a cab driver's license in Kiev, capital of the Ukraine. It is difficult for Jewish war veterans to obtain employment. Even Jews in high positions in Kiev wait about 5 years for new apartments in the meantime residing in the slum areas near the Dnieper River banks, while peasants brought in from outlying villages are placed, within months, in new apartment houses.

OCCASIONAL FRAMEUPS

Economic discrimination in the Ukraine and the former Rumanian territories compels some Jews into peripheral, extralegal ways of making a living. He is also, too often, the victim of deliberate frameups. When the security police close in on a suspect plant or management, the true culprits quickly line up witnesses to blame a Jew, any Jew who though sheer circumstance of the office he occupies can be made to appear as the villain.

Soviet Jews must also be alarmed by the latest decision of the Committee of the Party Government Control to enlist every worker in every job as a spy against his fellow workers. This kind of spying provides incentive for framing "the stranger." With his passport designating him as neither Ukrainian, nor Russian, but a member of a displaced nationality, the Jew becomes a natural target.

MANAGEMENT IN A VACUUM

Mr. ANDERSON. Mr. President, I ask unanimous consent to insert in the Record an address by Mr. Harvey Banks, former director of the California Department of Water Resources and now vice president of a large west coast engineering firm, delivered at the March 11 meeting of the National District Attorneys' Association.

Mr. Banks is widely respected in the water field. The multibillion-dollar California water plan was largely developed under his direction.

Mr. Banks' address is a perceptive and thoughtful discussion of Federal-State water rights issues and of the potentialities of S. 1111 in helping to resolve such conflicts and facilitate river basin planning.

The address includes suggestions for amendment of S. 1111 which deserve and will have careful consideration by the Interior and Insular Affairs Committee. Some are quite acceptable. One or two of them I question. All of the amendments, however, reflect a careful and constructive approach to planning our river basins.

I commend the address to all those who have a serious concern with finding the best practical solution to the problem of planning for the best development of our great watersheds.

I ask unanimous consent that it be printed in the body of the Record at this point.

There being no objection, the address was ordered to be printed in the Record, as follows:

"Management in a Vacuum"—Presented at the Western Water Law Symposium's 14th Annual Spring Conference of the National District Attorney's Association, Los Angeles, Calif.

(By Harvey O. Banks[1])

The problem areas in Federal-State relationships extend beyond the legal issues concerning the ownership and control of the water resources of the Western States and the authority to administer those resources, that are being so ably discussed by others here today. Irrespective of the manner of resolution of the legal issues—or lack of final resolution, as the case may be—these other problem areas will continue to impede optimum utilization of water resources and to prevent full participation by the States and local agencies in water resource development, unless positive action is taken by the Congress.

It is the purpose of this paper:

1. To discuss specific problems of Federal-State relationships in California, the manner of resolution of certain of these problems, and the nonresolution of others.
2. To identify a few of the problem areas in Federal-State relationships.
3. To comment on some of the possible solutions that have been offered.
4. To discuss the Water Resources Planning Act of 1963 as a possible vehicle to achieve more harmonious Federal-State-local relationships in the future.

NEED FOR PARTICIPATION BY STATE AND LOCAL AGENCIES IN WATER RESOURCE DEVELOPMENT

The need for greater participation by the States and local agencies in development of the Nation's water resources has been documented by the Select Committee on National Water Resources which was appointed pursuant to S. Res. 48, 86th Congress. In its report to the U.S. Senate, dated January 30, 1961, the select committee stated:[2]

"The magnitude of future demands on fresh water supplies will require giving very careful attention to possible conflicts among alternative purposes as future programs for water supply developments are planned and revised from time to time. Congress, of course, should not be faced with the necessity of deciding matters that can with mutuality best be resolved locally in cooperation with the Federal and State agencies concerned. Congress has recognized the importance of this in the past by enactment of the O'Mahoney-Millikin amendment to the Flood Control Act of 1944. This has been reenacted in all subsequent rivers and harbors and flood control legislation. It calls for State participation in planning for water resources developments prior to consideration being given to authorization. Implementation of these provisions should be strengthened, and the views of State and local agencies should be considered in connection with the formulation and operation of all Federal water resources programs.

The importance of Government policy in meeting the water resources problems ahead cannot be denied. The recommendations which follow are based on the committee's belief that future demands can be met best by finding the proper combination of (a) construction program; (b) scientific research; (c) development of known technical methods; and (d) strengthening of Government policies affecting water development and use. Such a combination of efforts cannot be achieved overnight, and will require the combined efforts of the legislative and executive branches of the Federal Government as well as a continuation and strengthening of work in these fields by State and local governments and private enterprise."

---

[2] Report of the Select Committee on National Water Resources pursuant to S. Res. 48, 86th Cong.; Rept. No. 29, 87th Cong., 1st sess., p. 17.

The select committee recommended: [3]

1. The Federal Government, in cooperation with the States, should prepare and keep up-to-date plans for comprehensive water development and management for all major river basins of the United States.

Such plans should take into account prospective demands for all purposes served through water development giving full recognition to non-revenue-yielding purposes such as streamflow regulation, outdoor recreation, and preservation and propagation of fish and wildlife, and keeping in mind the ultimate need for optimum development of all water resources.

2. The Federal Government should stimulate more active participation by the States in planning and undertaking water development and management activities by setting up a 10-year program of grants to the States for water resources planning.

5. The Federal Government in cooperation with the States should take the following steps to encourage efficiency in water development and use:

(a) Regulate flood plain use as a means of reducing flood damages whenever such regulation provides greater net benefits to the national economy than would be provided through other methods of preventing flood losses. Additional steps should be taken to delineate flood hazard areas so that the public will be aware of the risks involved in occupying flood plains.

(b) Study the emerging water problems of the areas in which water shortage will be most acute by 1980, with a view to finding ways that these water shortages can be dealt with in such manner as to minimize adverse effects on the economy of the area.

(c) Study the future needs for major storage reservoirs for river regulation for all purposes, and report to the Congress with specific recommendations as to steps that should be taken to preserve any necessary sites so that they will be available for use when needed at minimum cost.

(d) Provide for public hearings to be held in the vicinity of federally sponsored water resources facilities whenever such facilities are proposed for development or whenever any major change in works or policies is to be made. Prior to the hearings, the proposed chance or development should be made public, and comments should be solicited from State and local agencies and from organizations and individuals affected.

Quite apart from their own internal legal, organizational, funding and staffing problems, which are often severe, the States and local agencies face formidable obstacles in attempting to formulate and implement their own water resource programs. Because of the dominant position the Federal interests and programs now have on many stream systems where Federal projects have been built, are authorized or are under consideration, these other programs must be completely integrated and coordinated with the Federal programs. Under present circumstances it is often difficult to achieve the degree of integration and coordination necessary for optimum management of the resource and full participation by the States and local agencies. Not infrequently, the States and local agencies find themselves operating in a vacuum of unknowns, uncertainty and even conflicts among the Federal agencies themselves.

CALIFORNIA'S EXPERIENCE IN FEDERAL-STATE RELATIONSHIPS

A few examples from California's experience may be instructive. The State of California itself is now constructing the world's largest water project, the State water resources development system, sometimes called the Feather River project or the State water project. This is being financed by revenues accruing to the State from tideland oil development, and by a $1.75 billion general obligation bond issue approved by the voters on November 8, 1960.

California also has extensive water resource development programs undertaken by local agencies and private entities.

In excess of 75 percent of the natural runoff in California originates on federally withdrawn lands. Most of the larger dam and reservoir sites involve such withdrawn lands. Furthermore, Federal projects have already been built or are authorized on many of the stream systems on which the State and the local agencies are building or propose to build works. So the Federal interest is extensive.

California is fortunate in many ways, waterwise—its people, most of its State legislators, and several of its congressional delegation are extremely water conscious, it has a reasonably adequate body of water law, and it has strong and well-financed local public agencies. The State government has a good organizational structure with respect to all aspects of water resource development, control and utilization, with adequate staffs of competent professional and technical people, for which, with few exceptions, the legislature has always provided sufficient funds.

The State has a long history, dating back to 1874, of active interest and participation in the development of its water resources, first in basic data collection, investigations and planning, and now in the actual construction and operation of projects.

The State likewise has a long history of active and continuing cooperation and coordination with Federal agencies and makes large financial contributions to the several Federal programs of water development. For example, the State underwrote the repayment of the costs allocated to water conservation for the Black Butte project on Stony Creek in northern California and the New Hogan project on the Calaveras River near Stockton in central California. These projects are being built by the Corps of Engineers and will be operated by the Bureau of Reclamation.

But, in the matter of Federal-State relationships, perhaps California is most fortunate in that in 1927, the legislature, foreseeing the need for comprehensive, integrated development of its water resources and for large interbasin transfers of water, authorized [4] the State itself to set aside the unappropriated water necessary for general and coordinated plans for development. This has been accomplished by the State filing applications for the appropriation of such water, which applications are exempt from diligence until assigned for the actual construction of projects that are in furtherance of or not in conflict with the general and coordinated plan of development for which the applications were originally filed.

Over the years, a number of these State filings have been made until today at least 95 percent of the remaining unappropriated water of the State is covered by them. Several have been assigned, or releases from priority granted, for the construction of projects by the Federal agencies, by the State, by local public agencies, and by private entities. In the assignment, or in granting releases from priority, the California Water Commission, which has custody of the unassigned applications, must include conditions to reserve sufficient water for the future development of the counties in which the water originates,[5] and may insert other conditions determined to be necessary to protect the public interest and to insure proper development of the water resources and reservoir sites concerned.

The Bureau of Reclamation is the major Federal agency in California developing water for consumptive as well as other purposes. The Bureau which, by law,[6] must acquire its water rights in conformity with State water laws and procedures, has requested and received assignment of the State filings necessary for its projects which it has then processed through the State water rights board. In so doing it has accepted and abided by the conditions imposed in the assignment.

Thus, through the mechanism of the State filings, the State has been able to exercise a measure of control over the destiny of its water resources which otherwise would not have been possible. Other Western States may not be so fortunate.

However, the Bureau of Reclamation has refused to acknowledge that the State, acting through the State water rights board, has any authority to control the operation of its projects.

Responsible to legislative directive, the State developed the California water plan, a long-range master plan to guide the future development, conservation, control, protection, distribution and utilization of all the State's water resources for all beneficial purposes throughout the State by all agencies. The California water plan was approved by the legislature in 1959 and has been tacitly accepted by most, if not all, the Federal agencies involved. It has proven to be a most useful tool in achieving coordination of effort among all agencies, Federal, State, and local.

Within this framework then, what else has been necessary to harmonize the activities of the State and its local agencies with those of the Federal agencies?

The Federal central valley project and the State water project will each divert from the Sacramento-San Joaquin Delta for transfer to central and southern California. Each has or will have major storage reservoirs on the streams tributary to the delta from which water will be released to flow into the delta for rediversion there. In addition, unregulated runoff flowing into the delta will be diverted for storage and use under each project.

The Bureau of Reclamation and the State department of water resources have entered into an agreement [7] which puts their rights to the surplus waters at the delta on a parity as between the two agencies but not, of course, with respect to third parties. The agreement calls for sharing any shortages that may develop in the delta supply in the future, in accordance with a predetermined formula.

In furtherance of the terms of the agreement, the two agencies are now making additional studies for the coordinated and integrated operation of the two projects.

There are unfortunately, indications that some of the Federal interests involved may be having second thoughts about this Federal-State agreement. Should it be abrogated by the United States, the State water project might be in serious difficulties.

[7] Agreement between the United States of America and the Department of Water Resources of the State of California for the coordinated operation of the Federal central valley project and the State Feather River and delta diversion projects, May 16, 1960, contract No. 14–06–200–8363.

The Congress has authorized a Federal financial contribution to the State's Oroville Dam and Reservoir, now under construction, equal to the portion of the cost allocated to flood control. Considerable controversy developed during congressional hearings on the authorization bill as to whether the Federal or State interest rates should be used in computing the allocated cost—use of the lower Federal rate gave an allocation some $14 million less. A compromise was reached.

The San Luis unit, on the west side of the San Joaquin Valley, is a joint Federal-State undertaking; it comprises a large dam and reservoir for offstream storage of the surplus waters pumped from the Sacramento-San Joaquin Delta, certain pumping-generating plants, and a large canal to transport the water southerly from the reservoirs for use.

Storage at the San Luis site and a canal running southerly therefrom are needed both for the Federal central valley project and for the State water project. The Bureau of Reclamation and the State agreed upon the principles for the joint undertaking which were incorporated in the authorizing act.[8] Heated controversy developed in the Congress as to whether the acreage limitation provisions of Federal reclamation law must be applied to the service of State water within the State's service area. The issue was finally resolved in favor of the integrity of State law as governing the service of water by the State. Repercussions are still being heard from time to time.

The San Luis unit is being constructed by the Bureau of Reclamation with the State paying its share of the costs as construction proceeds under agreement[9] between the Bureau and the State. The State will operate it upon completion under further agreement with the Bureau, to serve the purposes of both projects.

Several problems of interrelationship between the Federal central valley project and the State water project remain to be resolved, however. The respective responsibilities for salinity control in the Sacramento-San Joaquin Delta, or the provision of substitute water supplies, and with respect to the maintenance and enhancement of the fish and wildlife resources of the delta, must be worked out. The relative extent of Federal and State service of water for agricultural purposes in certain areas in the west side of the San Joaquin Valley, is under discussion at the present time; clarifying legislation may be required.

There have been some notable examples of Federal-local cooperation in California, too. The Congress has made or has authorized financial contributions to certain local projects to cover the costs allocated to flood control—the Cherry Valley project of the city and county of San Francisco in the Tuolumne River and the Comanche project of the East Bay Municipal Utility District in the Mokelumne River, for example.

On the American River, the Bureau of Reclamation has built Folsom Reservoir at the edge of the foothills and is seeking congressional authorization for Auburn Dam and Reservoir immediately upstream. In the upper reaches of the American River system, the Sacramento Municipal Utility District and Placer County Water Agency are building projects for power generation and for municipal and irrigation water supplies. Both local agencies have entered into agreements with the Bureau covering their respective water rights and the operation of the projects. The water rights agreements were executed prior to issuance of permits by the State water rights board.

Not all potential Federal-local conflicts in water resource development in California have been settled so amicably. The Turlock and Modesto Irrigation Districts have been unable to reach agreement with the U.S. Fish and Wildlife Service, as well as certain local fishery interests with respect to the fish releases to be made from the proposed New Don Pedro project on the Tuolumne River, a project in which the city and county of San Francisco also has an interest for municipal water supply. The case is now pending before the Federal Power Commission.

But perhaps the most serious example of complete lack of Federal-State-local cooperation involves the Santa Margarita River in San Diego County. Here, in one of the most severely water short areas of the State, urgently needed conservation of the few remaining undeveloped water resources has been frustrated since 1949 by litigation instituted by the United States. Efforts to reach a compromise have been blocked. The net result has been a continuing waste of water to the ocean, to the detriment of everyone including the plaintiff, the United States.

It is notable that the successful examples of Federal-State and Federal-local cooperation in California have been characterized by a case-by-case approach and by long negotiations, compromise on both sides, and, finally, by formally executed agreements.

PROBLEM AREAS IN FEDERAL-STATE RELATIONSHIPS AT THE FEDERAL LEVEL

Aside from the current legal uncertainties concerning the ownership and control of the West's water resources, perhaps the greatest bar to more effective water resource management and to greater participation by the States and local agencies, is the fact that the Congress has never adopted a coherent national water policy—nor is it likely to do so. Rather, Congress has adopted and implemented a number of distinct development programs—the reclamation program of the Department of the Interior, the flood control program of the Corps of Engineers, and the small watershed protection and flood prevention program of the Department of Agriculture, for example—each functioning under somewhat different, and often conflicting policies. Furthermore, not infrequently Congress modifies the basic policy in the authorization of a specific project; for example, the acreage limitation provisions of reclamation law were modified for the Washoe project in Nevada and for the Santa Maria project in California.

In this regard, Theodore M. Schad,[10] formerly executive director for the Senate Select Committee on National Water Resources, has written: [11]

"In the evolution of national policies affecting water resources planning, many ideas that are of current significance have been perennial subjects of consideration by the Congress since the early years of the 19th century. In reviewing the history of water resources development in the United States, one is impressed by the perspicacity of such leaders as Albert Gallatin, Alexander Hamilton, John Wesley Powell, Senator Francis G. Newlands, the leaders of the conservation movement in the Theodore Roosevelt administration after the turn of the 20th century, and others. One is also struck by the fact that the same ideas for improving national water resource planning have been proposed repeatedly during the past 50 years, only to be turned down again and again because of the unwillingness of interested groups to compromise. The particular issue that seems to recur most frequently is the question of the extent of Federal participation in water resource development.

"During the first half of the 19th century the question, 'Do we need water resources planning on a national level?' might have been appropriately raised and debated. Many of our leaders then had enough vision to foresee that the needs for water and water-related activities would increase, and that the number of problems that transcend State and river basin boundaries would increase at an ever-increasing rate as the United States develops; therefore, the question was answered in the affirmative, through national policy, many years ago. But the means and methods through which national planning may be efficiently and effectively conducted is yet to be perfected.

"We must recognize that there may never be a more explicit statement of national policy than has already been expressed. It seems probable that the Congress of the United States is going to devise such water resources policy as it deems necessary. As in the past, it will be guided considerably by the recommendations and advice of the executive branch of the Government. Leadership will change from the Congress to the executive branch as with the tenure of members and officials, with dominant personalities exercising a long-lasting influence. This appears inevitable with the form of government established by the Constitution in which national powers are divided among the executive, the legislative, and the judicial branches of the Federal Government. This form of government was adopted for the basic reason that the people of the Original Thirteen States feared that concentration of power in a strong Central Government could permit their freedom to be surrendered. The constitutional division of responsibility is undoubtedly one of the primary factors that has prevented the establishment of a consistent national policy for water resource planning and development. It has provided a weakness that has permitted pressure groups, in many instances, to prevent what might have been desirable changes in water resources policies. Yet, this weakness has also tended to prevent the adoption of rigid policies that could have been ill-fitted to some of the diverse physical conditions that may be found throughout the United States.

"Conflicts between the Federal Government and the States appear to be inevitable because of the ill-defined and changing line of demarcation that has emerged between the responsibilities of the State and Federal Governments.

"Little has been said herein concerning the differences in policy caused by the differences in the basic legislation under which the major Federal water resource planning agencies operate. These differences will undoubtedly continue as long as the several agencies programs come under the jurisdiction of different committees of Congress; however, a trend has been begun that may lead gradually to consistency. This trend is toward enactments such as the Water Supply Act of 1958,[12] the Fish and Wildlife Coordination Act,[13] and the Federal Water

Pollution Control Act Amendments of 1961, which establish identical policies under which the Bureau of Reclamation and Corps of Engineers can cooperate in certain limited fields of their activity."

Nor has Congress acted to definitively delineate the nature and extent of the Federal responsibility in water resource development. With the possible exception of navigation, Congress has never accepted full responsibility for any particular aspect of water development; rather, it has acted on a project-by-project basis. The Senate Select Committee on National Water Resources recognized the problem but made no recommendations with respect thereto.

The new "Policies, Standards, and Procedures in the Formulation, Evaluation, and Review of Plans for Use and Development of Water and Related Land Resources," prepared under the direction of the President's Water Resources Council and approved by President Kennedy on May 15, 1962,[14] fails to define the Federal interests, objectives and responsibilities in meaningful terms. The result is that the Federal agency preparing a report on a particular project is, within rather broad limits, free to define the national interest and objective as it may see fit. Not infrequently, in cases where several Federal agencies are involved, their views and objectives are conflicting among themselves.

The difficulties in achieving harmonious relationships between Federal programs on the one hand and State and local programs on the other, are increased by:

1. The fact that Federal projects are funded by annual appropriations from the general funds of the United States, whereas States and local agencies generally must rely on the sale of bonds, a far more difficult and costly method of financing.

2. Differences in interest rates used in project formulation and for repayment.

3. The economic bias toward certain uses of water, such as agriculture, quality control, navigation, fish and wildlife, and recreation, caused by the pricing, repayment, and nonreimbursability policies under which the Federal programs operate. The States, and particularly local agencies, are not in a position to be so generous with their funds as is the U.S. Government. This bias may result in inefficiency in use and overallocation of the resource to these purposes. The matter of proper resource allocation will be of increasing concern, particularly to the States and local agencies, as the cost of new water supplies progressively grows greater with time.

4. The project-by-project approach in both planning and execution of most Federal programs, particularly on intrastate streams.

5. Competition and conflicts among the Federal agencies and programs.

6. The inadequacy of the present requirements for cooperation and coordination with States and local agencies, imposed by law and by directive upon the Federal agencies.

These problem areas, combined with the current uncertainty as to ownership and control of the basic resource, have resulted in a vacuum in which it is increasingly difficult for the States and local agencies to operate. The stimulus and initiative for corrective action must come through the Congress.

This is not to say that the States do not have their own internal problems, similar in many respects to those cited at the Federal level, which must be resolved before fully effective action can be taken. But until Congress acts affirmatively and positively with respect to the problem of Federal-State relationships, the States and local agencies will continue to find themselves forced to operate on case-by-case basis irrespective of their own best efforts. Because of the increasing scarcity of undeveloped water resources in relation to the ever-growing and expanding demands therefor, and the increasing costs of development, we can no longer afford the luxury of the present uncoordinated and haphazard approach.

SOME PROPOSALS FOR SOLUTION

David R. Warner, Chief, General Litigation Section, Lands Division, U.S. Department of Justice, has stated:[15]

"The problem is to ascertain the areas within which there is room for accommodation and then, to the extent such is not already provided for under existing law, to agree upon legislation within those areas which will work to the mutual advantage of the Nation at large and local interests in water resource development.

Mr. Clark (Assistant Attorney General) has suggested that the national interest in water resource conservation, development and use would be better served were Congress first to provide for a special study and delineation of all Federal claims of rights to the use of water, including claims based on reservations of the public lands, in areas where there is need for this knowledge. The results of such study and delineation would give the States and local interests information which would enable local determinations of the waters remaining available for local development. Such provision, if coupled with authorization for the appropriation of waters on reserved lands in excess of the anticipated needs for accomplishment of the purposes of the reservations, would very materially further those objectives of the various proposals for legislation which can be accommodated without hindrance to the national interest.

"To provide against waste of this precious resource pending the time when the reserved waters may be applied to the purposes for which reservations have been made, authorization of temporary use might be provided for. While this suggestion might be deemed impractical because of the unattractiveness of making substantial investments on the basis of temporary permits, this difficulty could be overcome if the United States were to guarantee return of the investments should the water supply of the projects for which permits are granted be impaired by exercise of the reserved rights within specified times after issuance of the permits."

While at first glance, the specific delineation and qualification of the Federal claims to water might appear to be a feasible solution, the proposal has extremely serious drawbacks, not the least of these would be the time required. Because of multiplicity of the Federal interests involved, such a study would take several years to complete and additional time for congressional consideration. During that period, little or no additional water development, especially by States and local interests, would or could be undertaken. The economic impact would be severe.

It must be recognized that in all of the Western States, as in case in California, most of the developable water resources originate on or flow across federally reserved lands, or occur in streams which are legally navigable. To allow the non-Federal interests to appropriate and develop only the excess remaining after full reservation for the anticipated Federal needs, would effectively preclude any further water development by the States and local interests for economic reasons—such excess water would be extremely costly and uneconomic to develop by itself.

The concept of allowing States and local interests to proceed under temporary permits with the United States guaranteeing return of the investments if the water involved were subsequently taken for a Federal purpose within a specified time, is hardly attractive. A State or local agency would find it difficult to justify proceeding with water development and to allow an economy to be built or expanded upon the water supply made available thereby under such conditions, unless at the same time, the United States guaranteed to continue to furnish a water supply for that economy at no greater cost. While the integrity of investment is highly important, the assurance of a continuing, dependable water supply is even more important to the people concerned.

It seems obvious that a different approach to the difficult problem of harmonizing Federal-State-local relationships and to provide for coordinated, cooperative action, is badly needed.

THE WATER RESOURCES PLANNING ACT OF 1963[16]

In furtherance of the recommendations of the Select Committee on National Water Resources, the Water Resources Planning Act of 1961 was introduced in the 1st session of the 87th Congress as S. 2246 with the backing of President Kennedy. Extensive hearings were held at which vigorous protests were voiced, particularly by some of the States, as to the inadequacy of State representation and participation. No action was taken by the 87th Congress but extensive amendments to meet the States' objections were prepared by the staff of the Senate Committee on Interior and Insular Affairs for consideration by the 88th Congress.[17] A clean bill has been introduced in the House of Reprsentatives as H.R. 3620.

Pertinent extracts from the Water Resources Planning Act of 1963 follow:

"STATEMENT OF POLICY

"SEC. 2. In order to meet the rapidly expanding demands for water throughout the Nation, it is hereby declared to be the policy of the Congress that the conservation, development, and utilization of the water and related land resources of the United States shall be planned on a comprehensive and coordinated basis with the cooperation of all affected Federal agencies, States, local governments, and others concerned.

"EFFECT ON EXISTING LAWS

"SEC. 3. Nothing in this Act shall be construed—

"(a) to expand or diminish either Federal or State jurisdiction, responsibility, or rights in the field of water resources planning, development, or control; nor to displace, supersede, or limit the jurisdiction or responsibility or any legally established joint or common agency of two or more States, or of two or more States and the Federal Government; nor to limit the authority of Congress to authorize and fund projects; nor to limit the use of other mechanisms, if preferred by the participating governmental units, in the water resources field;

"(b) as superseding, modifying, or repealing existing laws applicable to the various Federal agencies which are authorized to develop or participate in the development of water and related land resources, or to exercise licensing or regulatory functions in relation thereto; nor to affect the jurisdiction, powers, or prerogatives of the International Joint Commission, United States and Canada, or of the International Boundary and Water Commission, United States and Mexico.

[16] H.R. 3620, 88th Cong., 1st sess.

[17] Senate Committee on Interior and Insular Affairs, confidential committee print, tentative draft of a revision of S. 2246, 87th Cong., 1st sess., Jan. 11, 1963.

"TITLE II—RIVER BASIN COMMISSIONS

"Creation of commissions

"SEC. 201. (a) The President is authorized to declare the establishment of a river basin water resources commission upon request therefor by the (proposed Water Resources) Council, or request addressed to the Council by a State within which all or part of the basin or basins concerned are located if the request (1) defines the region, river basin, or group of related river basins for which a commission is requested.

"(b) Each such commission for a region, river basin, or group of river basins shall—

"(1) serve as the principal agency for the coordination of Federal, State, interstate, and local plans for the development of water and related land resources in its region, river basin, or group of river basins;

"(2) prepare a comprehensive coordinated, joint plan for Federal, State, interstate, and local development of water and related land resources;

"(3) recommend long-range schedules of priorities for the collection and analysis of basic data and for investigation, planning, and construction of projects; and

"(4) foster and undertake such studies of water and related land resources problems in its region, river basin, or group of river basins as are necessary in the preparation of the plan described in clause (2) of this subsection.

"Membership of commissions

"SEC. 202. Each river basin commission shall be composed of members appointed as follows:

"(a) A chairman appointed by the President who shall also serve as chairman and coordinating officer of the Federal members of the commission and who shall represent the Federal Government in Federal-State relations on the Commission;

"(b) One member from each Federal department or independent agency determined by the President to have a substantial interest in the work to be undertaken by the Commission, such member to serve as the representative of such department or independent agency;

"(c) One member from each State which lies wholly or partially within the region, river basin, or group of river basins for which the Commission is established, and the appointment of each such member shall be made in accordance with the laws of the State which he represents. In the absence of governing provisions of State law, such State members shall be appointed and serve at the pleasure of the Governor.

"(d) One member appointed by any interstate agency created by an interstate compact to which the consent of Congress has been given, and whose jurisdiction extends to the waters of the region, river basin, or group of river basins for which the river basin commission is created.

"(e) When deemed appropriate by the President, one member, who shall be appointed by the President, from the United States section of any international commission created by a treaty to which the consent of the Senate has been given, and whose jurisdiction extends to the waters of the region, river basin, or group of river basins for which the river basin commission is established.

"Organization of commissions

* * * * *

"SEC. 203. (b) State members of each commission shall annually elect the vice chairman, who shall serve also as chairman and coordinating officer of the State members of the commission.

* * * * *

(d) Voting on the commission shall be only by the chairman, acting in behalf of the Federal members, and by the vice chairman, upon instruction from the State members.

Duties of the commission

"SEC. 204. (a) Each river basin commission shall—

* * * * *

"(2) submit to the Council and the Governor of each participating State a report on its work at least once each year. Such report shall be transmitted through the President to the Congress. After such transmission, copies of any such report shall be sent to the heads of such Federal, State, interstate, and international agencies as the President or the Governors of the participating States may direct;

"(3) submit to the Council for transmission to the President and by him to the Congress, and the Governors and the legislatures of the participating States a comprehensive, coordinated, joint plan, and any major necessary revisions thereof, for water and related land resources development in the region, river basin, or group of river basins for which such commission was established. Before the commission submits such a plan or major revision to the Council, it shall transmit the proposed plan or revision to the head of each Federal department or agency, the Governor of each State, and each of the interstate agency, from which a member of the commission has been appointed, and to the head of the United States section of any international commission if the plan or revision deals with a boundary water or a river crossing a boundary, or any tributary flowing into such boundary water or river, over which the international commission has jurisdiction or for which it has responsibility. Each such department and agency head, Governor, interstate agency, and the United States section of an international commission shall have ninety days from the date of the receipt of the proposed plan or revision to report its views, comments, and recommendations to the commission. The commission may modify the plan or revision after considering the reports so submitted. The views, comments, and recommendations submitted by each Federal department or agency head, Governor, interstate agency, and United States section of an international commission shall be transmitted to the Council with the plan or revision.

"(4) submit to the Council at the time of submitting such plan, any recommendations it may have for continuing the functions of the commission and for implementing the plan."

It is suggested that the Water Resources Planning Act of 1963, with certain amendments which are discussed below, presents a workable means of resolving the present somewhat chaotic situation.

To be more fully effective in resolving current problems of Federal-State relationships, the Water Resources Planning Act of 1963, as set forth in H.R. 3620, should be amended to provide:

1. For greater representation by the States on river basin commissions concerned only with intrastate river basins or regions.

2. That a river basin commission once established, will be permanent unless its discontinuance is requested by all the States concerned or specifically directed by congressional action.

3. That in formulating its comprehensive, coordinated, joint plan for Federal, State, interstate and local development of water and related land resources, the river basin commission shall recognize and take into account all rights to the use of water which are valid under the laws of the State[s] involved. If such rights must be taken for any Federal purpose envisioned under the plan, the United States should be required to pay proper compensation therefor at the time of taking and to provide a replacement supply at no greater cost for any deprivation in water supply caused by such taking.

4. That the river basin commission shall recognize all existing Federal-State or Federal-local agreements.

5. That the joint plan as submitted to the Congress and to the State[s] shall clearly set forth the commission's recommendations concerning respective responsibilities as to financing, construction, and operation of the Federal, State, and local interests in controlling and developing the water resources concerned including water for quality control, enhancement of fish and wildlife resources, and for recreational purposes, and in providing the necessary water supplies for the land resources involved.

6. That the river basin commission shall recommend to the Congress and the State[s] the extent of cost sharing among Federal, State, and local interests for the specific units of the plan in which there is a common interest.

The Water Resources Planning Act of 1963 would also be helpful in eliminating some of the current problems among the Federal agencies themselves.

A precedent for joint Federal-State action in all aspects of water development is to be found in the Delaware River Basin Commission formed by interstate compact,[18] with very broad powers with respect to the control, development, protection and utilization of the waters of the Delaware River. The United States is a fully participating member of the Commission.

Careful consideration should be given to the appointment of such a river basin commission as envisioned in the Water Resources Planning Act of 1963 before proceeding with the lower Colorado River project[19] as proposed by then Secretary of the Interior. The areal extent of the proposal, extending as it does to the north coastal area in northern California, and the great diversity and complexity of the Federal-State-local interests involved, make it extremely unlikely that the Department of the Interior, acting alone, would be able to prepare an acceptable plan.

CONCLUSION

The present problems of Federal-State relationships encompass not only the current legal uncertainties as to ownership and control of the West's water resources, but also matters of policy, financing, cost sharing, respective extent of responsibility, interagency relationships and others. The Water Resources Planning Act of 1963, properly amended, appears to offer a mechanism for more harmonious Federal-State-local relationships and for achieving more effective development and utilization of the Nation's water resources. It is respectfully suggested the National District Attorneys Association, in addition to its efforts to find a proper solution to the legal issues concerned, also direct its attention to these other problems and their solution.

NEW U.S. AIRCRAFT DESIGNS TO MEET FOREIGN COMPETITION

Mr. MONRONEY. Mr. President, one of the greatest adventures in the history of mankind has been the development of the airplane. Safe, dependable air transportation is now taken for granted, though it was completely unheard of and undreamed of a few decades ago.

---

[18] Public Law 87–328, approved Sept. 27, 1961, 75 Stat. 688.

[19] "Future Water Resources Development in the Lower Colorado River Basin," committee print No. 1, House Committee on Interior and Insular Affairs, 88th Cong., 1st sess., Jan. 21, 1963.

Much of the remarkable growth of the worldwide aviation industry during the last 25 years has been accurately attributed to the ingenuity which, under our American free-enterprise system, went into the design of one particular U.S. transport plane. I refer, of course, to the old and reliable workhorse of the airways, the DC-3, a product of the Douglas Aircraft Co.

This week Donald W. Douglas, chairman of the board of Douglas Aircraft, announced that his firm will proceed immediately to produce a new twin-jet commercial airliner to be known as the DC-9. Perhaps never again will the aviation world have the benefit of a breakthrough comparable to the DC-3, but the decision of the Douglas Co. to undertake production of a so-called "compact jet" transport has rightfully drawn applause and expressions of good wishes to the company from throughout the world. The U.S. aircraft industry has thrived on competition. Douglas, in announcing the DC-9 project, made it clear that the company expects this aircraft to meet a need in the highly competitive market for versatile transport airplanes.

It has been growing more evident every day that our airlines need a jet transport somewhat smaller than the existing jet airliners such as the marvelous Boeing 707's, the DC-8's and the Convairs. These larger and more expensive planes have helped improve the financial condition of our air carriers, but they require large airports and a large volume of passengers to show a profit. Of the 727 airports in the United States with scheduled airline service, only 61 now are serviced by pure jets. Washington National Airport, of course, is the outstanding example of an airport not suited for existing jet airliners.

This week, during hearings of the Aviation Subcommittee on the Federal Airport Act, witness after witness has testified on various problems concerning the continuing development of our air transport industry. The committee has been reminded by highly qualified witnesses that emphasis must be given to the design and development of air transports compatible with the existing and planned airports in this country. A fast, economical jet airliner adapted to a larger proportion of the existing airport system is a well-defined and much sought after objective. The Boeing 727, now undergoing flight tests, is a three-engine design which is expected to require runways of less than 6,000 feet in length. It will carry a unit cost of about $4,200,000, according to the Federal Aviation Agency, and will have a maximum gross takeoff weight of 142,000 pounds. The DC-9, still in the design stage, also will need less than 6,000 feet of runway and will cost about $3,100,000 per plane, according to the FAA. It will have a maximum gross takeoff weight of about 77,000 pounds. The DC-9 passenger capacity will therefore be smaller.

Mr. Douglas has cited the requirement for a somewhat smaller and more economical jet aircraft to operate at ranges of from 100 to 1,100 miles. He believes that hundreds of obsolete and obsolescent aircraft eventually will be replaced by aircraft of the DC-9 type. His statements concerning this decision reflect well upon the citizenship and statesmanship of the entire aircraft building industry.

Mr. Douglas said:

> While our decision to build the DC-9 had to be, and is, based on our best business calculations, we are also conscious of the benefit to our national interests of this project. American-built aircraft have been preeminent in world air commerce for almost 30 years. We shall be pleased to help, once again, in maintaining that position of leadership.

Several aircraft companies in Europe already have taken aim on this target. It is good to have another U.S. company join these highly qualified foreign firms in competing to fill the need. The defense of the free world depends to a large extent upon the continued growth and improved health of private industrial organizations capable of producing such highly complex machines.

The economy of the United States stands to benefit also. I was particularly interested to note that the Douglas Co. disclosed a new cost-sharing arrangement with major subcontractors in connection with the DC-9. It was noted that these subcontracts will be divided among companies located in 27 States and Canada. However, the main production of the plane will be at Long Beach, Calif., providing employment for 6,000 there.

Although there may never be another giant stride forward like the DC-3, many improvements in the art of flight are yet to come. Millions upon millions of Americans have not yet flown. We have hardly touched the tremendous gains in our economy and our standard of living which air transport, both for cargo and passengers, can bring.

Every major innovation in aircraft design improves our opportunity to realize these potential benefits. The decision to build this new aircraft, the DC-9, follows the pattern of progress which not only Douglas, but many other U.S. aircraft companies have pursued. It is a most timely and most important decision.

THE BIRTH OF WEST VIRGINIA

Mr. **BYRD** of West Virginia. Mr. President, by proclamation of President Lincoln, on April 20, 1863, West Virginia was to be admitted to the Union as the 35th State on June 20, 1863. The State magazine section of the Charleston (W. Va.) Sunday Gazette-Mail has been running a series of articles by John G. Morgan detailing the events and incidents which led to West Virginia's severance from Virginia and the declaration of its independence as a separate State.

Almost 2 years earlier, on July 9, 1861, the citizens of western Virginia had elected two Senators to represent them in the U.S. Senate. Since the State of Virginia had seceded from the Union, but formal steps had not been taken leading to the severance of the region west of the mountains, there was doubt as to the legality of the election. The U.S. Senate, however, accepted the new Senators by a vote of 35 to 5.

Sentiment in western Virginia was growing rapidly for complete separation from the mother State and the emergence of a new State.

I ask unanimous consent to have printed in the RECORD another of Mr. Morgan's articles highlighting the drama of these portentous months as an emerging State sought admission to the Union, pledging complete loyalty to the principles of our Constitution.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LOYAL LEGISLATURE

(By John G. Morgan)

The first legislative assembly of the Reorganized Government of Virginia elected two outstanding Union men to the U.S. Senate on July 9, 1861.

They were John S. Carlile, 44, of Clarksburg, and Waitman T. Willey, 50, of Morgantown. Both had won distinction as delegates to the Virginia State Convention earlier in the year.

Carlile, a strong radical and former Member of Congress was elected 38 to 0. Willey, a conservative, received 22 votes to 10 for Peter G. Van Winkle of Parkersburg and six for Daniel Lamb of Wheeling.

The aggressive Carlile was at the fountainhead of the new State movement. At the time of the election, he was at the height of his popularity.

In an editorial endorsing him for the Senate post, the Wheeling Intelligencer said on the day of his election:

"Where is the man who has done so much in the movement, now so far along on its successful accomplishment, as Mr. Carlile? He has led the van * * * Mr. Carlile has been a leader, a bold and persevering one."

A contemporary writer, who saw Carlile in action at the Virginia convention, wrote this capsule description:

"A man of fine talents—a ready, keen, solid and impressive man * * * somewhat singular looking, being very sallow and angular in his face; flat on his head, compact and well-knit in his framework * * * a rich, deep, voice, fine power of expression, imperturbable coolness and a great deal of tact."

Willey, a slaveowner and lover of old Virginia, was accused of being lukewarm in his unionism. On his way home from the Virginia convention, while laboring under some misinformation, he accused President Lincoln of precipitating the Civil War.

But at the time of his election, Willey's popularity star obviously was on the rise again. Here's a contemporary sketch of the Senator:

"A very tall, elegant, dignified gentleman * * * long, bony face, large brilliant eyes, large nose, heavy eyebrows, large mouth, long chin, black hair, dark complexion, exceedingly long arms, skeleton-like hands, spectacles, no whiskers, fine clothes, looks like a great man, as he is, and his very presence casts a feeling of awe over you.

"Voice peculiar, and his style of speaking remarkable. Raises his voice up to a certain pitch, which is impossible to describe, more than to say it is a pleading, sorrowful, trembling voice, its effect is powerful, thrilling the hearts of his hearers as if by magnetism, and almost irresistibly carrying away the feelings of an audience, if not their judgments."

The new Senators were elected fill the seats vacated by Robert M. T. Hunter and James M. Mason after old Virginia seceded from the Union. Carlile was elected to serve until 1865 and Willey until 1863.

Carlile was in Washington at the time of the election, and Willey soon joined him there. Their credentials were presented by a loyal Tennessee Senator, Andrew Johnson.

The eligibility of the Senators from western Virginia was challenged, and a brisk debate followed.

One Senator claimed that seating Carlile and Willey would mean recognition of a minority of the Virginia people, who would have the power to overthrow the State government. That argument was countered with statements that seating the two Senators would mean recognition of the loyal citizens of the State—those who believed in the Union and supported the Constitution.

By a vote of 35 to 5, the Senate decided to accept the two new members. The action gave the people of western Virginia two strong voices in a very strategic place. It was good news for the backers of the new State movement.

The State legislative assembly, or loyal legislature, elected three additional officers on July 9. They were Lucian A. Hagans of Preston County, secretary of state; Samuel Crane of Randolph County, auditor; and Campbell Tarr of Brooke County, treasurer.

Election of the Senators and the three other officers was the main business completed by the assembly in a 26-day session.

The session opened in Wheeling at noon July 1, with the house convening in the U.S. customhouse and the senate in the Linsly Institute. Elections were conducted by joint action of the two houses.

In an organization meeting, Daniel Frost of Jackson County was elected Speaker of the House, defeating Fontain Smith of Marion County by a vote of 24–10. Daniel L. Polsley of Mason County, the loyal lieutenant governor, presided at sessions of the senate.

A total of 11 senators and 49 members of the house, representing 48 counties, were reported present at the session. However, part of them were absent or didn't participate in the voting on the U.S. Senators and State officials.

From the new loyal Governor, Francis H. Pierpont, each house received a written message, which said:

"We are passing through a period of gloom and darkness in our country's history, but we must not despair. There is a just God who 'rides upon the whirlwind and directs the storm.'"

Another part of the message said:

"There is only one thing now for each American citizen to decide in this controversy. Do you desire to stand by and live under the Constitution which has contributed so long and so greatly to the happiness and prosperity and transmitted its blessings to our posterity?

"Or do you desire the Union broken up and an oligarchy or military despotism established in its stead? The leaders in the South are striving for the latter. The Government of the United States is exerting its whole force to maintain the integrity of the former. There can be no neutral ground."

Papers showing that Pierpont had communicated with Federal authorities were transmitted to the two houses along with his message.

Copies of correspondence showed that on June 21, 1861, 1 day after he was formally elected Governor, Pierpont addressed a letter to President Lincoln.

The letter described conditions in Virginia and asked for a military force to aid in suppressing the rebellion and to protect the good people of the Commonwealth from domestic violence.

A reply came from U.S. Secretary of War Simon Cameron, who was directed by Lincoln to say: "A large additional force will soon be sent to your relief."

Cameron's letter added: "Instructions have now been given to the agents of the Federal Government to proceed hereafter under your direction, and the company and field officers will be commissioned by you."

In keeping with popular demand among western Virginians, a bill to create a new State was introduced in the house of delegates.

A preamble in the bill mentioned mountain barriers between eastern and western Virginia and the lack of a community of interests for the two sections.

Delegate George J. Arnold of Lewis County offered to amend the bill by inserting the name of "West Virginia."

While the measure was up for consideration, a resolution terming the statehood bill "inexpedient" was introduced.

In arguing for the bill and against the resolution, Delegate William B. Zinn of Preston County said:

"I am well aware that the whole people in my section of the country, and in all the counties surrounding the county which I represent here, are looking with anxiety every evening for the proceedings of this great and absorbing subject.

"Let the result go out that we declare it inexpedient to take the subject under consideration, and it will cast a gloom over their feelings and a discouragement that they perhaps have never experienced before."

Zinn stressed that "by moving in this matter now, we only prepare the subject and have it ready for future action. We do not know what the future may produce.

"All we ask is to prepare the whole matter and have it ready, then we can let it lay as long as we please, until the proper time for submitting it to Congress."

Supporters of the resolution and opponents of the bill contended that it still would be premature for the loyal legislature to act on a statehood measure.

They said the matter properly belonged to the Second Wheeling Convention, which was scheduled to resume its session on August 6. The resolution was rejected 16 to 14, and then the bill was defeated 17 to 10. House Speaker Frost was among those voting against the bill.

When time neared for adjournment, Delegate Charles Hooton, of Preston County, said no member wanted to go home as badly as he.

He said the rebel army was in his county, had been in his village and perhaps in his house. Neverthless, he said, he didn't want to leave until all business was finished.

Another member observed that the "world is governed too much already," and said he saw no point in continuing in session when "there is nothing to do but talk."

Delegate John C. Vance, of Harrison County declared that the longer the house remained in session the more business it had to consider.

The session adjourned on July 26. Frost's final comment was:

"Let each one of us do something for the maintenance of the supremacy of the general (Federal) Government and of our own reorganized State government, if need be shoulder the musket and march to the field of battle."

Meanwhile, the war continued. Northern troops retreated after the first Battle of Bull Run, Manassas, Va., on July 21, 1861.

In western Virginia, the July fighting was hot and heavy.

In his first skirmish of the war, Confederate Gen. Stonewall Jackson was defeated on July 2 at Falling Waters, near Martinsburg.

Union troops were victorious July 11 in the Battle of Rich Mountain, Randolph County, and 2 days later they captured Romney and won the Battle of Corrick's Ford in Tucker County. Harpers Ferry was evacuated by Confederates on July 15.

On July 17, Confederates won the close Battle of Scary in Putnam County. A week later, rebel forces under Gen. Henry A. Wise started retreating up the Kanawha Valley.

There were other skirmishes in Gilmer, Jefferson, Upshur, Barbour, and Cabell Counties.

Gen. Robert E. Lee took personal command of Confederate Forces in western Virginia on August 1, 1961.

Mr. BYRD of West Virginia. Mr. President, the State of West Virginia, which observes its centennial this year, grew out of the dissatisfaction of a determined minority of the citizens of Virginia to their State's seceding from the Union. On May 23, 1861, a majority of Virginia's citizens voted to ratify the Ordinance of Secession which had been passed in Richmond on April 17. Even before this vote of ratification, residents of the western part of the State, aware of the strong sentiment for secession in other sections, but resolute in their loyalty to the Union, sent their delegates to the First Wheeling Convention to develop preliminary plans for a course of action which would spell out in unmistakable terms their opposition to secession.

The growing protest to ratification among the citizens of western Virginia was sparked by a rising clamor for independence. On June 11, 1861, their delegates assembled for a second time in Wheeling for the Second Wheeling Convention to determine their future course.

An account of this history making period has appeared in the Charleston (W. Va.) Sunday Gazette-Mail in a series of articles by John G. Morgan.

I ask unanimous consent to have printed in the Record Mr. Morgan's article covering the incidents of the Second Wheeling Convention.

There being no objection, the article was ordered to be printed in the Record, as follows:

The Second Wheeling Convention

(By John G. Morgan)

The Second Wheeling Convention, with about 100 delegates attending from 34 counties, opened at 2 p.m. June 11, 1861, and remained in session 2 weeks.

On the second day, a 37-year-old, black-bearded Parkersburg lawyer named Arthur I. Boreman was elected permanent president.

Boreman told the delegates, assembled in Washington Hall: "If you gentlemen will go with me, we will take definite, determined, qualified action as to the course we will pursue.

"We will take such action as will result in western Virginia, if not the whole of Virginia, remaining in the Union of our fathers."

The gentlemen went with him, and action was taken. During the 2 weeks, the convention:

Adopted a declaration of rights.

Adopted ordinances to reorganize the State government and to provide means of financing it.

Elected a loyal Governor and seven other principal State officers.

Issued an address to the people.

Delegates caucused on the night of June 19 and chose Francis H. Pierpont as the loyal Governor. Named at the same time were:

Daniel L. Polsley of Mason County, Lieutenant Governor; James S. Wheat of Ohio County, attorney general; William Lazier of Monongalia, Daniel Lamb and James W. Paxton of Ohio, Peter G. van Winkle of Wood, and William A. Harrison of Harrison, members of the council of State.

All of the officers were formally elected on the floor of the convention June 20, precisely 2 years before West Virginia became a State.

Pierpont, elected unanimously, was a 47-year-old Fairmont lawyer with a reputation for rugged individualism, good speech-making and strong leadership in the movement to save Virginia to the Union.

The Wheeling Intelligencer made this comment:

"Frank Pierpont is one of those men well fitted for the stormy and revolutionary times that are upon us. He has the moral, mental and physical power of a leader.

"A truer man to the cause of the Union does not live; and he has the vigor of apprehension, that incisiveness of speech, and that indomitable will and courage that carries the people with him."

Pierpont said in a letter, dated June 20, to his wife: "The convention today unanimously conferred on me the position of Governor of Virginia. In this revolution, Divine Providence only knows what is to be the result of this step."

Technically speaking, Pierpont and the other officers were elected to fill vacancies created by the declaration of rights.

The declaration stated, in effect, that all of the State offices were vacated because the government of Virginia had decided to unite with the Confederacy.

The reorganized State government was deliberately created to do business with the Federal Government in Washington, to look after the cause of the Union and the people west of the Allegheny Mountains. Meanwhile, the old State government was expected to continue its relations with the Confederacy, which had headquarters in Montgomery, Ala., later moved to Richmond.

Thus, in June of 1861, there were two State governments for Virginia. One was the loyal (to the Union) government, with offices in Wheeling; and the original government still functioning at Richmond.

At that time, there still was no West Virginia, no official proposition to create it. But the ideas were cooking, and soon they wouldn't be denied.

In June of 1861, Pierpont himself didn't favor creation of a new State. Before he was elected Governor, he said in an address to the convention: "Two plans have been prepared for the purpose of meeting the present emergency. One is by division of the State, the other is by forming a government for the whole State * * *.

"The proper course, I maintain, for us to pursue is to institute a government for the whole State of Virginia. We are the loyal people of Virginia, entitled by law to the control of its military civil powers as soon as we can get it.

"As to dividing the State—which I have no doubt will ultimately be done, and which I will favor at the proper time—I would remark that the putting down of rebellion, the lending of a helping hand to aid the Government, the maintenance of our constitutional liberty in this land of ours from the St. Lawrence to the Rio Grande is of vastly more importance to us and to the world than the formation of a new State out of western Virginia at this time.

"But, * * * we lose by every moment we delay; even now, as is reported, ex-Governor [Henry A.] Wise is about taking command of forces to invade western Virginia. He will probably not have a great force to command, but, large or small, we will not wait for him to come here, but will meet him at the top of the Alleghenies, and at the tap of the drum, and at the point of the bayonet, will welcome him to a grave that he has merited for his treason heretofore."

Wise was recruiting Confederate troops in the Kanawha Valley at about the time Pierpont made his speech. The news of his presence irritated Federal forces, which were enjoying some major successes in northwestern Virginia.

Earlier, on June 3 at Philippi, in the first important land engagement of the Civil War, Federal troops defeated the Confederates, who retreated into Randolph County.

The victory at Philippi boosted the morale of pro-Union officials, who proceeded to hold an election on June 4. Delegates were chosen on that date to attend the Second Wheeling Convention a week later.

The convention passed resolutions to thank Federal authorities for responding to "our call for protection" and Federal Gen. George B. McClellan for rescuing northwest Virginia from the "destruction and spoliation" of rebel forces.

The declaration of rights was approved by a vote of 56 to 0. This caused Delegate John S. Carlile of Harrison County to remark: "We have 56 votes recorded in favor of our declaration, and we may remember there were just 56 signers to the Declaration of Independence."

Delegates responded with great applause, mingled with expressions of surprise and deep feeling.

However, additional members of the convention later voted their approval and added their signatures to the declaration. The final total of signatures was 83.

The vital part of the declaration stated in behalf of the people of Virginia that: "The preservation of their dearest rights and liberties and their security in person and property imperatively demand the reorganization of the government of the Commonwealth, and that all acts of said (Richmond) convention and executive, tending to separate this Commonwealth from the United States, or to levy and carry on war against them, are without authority and void; and that the offices of all who adhere to the said convention and executive, whether legislative, executive, or judicial, are vacated."

Election of Pierpont and the other State officers called for a demonstration on the evening of June 20.

Wheeling residents rang bells, beat drums and shouted. Two cannons boomed occasionally from hills east of the city.

The newly elected State officials visited nearby Camp Carlile, where they witnessed a dress parade of 600 soldiers. The uniformed men gave three cheers, and the officials replied with speeches.

On June 25, the last day of the convention, a written "address to the people" was issued by Boreman. The document appealed to the people "for countenance and support in this hour of great anxiety and trial," and added: "In every county where the free expression of your views has been permitted, your majorities in favor of the maintenance and perpetuity of the Union, have far exceeded the calculations of the most sanguine of your friends.

"Persevere then, in your most holy war against the corrupt and perjured oligarchy, who have usurped your government and would have sold you to the ambitious despots of an unholy affiliation."

In a final talk to the delegates, Boreman said: "We came here, some of us through difficulties, some at the peril of their lives, some yet trembling, fearing not the consequences of their action, but fearing lest the call for this convention should not be responded to by neighboring counties. But how agreeably have we been disappointed * * *.

"Then it is for us, gentlemen, after having inaugurated this government, to go home, not to idle away our time—not to fold our arms in inaction, but to go home with the determination to execute the government which we have reorganized; to put it in motion in every county and in every neighborhood within our power."

The convention adjourned until August 6. Governor Pierpont issued a call for the loyal legislature to convene on July 1.

Meanwhile, musket fire thickened in western Virginia. Skirmishes between the Federal and rebel forces were reported in Mineral Hampshire, and Tucker Counties and at other points.

Despite the uncomfortably, close background of Minie balls and the excitement of big conventions, there still was time for comment on the commonplace in Wheeling. One newspaper columnist wrote on June 20: "Yesterday was one of the dullest, laziest days we ever encountered. It was duller even apparently than the day before, or the day before that; people sat in their stores with their feet upon tables and high stools, reading their papers and slapping at flies, which are now beginning to be troublesome."

On July 1, a little news item called "horse visitation" appeared. It said the Army advertised that it wanted to buy 100 draft war horses to be inspected at Camp Carlile.

"Accordingly," the story said, "at an early hour on Saturday morning, horses of all ages, sizes, colors and condition, came hobbling, trotting, and whinnying over both bridges toward the quartermaster's office. Some of the horses looked as if they had been turned out to die and only resurrected for the occasion * * *."

Earlier, a reporter who visited Camp Carlile said some of the soldiers had christened their bunks with lampblack or chalk. Among the names he noted: "Pig's Misery," "Camp Hog Hole," "Devil's Dam," and "Astor House."

IMPACT OF ADMINISTRATION'S TAX PROPOSALS ON SMALL BUSINESS FIRMS

Mr. SPARKMAN. Mr. President, last Friday, the Senator from Nevada [Mr. BIBLE] and I announced that the Subcommittee on Taxes of the Select Committee on Small Business, of which Senator BIBLE is chairman, will hold hearings later this month on the administration's tax proposals as contained in the President's message to the Congress of January 24. Our purpose will be to determine the impact which these proposals might be expected to have upon the 4.5 million business firms in America that are classified as "small."

Obviously the proposals made by the President for changes in our tax laws will have a significant effect upon small business. I am happy to say that there is every indication that the net effect upon small firms will be beneficial. The reversal of the normal and surtax rates for corporations will mean a reduction of about 27 percent in the tax liabilities of corporations having taxable incomes of $25,000 or less. This is, indeed, meaningful tax relief. The reduction in rates applicable to individuals will likewise have a significant effect upon small partnerships and sole proprietorships, as will also the proposal to allow income averaging. Mr. President, I have served for a number of years as chairman of the Senate Small Business Committee. In that capacity I have come to know the burden which the Federal income tax places upon small businesses.

Secretary Dillon stated before the Ways and Means Committee the other day that small business is the keystone of our competitive economy and its potential for growth. I was delighted to see Mr. Dillon give expression to this fact. It was for the purpose of facilitating the realization of small business growth potential that the small business investment company program was created in 1958. This program has made a good start toward providing small firms with a source of external capital. However, the capital drought which plagues small business is caused in large measure by the high rates of Federal income taxation, which prevent small firms from generating internal capital with which to finance growth and expansion. For this reason, Mr. President, I was indeed pleased with the rate reduction proposed by the President.

On the other hand, I am concerned about the possible adverse effect which one of these proposals might have upon our economy in general and upon small business in particular. I have reference to the recommendation that the capital gains tax be made applicable to any gain on capital assets transferred at death.

Mr. President, the part played by Federal tax considerations in decisions by small firms to merge or sell out, has been a matter of concern to our committee for many years. The Federal estate tax has long been recognized as a factor contributing to the increasing trend toward concentration within many industries. This remains true, even though survivors may be allowed 10 years within which to pay the estate tax. The scales are still weighted heavily in favor of mergers or sellouts, where, at worst, capital gains taxes are paid, and more likely, a tax-free exchange of stock can be arranged.

About the only factor presently on the scales in favor of a decision by the one-owner independent to keep his business is the fact that, if he sells he may have to pay capital gains tax but if he keeps the business and passes it on to his heirs upon death, no income tax is paid on whatever gains may have accrued to the assets of the business. Naturally, Mr. President, my present concern is over the fact that it seems to me that we are now proposing to remove this lone factor from the balance. This is a matter which I wanted to bring to the attention of the Senate, Mr. President. It is something which the subcommittee of which the Senator from Nevada [Mr. BIBLE] is chairman, plans to go into carefully at the hearings. I know that the Senator from Nevada will do an excellent job of analyzing this and the other proposals from the standpoint of their effect upon small business. I want to commend the Senator from Nevada for his interest and his efforts in this matter. He has always served with distinction as the chairman of the Subcommittee on Taxes, and the small businessmen of his State and of the entire Nation owe him a debt of gratitude for the job that he has done. I look forward to his report to the Senate on this vital and timely matter.

WHAT THE FEDERAL TRADE COMMISSION IS DOING ABOUT MILK

Mr. SPARKMAN. Mr. President, during the period of the past year or longer, a number of Members of the Senate have referred to the Senate Small Business Committee complaints received from independent dairy processors about unfair, discriminatory, and predatory competitive practices in connection with the sale of milk and milk products. In every case, I have advised my colleagues that intensive work in connection with the situation in the dairy industry is being carried on by the Antitrust Division of the Department of Justice and by the Federal Trade Commission. I may add that the Small Business Committee of the House of Representatives has done considerable work in behalf of the dairy industry. Last Monday, at the sixth national convention of the National Independent Dairies Association, Mr. Francis C. Mayer, Chief of the Division of Discriminatory Practices of the Federal Trade Commission, delivered an informative and helpful address entitled "What the Federal Trade Commission Is Doing About Milk." Because of the widespread interest in the Senate about the competitive conditions in the dairy industry, frequently described as "chaotic," I should like to bring Mr. Mayer's remarks to the attention of this body, and I ask unanimous consent that his speech be inserted in the RECORD at this point.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

WHAT THE FEDERAL TRADE COMMISSION IS DOING ABOUT MILK

(Remarks of Francis C. Mayer, Chief, Division of Discriminatory Practices, Federal Trade Commission, at Sixth National Convention of the National Independent Dairies Association, the Mayflower Hotel, Washington, D.C., April 8, 1963)

Please permit me to express my appreciation to you for the invitation to appear here today. Of course, the views expressed are my own and do not necessarily reflect those of the Federal Trade Commission.

Our good friend, Lynn Paulson, advised me that he wanted me to explain "What the Federal Trade Commission is doing about milk." In answer, the Commission is vitally interested in the problems confronting all members of the industry, including the over 400 independent concerns that are members of the National Independent Dairies Association. The Federal Trade Commission, which is charged with preserving free and fair competition, is devoting a significant amount of its total effort to the dairy industry and its competitive problems.

This effort has been directed toward stemming the tide of rising concentration and the elimination of unlawful discriminatory pricing practices. We are presently moving in other areas in an effort to reach other types of practices, such as selling below cost, using milk as a loss leader, and pricing problems which arise from use of private label.

A. CONCENTRATION IN THE DAIRY INDUSTRY

The Commission has attacked the rising concentration in this industry by issuing merger complaints. The dairy industry in the United States has historically been characterized by thousands of firms processing and selling their products locally. In recent years, however, the number of companies participating in the industry has declined drastically while eight national companies have been acquiring hundreds of dairy concerns. Between 1950 and 1961, the total number of milk processors in the United States declined 57 percent from 16,089 to 7,179 and the total number of frozen dessert manufacturers, excluding retail counter freezer operations, declined 24 percent from 4,203 to 3,228.[1] Between 1954 and 1958, the number of companies producing creamery butter, natural cheese, concentrated milk, fluid milk and frozen desserts declined by an average of 17.4 percent. Also during this period, National Dairy Products Corp., the Borden Co., Beatrice Foods Co., Foremost Dairies, Inc., Carnation Co., Arden Farms Co., Pet Milk Co., and Fairmont Foods Co., all nationwide dairy corporations, acquired at least 505 dairy concerns throughout the country. Since 1905, these 8 companies have made at least 1,949 dairy acquisitions in the United States.

In 1958, these eight national companies accounted for 31 percent of the value of shipments of fluid milk in the United States. These eight and Swift & Co., a large foods company which also manufactures ice cream, accounted for 44.4 percent of the value of shipments of frozen desserts. The individual companies shares are as follows:

Fluid milk

	Percent
Borden	9.2
National	8.9
Foremost	4.3
Beatrice	3.4
Carnation	2.3
Arden	1.4
Farimont	.9
Pet	.6
Total	31.0

Frozen desserts

	Percent
National	13.1
Borden	10.6
Foremost	6.4
Beatrice	4.9
Swift	2.7
Carnation	2.4
Arden	2.1
Fairmont	1.5
Pet	0.7
Total	44.4

In 1958, therefore, the eight largest companies averaged approximately 4.0 percent of the total value of shipments of fluid milk and 5.5 percent of the total value of shipments of frozen desserts in the United States. The remaining milk processors in the United States in 1958 had an average of 0.001 percent of the value of shipments of fluid milk making the average national company 400 times larger than the average remaining milk processor. The remaining frozen dessert manufacturers had an average of 0.05 percent. Thus, the average national company was 110 times larger than the average remaining manufacturer of frozen desserts.

The Commission has issued merger complaints against the four leading national concerns; viz, National Dairies, Foremost, Beatrice, and Borden. These cases are at various stages of completion.

In the National Dairy case, docket 6651, a consent order was recently signed which provides that for the next 10 years, National Dairy Products Corp., may not acquire any domestic manufacturer, processor or seller of fluid milk, ice cream, ice milk, mellorine, sherbet or water ices, natural or processed cheese or butter without prior approval of the Federal Trade Commission. In addition, National Dairy must sell to a purchaser approved by the Commission, two dairies it acquired in 1954. The companies are the White Ice Cream & Milk Co., of Wilmington, N.C. and the Plains Creamery, Inc., of Amarillo, Tex. Further, National Dairy may not sell processed fluid milk for 5 years after the sale in 10 North Carolina counties where White did business and in 27 Texas counties and 3 Oklahoma counties where Plains operated.

The Commission on April 30, 1962, issued an order in the Foremost case, docket 6495, ordering divestiture of 10 companies. This divestiture will reduce Foremost to half its present size. The Beatrice and Borden cases have not yet reached the Commission for final disposition. In Beatrice, docket 6653, proposed findings of fact and order were filed on December 19, 1962, requesting divestiture of 37 corporations engaged in commerce and a cease-and-desist order inhibiting all future acquisitions. The initial decision is due on May 1, 1963. Hearings are presently being held in the Borden case, docket 6652, and this case is nearing completion.

---

[1] Source of statistics used herein is in the matter of Beatrice Foods Co., docket No. 6653.

So you can see that we have taken on the majors in the merger field. These cases are complex—giant records are made slowly in the course of extensive litigation—many market areas must be examined minutely—no detail can be overlooked for the record must withstand the scrutiny and attacks of the most experienced trial counsel employed by these big concerns. But these cases are finally being brought to a close and it is hoped that, whatever the final determination by the Commission, the courts will ultimately enforce, indeed applaud our efforts in this area. The Commission's concern about concentration in the dairy industry is both timely and real and, I believe, one of its major accomplishments in its efforts to protect small business.

B. ANTIMONOPOLY COMPLAINTS INVOLVING DAIRY RESPONDENTS

In recent years, the Commission has filed numerous formal complaints against both national and regional companies alleging violations of the Robinson-Patman Act and Federal Trade Commission Act. Except for two consent orders, In the Matter of United Farmers of New England, Inc., docket 8406, and In the Matter of Kelly Creamery Co., docket 7783, the cases have been vigorously contested requiring extensive investigations, protracted hearings, and tremendous records.

The complaints referred to and the companies involved are: National Dairy Products Corp., docket No. 7018; the Borden Co., docket No. 7474; Foremost Dairies, Inc., docket No. 7475; Beatrice Foods Co., Inc., docket No. 7599; Dean Milk Co., docket No. 8032; Central Arkansas Milk Products Association, docket No. 8391; H. P. Hood & Sons, Inc., docket No. 7709; H. P. Hood & Sons, Inc, and the Great Atlantic and Pacific Tea Co, Inc., docket No. 8273; in the matters of Adams Dairy Co. and Adams Dairy, Inc., and the Kroger Co., docket No. 7596; Safeway Stores, Inc., docket No. 7597; and the Great Atlantic and Pacific Tea Co., Inc., docket No. 7598.

In some of these cases hearings are in progress and some have been decided. Some orders have been entered by the hearing examiners and some by the Commission. In summary, the Commission has issued a substantial number of formal antimonopoly complaints involving your industry. The complaints name as respondents national concerns as well as regional dairies, chainstores, and producers. Many of the complaints are national in scope but some primarily involve regional markets. The practices involved include, but are not limited to, territorial and competing customer, price discriminations, disproportionate advertising allowances, conspiracy to fix prices, exclusive dealing, selling below cost, and illegal acquisitions and mergers.

These cases have brought to light many serious interpretation and evidentiary problems which must be solved before effective Commission action can be felt in these areas. At the threshold of any action we are met with a series of objections directed toward what I believe is an unrealistically narrow interpretation of what is interstate commerce, a basic prerequisite of any Commission action. However, the seriousness of these objections cannot be ignored. A recent decision of the Sixth U.S. Circuit Court of Appeals, *Willard Dairy* v. *National Dairy Products Corp.*, 1962 Trade Cases, par. 70,556 (Sixth Cir. 1962), raises some serious questions but, in and of itself, does not represent an unsurmountable obstacle to our efforts to curb the activities of the interstate giants who are discriminating in local markets.

Then we always have the problem of "who struck John." In several of the cases in which our trials have been completed we have been unable to affix responsibility for the price break that triggered the war. Somewhere lurking in the wings is the jugoperator or the discounter who, for his own purposes, is insistent upon depressing the price sometimes until it reaches below cost proportions. Somehow in this maze of statistics, claims and counterclaims the majors sometimes emerge smelling like the proverbial rose.

This is not to say that these proven obstacles will deter us in our efforts but I would be less than candid if I did not recognize the seriousness of our problems, indeed your problems, if we are to render any effective aid to the small dairy processor.

But all is not grim.

Sometimes our efforts result in definite contributions to clarification of the status of industry practices as well as to the type and style of remedy which may emerge to eliminate the practices. Consider our recent Borden decision, (docket 7129), in which the Commission prohibited discrimination in price between identical products even though they were different brands. And I should note that a cease and desist order can have broad implications. Although the discrimination was limited to evaporated milk, the Commission's order encompassed all "food products." The Commission took the position that the same or similar price discrimination practice could be used as well for other food products and the order, to be effective, was made to include all food products.

Recently the Commission has demonstrated an increased awareness of the inequities which arise from piecemeal action directed against individual companies who are engaged in industrywide practices.

If competitors are free to ignore Commission regulation, any individual company operating under a cease-and-desist order operates at a serious disadvantage. Accordingly, we intend to proceed against all offenders and even the smaller members of the dairy industry if their conduct warrants such action. In fact, some of our investigations have disclosed that in some instances small, independent companies have initiated practices which have touched off price wars.

C. INVESTIGATIONS RELATING TO PRICING

Numerous complaints are received every week concerning pricing problems in the dairy industry by the Division of Discriminatory Practices. This division is responsible for the trial of cases involving violations of sections 2 and 3 of the Clayton Act, and cases brought under section 5 of the Federal Trade Commission Act against buyers for knowingly inducing and receiving discriminatory allowances from suppliers.

The staff located in Washington, with the assistance of the field office personnel, has expended a substantial number of man-hours devoted to investigations involving discriminatory pricing in the sale of fluid milk. Over 27 such cases are presently under investigation, excluding numerous and time-consuming investigational hearings.

The cases involve allegations of sales below cost, territorial price discriminations, and discriminations among competing customers. The investigations cover most of the Nation including market areas located in the States of Arizona, Arkansas, California, Colorado, Illinois, Indiana, Kansas, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New Mexico, New York, Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Utah, West Virginia, and Wisconsin.

The Commission is very much aware of the problems in this industry and authorized a broad, nationwide investigation in its resolution dated July 3, 1962. The resolution stating the Commissions reasons for initiating the investigation reads:

"Whereas the Commission has received complaints and information to the effect that some corporations may be engaged in unfair and discriminatory acts and practices in connection with the production, distribution, purchase and sale of fluid milk alone or in combination with other products or services in Indianapolis, Ind.; Denver, Colo.; St. Louis, Mo.; Topeka, Kans.; Peoria, Ill., and other trade areas throughout the United States; and

"Whereas, instances have come to the attention of the Commission where some corporations have engaged in the practice of selling fluid milk alone or in combination with other products or services in selected market areas at below cost prices; and further have engaged in the practice of selling fluid milk alone or in combination with other products or services in certain selected geographical areas at extremely low prices while maintaining much higher prices in other areas; * * *

"Whereas the Commission has received complaints and information to the effect that such acts and practices result in severe economic injury to many small businesses; and

"Whereas such acts and practices may constitute violations of section 2 of the Clayton Act, as amended by the Robinson-Patman Act (15 U.S.C. 13), or section 5 of the Federal Trade Commission Act (15 U.S.C. 45), statutes administered by the Commission, or may require additional legislation. * * *"

Investigational hearings have been held pursuant to the Commission's resolution in Indianapolis, Chicago, Denver, Detroit, Dayton, and Long Island. These records are presently being reviewed with a view of determining whether complaints should issue. The Commission is making a concentrated effort to stop the demise of small business concerns because of unlawful pricing practices.

But decisions to proceed by the complaint process are not easily made. We are very much aware of the problems which have arisen in past cases and the difficulties of proof which I have already mentioned. But we are not fainthearted. And I am proud of the fact that many of the criticisms of the Commission in the recent past have been directed toward an excess of zeal in its efforts to secure compliance with the statutes which it enforces rather than the negative harpings that the Commission is not making all-out efforts to enforce the law.

I must say, however, that all does not come out roses with regard to the complaints filed by this association. We have found in many of our investigations that the assistance that we receive from industry members is inadequate.

They are not completely informed as to the chronology of events that have taken place in the market. They have not saved advertisements showing price changes and have not documented injury such as loss of customers; sales volume or profits. These are some of the reasons why investigations are time consuming.

In many instances our investigations have disclosed that the pricing practices complained of are purely local and entirely intrastate. Formal complaints cannot issue in these circumstances because of jurisdictional limitations. Much time and effort would be saved if members of the industry would be more selective in making complaints. In these cases, the complaints should be called to the attention of State regulatory agencies. Competitive pricing is the jugular vein controlling your very existence. Direct your complaints to all who can or will help whether they be on the community, city, county, State or Federal level.

It must be noticed that once complaint is issued, there are many dilatory tactics that can be and are utilized to delay litigation. However, we must remember that all persons charged with violations of laws administered by the Commission are entitled to a fair trial. Yet complaints are numerous concerning the pace at which litigated cases proceed. It is felt that the recent revision in the rules requiring continuous hearings will help speed up litigation. Authority to issue temporary cease and desist orders, if granted to the Commission, would be of inestimable help to the Commission in halting unlawful practices prior to termination of protracted proceedings.

Although the dairy industry is only a small part of the total economy with which the Commission is concerned, the record of formal complaints issued and investigations undertaken demonstrates the vigilance of the Commission in its efforts to insure the continued existence of this industry comprised of small, independent entrepreneurs such as yourselves.

Thank you for the privilege of discussing these important matters with you.

THE CHANGING ROLE OF WOMEN IN A CHANGING SOCIETY

Mr. MOSS. Mr. President, the Deseret News, one of Utah's outstanding newspapers, recently published a series of feature articles on "The Changing Role of Women in a Changing Society—6 Months Later," which was the subject of a seminar held recently at the University of Utah.

A featured speaker at this seminar was Mrs. George A. Ballif, member of the Education Committee of the President's Commission on the Status of Women, and one of Utah's most prominent and distinguished women. This Commission is to make its report to the President next October and I commend the Deseret News article to my colleagues and ask unanimous consent that it be printed in the Record at this point.

There being no objection, the article was ordered to be printed in the Record, as follows:

Modern Woman Told: Accept Intellectual Challenges

(By Rose Mary Pedersen)

For today's woman, studying philosophy may be more important than baking a cake.

Or, to put it a bit differently, a woman is making a serious mistake if she allows surface things to take precedence over basics.

(And the most important basic of all is education.)

This was the contention of Mrs. George A. Ballif, member of the President's Commission on the Status of Women, and featured speaker at a symposium held last week at the University of Utah.

INTELLECTUAL STIMULATION

Mrs. Ballif, lecturing at the conference on "The Changing Role of Women—6 Months Later," emphasized that every woman—be she young or old—needs a generous amount of intellectual stimulation in her life.

"If women are to fulfill their promise as individuals, as well as bring the best they can of themselves to their families, they must keep studying," the University of Utah seminar speaker stated.

"With all the New Frontier emphasis on culture, women now, more than ever, need to become better informed individuals. One of the tragedies of our 20th century is that woman brainpower has been allowed to go virtually untapped."

Explaining this point of view, Mrs. Ballif said that being a member of the President's Commission on the Status of Women has put her in direct contact with facts and figures concerning women in the professional world.

"It has been shocking and disheartening to discover that although more girls are going to college now than ever before, fewer are putting their college educations to work for them."

She continued that although our Nation's colleges and universities are turning out vast numbers of well-qualified, scholarly young ladies who show promise in a variety of academic directions, few of those graduates are doing much with what they have learned.

SCAN STATISTICS

According to Mrs. Ballif, a mere scanning of the statistics shows few young women interested in anything but suburban housewifery.

"And there is absolutely no excuse for this," chided the seminar speaker. "Girls have great intellectual potentialities. And they must not, because of social pressure (or lackadaisical attitudes) neglect to develop them."

Referring back to this idea, the symposium speaker remarked that society must not allow its women to become apathetical, or to fall prey to defeatist so-what-does-it-matter points of view.

"This way of thinking will sow seeds of national destruction," Mrs. Ballif warned.

Using as her reference the newly published book, "The Feminine Mystique," by Betty Friedan, Mrs. Ballif said many American women are suffering a "slow deterioration of mind and spirit" because the pattern into which the have been told they must fit does not inspire them at all; require mature capabilities or the stretching of mental muscles.

FRUSTRATED WOMEN

In other words, in Mrs. Ballif's opinion, American women today are becoming frustrated because they feel there should be something more for them in life than dusting, doing dishes, and making peanut butter sandwiches.

Is anything being done to alter this condition?

Mrs. Ballif remarked that the President's Commission currently is involved in studies to make the lot of women brighter and more intellectually challenging.

"We have people on our committee investigating the possibilities of sending women back to school even during their childbearing years; we have groups looking into the possibilities of providing better jobs with better pay for women; we have people examining statistics about the older women and analyzing how a more rewarding life for her might be found after her family is grown and gone."

Mrs. Ballif told those in attendance at the U. of U. conference that these studies (they began under the direction of the "very well-educated" Mrs. Eleanor Roosevelt) have pointed up again and again that there is nothing more fundamental to a society than the opportunity to learn.

GOLDEN OPPORTUNITY

Without this opportunity, Mrs. Ballif said, "human beings feel stifled, futile and have no real reason for going on from one day to another."

She stressed quietly but intently, "Women, as well as men, have the inherent right to be considered as human beings—as human beings entitled to the opportunity to learn."

And again quoting Betty Friedan, she said: "If we continue to produce millions of young mothers who stop their education, short of identity, we are contributing to the mass burial of the American woman."

ESTABLISHMENT OF WATER RESOURCES RESEARCH CENTERS

Mr. MANSFIELD. Mr. President, at the present time on the calendar are three bills still to be considered. There are three bills only. One is the bill (S. 2), to establish water resources research centers at land-grant colleges and State universities.

I ask unanimous consent that the bill S. 2 be laid before the Senate and made the pending business.

The PRESIDING OFFICER. The bill will be stated by title.

The Legislative Clerk. A bill (S. 2) to establish water resources research centers at land-grant colleges, and State universities, to stimulate water research at other colleges, universities, and centers of competence, and to promote a more adequate national program of water research.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, there will be no action taken on that bill today.

ORDER FOR ADJOURNMENT UNTIL 12 O'CLOCK MONDAY, APRIL 15, THEN TO 12 O'CLOCK THURSDAY, APRIL 18, AND LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate adjourns tonight, it adjourn to meet at 12 o'clock on Monday next, and that following the adjournment on Monday next, the Senate adjourn to meet at 12 o'clock noon on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, there will be no business on those 2 days. The meetings of the Senate will be pro forma. Any Senator who desires to make speeches may feel free to do so.

A week from Monday the bill (S. 2) to establish water resources research centers at land-grant colleges and State universities will be the pending business before the Senate. We intend to have the bill before the Senate on that day.

Consideration of that bill will be followed by consideration of Senate bill 1007, a bill to guarantee electric consumers in the Pacific Northwest first call on electric energy generated at Federal hydroelectric plants in that region and to guarantee electric consumers in other regions reciprocal priority, and for other purposes.

Consideration of that bill will be followed or taken up concurrently with consideration of the confirmation of the nominees for the directors of the Satellite Communications Corp.

CONGRESSIONAL BUSINESS

Mr. MANSFIELD. Mr. President, some of the country's newspapers, some of its political scientists, and some of its public officials have recently joined in a chorus of dismay over the failure of the

Congress to get down to business. With a unanimity of opinion and even of phrase they have belabored the committee system of the Congress, the chairmen of the committees, the President, the party leadership in Congress, and something called the Senate establishment.

This kind of criticism has a way of snowballing, and I expect that other newspapers, political scientists, and officials will join in the criticism, perhaps even—as in past years—after the Congress has succeeded in passing a substantial legislative program. There is a certain lag in these matters.

Therefore, before we celebrate the Easter season, Mr. President, I think it would be wise to take stock of the past 3 months, and to assess the work of the 88th Congress as of April 11. This may give us a better judgment of the criticism that has been leveled at the Congress in recent weeks.

We began the session with a prolonged controversy over an amendment to the cloture rule. I shall not undertake to judge the merits of prolonging that debate to the extent it was. Nevertheless it did consume those weeks we usually devote to the organization of committees and the commencement of hearings on the President's program.

It required another 2 weeks after the rules fight had ended before we were able to complete committee assignments and provide funds for investigations and other committee activity.

Finally, the ordinary mechanics of the Senate were set in motion. Committees began their hearings and deliberations, and we received the first major bills of the Congress.

Since that time we have completed action on the following measures:

The Youth Employment Act—a 5-year program to employ and retrain jobless youngsters between the ages of 16 and 22, in a youth conservation corps and a hometown service corps.

The mass transit bill—a grant and guaranteed loan program to assist urban areas in providing better transit for their people.

The wilderness bill—a program by which 35 million acres of federally owned land will be set aside as wilderness, unavailable for commercial use.

The military procurement bill—authorizing $15 billion for aircraft, missile, and naval vessel procurement for fiscal 1964.

In addition, we have passed an agricultural supplemental of $508 million; we extend the draft to July 1, 1967; we authorized the preparation of a comprehensive outdoor recreation plan; we voted to establish a Commission on Science and Technology; and we conferred honorary citizenship on one of the great statesmen of world history, Sir Winston Churchill.

The quality of this record, in my opinion, commends itself to our people. Certainly it is not the record of a prolific Senate; but the well-being of the country is not automatically served by a long list of bills adopted. What counts for the country is the quality of legislation, whether it meets a real need, and whether it meets it in a rational manner. In both regards I think the bills we have passed measure up quite well.

This is not to say that the record might not have been improved. Of course it might have been improved; sacrifices might have been made which would have enabled us to get underway at an earlier date. Once we began to legislate, however, we moved swiftly and effectively.

When we renew our efforts on Monday week, we hope to get the committees into full-scale operation at once, and to consider their recommendations as quickly as they are reported. During that week of April 22 we expect to have the supplemental appropriations bill before us, if it is reported early in the week as we hope it will be. We will also consider S. 2, the water resources bill, and S. 1007, the Pacific Northwest power bill. There will not be many days thereafter, so I fervently hope, when we shall be without major legislation on the floor or imminent. I commend the Senate committees and the Senate as a whole for the fine work done since the committees were organized less than 2 months ago.

TRIBUTE TO THE MAJORITY LEADER

Mr. HUMPHREY. Mr. President, I think it would be only right and proper, not as a deputy or majority whip but as a Senator from Minnesota, that I congratulate the majority leader for the excellent leadership he has been giving to the Senate. I think we saw it last night, when many problems were resolved. We witnessed it again today. We surely witnessed it under the difficult situation prevailing at the time the mass transit bill was under consideration, as we have all through this session.

I, for one, wish to say to the Senator from Montana, our distinguished majority leader, it is a joy, a privilege, and an honor to be associated with him, to follow his leadership, and to work with him.

We have proved in this Senate that we can get the job done, and we shall continue to do so.

Mr. MANSFIELD. Mr. President, the feeling is reciprocal. I am distinctly honored and privileged to have the opportunity to serve side by side with my good friend and distinguished colleague, the senior Senator from Minnesota.

THE DISASTER OF THE NUCLEAR SUBMARINE "THRESHER"

Mr. HUMPHREY. Mr. President, the Nation mourns today the tragic loss of 129 brave men, skilled men, irreplaceable men, in the sea off New England.

The disaster of the nuclear submarine *Thresher* should remind us that this Nation is not defended without great danger to those relatively few Americans who serve us in the Armed Forces.

For those who daily place their lives in jeopardy in the engines of defense that the Nation supplies but only a few of us man, let us take this solemn moment to express the gratitude of the American people.

And let us also remember, as we mourn the loss of the officers and men of *Thresher*, that for all too many years the Congress has kept down the salary levels of the military forces, as compared with the salaries of their opposite members in the civilian economy.

Thresher's men asked much of their wives and families—to live on inadequate incomes—in order that those seamen, those petty officers, those young commissioned officers might serve their country. I daresay that every man on *Thresher* could have left his ship and his service to go into far higher paying employment in industry. What kept them in the service? Leadership, loyalty to their officers, dedication to the welfare of their country—yes, American patriotism.

Mr. President, it is a national disgrace that the American people and Congress continue to ask so much of so few for so little.

I am referring in this instance to the military pay bill and all that it means.

Yes, let us mourn the dead men of *Thresher* and extend our sympathies to their families. Let us also resolve now that the Congress will wipe out the disgraceful discrimination in salary against the bravest of us all.

Mr. President, I thought it was an appropriate moment for us to take note of the sacrifices which these men make, even when tragedy does not befall them. What a sad and unhappy day this is when we hear the reports that there is little or no hope for their safety or for their recovery.

"PACEM IN TERRIS"—ENCYCLICAL OF POPE JOHN XXIII

Mr. HUMPHREY. Mr. President, today we voted on a great defense measure, the military authorization bill, involving billions of dollars. I voted for the bill. I followed the leadership of those in whom I place trust and in whom I have confidence as to their judgment as to the defense needs of our country. Our Nation is faced by a powerful enemy, and the world is in the throes of tremendous social upheaval. Our Nation must be strong not only for ourselves but also for others who seek to live in freedom.

In these closing moments of the legislative day, Mr. President, I think it is proper that one's thoughts turn not only to the business of legislation; not only to the hard, cold facts of the world in which we live in terms of the struggle now underway; but also to the solemnity of the religious season.

Our brethren of the Jewish faith are in the midst of their annual celebration of the Passover—a time of communal devotion and thankfulness for deliverances. For Christians the weekend brings the climax of Holy Week. Tonight we remember the vigil and the betrayal of Our Lord at Gethsemane; tomorrow His crucifixion; Sunday His resurrection. It is fitting, therefore, that men of all faiths and of all hues of religious or social doctrine take to heart the wise words which have just been received from His Holiness, Pope John XXIII.

Mr. President, this morning I was privileged, among millions of people, to glance through and to read many of the pronouncements of the great Pope John XXIII. This great spiritual leader is giving the world a ray of hope, a feeling of a better day.

I ask unanimous consent that the text of Pope John's encyclical, entitled "Pacem in Terris"—peace on earth—may be printed in the RECORD at the conclusion of my remarks; and I also ask unanimous consent that an editorial published in the New York Times of April 11, 1963, entitled "The Pope's Plea for Peace," may be printed in the RECORD at the conclusion of my remarks.

The **PRESIDING OFFICER**. Is there objection to the request by the Senator from Minnesota? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. HUMPHREY. Mr. President, no words of mine can add to the significance of this paper encyclical. It is one of the most liberal, one of the most universal, one of the most human documents of our time. The name of the encyclical recalls the words of the angels to the shepherds in the fields at the birth of Christ; the message itself has meaning for all men, whatever their citizenship, religious faith, or condition of life. Almost Jeffersonian in spirit, the Pope's encyclical breathes the ancient inspiration and wisdom of the Christian fathers. It is contemporary in application yet timeless in its language and tenacious in its reverence for Christian doctrine.

"Pacem in Terris" is permeated with concern for all men—Catholics and non-Catholics, Christians and non-Christians, believers and nonbelievers. In his profound respect for the dignity of man, Pope John XXIII reminds us of those Renaissance masterpieces which adorn his residence in the Vatican. In his insistence on the rights of man, drawn from an immutable natural law, the Pope is articulating a philosophy shared by our own Founding Fathers of the 18th century. In his emphasis on social justice combined with the interlocking rights and obligations of men at all levels of society, the encyclical of John XXIII is in the tradition of the "Rerum Novarum" of Leo XIII in 1891, of the "Quadragesimo Anno" of Pius XI in 1931, and of his own "Mater et Magistra" in July 1961. The net effect of these papal pronouncements is to put the church at the vanguard of the world movement for peace, for a community of nations, for the rights of individuals, for aid to the less fortunate nations of the world, for evolutionary reforms, for constitutional government, for strengthening the United Nations, and for achieving controlled disarmament as well as an end to nuclear testing. No one in authority can read this document without experiencing a keener sense of his responsibility to those under him. No individual can read it without acknowledging his relationship to his fellow man. If the document were inscribed on the conscience of all national leaders there would be no more wars, no more violation of human rights, no more exploitation of man by man.

Yet the Pope, although a visionary in the best sense of the term, is by no means utopian. He warns of the danger of "the appalling destruction and sorrow * * * that may be set off by some uncontrollable and unexpected chance" unless the headlong arms race is ended. He himself recognizes that "the problem of bringing social reality into line with the objective requirements of justice is a problem which will never admit of a definitive solution." Therefore, Mr. President, let us not idly dismiss the Pope's earnest wish that:

> The United Nations Organization—in its structure and in its means—may become even more equal to the magnitude and nobility of its tasks, and that the day may come when every human being will find therein an effective safeguard for the rights which derive directly from his dignity as a person, and which are therefore universal, inviolable, and inalienable rights.

I close, Mr. President, by citing a passage of the encyclical which should serve as a guide to every Member of this body. Cautions the Pope:

> Rather than relax and feel satisfied with objectives already achieved all human beings ought * * * to reckon that what has been accomplished is but little in comparison with what remains to be done: because organs of production, trade unions, associations, professional organizations, insurance systems, legal systems, political regimes, institutions for culture, health, recreational, or sporting purposes—these must all be adjusted to the era of the atom and of the conquest of space, an era which the human family has already entered, wherein it has commenced its new advance toward limitless horizons.

In other words, Mr. President, man can indeed take his place "only a little below the angels" if he seizes his opportunities. The 17th-century French philospher Blaise Pascal reminds us that man is not only the supreme creation of nature in one sense, but also that in another sense he is the puniest and the most insignificant of God's works. It is up to us, under divine guidance, to determine whether we shall take the path of insignificance or of glory. The encyclical, "Pacem in Terris," has clearly pointed us in the right direction.

TEXT OF POPE JOHN'S ENCYCLICAL "PACEM IN TERRIS," CALLING FOR A WORLD COMMUNITY

(EDITOR'S NOTE.—Following, in translation supplied by the Vatican Press Office, is the text of the encyclical "Pacem in Terris" ("Peace on Earth"), issued today by Pope John XXIII.)

Encylical letter of His Holiness John XXIII, by divine providence Pope, to the venerable brothers the patriarchs, primates, archbishops and other local ordinaries in peace and communion with the Apostolic See, to the clergy and faithful of the whole world, and to all men of good will, on establishing universal peace in truth, justice, charity and liberty.

To our venerable brothers the patriarchs, primates, archbishops, bishops and other local ordinaries in peace and communion with the Apostolic See, to the clergy and faithful of the whole world and to all men of good will: Pope John XXIII; venerable brothers and beloved children, health and apostolic benediction.

INTRODUCTION

Order in the universe

Peace on earth, which men of every era have most eagerly yearned for, can be firmly established only if the order laid down by God be dutifully observed. The progress of learning and the inventions of technology clearly show that, both in living things and in the forces of nature, an astonishing order reigns, and they also bear witness to the greatness of man, who can understand that order and create suitable instruments to harness those forces of nature and use them to his benefit.

But the progress of science and the inventions of technology show above all the infinite greatness of God, who created the universe and man himself. He created all things out of nothing, pouring into them the abundance of His wisdom and goodness, so that the holy psalmist praises God in these words: "O Lord our master. The majesty of Thy name fills all the earth."[1] Elsewhere he says: "What diversity, Lord, in Thy creatures. What wisdom has designed them all."[2] God also created man in his own image and likeness,[3] endowed him with intelligence and freedom, and made him lord of creation, as the same psalmist declares in the words: "Thou has placed him only a little below the angels, crowning him with glory and honor and bidding him rule over the works of Thy hands. Thou has put all under his dominion."[4]

Order in human beings

How strongly does the turmoil of individual men and peoples contrast with the perfect order of the universe. It is as if the relationships which bind them together could be controlled only by force. But the creator of the world has imprinted in man's heart an order which his conscience reveals to him and enjoins him to obey: This shows that the obligations of the law are written in their hearts, their conscience utters its own testimony.[5] And how could it be otherwise? For whatever God has made shows forth His infinite wisdom, and it is manifested more clearly in the things which have greater perfection.[6]

But fickleness of opinion often produces this error, that many think that the relationships between men and states can be governed by the same laws as the forces and irrational elements of the universe, whereas the laws governing them are of quite a different kind and are to be sought elsewhere, namely, where the Father of all things wrote them, that is, in the nature of man. By these laws men are most admirably taught, first of all how they should conduct their mutual dealings among themselves, then how the relationships between the citizens and the public authorities of each state should be regulated, then how states should deal with one another, and finally how, on the one hand, individual men and states, and on the other hand, the community of all peoples, should act toward each other, the establishment of such a world community of peoples being urgently demanded today by the requirements of universal common good.

PART I—ORDER BETWEEN MEN

Every man is a person with rights and duties

First of all, it is necessary to speak of the order which should exist between men. Any human society, if it is to be well-ordered and productive, must lay down as a foundation this principle, namely, that every human being is a person, that is, his nature is endowed with intelligence and free will. By virtue of this, he has rights and duties of his own, flowing directly and simultaneously from his very nature, which are, therefore, universal, inviolable and inalienable.[7]

---

[1] Psalms VIII, 1.

[2] Psalms CIII, 24.

[3] Cf. Genesis, 1, 26.

[4] Psalms VIII, 5-6.

[5] Romans II, 15.

[6] Cf. Psalms XVIII, 8-11.

If we look upon the dignity of the human person in the light of divinely revealed truth, we cannot help but esteem it far more highly. For men are redeemed by the blood of Jesus Christ, they are by grace the children and friends of God and heirs of eternal glory.

Rights

The Right to Life and a Worthy Standard of Living

Beginning our discussion of the rights of man, we see that every man has the right to life, to bodily integrity and to the means which are necessary and suitable for the proper development of life. These are primarily food, clothing, shelter, rest, medical care and, finally the necessary social services. Therefore, a human being also has the right to security in cases of sickness, inability to work, widowhood, old age, unemployment, or in any other case in which he is deprived of the means of subsistence through no fault of his own.[8]

Right Pertaining to Moral and Cultural Values

By the natural law every human being has the right to respect for his person, to his good reputation, the right to freedom in searching for truth and in expressing and communicating his opinions, and in pursuit of art, within the limits laid down by the moral order and the common good. And he has the right to be informed truthfully about public events.

The natural law also gives man the right to share in the benefits of culture, and therefore the right to a basic education and to technical and professional training in keeping with the stage of educational development in the country to which he belongs. Every effort should be made to insure that persons be enabled, on the basis of merit, to go on to higher studies, so that, as far as possible, they may occupy posts and take on responsibilities in human society in accordance with their natural gifts and the skills they have acquired.[9]

The Right To Worship God According to One's Conscience

Every human being has the right to honor God according to the dictates of an upright conscience, and therefore the right to worship God privately and publicly. For, as Lactantius so clearly taught: We were created for the purpose of showing to the God who bore us the submission we owe Him, or recognizing Him alone, and of serving Him. We are obliged and bound by this duty to God. From this religion itself receives its name.[10] And on this point our predecessor of immortal memory, Leo XIII, declared: "This genuine, this honorable freedom of the sons of God, which most nobly protects the dignity of the human person, is greater than any violence or injustice. It has always been sought by the church, and always most dear to her. This was the freedom which the apologists claimed with intrepid constancy, which the apologists defended with their writings, and which the martyrs in such numbers consecrated with their blood." [11]

The Right To Choose Freely One's State of Life

Human beings have the right to choose freely the state of life which they prefer, and therefore the right to set up a family, with equal rights and duties for man and woman, and also the right to follow a vocation to the priesthood or the religious life.[12]

The family, grounded on marriage freely contracted, monogamous and indissoluble, is and must be considered the first and essential cell of human society. To it must be given every consideration of an economic, social, cultural, and moral nature which will strengthen its stability and facilitate the fulfilment of its specific mission.

Parents, however, have a prior right in the support and education of their children.[13]

Economic Rights

Human beings have the natural right to free initiative in the economic field, and the right to work.[14]

Indissolubly linked with those rights is the right to working conditions in which physical health is not endangered, morals are safeguarded and young people's normal development is not impaired. Women have the right to working conditions in accordance with their requirements and their duties as wives and mothers.[15]

From the dignity of the human person, there also arises the right to carry on economic activities according to the degree of responsibility of which one is capable.[16] Furthermore—and this must be specially emphasized—there is the right to a working wage, determined according to criterions of justice and sufficient, therefore, in proportion to the available resources, to give the worker and his family a standard of living in keeping with the dignity of the human person. In this regard, our predecessor Pius XII said: "To the personal duty to work imposed by nature, there corresponds and follows the natural right of each individual to make of his work the means to provide for his own life and the lives of his children. So profoundly is the empire of nature ordained for the preservation of man." [17]

The right to private property, even of productive goods, also derives from the nature of man. This right, as we have elsewhere declared, is a suitable means for safeguarding the dignity of the human person and for the exercise of responsibility in all fields; it strengthens and gives serenity to family life, thereby increasing the peace and prosperity of the state.[18]

However, it is opportune to point out that there is a social duty essentially inherent in the right of private property.[19]

The Right of Meeting and Association

From the fact that human beings are by nature social, there arises the right of assembly and association. They have also the right to give the societies of which they are members the form they consider most suitable for the aim they have in view, and to act within such societies on their own initiative and on their own responsibility in order to achieve their desired objectives.[20]

We ourselves stated in the encyclical "Mater et Magistra" that, for the achievement of ends which individual human beings cannot attain except by association, it is necessary and indispensable to set up a great variety of such intermediate groups and societies in order to guarantee for the human person a sufficient sphere of freedom and responsibility.[21]

The Right To Emigrate and Immigrate

Every human being has the right to freedom of movement and of residence within the confines of his own country; and when there are just reasons for it, the right to emigrate to other countries and take up residence there.[22] The fact that one is a citizen of a particular state does not detract in any way from his membership of the human family as a whole, nor from his citizenship of the world community.

Political Rights

The dignity of the human person involves the right to take an active part in public affairs and to contribute one's part to the common good of the citizenry. For, as our predecessor of happy memory, Pius XII, pointed out: The human individual, far from being an object and, as it were, a merely passive element in the social order, is in fact, must be and must continue to be, its subject, its foundation and its end.[23]

The human person is also entitled to a juridical protection of his rights, a protection that should be efficacious, impartial, and inspired by the true norms of justice.

As our predecessor Pius XII teaches: That perpetual privilege proper to man, by which every individual has a claim to the protection of his rights, and by which there is assigned to each a definite and particular sphere of rights, immune from all arbitrary attacks, is the logical consequence of the order of justice willed by God.[24]

Duties

Rights and Duties Necessarily Linked in the One Person

The natural rights with which we have been dealing are, however, inseparably connected, in the very person who is their subject, with just as many respective duties; and rights as well as duties find their source, their sustenance, and their inviolability in the natural law which grants or enjoins them.

For example, the right of every man to life is correlative with the duty to preserve it; his right to a decent standard of living with the duty of living it becomingly; and his right to investigate the truth freely, with the duty of seeking it and of possessing it ever more completely and profoundly.

Reciprocity of Rights and Duties Between Persons

Once this is admitted, it is also clear that in human society to one man's right there corresponds a duty in all other persons: the duty, namely, of acknowledging and respecting the right in question. For every fundamental human right draws its indestructible moral force from the natural law, which, in granting it, imposes a corresponding obligation. Those, therefore, who claim their own rights, yet altogether forget or neglect to carry out their respective duties, are people who build with one hand and destroy with the other.

Mutual Collaboration

Since men are social by nature they are meant to live with others and to work for one another's welfare. A well-ordered human society requires that men recognize and observe their mutual rights and duties. It also demands that each contribute generously to the establishment of a civic order in which rights and duties are progressively more sincerely and effectively acknowledged and fulfilled.

It is not enough, for example, to acknowledge and respect every man's right to the means of subsistence: One must also strive to obtain that he actually has enough in the way of food and nourishment.

The society of men must not only be organized but must also provide them with abundant resources. This certainly requires that they observe and recognize their mutual rights and duties: It also requires that they collaborate together in the many enterprises that modern civilization either allows or encourages or even demands.

The dignity of the human person also requires that every man enjoy the right to act freely and responsibly. For this reason, therefore, in social relations man should exercise his rights, fulfill his obligations, and, in the countless forms of collaboration with others, act chiefly on his own responsibility and initiative. This is to be done in such a way that each one acts on his own decision, of set purpose and from a consciousness of his obligation, without being moved by force or pressure brought to bear on him externally. For any human society that is established on relations of force must be regarded as inhuman, inasmuch as the personality of its members is repressed or restricted, when in fact they should be provided with appropriate incentives and means for developing and perfecting themselves.

Social Life in Truth, Justice, Charity, and Freedom

A political society is to be considered well ordered, beneficial, and in keeping with human dignity if it is grounded on truth. As the Apostle Paul exhorts us: "Away with falsehood then; let everyone speak out the truth to his neighbor; membership of the body binds us to one another." [25] This demands that reciprocal rights and duties be sincerely recognized. Furthermore, human society will be such as we have just described it, if the citizens, guided by justice, apply themselves seriously to respecting the rights of others and discharging their own duties; if they are moved by such fervor of charity as to make their own the needs of others and share with others their own goods: If, finally, they work for a progressively closer fellowship in the world of spiritual values. Human society is realized in freedom, that is to say, in ways and means in keeping with the dignity of its citizens, who accept the responsibility of their actions, precisely because they are by nature-rational beings.

Human society, venerable brothers and beloved children, ought to be regarded above all as a spiritual reality: in which men communicate knowledge to each other in the light of truth; in which they can enjoy their rights and fulfill their duties, and are inspired to strive for moral good. Society should enable men to share in and enjoy every legitimate expression of beauty, and encourage them constantly to pass on to others all that is best in themselves, while they strive to make their own the spiritual achievements of others. These are the spiritual values which continually give life and basic orientation to cultural expressions, economic and social institutions, political movements and forms, laws, and all other structures by which society is outwardly established and constantly developed.

God and the Moral Order

The order which prevails in society is by nature moral. Grounded as it is in truth, it must function according to the norms of justice, it should be inspired and perfected by mutual love, and finally it should be brought to an evermore refined and human balance in freedom.

Now an order of this kind, whose principles are universal, absolute and unchangeable, has its ultimate source in the one true God, who is personal and transcends human nature. Inasmuch as God is the first truth and the highest good. He alone is that deepest source from which human society can draw its vitality, if that society is to be well-ordered, beneficial, and in keeping with human dignity.[26] As St. Thomas Aquinas says: "Human reason is the norm of the human will, according to which goodness is measured, because reason derives from the eternal law which is the divine reason itself. It is evident then that the goodness of the human will depends much more on the eternal law than on human reason." [27]

Characteristics of the Present

Our age has three distinctive characteristics. First of all, the working classes have gradually gained ground in economic and public affairs. They began by claiming their rights in the socioeconomic sphere; they extended their action then to claims on the political level; and finally applied themselves to the acquisition of the benefits of a more refined culture. Today, therefore, workers all over the world refuse to be treated as if they were irrational objects without freedom, to be used at the arbitrary disposition of others. They insist that they be always regarded as men with a share in every sector of human society: in the social and economic sphere, in the fields of learning and culture, and in public life.

Second, it is obvious to everyone that women are now taking a part in public life. This is happening more rapidly, perhaps, in nations of Christian civilization, and, more slowly but broadly, among peoples who have inherited other traditions or cultures. Since women are becoming ever more conscious of their human dignity, they will not tolerate being treated as mere material instruments but demand rights befitting a human person both in domestic and in public life.

Finally, the modern world, as compared with the recent past, has taken on an entirely new appearance in the field of social and political life. For since all nations have either achieved or are on the way to achieving independence, there will soon no longer exist a world divided into nations that rule others and nations that are subject to others.

Men all over the world have today—or will soon have—the rank of citizens in independent nations. No one wants to feel subject to political powers located outside his own country or ethnic group. Thus, in very many human beings the inferiority complex which endured for hundreds and thousands of years is disappearing, while in others there is an attenuation and gradual fading of the corresponding superiority complex which had its roots in social-economic privileges, sex or political standing.

On the contrary, the conviction that all men are equal by reason of their natural dignity has been generally accepted. Hence racial discrimination can no longer be justified, at least doctrinally or in theory. And this is of fundamental importance and significance for the formation of human society according to those principles which we have outlined above. For, if a man becomes conscious of his rights, he must become equally aware of his duties. Thus he who possesses certain rights has likewise the duty to claim those rights as marks of his dignity, while all others have the obligation to acknowledge those rights and respect them.

When the relations of human society are expressed in terms of rights and duties, men become conscious of spiritual values, understand the meaning and significance of truth, justice, charity and freedom, and become deeply aware that they belong to this world of values. Moreover, when moved by such concerns, they are brought to a better knowledge of the true God who is personal and transcendent, and thus they make the ties that bind them to God the solid foundations and supreme criterion of their lives, both of that life which they live interiorly in the depths of their own souls and of that in which they are united to other men in society.

PART II—RELATIONS BETWEEN INDIVIDUALS AND THE PUBLIC AUTHORITIES

Necessity and divine origin of authority

Human society can be neither well ordered nor prosperous unless it has some people invested with legitimate authority to preserve its institutions and to devote themselves as far as is necessary to work and care for the good of all. These, however, derive their authority from God, as St. Paul teaches in the words, "Authority comes from God alone." [28] These words of St. Paul are explained thus by St. John Chrysostom: What are you saying? Is every ruler appointed by God? I do not say that, he replies, for I am not dealing now with individual rulers, but with authority itself. What I say is, that it is the divine wisdom and not mere chance that has ordained that there should be government, that some should command and others obey.[29] Moreover, since God made men social by nature, and since no society can hold together unless someone be over all, directing all to strive earnestly for the common good, every civilized community must have a ruling authority, and this authority, no less than society itself, has its source in nature, and has, consequently, God for its authority himself.[30]

But authority is not to be thought of as a force lacking all control. Indeed, since it is the power to command according to right reason, authority must derive its obligatory force from the moral order, which in turn has God for its first source and final end. Wherefore our predecessor of happy memory, Pius XII, said: "That same absolute order of beings and their ends which presents man as an autonomous person, that is, as the subject of inviolable duties and rights, and as at once the basis of society and the purpose for which it exists, also includes the state as necessary society invested with the authority without which it could not come into being or live * * *. And since this absolute order, as we learn from the sound reason, especially from the Christian faith, can have no origin save in a personal God who is our Creator, it follows that the dignity of the state's authority is due to its sharing to some extent in the authority of God himself.[31]

[31] Cf. Pius XII's 1944 radio message, op. cit., p. 15.

Where the civil authority uses as its only or its chief means either threats and fear of punishment or promises of rewards, it cannot effectively move men to promote the common good of all. Even if it did so move them, this would be altogether opposed to their dignity as men, endowed with reason and free will. As authority is chiefly concerned with moral force, it follows that civil authority must appeal primarily to the conscience of individual citizens, that is, to each one's duty to collaborate readily for the common good of all. Since by nature all men are equal in human dignity, it follows that no one may be coerced to perform interior acts. That is in the power of God alone, who sees and judges the hidden designs of men's hearts. Those therefore who have authority in the state may oblige men in conscience only if their authority is intrinsically related with the authority of God and shares in it.[32]

By this principle the dignity of the citizens is protected. When, in fact, men obey their rulers, it is not all as men that they obey them, but through their obedience it is God, the provident Creator of all things, whom they reverence, since He has decreed that men's dealings with one another should be regulated by an order which He himself has established. Moreover, in showing this due reverence to God, men not only do not debase themselves but rather perfect and enoble themselves. For to serve God is to rule.[33]

Since the right to command is required by the moral order and has its source in God, it follows that, if civil authorities legislate for or allow anything that is contrary to that order and therefore contrary to the will of God, neither the laws made nor the authorizations granted can be binding on the consciences of the citizens, since God has more right to be obeyed than men.[34] Otherwise, authority breaks down completely and results in shameful abuse. As St. Thomas Aquinas teaches: Human law has the true nature of law only insofar as it corresponds to. Insofar as it falls short of right reason, and therefore is derived from the eternal law. Insofar as it falls short of right reason, a law is said to be a wicked law. And so, lacking the true nature of law, it is rather a kind of violence.[35]

It must not be concluded, however, because authority comes from God, that therefore men have no right to choose those who are to rule the state, to decide the form of government and to determine both the way in which authority is to be exercised and its limits. It is thus clear that the doctrine which we have set forth is fully consonant with any truly democratic regime.[36]

Attainment of the common good

Purposes of the Public Authority

Individual citizens and intermediate groups are obliged to make their specific contributions to the common welfare. One of the chief consequences of this is that they must bring their own interests into harmony with the needs of the community, and must dispose of their goods and their services as civil authorities have prescribed, in accord with the norms of justice, in due form and within the limits of their competence. This they must do by means of formally perfect actions, the content of which must be morally good, or at least capable of being directed toward good.

Indeed, since the whole reason for the existence of civil authorities is the realization of the common good, it is clearly necessary that, in pursuing this objective, they should respect its essential elements, and at the same time conform their laws to the needs of a given historical situation.[37]

Assuredly, the ethnic characteristics of the various human groups are to be respected as constituent elements of the common good,[38] but these values and characteristics by no means exhaust the content of the common good. For the common good is intimately bound up with human nature. It can never exist fully and completely unless, its intimate nature and realization being what they are, the human person is taken into account.[39]

In the second place, the very nature of the common good requires that all members of the political community be entitled to share in it, although in different ways according to each one's tasks, merits and circumstances. For this reason, every civil authority must take pains to promote the common good of all, without preference for any single citizen or civil group. As our predecessor of immortal memory, Leo XIII, has said: The civil power must not serve the advantage of any one individual or of some few persons, inasmuch as it was established for the common good of all.[40] Considerations of justice and equity, however, can at times demand that those involved in civil government give more attention to the less fortunate members of the community, since they are less able to defend their rights and to assert their legitimate claims.[41]

In this context, we judge that attention should be called to the fact that the common good touches the whole man, the needs both of his body and of his soul. Hence it follows that the civil authorities must undertake to effect the common good by ways and means that are proper to them. That is, while respecting the hierarchy of values, they should promote simultaneously both the material and the spiritual welfare of the citizens.[42]

These principles are clearly contained in the doctrine stated in our encyclical, "mater et Magistra," where we emphasized that the common good of all embraces the sum total of those conditions of social living whereby men are enabled to achieve their own integral perfection more fully and more easily.[43]

Men, however, composed as they are of bodies and immortal souls, can never in this mortal life succeed in satisfying all their needs or in attaining perfect happiness. Therefore, all efforts made to promote the common good, far from endangering the eternal salvation of men, ought rather to serve to promote it.[44]

Responsibilities of the Public Authority, and Rights and Duties of Individuals

It is agreed that in our time the common good is chiefly guaranteed when personal right and duties are maintained. The chief concern of civil authorities must therefore be to insure that these rights are acknowledged, respected, coordinated with other rights, defended and promoted, so that in this way each one may more easily carry out his duties. For to safeguard the inviolable rights of the human person, and to facilitate the fulfilment of its duties, should be the essential office of every public authority.[45]

This means that if any government does not acknowledge the rights of man or violates them, it not only fails its duty, but its orders completely lack juridical force.[46]

Reconciliation and Protection of Rights and Duties of Individuals

One of the fundamental duties of civil authorities, therefore, is to coordinate social relations in such fashion that the exercise of one man's rights does not threaten others in the exercise of their own rights nor hinder them in fulfilment of their duties. Finally, the rights of all should be effectively safeguarded and, if they have been violated, completely restored.[47]

Duty of Promoting the Rights of Individuals

It is also demanded by the common good that civil authorities should make earnest efforts to bring about a situation in which individual citizens can easily exercise their rights and fulfill their duties as well. For experience has taught us that, unless these authorities take suitable action with regard to economic, political and cultural matters, inequalities between the citizens tend to become more and more widespread, especially in the modern world, and as a result human rights are rendered totally ineffective, and the fulfilment of duties is compromised.

It is therefore necessary that the administration give wholehearted and careful attention to the social as well as to the economic progress of the citizens, and to the development, in keeping with the development of the productive system, of such essential services as the building of roads, transportation, communications, water supply, housing, public health, education, facilitation of the practice of religion and recreational facilities. It is necessary also that governments make efforts to see that insurance systems are made available to the citizens, so that, in case of misfortune or increased family responsibilities, no person will be without the necessary means to maintain a decent standard of living. The Government should make similarly effective efforts to see that those who are able to work can find employment in keeping with their aptitudes, and that each worker receives a wage in keeping with the laws of justice and equity. It should be equally the concern of civil authorities to insure that workers be allowed their proper responsibility in the work undertaken in industrial organization, and to facilitate the establishment of intermediate groups which will make social life richer and more effective. Finally, it should be possible for all the citizens to share as far as they are able in their country's cultural advantages.

Harmonious Relations Between Public Authority's Two Forms of Intervention

The common good requires that civil authorities maintain a careful balance between coordinating and protecting the rights of the citizens, on the one hand, and promoting them, on the other. It should not happen that certain individuals or social groups derive special advantage from the fact that their rights have received preferential protection. Nor should it happen that governments, in seeking to protect these rights, become obstacles to their full expression and free use. For this principle must always be retained: that state activity in the economic field, no matter what its breadth or depth may be, ought not to be exercised in such a way as to curtail an individual's freedom of personal initiative. Rather it should work to expand that freedom as much as possible by the effective protection of the essential personal rights of each and every individual.[48]

The same principle should inspire the various steps which governments take in order to make it possible for the citizens more easily to exercise their rights and fulfill their duties in every sector of social life.

Structure and operation of the public authority

It is impossible to determine, once and for all, what is the most suitable form of government, or how civil authorities can most effectively fulfill their respective functions, i.e., the legislative, judicial, and executive functions of the state. In determining the structure and operation of government which a state is to have, great weight has to be given to the historical background and circumstances of given political communities, circumstances which will vary at different times and in different places. We consider, however, that it is in keeping with the innate demands of human nature that the state should take a form which embodies the threefold division of powers corresponding to the three principal functions of public authority. In that type of state, not only the official functions of government but also the mutual relations between citizens and public officials are set down according to law, which in itself affords protection to the citizens both in the enjoyment of their rights and in the fulfillment of their duties.

If, however, this political and juridical structure is to produce the advantages which may be expected of it, public officials must strive to meet the problems which arise in a way that conforms both to the complexities of the situation and the proper exercise of their function. This requires that, in constantly changing conditions, legislators never forget the norms of morality, or constitutional provisions, or the objective requirements of the common good. Moreover, executive authorities must coordinate the activities of society with discretion, with a full knowledge of the law and after a careful consideration of circumstances, and the courts must administer justice impartially and without being influenced by favoritism or pressure. The good order of society also demands that individual citizens and intermediate organizations should be effectively protected by law whenever they have rights to be exercised or obligations to be fulfilled. This protection should be granted to citizens both in their dealings with each other and in their relations with government agencies.[49]

Law and Conscience

It is unquestionable that a legal structure in conformity with the moral order and corresponding to the level of development of the political community is of great advantage to achievement of the common good.

And yet, social life in the modern world is so varied, complex, and dynamic that even a juridical structure which has been prudently and thoughtfully established is always inadequate for the needs of society.

It is also true that the relations of the citizens with each other, of citizens and intermediate groups with public authorities, and finally of the public authorities with one another are often so complex and so sensitive that they cannot be regulated by inflexible legal provisions. Such a situation therefore demands that the civil authorities have clear ideas about the nature and extent of their official duties if they wish to maintain the existing juridical structure in its basic elements and principles, and at the same time meet the exigencies of social life, adapting their legislation to the changing social scene and solving new problems. They must be men of great equilibrium and integrity, competent, and courageous enough to see at once what the situation requires and to take necessary action quickly and effectively.[50]

Citizens' Participation in Public Life

It is in keeping with their dignity as persons that human beings should take an active part in government, although the manner in which they share in it will depend on the level of development of the political community to which they belong.

Men will find new and extensive advantages in the fact that they are allowed to participate in government. In this situation, those who administer the government come into frequent contact with the citizens, and it is thus easier for them to learn what is really needed for the common good. The fact, too, that ministers of government hold office only for a limited time keeps them from growing stale and allows for their replacement in accordance with the demands of social progress.[51]

Characteristics of the Present Day

In modern times, where there is question of organizing political communities juridically, there is observable first of all the tendency to write in concise and limpid phraseology a charter of fundamental human rights, which is, as often as not, inserted in the State constitutions, or is an integral part of them.

Secondly, there is also an inclination to determine, by the compilation of a document called the Constitution, the procedures through which the governing powers are to be created, along with their mutual relations, the spheres of their competence, the forms and systems they are obliged to follow in the performance of their office.

The relations between the government and the governed are then set forth in terms of rights and duties, and it is clearly laid down that the paramount task assigned to Government officials is that of recognizing, respecting, reconciling, protecting, and promoting the rights and duties of citizens.

It is of course impossible to accept the theory which professes to find the original and single source of civic rights and duties, of the binding force of the Constitution, and of a government's right to command in the mere will of human beings, individually or collectively.[52]

The tendencies to which we have referred, however, do clearly show that the men of our time have become increasingly conscious of their dignity as human persons. This awareness prompts them to claim a share in the public administration of their country, while it also accounts for the demand that their own inalienable and inviolable rights be protected by law. It also requires that Government officials be chosen in conformity with constitutional procedures, and perform their specific functions within the limits of law.

PART III—RELATIONS BETWEEN STATES

Subjects of rights and duties

Our predecessors have constantly maintained, and we join them in reasserting, that political communities are reciprocally subjects of rights and duties. This means that their relationships also must be harmonized in truth, in justice, in a working solidarity, in liberty. The same moral law which governs relations between individual human beings serves also to regulate the relations of political communities with one another. This will be readily understood when one reflects that the individual representatives of political communities cannot put aside their personal dignity while they are acting in the name and interest of their countries. And that they cannot therefore violate the very law of their being, which is the moral law.

It would be absurd, moreover, even to imagine that men could surrender their own human attributes, or be compelled to do so, by the very fact of their appointment to public office, whereas they have been given that noble assignment precisely because the wealth of their human endowments has earned them their reputation as outstanding members of the body politic. Furthermore, authority is a necessary requirement of the moral order in human society. It may not therefore be used against that order. And the very instant such an attempt were made, it would cease to be authority, as the Lord has warned us:

"A word, then, for the kings' ears to hear, kings' hearts to heed: A mesage for you, rulers, wherever you be. Listen well, all you that have multitudes at your command, foreign hordes to do your bidding. Power is none but comes to you from the Lord, nor any royalty but from one who is above all. He it is that will call you to account for your doings with a scrutiny that reads your inmost thoughts." [53]

Lastly, it is to be borne in mind that also in the regulating of relations between political communities, authority is to be exercised for the achievement of the common good, which constitutes the reason for its existence.

But a fundamental factor of the common good is acknowledgment of the moral order and respect for its prescriptions. Order between the political communities must be built upon the unshakable and unchangeable rock of the moral law, made manifest in the order of nature by the Creator himself and by Him engraved on the hearts of men with letters that may never be effaced. Like the rays of a gleaming beacon, its principles must guide the plans and policies of men and nations. These are the signals—of warning, safety, and smooth sailing—they will have to heed if they would not see all their laborious efforts to establish a new order condemned to tempest and shipwreck.[54]

In Truth

First among the rules governing the relations between states is that of truth. This calls, above all, for the elimination of every trace of racism and the consequent recognition of the principal that all states are by nature equal in dignity. Each of them, accordingly, is vested with the right to existence, to self-development, to the means fitting to its attainment and to be the one primarily responsible for this self-development. Add to that the right of each to its good name, and to the respect which is its due. Very often, experience has taught us, individuals will be found to differ considerably, in knowledge, virtue, talent, and wealth. Yet these inequalities must never be held to excuse any man's attempt to lord it over his neighbors unjustly. They constitute rather a source of greater responsibility in the contribution which each and everyone must make toward mutual improvement.

Similarly, political communities may have reached different levels of culture, civilization, or economic development. Neither is that a sufficient reason for some to take unjust advantage of their superiority over others. Rather should they see in it an added motive for more serious commitment to the common cause of social progress.

[53] "Sapientia," vi, 2–4.

[54] Cf. Pius XII, op. cit., p. 16.

It is not true that some human beings are by nature superior and others inferior. All men are equal in their natural dignity. Consequently, there are no political communities which are superior by nature and none which are inferior by nature. All political communities are of equal natural dignity, since they are bodies whose membership is made up of these same human beings. Nor must it be forgotten, in this connection, that peoples can be highly sensitive, and with good reason, in matters touching their dignity and honor.

Truth further demands that the various media of social communications made available by modern progress, which enable the nations to know each other better, be used with serene objectivity. That need not, of course, rule out any legitimate emphasis on the positive aspects of their way of life. But methods of information which fall short of the truth, and by the same token impair the reputation of this people or that, must be discarded.[55]

In Justice

Relations between political communities are to be further regulated by justice. This implies, over and above recognition of their mutual rights, the fulfillment of their respective duties.

Political communities have the right to existence, to self-development and to the means necessary for this. They have the right to play the leading part in the process of their own development and the right to their good name and due honors. From which it follows as a simultaneous consequence that they have also the corresponding duty of respecting these rights in others and of avoiding any act of violation. Just as an individual man may not pursue his own interests to the detriment of other men, so, on the international level, one state may not develop itself by restricting or oppressing other states. St. Augustine rightly says, "What are kingdoms without justice but bands of robbers?"[56]

Not only can it happen, but it actually does happen that the advantages and conveniences which nations strive to acquire for themselves become objects of contention. Nevertheless, the resulting disagreements must be settled, not by force, nor by deceit or trickery, but rather in the only manner which is worthy of the dignity of man; i.e., by a mutual assessment of the reasons on both sides of the dispute, by a mature and objective investigation of the situation, and by an equitable reconciliation of differences of opinion.

The treatment of minorities

From the 19th century there has been a rather widespread tendency in historical evolution that political communities equate themselves to national communities. However, for various reasons, it has not always been possible to make geographical boundaries coincide with ethnic ones. This gives rise to the phenomenon of minorities and to the relative complex problems.

In the first place, it must be made clear that justice is seriously violated by whatever is done to limit the strength and numerical increase of these lesser peoples. The injustice is even more serious if such sinful projects are aimed at the very extinction of these groups.

On the other hand, the demands of justice are admirably observed by those civil authorities who promote the natural betterment of those citizens belonging to a smaller ethnic group, particularly when that betterment concerns their language, the development of their natural gifts, their ancestral customs, and their accomplishments and endeavors in the economic order.[57]

It should be noted, however, that these minority groups, either because of a reaction to their present situation or because of their historical difficulties are often inclined to exalt beyond due measure anything proper to their own people, so as to place them even above human values, as if that which is proper to humanity were to be at the service of that which is proper to the nation. Reason rather demands that these very people recognize also the advantages that accrue to them from their peculiar circumstances. For instance, no small contribution is made toward the development of their particular talents and spirit by their daily dealings with people who have grown up in a different culture. This, however, will be true only if they will know how to act as a bridge, which facilitates the circulation of life in its various expressions among different traditions or civilizations, and not a zone of discord which can cause great damage and choke natural development.

Active Solidarity

Certainly relations between states must be regulated by the norms of truth and justice, but they also derive great benefits from active solidarity, through mutual cooperation on various levels; such as, in our own times, has already taken place with laudable results in the economic, social, political, educational, health and sport spheres. We must remember that, of its very nature, civil authority exists, not to confine its people within the boundaries of their nation, but rather to protect, above all else, the common good of that particular civil society, which certainly cannot be divorced from the common good of the entire human family.

This entails not only that civil societies should pursue their particular interests without hurting others, but also that they should join forces and plans whenever the efforts of an individual government cannot achieve its desired goals. But in the execution of such common efforts, great care must be taken lest what helps some nations should injure others.

Furthermore, the universal common good requires that in every nation friendly relations be fostered in all fields between the citizens and their intermediate societies.

There are groupings of people of more or less different racial backgrounds. However, the elements which characterize an ethnic group must not be transformed into a watertight compartment in which human beings are prevented from communicating with their fellow men belonging to different ethnic groups. That would contrast with our contemporary situation, in which the distances separating peoples have been almost wiped out. Nor can one overlook the fact that, even though human beings differ from one another by virtue of their ethnic peculiarities, they all possess certain essential common elements, and are inclined by nature to meet each other in the world of spiritual values, whose progressive assimilation opens to them the possibility of perfection without limits. They have the right and duty therefore to live in communion with one another.

Proper Balances Between Population, Land, and Capital

As everybody knows, there are countries with an abundance of arable land and a scarcity of manpower, while in other countries there is no proportion between natural resources and the capital available. This demands that peoples should set up relationships of mutual collaboration, facilitating the circulation from one to the other of capital, goods, and manpower.[58]

Here we deem it opportune to remark that, whenever possible, the work to be done should be taken to the workers, not vice versa.

In this way a possibility of a better future is offered to many persons without being forced to leave their own environment in order to seek residence elsewhere, which almost always entails the heartache of separation and difficult periods of adjustment and social integration.

The problem of political refugees

The sentiment of universal fatherhood which the Lord has placed in our heart makes us feel profound sadness in considering the phenomenon of political refugees: a phenomenon which has assumed large proportions and which always hides numberless and acute sufferings.

Such expatriations show that there are some political regimes which do not guarantee for individual citizens a sufficient sphere of freedom within which their souls are allowed to breathe humanly. In fact, under those regimes even the lawful existence of such a sphere of freedom is either called into question or denied. This undoubtedly is a radical inversion of the order of human society, because the reason for the existence of public authority is to promote the common good, a fundamental element of which is the recognition of that sphere of freedom and the safeguarding of it.

At this point it will not be superfluous to recall that such exiles are persons, and that all their rights as persons must be recognized, since they do not lose those rights on losing the citizenship of lands of which they are former members.

Now among the rights of a human person there must be included that by which a man may enter a political community where he hopes he can more fittingly provide a future for himself and his dependents. Wherefore, as far as the common good rightly understood permits, it is the duty of that state to accept such immigrants and to help to integrate them into itself as new members.

Wherefore, on this occasion, we publicly approve and commend every undertaking, founded in the principles of human solidarity and Christian charity, which aims at making migration of persons from one country to another less painful.

And we will be permitted to signal for the attention and gratitude of all right-minded persons the manifold word which specialized international agencies are carrying out in this very delicate field.

Disarmament

On the other hand, it is with deep sorrow that we note the enormous stocks of armaments that have been and still are being made in more economically developed countries, with a vast outlay of intellectual and economic resources. And so it happens that, while the people of these countries are loaded with heavy burdens, other countries as a result are deprived of the collaboration they need in order to make economic and social progress.

The production of arms is allegedly justified on the grounds that in present-day conditions peace cannot be preserved without an equal balance of armaments. And so, if one country increases its armaments, others feel the need to do the same; and if one country is equipped with nuclear weapons, other countries must produce their own, equally destructive.

Consequently, people live in constant fear lest the storm that every moment threatens should break upon them with dreadful violence. And with good reason, for the arms of war are ready at hand. Even though it is difficult to believe that anyone would deliberately take the responsibility for the appalling destruction and sorrow that war would bring in its train, it cannot be denied that the conflagration may be set off by some uncontrollable and unexpected chance. And one must bear in mind that, even though the monstrous power of modern weapons acts as a deterrent, it is to be feared that the mere continuance of nuclear tests, undertaken with war in mind, will have fatal consequences for life on the earth.

---

[55] Cf. Pius XII's radio message on Christmas Eve, 1940, Acta Apostolicae Sedis, vol. 33, pp. 5–14.

[56] St. Augustine's "De Civitate Dei," book IV, ch. 4, ed. P. L. 41, p. 115; cf. Pius XII's radio message on Christmas Eve, 1939, Acta Apostolicae Sedis, vol. 32, pp. 5–13.

[57] Cf. Pius XII's 1941 radio message, op. cit., pp. 10–21.

[58] Cf. "Mater et Magistra," op. cit., p. 439.

Justice, then, right reason, and humanity urgently demand that the arms race should cease. That the stockpiles which exist in various countries should be reduced equally and simultaneously by the parties concerned. That nuclear weapons should be banned. And that a general agreement should eventually be reached about progressive disarmament and an effective method of control. In the words of Pius XII, our predecessor of happy memory: "The calamity of a world war, with the economic and social ruin and the moral excesses and dissolution that accompany it, must not be permitted to envelop the human race for a third time."[59]

All must realize that there is no hope of putting an end to the building up of armaments, nor of reducing the present stocks, nor, still less, of abolishing them altogether, unless the process is complete and thorough and unless it proceeds from inner convictions: unless; that is, everyone sincerely cooperates to banish the fear and anxious expectation of war with which men are oppressed. If this is to come about, the fundamental principle on which our present peace depends must be replaced by another, which declares that the true and solid peace of nations consists not in equality of arms, but in mutual trust alone. We believe that this can be brought to pass, and we consider that it is something which reason requires, that it is eminently desirable in itself, and that it will prove to be the source of many benefits.

In the first place, it is an objective demanded by reason. There can be, or at least there should be, no doubt that relations between states, as between individuals, should be regulated not by the force of arms, but by the light of reason, by the rule; that is, of truth, of justice, and of active and sincere cooperation.

Secondly, we say that it is an objective earnestly to be desired in itself. Is there anyone who does not ardently yearn to see war banished, to see peace preserved, and daily more firmly established?

And finally, it is an objective which will be a fruitful source of many benefits, for its advantages will be felt everywhere, by individuals, by families, by nations, by the whole human family. The warning of Pius XII still rings in our ears: "Nothing is lost by peace. Everything may be lost by war."[60]

Since this is so, we, the vicar on earth of Jesus Christ, Saviour of the world and author of peace, and as interpreter of the very profound longing of the entire human family, following the impulse of our heart, seized by anxiety for the good of all, we feel it our duty to beseech men, especially those who have the responsibility of public affairs, to spare no labor in order to insure that the world events follow a reasonable and human course.

In the highest and most authoritative assemblies, let men give serious thought to the problem of a peaceful adjustment of relations between political communities on a world level: an adjustment founded on mutual trust, on sincerity in negotiations, on faithful fulfillment of obligations assumed. Let them study the problem until they find that point of agreement from which it will be possible to commence to go forward toward accords that will be sincere, lasting, and fruitful.

We, for our part, will not cease to pray God to bless these labors so that they may lead to fruitful results.

In Liberty

It has also to be borne in mind that relations between states should be based on freedom, that is to say, that no country may unjustly oppress others or unduly meddle in their affairs. On the contrary, all should help to develop in others a sense of responsibility, a spirit of enterprise and an earnest desire to be the first to promote their own advancement in every field.

The Evolution of Economically Underdeveloped Countries

Because all men are joined together by reason of their common origin, their redemption by Christ and their supernatural destiny, and are called to form one single family, we appealed in the encyclical "Mater et Magistra" to economically developed nations to come to the aid of those which were in the process of development.[61]

We are greatly consoled to see how widely that appeal has been favorably received. And we are confident that even more so in the future it will contribute to the end that the poorer countries, in as short a time as possible, will arrive at that degree of economic development which will enable every citizen to live in conditions in keeping with his human dignity.

But it is never sufficiently repeated that the cooperation, to which reference has been made, should be effected with the greatest respect for the liberty of the countries being developed, for these must realize that they are primarily responsible, and that they are the principal artisans in the promotion of their own economic development and social progress.

Our predecessor Pius XII already proclaimed that in the field of a new order founded on moral principles, there is no room for violation of freedom, integrity, and security of other nations, no matter what may be their territorial extension or their capacity for defense. It is inevitable that the powerful states, by reason of their greater potential and their power, should pave the way in the establishment of economic groups comprising not only themselves but also smaller and weaker states as well. It is nevertheless indispensable that in the interests of the common good they, as all others, should respect the rights of those smaller states to political freedom, to economic development, and to the adequate protection, in the case of conflicts between nations, of that neutrality which is theirs according to the natural, as well as international law. In this way, and in this way only, will they be able to obtain a fitting share of the common good, and assure the material and spiritual welfare of their people.[62]

It is vitally important, therefore, that the wealthier states in providing varied forms of assistance to the poorer, should respect the moral values and ethnic characteristics peculiar to each, and also that they should avoid any intention of political domination. If this is done, a precious contribution will be made toward the formation of a world community, a community in which each member, whilst conscious of its own individual right and duties, will work in a relationship of equality toward the attainment of the universal common good.[63]

Signs of the Times

Men are becoming more and more convinced that disputes which arise between states should not be resolved by recourse to arms, but rather by negotiation.

It is true that on historical grounds this conviction is based chiefly on the terrible destructive force of modern arms. And it is nourished by the horror aroused in the mind by the very thought of the cruel destruction and the immense suffering which the use of those armaments would bring to the human family. And for this reason it is hardly possible to imagine that in the atomic era war could be used as an instrument of justice.

Nevertheless, unfortunately, the law of fear still reigns among peoples and it forces them to spend fabulous sums for armaments: not for aggression, they affirm—and there is no reason for not believing them—but to dissuade others from aggression.

There is reason to hope, however, that by meeting and negotiating, men may come to discover better the bonds that unite them together, deriving from the human nature which they have in common. And that they may also come to discover that one of the most profound requirements of their common nature is this: that between them and their respective peoples it is not fear which should reign but love, a love which tends to express itself in a collaboration that is loyal, manifold in form and productive of many benefits.

PART IV—RELATIONSHIP OF MEN AND OF POLITICAL COMMUNITIES WITH THE WORLD COMMUNITY

Interdependence between political communities

Recent progress of science and technology has profoundly affected human beings and influenced men to work together and live as one family. There has been a great increase in the circulation of ideas, of persons, and of goods from one country to another, so that relations have become closer between individuals, families, and intermediate associations belonging to different political communities, and between the public authorities of those communities. At the same time the interdependence of national economies has grown deeper, one becoming progressively more closely related to the other so that they become, as it were, integral parts of the one world economy. Likewise the social progress, order, security, and peace of each country are necessarily connected with the social progress, order, security, and peace of all other countries.

At the present day no political community is able to pursue its own interests and develop itself in isolation, because the degree of its prosperity and development is a reflection and a component part of the degree of prosperity and development of all the other political communities.

Insufficiency of modern states to insure the universal common good

The unity of the human family has always existed, because its members were human beings all equal by virtue of their natural dignity. Hence there will always exist the objective need to promote, in sufficient measure, the universal common good, that is, the common good of the entire human family.

In times past, one would be justified in feeling that the public authorities of the different political communities might be in a position to provide for the universal common good, either through normal diplomatic channels or through top-level meetings, by making use of juridical instruments such as conventions and treaties, for example: juridical instruments suggested by the natural law and regulated by the law of nations and international law.

---

[59] Cf. Pius XII's 1941 radio message, op. cit., p. 17, and Benedict XV's exhortation Aug. 1, 1917, Acta Apostolicae Sedis, vol. 9, p. 418.

[60] Cf. Pius XII's radio message on Aug. 24, 1939, Acta Apostolicae Sedis, vol. 31, p. 334.

[61] Cf. Acta Apostolicae Sedis, vol. 53, pp. 440–441.

[62] Cf. Pius XII's 1941 radio message, op. cit., pp. 16–17.

[63] "Mater et Magistra," op. cit., p. 443.

As a result of the far-reaching changes which have taken place in the relations between the human family, the universal common good gives rise to problems which are complex, very grave, and extremely urgent, especially as regards security and world peace.

On the other hand, the public authorities of the individual political communities—placed as they are on a footing of equality one with the other—no matter how much they multiply their meetings or sharpen their wits in efforts to draw up new juridical instruments, they are no longer capable of facing the task of finding an adequate solution to the problems mentioned above. And this is not due to a lack of good will or of a spirit of enterprise, but because of a structural defect which hinders them.

It can be said, therefore, that at this historical moment the present system of organization and the way its principle of authority operates on a world basis no longer correspond to the objective requirements of the universal common good.

Connection Between the Common Good and Political Authority

There exists an intrinsic connection between the common good on the one hand and the structure and function of public authority on the other. The moral order, which needs public authority in order to promote the common good in human society, requires also that the authority be effective in attaining that end. This demands that the organs through which the authority is formed, becomes operative and pursues its ends, must be composed and act in such a manner as to be capable of bringing to realization the new meaning which the common good is taking on in the historical evolution of the human family.

Today the universal common good poses problems of worldwide dimensions, which cannot be adequately tackled or solved except by the efforts of public authorities endowed with a wideness of powers, structure, and means of the same proportions: that is, of public authorities which are in a position to operate in an effective manner on a worldwide basis. The moral order itself, therefore, demands that such a form of public authority be established.

Public Authority Instituted by Common Consent and Not Imposed by Force

A public authority, having worldwide power and endowed with the proper means for the efficacious pursuit of its objective, which is the universal common good in concrete form, must be set up by common accord and not imposed by force. The reason is that such an authority must be in a position to operate effectively yet, at the same time, its action must be inspired by sincere and real impartiality; in other words, it must be an action aimed at satisfying the objective requirements of the universal common good. The difficulty is that there would be reason to fear that a supernational or worldwide public authority, imposed by force by the more powerful political communities, might be or might become an instrument of one-sided interests and even should this not happen, it would be difficult for it to avoid all suspicion of partiality in its actions, and this would take from the efficaciousness of its activity.

Even though there may be pronounced differences between political communities as regards the degree of their economic development and their military power, they are all very sensitive as regards their juridical equality and their moral dignity. For that reason, they are right in not easily yielding in obedience to an authority imposed by force, or to an authority in whose creation they had no part, or to which they themselves did not decide to submit by conscious and free choice.

The Universal Common Good and Personal Rights

Like the common good of individual political communities, so too the universal common good cannot be determined except by having regard to the human person. Therefore, the public authority of the world community, too, must have as its fundamental objective the recognition, respect, safeguarding, and promotion of the rights of the human person, this can be done by direct action when required, or by creating on a world scale an environment in which the public authorities of the individual political communities can more easily carry out their specific functions.

The Principle of Subsidiarity

Just as within each political community the relations between individuals are governed by the principle of subsidiarity, so too the relations between the public authority of each political community and the public authority of the world community must be regulated by the light of the same principle. This means that the public authority of the world community must tackle and solve problems of an economic, social, political, and cultural character which are posed by the universal common good. For, because of the vastness, complexity, and urgency of those problems, the public authorities of the individual states are not in a position to tackle them with any hope of a positive solution.

The public authority of the world community is not intended to limit the sphere of action of the public authority of the individual political community, much less to take its place. On the contrary, its purpose is to create, on a world basis, an environment in which the public authorities of each political community, its citizens and intermediate associations, can carry out their tasks, fulfill their duties, and exercise their rights with greater security.[64]

Modern Developments

As is known, the United Nations Organization (UNO) was established on June 26, 1945, and to it there were subsequently added intergovernmental agencies with extensive international tasks in the economic, social, cultural, educational, and health fields. The United Nations Organization had as its essential purpose the maintenance and consolidation of peace between peoples, fostering between them friendly relations, based on the principles of equality, mutual respect, and varied forms of cooperation in every sector of human society.

An act of the highest importance performed by the United Nations Organization was the Universal Declaration of Human Rights, approved in the General Assembly of December 10, 1948. In the preamble of that declaration, the recognition and respect of those rights and respective liberties is proclaimed as an ideal to be pursued by all peoples and all countries.

Some objections and reservations were raised regarding certain points in the declaration. There is no doubt, however, that the document represents an important step on the path toward the juridical-political organization of the world community. For in it, in most solemn form, the dignity of a person is acknowledged to all human beings. And as a consequence there is proclaimed as a fundamental right, the right of free movement in the search for truth and in the attainment of moral good and justice, and also the right to a dignified life, while other rights connected with those mentioned are likewise proclaimed.

It is our earnest wish that the United Nations Organization—in its structure and in its means—may become ever more equal to the magnitude and nobility of its tasks, and that the day may come when every human being will find therein an effective safeguard for the rights which derive directly from his dignity as a person, and which are therefore universal, inviolable, and inalienable rights. This is all the more to be hoped for since all human beings, as they take an ever more active part in the public life of their own political communities, are showing an increasing interest in the affairs of all peoples, and are becoming more consciously aware that they are living members of a world community.

PART V—PASTORAL EXHORTATIONS

Duty of taking part in public life

Once again we deem it opportune to remind our children of their duty to take an active part in public life, and to contribute toward the attainment of the common good of the entire human family as well as to that of their own political community. They should endeavor, therefore, in the light of the faith and with the strength of love, to insure that the various institutions—whether ecconomic, social, cultural, or political in purpose—should be such as not to create obstacles, but rather to facilitate or render less arduous man's perfections of himself both in the natural order as well as in the supernatural.

Scientific Competence, Technical Capacity and Professional Experience

Nevertheless, in order to imbue civilization with sound principles and enliven it with the spirit of the gospel, it is not enough to be illumined with the gift of faith and enkindled with the desire of forwarding a good cause. For this end it is necessary to take an active part in the various organizations and influence them from within. And since our present age is one of outstanding scientific and technical progress and excellence, one will not be able to enter these organizations and work effectively from within unless he is scientifically competent, technically capable and skilled in the practice of his own profession.

Apostolate of a Trained Laity

We desire to call attention to the fact that scientific competence, technical capacity and professional experience although necessary, are not of themselves sufficient to elevate the relationships of society to an order that is genuinely human: that is, to an order whose foundation is truth, whose measure and objective is justice, whose driving force is love, and whose method of attainment is freedom.

For this end it is certainly necessary that human beings carry on their own temporal activities in accordance with the laws governing them and following the methods corresponding to their nature. But at the same time it is also necessary that they should carry on the activities as acts within the moral order: therefore, as the exercise or vindication of a right, as the fulfillment of a duty or the performance of a service, as a positive answer to the providential design of God directed to our salvation. In other words, it is necessary that human beings, in the intimacy of their own consciences should so live and act in their temporal lives as to create a synthesis between scientific, technical and professional elements on the one hand, and spiritual values on the other.

Integration of Faith and Action

It is no less clear that today, in traditionally Christian nations, secular institutions, although demonstrating a high degree of scientific and technical perfection, and efficiency in achieving their respective ends, not infrequently are but slightly affected by Christian motivation or inspiration.

It is beyond question that in the creation of those institutions many contributed and continue to contribute who were believed to be and who consider themselves Christians and without doubt, in part at least, they were and are. How does one explain this? It is our opinion that the explanation is to be found in an inconsistency in their minds between religious belief and their action in the temporal sphere. It is necessary, therefore, that their interior unity be reestablished, and that in their temporal activity faith should be present as a beacon to give light, and charity as a force to give life.

---

[64] Cf. Pius XII's allocution on Sept. 19, 1948, Acta Apostolicae Sedis, vol. 40, p. 412.

Integral education

It is our opinion, too, that the above-mentioned inconsistency between the religious faith, in those who believe, and their activities in the temporal sphere, results—in great part if not entirely—from the lack of a solid Christian education. Indeed, it happens in many quarters and too often that there is no proportion between scientific training and religious instruction: the former continues and is extended until it reaches higher degrees, while the latter remains at elementary level. It is indispensable, therefore, that in the training of youth, education should be complete and without interruption: namely, that in the minds of the young, religious values should be cultivated and the moral conscience refined, in a manner to keep pace with the continuous and ever more abundant assimilation of scientific and technical knowledge. And it is indespensable too that they be instructed regarding the proper way to carry out their actual tasks.[65]

Constant endeavor

We deem it opportune to point out how difficult it is to understand clearly the relation between the objective requirements of justice and concrete situations, namely, to perceive the degrees and forms in which doctrinal principles and directives ought to be applied to reality.

And the perception of those degrees and forms is all the more difficult in our times, which are marked by a pronounced dynamism. For this reason, the problem of bringing social reality into line with the objective requirements of justice is a problem which will never admit of a definitive solution. Meanwhile, our children must watch over themselves lest they relax and feel satisfied with objectives already achieved.

In fact, all human beings ought rather to reckon that what has been accomplished is but little in comparison with what remains to be done: because organs of production, trade unions, associations, professional organizations, insurance systems, legal systems, political regimes, institutions for culture, health, recreational or sporting purposes—these must all be adjusted to the era of the atom and of the conquest of space: an era which the human family has already entered, wherein it has commenced its new advance toward limitless horizons.

Relations Between Catholics and Non-Catholics in Social and Economic Affairs

The doctrinal principles outlined in this document derive from or are suggested by requirements inherent in human nature itself, and are, for the most part, dictates of the natural law. They provide Catholics, therefore, with a vast field in which they can meet and come to an understanding both with Christians separated from this Apostolic See, and also with human beings who are not enlightened by faith in Jesus Christ, but who are endowed with the light of reason and with a natural and operative honesty. In such relations let the faithful be careful to be always consistent in their actions, so that they may even come to any compromise in matters of religion and morals.

At the same time, however, let them be, and show themselves to be, animated by a spirit of understanding and detachment, and disposed to work loyally in the pursuit of objectives which are of their nature good, or conducive to good.[66]

However, one must never confuse error and the person who errs, not even when there is question of error or inadequate knowledge of truth in the moral or religious field. The person who errs is always and above all a human being, and he retains in every case his dignity as a human person, and he must be always regarded and treated in accordance with that lofty dignity. Besides, in every human being, there is a need that is congenital to his nature and never becomes extinguished, compelling him to break through the web of error and open his mind to the knowledge of truth. And God will never fail to act on his interior being, with the result that a person, who at a given moment of his life lacks the clarity of faith or even adheres to erroneous doctrines, can at a future date be enlightened and believe the truth. Meetings and agreements in the various sectors of daily life, between believers and those who do not believe or believe insufficiently because they adhere to error, can be occasions for discovering truth and paying homage to it.

It must be borne in mind, furthermore, that neither can false philosophical teachings regarding the nature, origin, and destiny of the universe and of man, be identified with historical movements that have economic, social, cultural, or political ends, not even when these movements have originated from those teachings and have drawn and still draw inspiration therefrom. Because the teachings, once they are drawn up and defined, remain always the same, while the movements, working on historical situations in constant evolution, cannot but be influenced by these latter and cannot avoid, therefore, being subject to changes, even of a profound nature. Besides, who can deny that those movements, insofar as they conform to the dictates of right reason and are interpreters of the lawful aspirations of the human person, contain elements that are positive and deserving of approval?

It can happen, then, that a drawing nearer together or a meeting for the attainment of some practical end, which was formerly deemed inopportune or unproductive, might now or in the future be considered opportune and useful. But to decide whether this moment has arrived, and also to lay down the ways and degrees in which work in common might be possible for the achievement of economic, social, cultural, and political ends which are honorable and useful; these are the problems which can only be solved with the virtue of prudence, which is the guiding light of the virtues that regulate the moral life, both individual and social. Therefore, as far as Catholics are concerned, this decision rests primarily with those who live and work in the specific sectors of human society in which those problems arise, always, however, in accordance with the principles of the natural law, with the social doctrine of the church, and with the directives of ecclesiastical authority. For it must not be forgotten that the church has the right and the duty not only to safeguard the principles of ethics and religion, but also to intervene authoritatively with her children in the temporal sphere, when there is a question of judging about the application of those principles to concrete cases.[67]

Little by Little

There are some souls, particularly endowed with generosity, who, on finding situations where the requirements of justice are not satisfied or not satisfied in full, feel enkindled with the desire to change the state of things, as if they wished to have recourse to something like a revolution.

It must be borne in mind that to proceed gradually is the law of life in all its expressions, therefore in human institutions, too, it is not possible to renovate for the better except by working from within them, gradually. Pius XII proclaimed: Salvation and justice are not to be found in revolution, but in evolution through concord. Violence has always achieved only destruction, not construction the kindling of passions not their pacification, the accumulation of hate and ruin, not the reconciliation of the contending parties. And it has reduced men and parties to the difficult task of rebuilding, after sad experience, on the ruins of discord.[68]

An Immense Task

There is an immense task incumbent on all men of good will; namely, the task of restoring the relations of the human family in truth, in justice, in love, and in freedom: the relations between individual human beings, between citizens and their respective political communities, between political communities themselves, between individuals, families, intermediate associations, and political communities on the one hand, and the world community on the other. This is a most exalted task, for it is the task of bringing about true peace in the order established by God.

Admittedly, those who are endeavoring to restore the relations of social life according to the criterions mentioned above, are not many. To them we express our paternal appreciation, and we earnestly invite them to persevere in their work with ever greater zeal. And we are comforted by the hope that their number will increase, especially among those who believe. For it is an imperative of duty, it is a requirement of love. Every believer in this world of ours must be a spark of light, a center of love, a vivifying leaven amidst his fellow men: and he will be this all the more perfectly, the more closely he lives in communion with God in the intimacy of his own soul.

In fact, there can be no peace between men unless there is peace within each one of them: unless, that is, each one builds up within himself the order wished by God. Hence St. Augustine asks: Does your soul desire to overcome your lower inclinations? Let it be subject to Him who is on high and it will conquer the lower self: there will be peace in you true, secure and well-ordered peace. In what does that order consist? God commands the soul, the soul commands the body and there is nothing more orderly than this.[69]

The Prince of Peace

These words of ours, which we have wished to dedicate to the problems that most beset the human family today and on the just solution of which the ordered progress of society depends, are dictated by a profound aspiration which we know is shared by all men of goodwill: The consolidation of peace in the world.

As the humble and unworthy vicar of Him whom the prophet announced as the Prince of Peace,[70] we have the duty to expend all our energies in an effort to protect and strengthen this gift.

However, peace will be but an empty-sounding word unless it is founded on the order which this present document has outlined in confident hope: An order founded on truth, built according to justice, vivified and integrated by charity, and put into practice in freedom.

[69] Augustinian Miscellanea, p. 633.

[70] Cf. Isaias, ix, 6.

This is such a noble and elevated task that human resources, even though inspired by the most praiseworthy goodwill, cannot bring it to realization alone. In order that human society may reflect as faithfully as possible the kingdom of God, help from on high is necessary. For this reason, during these sacred days our supplication is raised with greater fervor toward Him who by His painful passion and death overcame sin—the root of discord and the source of sorrows and inequalities—and by His blood reconciled mankind to the Eternal Father, for He himself is our peace. He it is that hath made both one. * * * "And coming He announced the good tidings of peace to you who were afar off, and of peace to those who were near."[71]

And in the liturgy of these days we hear the announcement: "Our Lord Jesus Christ, after His resurrection, stood in the midst of His disciples and said, 'Peace be to you, alleluia.' The disciples rejoiced seeing the Lord."[72]

"He leaves us peace, He brings us peace; peace I leave with you, My peace I give to you, not as the world gives do I give to you."[73]

This is the peace which we implore of Him with the ardent yearning of our prayer.

May He banish from the hearts of men whatever might endanger peace, may He transform them into witnesses of truth, justice and brotherly love. May He enlighten the rulers of peoples so that in addition to their solicitude for the proper welfare of their citizens, they may guarantee and defend the great gift of peace. May He enkindle the wills of all, so that they may overcome the barriers that divide, cherish the bonds of mutual charity, understand others, and pardon those who have done them wrong. By virtue of His action, may all peoples of the earth become as brothers, and may the most longed for peace blossom forth and reign always between them.

As a pledge of this peace, and with the ardent wish that it may shine forth on the Christian communities entrusted to your care, especially for the benefit of those who are most lowly and in the greatest need of help and defense, we are glad to impart to you, venerable brothers, to the priests both secular and religious, to the religious men and women and to the faithful of your dioceses, particularly to those who make every effort to put these exhortations of ours into practice, our apostolic blessing in propitiation of heavenly favors. Finally, upon all men of goodwill to whom this encyclical letter is also addressed, we implore from Almighty God health and prosperity.

Given at Rome at St. Peter's, on Holy Thursday, the eleventh day of April, in the year 1963, the fifth of our Pontificate.

JOHN XXIII.

[From the New York Times, Apr. 11, 1963]

THE POPE'S PLEA FOR PEACE

Raising his voice above the turmoil of this world, Pope John XXIII appeals not only to Catholics but to everyone, irrespective of race, creed, or political persuasion, to work together to establish peace on earth. He reiterates a plea that has echoed and reechoed through the millennia since the prophecy of Isaiah. But he gives it new urgency by emphasizing that the only alternative to peace in the atomic age is the possible annihilation of mankind. Realist enough to recognize that exhortation is not enough, he offers his own "grand design" for an "edifice of peace."

The cornerstone of this edifice is to be the United Nations, to which the Pope would give worldwide authority with the power and the means to safeguard peace. Such an authority is necessary, he holds, because national governments can no longer guarantee peace. He does not specifically call for a United Nations peace force, but his words certainly do suggest it. At the same time, the Pontiff calls for settlement of disputes by negotiation instead of war, for a nuclear test ban and for progressive disarmament under effective control, starting with a reduction of armament stockpiles. Pope John urges respect for human rights and freedoms, an end to racism, colonialism, and religious persecution; the free movement of capital, goods, and manpower to fill up empty spaces; and aid to the poorer nations by the richer ones.

Most of these suggestions and principles are already being practiced by the United Nations and the United States. They acquire added potency by being espoused by an authority to whom even Premier Khrushchev has made his symbolic bow. Unfortunately, the world does not consist of men of goodwill alone and too many forces continue to obstruct a fuller realization of the Pontiff's program.

The United Nations, for example, faces financial bankruptcy because many nations, of the free world as well as the Soviet bloc, refuse to pay their assessment for relatively minor peacekeeping operations in the Congo and in the Middle East. The Geneva disarmament conference has recessed after another no-progress report. And the West must continue to arm itself against the Communist threat in order to preserve peace by the only means now available—an effective balance of power on which depend our survival and the cause of freedom.

AUTHORIZATION FOR SIGNING ENROLLED BILLS AND JOINT RESOLUTIONS DURING ADJOURNMENT

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the Secretary of the Senate receive, and the Vice President or President pro tempore be authorized to sign enrolled bills and joint resolutions during the adjournment of the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MORSE. Mr. President, earlier today I notified the leadership I had a very serious matter that I had to discuss tonight, involving a problem which has arisen in the State of Oregon concerning the General Services Administration and the administration—a problem that could very well, if it did not receive the attention of the administration, result in a serious scandal which would greatly embarrass the Kennedy administration in my part of the country. But, as usual, I agreed to postpone the delivery of this speech until after we had disposed of the military procurement bill.

My good friend the Senator from Rhode Island [Mr. PELL] is confronted with a very serious emergency in connection with his time schedule.

Therefore, I ask unanimous consent that I may yield to him while he makes a speech he desires to deliver, without my losing my right to the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

THE BERLIN SITUATION

Mr. PELL. Mr. President, I thank the Senator from Oregon for being so courteous. I am most appreciative.

Now that the Communist pressures appear temporarily eased upon Berlin, and our own national prestige is not presently under attack in that part of the world, it is the time for us to seek some sort of resolution of the Berlin problem.

It would seem particularly appropriate at this time, when our Government is once again holding discussions with the Soviets on Berlin. Another session is scheduled to be held in the next few days, and I for one hope that our negotiators will at long last take the diplomatic initiative.

It is very much in our national interests to do so, since there is no situation in the world today where our forces and our flag occupy a more vulnerable position than in this island of freedom surrounded by Communist East Germany. And to seize the opportunity now when a few cracks seem to be appearing in the monolithic Communist structure might be particularly good from the viewpoint of our own American national interest.

The United States has naturally always wished that there would be an abatement of the German problem and more particularly of its more acute, though tributary, Berlin problem. We have a lot to lose there, and little to gain. But the problem has been that in order to secure an easing of tensions, a detente, both parties to the dispute must desire it.

This has not been the case since the Soviets, through their East German puppets, have intentionally created each of the various crises that have occurred in Berlin. Now, though, the position appears a little changed.

The Kremlin actually expressed interest that discussions on Berlin take place, both last January and just a month ago.

The reason for this Soviet effort toward an easing of tensions may result from their problems with Peiping. It may result from the very real fears of the holocaust that would be World War III; fears which must be in the Soviet mind when they saw what almost happened as a result of their clumsy efforts to change the nuclear balance of power in Cuba last October. Or it may be the final realization of Khrushchev that his country, too, has more to gain through peace than war.

But, no matter what the reason, it would appear that for the first time since World War II the Soviets genuinely desire some sort of negotiations leading to an easing of tensions in Berlin. Then, too, let us recall Pope John XXIII's plea to all rulers at the time of the Cuban crisis:

> To promote, favor and accept negotiations, at all levels and at all times, is a rule of wisdom and prudence which calls down the blessings of heaven and earth.

Now, let us briefly examine what are our own national interests there. Our national interests are the preservation of the freedom, of the liberty, and of the economic viability of West Berlin, along with our right of garrisoning West Berlin and, most important, our right of land access. At the moment, we have all of these except for the question of the right of access. And here, as a result of the somewhat fuzzy agreements drawn in good faith at the end of World War II, we did not press for any rights of specific land access to Berlin, instead preferring to have rights of general access. Moreover, the West Germans right of land access to Berlin is presently subject to the whim of the East German authorities, a matter of very real concern to the Federal Republic.

---

[71] Ephesians, ii, 14–17.

[72] Responses to matins on the Friday after Easter.

[73] St. John, xiv, 27.

What we must gain in any resolution of the Berlin problem is a clearly defined corridor of land access to West Berlin, backed up by ironclad guarantees for the freedom of West Berlin together with the West's complete freedom to garrison West Berlin. To achieve these ends, we can afford to acknowledge the continuing existence of the two German governments and agree upon the Oder-Neisse frontier. Such an agreement must equally spell out the right of land access to Berlin. In so doing, we would profit, since we would have gained what we have never yet had, the West's clearly defined and mutually agreed upon right of land access to Berlin, while the Communists would not have gained control over a single human being or a single square inch not already under their rule.

We would have gained in another way, too, since our present policy has led us to the ironic policy position that we depend upon the Russians staying in East Germany. Why? Because we refuse to deal with the East Germans, the de facto government of the area. By this refusal we strengthen the Soviet position that, not only do they want to remain in East Germany, but the United States makes it impossible for them to do otherwise.

The thought of a specific land corridor brings back distasteful memories of the Polish corridor, which proved impractical. In this case, though, the road highway from Berlin to Helmstedt in Western Germany could be internationalized in accordance with the suggestion of President Kennedy last spring. And, because there are 79 overpasses and 65 underpasses along this 110-mile highway, there would be virtually no interference with the economic life of Eastern Germany. Specifically, these overpasses and underpasses include not only roads that traverse the highway but also 21 railroads. To my mind, the West and West Germany would gain an immense amount if this highway could be pinned down as its road of access.

There are additional steps that could be taken, too, to help cool the temperature. The thought has been advanced of moving the United Nations headquarters to Berlin. I think that would be a bit difficult and extreme. However, there is no reason in the world why the European headquarters of the United Nations, presently at the Palais des Nations in Geneva, and the United Nations Educational, Scientific and Cultural Organization, presently in Paris, should not be moved to Berlin, preferably East Berlin. But, no matter if they were in East Berlin or West Berlin, the presence of these United Nations' bodies would have a cooling down effect upon the political temperatures in all of Berlin.

While the cruel Berlin wall is a permanent reminder of the failure of the Communist empire to retain the loyalty of its subjects, the present thinking in West Berlin is concentrating more upon amelioration and the improvement of conditions for the Germans on the other side of that wall. Of particular interest to the Berliners would be the seizing of the initiative in pressing far more vigorously for a relaxation of the Communist controls at the wall. As it is, East Berliners cannot cross to West Berlin to attend burials—only the coffin with its dead body is permitted through.

An additional cooling-down thought here, and a way of strengthening Mayor Willy Brandt's hand, would be to work out a revised status of forces agreement with West Berlin whereunder our American, British, and French forces would be garrisoned in West Berlin at the invitation of the West Berlin Government.

A further step in this direction would be to take the initiative in suggesting to the Communists in Berlin a mutual slacking off of propaganda and intelligence operations in each other's territory, in both East and West Berlin.

Along the lines of the cooling down of temperatures and the amelioration of relations between East and West would be the legitimization of today's almost half billion dollars worth of annual trade that exists between Western Germany and Eastern Germany.

Actually, the West German Government is presently making efforts to normalize its own relations, especially its trading relations, with the satellite nations behind the curtain, particularly with Poland, Czechoslovakia, and Hungary.

Moreover, a reduction of tensions in Germany could result in a considerable reduction in the United States present adverse balance-of-payments position since at this time we are presently spending more than $50 billion a year in defense and supporting more than 400,000 men in Europe. All the other NATO members put together are spending less than $20 billion a year, none of them have a longer draft period, only two have as long a draft period and all the rest have either shorter draft periods or no draft at all. In addition, too, perhaps we could participate in some of the more than $4 billion trade in consumer, nonstrategic goods with the Soviet bloc which our NATO allies find so profitable.

Now, let us examine this question of a unified Germany. Some day, it will come. But, when that happy day comes, there will, in itself, no longer be a Berlin problem.

In fact, it is high time that we faced the impossibility of having a peacefully unified Germany in the near future. The present actual impossibility of unifying Germany is perceived by nearly all Europeans, Western and Eastern, many Americans, and quite a few Germans, though this thought is rarely uttered in public. Why? Because, as so often happens in democracies, when we come to questions of foreign policy, we become frozen in our position. Discussion of a change in direction becomes most difficult and, at times, very unpopular.

Yet, we should bear in mind what Lord Palmerston once said:

> We have no eternal allies and we have no perpetual enemies. Our interests are eternal and perpetual and those interests it is our duty to follow.

This means that policies must be determined by national interests, that national interests can and do change in a changing world, that it is the national interests which must be followed and which must determine policy and that the policies in themselves are not immutable. This sound advice should certainly apply to our American policy towards Germany. We must always ask ourselves the question, "where lies our American national interest?"

Original Western support for the concept of a unified Germany was based on the assumption that such a unified Germany would be neutral and would have neither arms nor the potential for making arms. When in September 1946, Secretary of State James Byrnes, in his "hand of friendship to Germany" speech expressed our national support of a unified Germany, the world had not yet become so polarized between the East and the West. We thought then that the unified Germany of the future would be a peaceful, unarmed Germany in a world at peace. Also, at that time, we hoped that we and the other nations of the world would disarm. We had proceeded to do so and had virtually dismantled our Armed Forces. But, the Soviets did not follow suit. Since then, we have had to rearm with the result that the death-dealing and destructive potential of weapons available to both West and East has increased fantastically.

More paradoxical, since 1954, we have urged the West Germans to build up their armed forces. With our support, they have established a strong army of 11 divisions of 253,000 men. It is actually the most effective and powerful land contribution to NATO and, excluding the Russians, the most powerful ground force in Europe. The West Germans also have a navy of 177 ships and 28,000 men and an air force of 90,000 men.

By the same token, East Germany has become the second leading industrial satellite nation today with an estimated gross national product of $19.5 billion in 1961, or $2 billion less than that of its leading satellite rival, Poland. It also has become a military power of some force with an army of approximately 200,000 or more, a 14,000-man navy and an air force of 10,000 men.

The present armed state of both East and West Germany is an existing fact. Moreover, in this time of world pressure, it is unlikely that any alliance will consent to give up any significant portion of its arms until the tensions between the East and the West have abated. The NATO nations certainly will not want Western Germany, the very bulwark of its land forces, to withdraw its troops from their strength. Nor will the Warsaw Pact nations, the Communist nations, permit East Germany, with all its industrial and military resources to withdraw from the Communist orbit. In any event, it is a fact that nature abhors a vacuum, particularly in times of crisis. Hence, it is not likely that either the United States or the Soviet Union, the Western alliance or the Eastern bloc, will agree on a disarmed, neutral Germany.

This being the case, would it not be better if we faced and accepted the fact of two separate German Governments until hopefully the international situation evolves to a more peaceful, temperate point where we can get agreement on a single, unarmed and democratic Germany?

Then, too, whenever the question of a rearmed and reunified Germany is discussed, there looms like a cloud in the back of our minds, the recollection that Germany has engaged in three aggressive wars within the past 100 years. Unfashionable as it is to mention today, this is a fact very much in the European mind. It is one of the reasons, too, for the general acceptance of the fact that Germany should not have nuclear weapons. From a long-term viewpoint, though, no one nation can be permanently pointed out in this connection, no matter what her history or whether or not she won or lost a war. Accordingly, there must be continued and strong emphasis on our present policy to prevent proliferation of those nations with the atomic weapons. This is perhaps the most important single policy that we and the Soviets share.

In Eastern Europe, the malaise concerning German rearmament is especially true. The people in the Eastern European countries, particularly Poland, Russia and Czechoslovakia, have almost traumatic fears of German rearmament. The fact that these fears are vociferated by the Communist governments of these countries does not obliterate the fact that the fears of these Eastern European people are genuine. They are fears derived not only from their brutal experiences and memories in World War II, but from centuries of prior unhappy attack and occupation by Germans. We must recognize the fact that the Eastern Europeans still fear the Germans even more than the Russians. The Poles know, too, that some of the West Germans calling most loudly for unification are thinking in terms of the next step, the regaining of the former German territories under Polish rule. For good or bad, only Poles live today in the Oder-Neisse Territories, scarcely a German is left there. Yet, even Dr. Adenauer recently said, "The Oder-Neisse line is not Germany's eastern frontier." Any attempt at reconquest by Germany certainly would produce a war with the Poles and probably turn Europe into an inferno.

A more strident West German minority has a third step in mind, the regaining of the Sudetenland in Czechoslovakia.

But, many Germans are aware of the dangers inherent in a reunited and armed Germany. In fact, the Social Democrats in 1959 advanced the Deutschland plan which accepted the Oder-Neisse frontier. Recently, Klaus von Bismark, director of the North Rhine-Westphalia radio and grandson of the famous Iron Chancellor, and seven other leaders of German public opinion, advocated for the time being, the acceptance of the present West German boundaries and suggested that the emphasis of German policy be directed more toward the amelioration of conditions in East Germany and toward bringing more freedom to the East Germans, rather than upon reunification.

Historically, Germany has existed as a single country, united within her early-Hitler borders, for only one hundred of the past thousand years. Actually, if history and culture are to be used as criteria, West Germany has a greater affinity with Austria than with East Germany. They have certainly more cultural and social ties in common.

But, when thinking about Germany or any other problem in our world today, our paramount consideration must be that the Communists are the present main threat and danger to our lives and to our very civilization. The Communists are our No. 1 enemy, we are their No. 1 target. Those Communists who have the least to lose, like the Red Chinese, may well believe that war is their best means to attain world domination. Those with more to lose like the Soviets, and their satellites while still wanting world domination, may be more anxious to avoid war. In connection with the Communist threat, there are those in the West who believe that a rearmed and reunified Germany is the best bulwark against the Soviets. I submit that this is not necessarily the case. Twice before in the last half century, the Germans have made arrangements and understandings with the Kremlin so that they could concentrate their efforts on the West.

First, there was the Rapallo Agreement of 1922 and then the Ribbentrop Agreement of 1939. Perhaps, if there were a reunited and rearmed Germany with an awakened sense of lebenstraum, this could happen again.

Accordingly, I think we should give our present policy toward Germany a critical reexamination with a view toward acceptance of the fact that Germany is divided as long as we have not reached the millennium of a world and a time when we can achieve a unified, unarmed Germany. From a tangible viewpoint, does such a de facto acceptance of a divided Germany give the Communists control over a single additional person or square inch? No. Nor would such action preclude our continuing to seek a solution for Germany which would result in the unified and unarmed Germany for which we all hope and where all its people might exercise their democratic rights.

Moreover, recognition of the Oder-Neisse frontier would have an exhilarating impact upon the Poles and a Pandora's Box effect of potential trouble and unrest for the Soviets. At present, while President de Gaulle has accepted the Oder-Neisse frontier, only the Communist countries formally recognize Poland's 283-mile western frontier. This recognition is highly important in influencing the ties of Poland to the Kremlin. If the West recognized the Oder-Neisse frontier as well, one of the main bonds tying Poland to Russia would have been cut. Poland's own restiveness and basic anti-Russian feelings could soon produce vehement outbursts against the Soviets.

Actually, de facto acceptance of East Germany and recognition of the Oder-Neisse line in exchange for concrete agreements for clearly defined land access to West Berlin and ironclad guarantees of its freedom would serve to hasten the day when a unified, neutral, disarmed, and democratic Germany might be achieved. For, if these steps were taken, they would result in the relaxation of tension and alleviation of the anxiety of Europeans, Western or Eastern, friend or foe, that is the first condition for such unification.

We would have gained something we do not now have, specific land access to Berlin. And the Communists would not have gained dominance over a single person or area they do not now control.

We and the whole free world would be the gainers.

Mr. MANSFIELD. I compliment the distinguished Senator from Rhode Island for the all too few speeches he makes in the field of foreign policy. I say all too few because I know of his splendid background, his training in the field of diplomacy, and, from personal observation, his interest in the affairs of nations outside our own country.

The distinguished Senator has raised for consideration and possible negotiation the question of access roads to Berlin, not only north and south, but perhaps east and west as well, and not only on the land, but perhaps in the air also.

He has raised the question of the Berlin wall.

He has also raised the question of the possibility of moving certain subsidiary elements of the U.N. to Berlin, where they would become headquarters for this organization.

He has gone beyond the question of Berlin and has discussed the possibility of a unified Germany; or perhaps I should say, in his opinion, at the present time, the lack of the possibility of a unified Germany.

He has discussed the question of the Oder-Neisse line and the relationship of that line of demarcation to modern-day Poland.

He has also impressed upon the Senate the ever-present Russian fear of a revived and reunified Germany.

There are many questions which the Senator has raised and which are worthy of consideration and worthy of negotiation.

In commending him for his courage and straightforwardness in making his views known and laying the groundwork for possible negotiations, would recall to his mind the statement of President Kennedy in his first inaugural address, when he said:

> We should never fear to negotiate. But we should never negotiate out of fear.

Again, I commend the distinguished Senator from Rhode Island.

Mr. PELL. I thank the Senator from Montana.

Mr. HUMPHREY. Mr. President, I desire to join in the compliments being paid to the junior Senator from Rhode Island. I do not know of a single Member of this body who has a greater knowledge of foreign policy and foreign relations than does the Senator from Rhode Island. I hope to see the day when the Senator from Rhode Island will be a permanent member of the Committee on Foreign Relations. He is at present a member of the Subcommittee on International Organizations, and I know that he will make a distinct contribution to the work of that subcommittee and the work of the Senate.

The junior Senator from Rhode Island has a willingness to venture into complex, controversial areas of policy, and to do so in a manner that is constructive and thoughtful and which lends itself toward solution. I compliment him.

It is not a question of the individual views which the Senator expresses or the policy position he takes. The most important thing is that the Senate consider the proposal along the lines he has advanced.

Mr. MORSE. Mr. President, I am very happy to have yielded to the Senator from Rhode Island, because it afforded me the privilege of listening to his speech. I commend him for his thoughtful and thought-provoking remarks. His speech very well forms the basis for a considerable amount of discussion both in the Committee on Foreign Relations and in the State Department.

THE PROMOTION OF THE ARTS

Mr. JAVITS. Mr. President, the senior Senator from Minnesota [Mr. HUMPHREY] has today introduced a comprehensive bill with respect to the arts of the country and has done me the honor of including in his bill the text of a bill I have sponsored ever since I have been a Member of the Senate to provide for a U.S. Arts Foundation.

I wish to emphasize that I know of very few areas of domestic concern which more urgently require the consideration of Congress for the benefit of the morale of our people, as well as the fruit of all we are working for and fighting for, than the progress of literature and music in our Nation.

The bill, which I consider to be a splendid amalgam of what the Senator from Minnesota would like to see in the form of an Advisory Committee on Arts and what I would like to see in the form of a U.S. Arts Council, is splendidly combined. I urge upon the Senate the early consideration of the proposed legislation.

It will be a proud moment in our country, indeed a moment of maturity, when the bill shall be passed. The Committee on Labor and Public Welfare reported it favorably at the last session, with the kind help of the Senator from Oregon [Mr. MORSE], the Senator from Rhode Island [Mr. PELL], and other Senators, but it did not reach a vote because of the lateness of time when the bill was reported.

I am hopeful that the bill of the Senator from Minnesota [Mr. HUMPHREY], which really brings the matter to a pitch of perfection in terms of legislative draftsmanship and a combination of ideas, will again be favorably reported; and I sincerely hope that the Senate will consider it favorably this year.

ADVISORY COMMISSION ON INTERGOVERNMENTAL RELATIONS, FOURTH ANNUAL REPORT

Mr. MUSKIE. Mr. President, the Advisory Commission on Intergovernmental Relations has submitted its fourth annual report to the President of the United States, the Vice President, and the Speaker of the House of Representatives. Senators will recall that in 1959, the Congress enacted Public Law 86–380 which established an Advisory Commission on Intergovernment Relations. The Commission, as constituted by Congress, has seven basic purposes:

First, to bring together representatives of the Federal, States, and local governments for consideration of common problems;

Second, to provide a forum for discussion of the administration of Federal grant programs;

Third, to give critical attention to the conditions and controls involved in the administration of Federal grant programs;

Fourth, to make available technical assistance to the executive and legislative branches of the Federal Government in the review of proposed legislation to determine its overall effect on the Federal system;

Fifth, to encourage discussion and study at an early stage of emerging public problems that are likely to require intergovernmental cooperation;

Sixth, to recommend, within the framework of the Constitution, the most desirable allocation of governmental functions, responsibilities, and revenues among the several levels of Government; and

Seventh, to recommend methods of coordinating and simplifying tax laws and administrative practices to achieve a more orderly and less competitive fiscal relationship between the levels of Government and to reduce the burden of compliance for taxpayers.

In carrying out its responsibilities, the Commission has been composed of representatives of each level of Government and from the legislative and executive branches thereof. I was privileged to be one of the principal sponsors of the legislation establishing the Commission, and it has been a distinct pleasure to serve as a member of the Commission since its establishment. The senior Senator from North Carolina [Mr. ERVIN] and the senior Senator from South Dakota [Mr. MUNDT] have also served on the Commission since its inception. On the House side, Mr. FOUNTAIN of North Carolina, chairman of the Intergovernmental Relations Subcommittee of the House Committee on Government Operations and the original sponsor of the bill creating the Commission, as has his colleague on the subcommittee, the gentlewoman from New Jersey [Mrs. DWYER]. Mr. KEOGH, of New York, is the third House Member on the Commission.

A year has elapsed since the submission of the Commission's third annual report. I think it appropriate to inform the Senate of how the Commission has been progressing since that time, and of the extent to which it has been measuring up to the responsibilities placed upon it by the statute. I will give today an overall report on the Commission's work; subsequent reports on particular subjects will be placed in the RECORD by other Members of Congress or by me, depending upon the subject matter involved and our respective interests in it.

At the outset, I should again like to pay tribute to the very able chairman under which the Commission has proceeded—Mr. Frank Bane of Virginia, a man known to many Senators for his lifetime career of work and leadership in Federal, State and local governments. He was appointed the first Chairman of the Commission by President Eisenhower and last year was reappointed for a second term as Chairman by President Kennedy.

The Commission, in addition to the six members from the Congress, has three members from the executive branch—the Secretaries of the Treasury and Health, Education, and Welfare, and the Administrator of the Housing and Home Finance Agency. Its other membership includes four Governors, four mayors, three State legislative leaders and three elected county officials. In addition to the Chairman, the general public is represented on the Commission by two other members.

The Commission has been assisted in its undertakings by an excellent professional staff which is under the able supervision of the Commission's Executive Director, Mr. William G. Colman. With 7 new appointments, the total staff was brought to its full 25-man complement.

It has been a stimulating experience for me to work with the distinguished people who have served on the Commission and to discuss and debate major questions of Federal-State-local relations with them. During the course of last year, the Commission published three new reports which were primarily of an informational nature and which did not require legislative or executive implementation. These technical studies which have been made available in order to provide much needed reference material to State and local governments, include:

First. "Factors Affecting Voter Reactions to Governmental Reorganization in Metropolitan Areas," Report M–15, May 1962;

Second. "Measures of State and Local Fiscal Capacity and Tax Effort," Report M–16, October 1962; and

Third. "A Directory of Federal Statistics for Metropolitan Areas," Report M–18, October 1962.

General meetings of the Advisory Commission were held last year on May 4–5; June 28–29; October 10–12, and December 13–14. During the course of these sessions, five reports inquiring implementary action were considered and acted upon. These reports are as follows:

First. "Alternative Approaches to Governmental Reorganization in Metropolitan Areas," Report A–11, June 1962;

Second. "State Constitutional and Statutory Restrictions Upon the Structural, Functional, and Personnel Powers of Government," Report A–12, October 1962;

Third. "Intergovernmental Responsibilities for Water Supply and Sewage Disposal in Metropolitan Areas," Report A–13, October 1962;

Fourth. "State Constitutional and Statutory Restrictions on Local Taxing Powers," Report A–14, October 1962; and

Fifth. "Apportionment of State Legislatures," Report A–15, December 1962.

The Advisory Commission's reports have been widely distributed and have received considerable attention from Federal, State, and local legislative and administrative officials and from the professional, business, and academic communities. Five of the 1961 reports and one of the 1962 studies were reprinted last year in order to meet the demand.

I am sure Senators will be interested in what is taking place as a result of the Commission's reports. The Commission, as a continuing national body, is not content with merely making studies and recommendations. Commission members want to see the recommendations put into effect and have devoted considerable attention to following through in behalf of their recommendations in terms of legislative or administrative action. Permit me to summarize briefly what has happened in regard to the Commission's recommendations for action at the Federal and State levels.

Of the 13 recommendations requiring congressional action that were advanced in 1961, 6 have now been enacted into law and 1 has received executive implementation. Four of these proposals coincided with provisions subsequently incorporated into the Housing Act of 1961. These included: Expanded financial support for metropolitan planning agencies; Federal technical assistance to State and local urban planning; congressional consent in advance to interstate compacts for metropolitan area planning, and Federal financial assistance for mass transportation. The passage of Public Law 87–870 during the 2d session of the 87th Congress, in which I was proud to play a part, marked a clear-cut instance wherein the Advisory Commission assumed a major role in generating support for its recommendations. This legislation, among other things, provided for: (a) admission of State and local tax personnel to Internal Revenue Service training programs; and (b) the authorization for the performance of statistical and other services for State tax agencies. The most recent implementation of one of the Advisory Commission's 1961 proposals came through administrative action, rather than by legislative enactment. On December 14, 1962, in his testimony on the role of the Federal Government in metropolitan areas before the Senate Subcommittee on Intergovernmental Relations of the Committee on Government Operations, the Honorable Robert C. Weaver, Administrator of the Housing and Home Finance Agency, announced that HHFA had just revised its policies in administering section 701 of the Housing Act of 1954 so as to provide for continuing assistance to metropolitan planning agencies, as well as to other planning agencies eligible under this program. In response to my question as to whether this action would implement the basic purpose of S. 3362 which incorporated the Advisory Commission's recommendation for continuing financial support for comprehensive planning in metropolitan areas, Mr. Weaver reported:

> Yes. We recognize that comprehensive planning is a continuing process which does not stop when one over-all plan has been prepared. I am advised that we do have the authority to provide grants to support certain and continuing planning functions in the comprehensive planning process and we intend to use this authority to strengthen the activities of planning agencies. * * *

The Housing and Home Finance Agency and its esteemed Administrator are to be congratulated on this implementary step.

The items remaining from the 1961 agenda for congressional action are: (a) review of Federal grant-in-aid applications by metropolitan planning agencies; (b) revision of Federal estate tax credit for taxes paid to States; (c) authorizing transfers of funds among public health grants and provision of a standard allocation formulated for such grants; (d) provisions for retrocession of exclusive Federal jurisdiction of various Government lands and properties; and (e) providing uniform congressional policy and procedure under which all new grants-in-aid would be examined periodically. Bills to carry out these various recommendations are in the process of being, or already have been introduced in this session of Congress.

Since most of the Advisory Commission's 1962 action reports had a State and local emphasis, only three of last year's recommendations require congressional implementation. These include: (a) Amendment of the Water Pollution Control Act of 1956 to provide, first, an additional matching incentive for the development of sewage disposal facilities on a regional or area-wide basis; and second, an increased dollar ceiling in Federal grants to larger cities for sewage treatment works;

(b) Amendment of the statute governing public facility loans program of the Housing and Home Finance Agency to permit, first, communities of 50,000 or more to qualify for sewer and water loans, and second, the joining together of communities with an aggregate population of over 50,000 for purposes of such loan assistance; and (c) amendment of statutes governing the FHA mortgage insurance program and the home loan program of the Veterans' Administration to, first, tighten eligibility requirements for individual well and septic tank installations, and second, include as insurable site preparation and development costs of water and sewer lines and systems.

Despite the relative recency of the report on "Intergovernmental Responsibility for Water Supply and Sewage Disposal in Metropolitan Areas," its recommended amendment of the Water Pollution Control Act of 1956 has already been incorporated into bills filed in this session: S. 649 and H.R. 3166—Representative **Blatnik**, Democrat, of Minnesota. The two remaining proposals are receiving the preliminary analysis necessary for their later introduction.

Of the Advisory Commission's 21 recommendations for State legislative action, 10 have been developed into draft bills and 1 into a proposed State constitutional amendment. The draft proposals cover: (a) establishment of a State office of local affairs; (b) authorization for voluntary transfer of functions between municipalities and counties and vice versa; (c) authorization for interlocal contracting and joint enterprises; (d) authorization to local governments to invest idle funds; (e) authorization to secure and preserve "open spaces"; (f) establishment of State responsibilities for mass transportation in metropolitan areas; (g) authorization of establishment of metropolitan function authorities; (h) authorization of establishment of metropolitan area planning commissions; (i) authorization to municipalities for exercise of extraterritorial powers; and (j) regulation of new municipal incorporations.

The draft constitutional amendment is concerned with the removal of constitutional barriers to intergovernmental cooperation.

The Council of State Governments has approved 9 of these draft measures and 9 of the 10 policy recommendations. These have been included in the council's 1963 legislative program. Both the Governors' conference and the National Association of Counties have endorsed 14 of the advisory commission's 21 State legislative recommendations. The American Municipal Association has passed resolutions approving 18 of the proposed bills and the U.S. Conference of Mayors has formally taken action in favor of 10. The State Legislatures of Kentucky, Oklahoma, Oregon, Minnesota, and Michigan have enacted or are in the process of considering one or more of these draft measures.

The Commission has performed other activities in 1962 in order to carry out its statutory responsibilities for technical assistance in the review of proposed legislation and encouraging discussion of emerging public problems. Members and staff of the Commission made presentations at the 1962 conventions of the major organizations of government officials and of other groups concerned with the intergovernmental aspects of public policy issues, taxation and finance, and urban area problems. Comments and advice were rendered to the executive branch and Congress on certain pieces of proposed legislation affecting Federal-State-local relations. During the year, consultations have been held between the Commision staff and Federal and State officials in an attempt to broaden the scope of administrative cooperation at these government levels.

In concluding, I am happy to report that during the last calendar year the Commission has demonstrated its ability to accomplish four things: (a) To focus its attention on selected issues and to face up to and take definite positions on them; (b) to prepare and distribute eight reports that have brought forth approval as to both their intellectual caliber and commonsense; (c) to secure widespread formal support from various organizations of State and local officials; and (d) to help secure the enactment of two of its recommendations requiring congressional action and executive implementation of another Commission proposal, thus bringing the record of Federal implementations to seven; and to effect an implementation of three of the Commission's recommendations for State legislative action. One is embodied in the Kentucky Interlocal Cooperation Act and the others in two provisions of the newly proposed Michigan constitution.

The Commission has been able to do these things with a reasonably small staff and without internal or external repercussions or recriminations. It is important to note that members of the Commission have not divided into blocs in considering the issues with which they have been confronted.

The major problems still confronting the Commission are threefold. Despite increased public awareness of its work, the Commission still has not received the widespread publicity in national periodicals and in newspaper coverage that its work warrants. Second, the significant contribution that the Commission has made to the body of literature dealing with intergovernmental relations has yet to have the kind of legislative impact that the Commission desires. Finally, although increasing somewhat, the Commission still is doing relatively little to discharge its statutory responsibility of assisting the executive and legislative branches of the Federal Government in the "review of proposed legislation to determine its overall effect on the Federal system."

Despite these shortcomings, I think it will be agreed that the positive accomplishments of the Advisory Commission constitute a commendable record for a body that has existed for such a very brief time. I confidently predict that its effectiveness will continue to grow.

SECRETARY OF DEFENSE ROBERT McNAMARA

Mr. MUSKIE. Mr. President, several committees of both the House and Senate are deeply involved in questions of defense policy, the structure of our Department of Defense, and the organization of our Armed Forces. At the center of every such inquiry is the Secretary of Defense, a man of great intelligence, immense capability, force, and integrity. Secretary Robert McNamara is a decisive man. He is, therefore, a controversial man.

I know that many Senators are concerned with several areas of defense policy and decisions. Therefore, I think, it is important to bring to their attention an important and penetrating article entitled "Revolution in the Pentagon," written by Theodore H. White, and published in the April 23 issue of Look magazine. Mr. White is a distinguished reporter and author. I am sure Senators will find his observations enlightening and helpful in considering the problems of the Pentagon and the kind of administration which Secretary McNamara is directing. I ask unanimous consent that the article be printed in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REVOLUTION IN THE PENTAGON

(By Theodore H. White)

No office in Washington receives a visitor more peacefully than the Office of the Secretary of Defense.

This tranquil chamber—white-walled, high-ceilinged, beige-carpeted—calms the visitor as much with its vast dimensions as with its hush. Certainly, it gives no hint that this is the most dangerous of all the ornate command posts of Washington leadership.

Yet it is. Eight Secretaries of Defense have occupied this post. One or two survived the ordeal with vigor and honor. But for the most part, here famous captains of industry have been stripped of magic and sent home, ham-fisted politicians defeated, great national heroes gutted of their vitality. And one, his reason cracking under the strain that pulses here, jumped from a window and killed himself.

This is, therefore, a room of peril. Yet no foreign enemy creates the peril—it is shaped by dedicated Americans whose imagination, will, and passion clash at peak intensity in this room over the policies the Secretary of Defense must set. For more than 15 years, until now, no one has been able to say who was master of the forces gathered here.

There is little to tell the roving eye that today matters have changed in this room. The paint has been freshened; the battle paintings on the wall have been replaced by color blowups of the High Sierras. A cheap black-and-white Rouault print, crudely pasted to the glass of its frame, is a new touch at this level of American command. But the Rouault faces a man who sits, as all the Secretaries of Defense have sat, behind the same 8½-foot-long General Pershing desk. Beyond him is the traditional General Sherman table. The remorseless wall clock, with its sweep hand and its chart, marks the same globe-girdling problems that tormented his predecessors—problems ranging from CINCEUR in Paris (operating on ZULU time plus 1, which is 6 hours later than Washington time) to CINCPAC in Hawaii (on ZULU time minus 10, 5 hours earlier than Washington time). time).

The change in this room can be measured neither in decor nor in charts, for this room disposes of power, and the nature of power is that it is felt—not seen. No sign announces here that the striking force of America's homeland reserve has tripled in 2 years, while abroad its political response has changed from 1961's nervous search for compromise in Laos to 1962's hammer blow poised to frustrate Khrushchev's Cuban attempt.

The man who has captained this change—Robert Strange McNamara, eighth Secretary of Defense—is already, after the President and his brother, the most important man in the American government. Power becomes him—gravely and easily. As you walk across the long Mussolini-sized room to visit Robert McNamara, you find the Secretary's eyes fixed on what he is reading, his left hand penciling the tiny cramped handwriting now famous in the Pentagon. He does not lift his eyes until you are right there standing before him. This, of course, is disconcerting. It will also be disconcerting when he silently dismisses you by dropping his eyes to the memorandum you interrupted. But this is McNamara, the man in white shirtsleeves, the IBM machine with legs, the man whose brown eyes behind the rimless, oval-cut eyeglasses are emotionless.

It is difficult to associate this McNamara with the man who, pacing the large room late one night during his first few weeks in office, burst out, "I tell you this place is a jungle—a jungle." It is difficult also to associate the muscular quality of the tall body, the high, inflectionless voice, the slick black hair with the surgical quality of his thought. It is, lastly, difficult to associate this McNamara with the bubbling-charming evening McNamara, one of the most completely engaging dinner companions on Washington's inner social circuit. But the evening McNamara must wait on the man behind this desk, for the daytime McNamara is an artist of a particular kind who has, after 2 years, created news that should now be recorded.

First, the civilian authority in American Government has won full control of the power of the Pentagon.

Second, American striking power is in a historic process of multiplication and change.

Third, the purpose and use of this power have been redefined.

These are developments of vast importance. Translated into simpler language, they mean that if America's leaders invite Americans to die in battle or under bombardment in the next few years, it will be by reasonable decision, rather than by accident or spastic reaction.

This may seem like a simple achievement. But to explain how it happened is a complicated story, reaching back through 15 years of merciless strife and chaos, as generals, admirals, scientists, and statesmen—all seeking American security—set their hands, one against the other, in the corridors of this building.

The story starts in 1945 with the destruction of the U.S. Army in its hour of triumph. Americans did not demobilize their magnificent Army, they destroyed it. So swift and chaotic was the dismantling of the Nation's force around the world, as homesick GI's rioted from Marseilles to Manila, that all prospect of a reasonable and expectable balance of strength with the war-weary Russians evaporated in a few months. American ground power ceased to exist. So did the airlift and mobility that made this power global. Ten months after V–E day, the 3.5 million Americans (68 combat divisions) in Europe had shrunk to 400,000. The 149 American air groups that had reduced Germany to rubble were sinking to their nadir of two combat wings; and in all the United States, the combat backup of this force was 90 bombers, 460 fighter planes—and only 175 first-class pilots to man them.

Seized with the belief that the world was at peace, Americans cut their arms budget to a low of $9.7 billion (which, in 1948, maintained only one combat division in Europe). Within the confines of this ever-contracting budget, America's generals and admirals swiftly learned to fight first over money, then over strategy.

The Korean war reversed matters momentarily. But once it was over, American ground power again shriveled. And since no reasoned strategy could rest on a ground force whose combat strength shot up and down like a yo-yo (from 12 divisions in 1950 to 23 in 1952 and 14 in 1960), American strategy, by default, began to tailor itself to a single new instrument, SAC—the Strategic Air Command, which sheltered all the Western World with its ability to wipe out Russia.

SAC was a reflection of the scientific, rather than political, "input" in Pentagon thinking. While the world abroad went from political explosion to more dramatic political explosion, American science went from technological breakthrough to more dramatic breakthrough, pouring the most dazzling developments into SAC. Nuclear physics leaped from fission to fusion bombs; new transistors invited ultra-swift new computers; these, wedding to rocketry development, ushered in the age of intercontinental missiles. The weapons they spawned created industries, then entire communities, dependent solely on weapons-systems decisions in Washington. Strategic decisions became live-or-die sentences for communities (from Suffolk County, N.Y., to San Diego, Calif.) whose political and industrial leaders intruded in the squabbles of the Pentagon.

The most experienced leadership would have had difficulty in absorbing such a torrent of "input." But the Pentagon from 1947 on was under new management. In 1947, Congress decided to make the Army, Navy, Air Force all equal and to place over them an instrument and a man entirely new to U.S. history—an Office and a Secretary of Defense—to "coordinate." What "coordinate" meant, Congress never defined. As if giving each nominee a "may-the-best man-win" sendoff, it ratified seven successive Secretaries, and tossed each of them into the Pentagon ambuscades to explore what his true authority was.

The game, as it was played, could have been called: "Who's Boss Now?" Who really directed American military posture—civilian or military, amateur or professional? Who had the right to make what claim on America's total resources? For what defense purposes?

It was a lethal game. James Forrestal, a fragile man, was the first Secretary at bat. Neurotic, he thought of himself as being beaten by the uniforms and jumped to his death. Only in retrospect has he come to be recognized as a truly creative boss. After Forrestal, on the other hand, apparent victors in the game turned out to be Pentagon patsies. The toughest civilian team installed in the Pentagon was that of Charles E. (Engine Charlie) Wilson and Roger Kyes, both imported from General Motors. Pentagon generals still wince at the remembered rudeness of Wilson, and Kyes' treatment of one general is legendary. "I didn't come down here to shovel snow," said Kyes to the general. Then, bending over, he flicked the general's stars and continued, "I came down here to pluck stars." But such apparently "tough" civilians could be briefed, flattered, outwitted and finally absorbed by generals and admirals who systematically study all leadership patterns among men, from Red Square to Wall Street. By the end of the Eisenhower administration, control of American strategy lay not in the hands of civilian leadership, but in the hands of the uniformed Chiefs of Staff.

This was tragedy. The duty of a Secretary of Defense is to get out of the Pentagon that kind of power which best advances the policies of America over the turbulent globe. If the Secretary fails to interpret to the Pentagon what kind of power his President wants, then power makes its own rules and strategy, like an inertially guided missile that moves only by interior technical reference.

This was tragedy, most of all for generals and admirals. The decay of civilian leadership should have made them happy. But it did not. They could no more agree among themselves as to what was a right and proper American military effort than could a college debating society. Year in, year out, in gross and detail, the Chiefs of Staff battled each other over disposition of American resources. Occasionally, their bitterness and anguish burst into the open—as when a general publicly denounced the admirals before Congress as "Fancy Dans." Occasionally, two services ganged up on a third—as happened in 1956, when the Air Force and Navy agreed to all but abolish the Army, reducing it to a civil defense police force at home and a number of atomic task forces abroad. (A calculated Army press leak exploded that plan before it got off the ground.) Occasionally, civilians, too, were destroyed—as when the Air Force shot down Robert Oppenheimer, the genius who tooled the first atom bomb, because it suspected him of forcing the Air Force to share its monopoly of atomic weapons with the Army and Navy.

Gradually, a pattern developed. Within the Air Force, the elite corps of SAC dominated thinking, and the Air Force thus spoke for the strategy of "massive retaliation," a strategy pleasing to both the most ferocious and most economy-minded American political thinkers. The Army spoke for a strategy of "flexible response," pleading, through spokesmen like Maxwell Taylor and James Gavin, for the manpower and equipment to face the changes of a changing world The Navy was the cat that walked by itself, casting its vote, when it had to, for massive retaliation against flexible response.

Civilians controlled the feuding service chieftains mainly through budget recommendations. Gradually, strategy became the offspring of the budget. The Chiefs of Staff finally arrived at a bitter budgetary compromise, behind the blurred words of which lay this formula: Of any sum appropriated for defense, the Army would have 23 percent, the Navy 28 percent, the Air Force 46 percent. Under the compromise, each service planned its own future war against Russia; each had its own intelligence net and its own supply system; each had its own missile program. The plans might not fit, of course. The Army had plans for airlifting emergency reinforcements to meet a threat in Europe, but the Air Force had no plans for providing the matching lift. The Army planned for a long war and stockpiled 2 years of some combat consumables; the Air Force planned for a short war and stockpiled a few weeks of combat consumables. But all three services felt they were ready—more or less.

Thus, at the beginning of March 1961, barely 6 weeks after his inauguration, John F. Kennedy gathered the Joint Chiefs of Staff to consider the Communist thrust in Laos. At this point, clarity struck. For, as the new President sat down in the long, gloomy Cabinet room off the White House rose garden to inquire what he might do to meet the threat, he found this: The forces at his disposal were incredible—or else they were a joke. He might, if he chose, unleash the frightful power of SAC, which could wipe out any capital on earth with a spasm of its muscles. But, short of that, he was told, the Armed Forces could provide only a few combat teams for an operation in Laos—provided the emergency lasted no more than 30 days and there was no crisis in Berlin. Those present recall the President's disbelief. Unwilling to risk total war over Laos, the United States would have to settle for what it could get. Matters would grow worse in the next few months as Cuba followed Laos, and Berlin followed Cuba.

Yet, by this time, a superior if civilian intelligence had begun to examine the ailing American giant whose cramped muscles could respond to crisis in only one way—with a single cataclysmic spasm. Robert Strange McNamara had taken over at the Pentagon and was trying to find out how to restore flexibility to American power.

Robert McNamara, the new man in charge of the musclebound giant, was in 1961 no stranger to the Pentagon. During World War II, he had served an apprenticeship (as captain) in the building's C–3 ring, where he could look out over an air well and get what is called a "bowel view" of Pentagon leadership.

McNamara, then 26 years old, was by all accounts a rather perplexing fellow, as he had been since school days. One of his earliest friends remembers him from high school (where he was president of the yearbook, president of the French club, a member of the glee club, and a member of the board of student control). With the puzzlement that characterizes all memories of him, she says, "He was so painfully good; he was so neat, so clean; he was the kind of boy you'd trust with either your money or your sick kittens. But when I say that, I make him sound like a square. Yet he wasn't, he wasn't—a square is an object of ridicule, and Bob was a great talker, a good dancer; it was always fun to have him around. He was never left out of anything."

McNamara moved brilliantly from high school to college (the University of California), made Phi Beta Kappa in his junior year. After going on to Harvard Business School, he married Margaret Craig, of San Francisco, and later became an assistant professor at the school. "We were all broke," recalls Eugene Zuckert, a junior dean at the business school, now Secretary of the Air Force. "We were all kids then, and the McNamaras lived at Morris Hall, and we would go out to parties just to sneak some punch. But smack at 10:30, the McNamaras would go home to bed, because he had to be ready for work the next day."

It was McNamara's teaching specialty—statistical control—that brought him to the Pentagon in midwar. (He had wanted to volunteer after Pearl Harbor, had instead been assigned to teach his specialty to Army Air Force officers at Harvard.) The war, at this point, was giving Americans their first experience in dealing swiftly with waterfalls of data under emergency conditions. For the first time, men were groping for instantaneous decisions based on calculations involving thousands of miles, millions of human beings, billions of gallons of gasoline. After months of instructing air officers in such methods of calculation, McNamara, in February 1943, decided simply to join them.

There is little romance to statistical control. Its purpose is to dump the drudgery of calculation on computers and machines. The supervising human is required only to think: first, to pose questions to the calculators; and finally, once questions have conscripted answering data, to make decisions on the basis of such data. It was in these statistical vineyards that McNamara first labored, then starred.

The ability to ask the proper questions governing oceans of data is rare today. It was even rarer in 1945. When the war ended, McNamara and a band of nine AAF companions were invited to move as a package (called the Quiz Kids) from Pentagon desks to the ailing Ford Motor Co. McNamara was 29 when he arrived to probe Ford with his questions. The giant company, the outstanding invalid of the prewar automobile industry, was once again facing financial crisis with the end of military production. When McNamara left Ford as president, 14 years later, the company had an annual net profit of $427 million.

In Michigan, as everywhere else, there were always the two McNamaras. The Ford or daytime McNamara was a paragon of efficiency. Tough enough to recommend, as division chief, that Ford liquidate its Edsel venture and admit its $250 million error, he he foreshadowed the man who could later wipe out the half-billion-dollar Skybolt project with the same surgical precision.

The evening McNamara lived in a rambling, white-trimmed brick Tudor house at Ann Arbor, home of the University of Michigan, 30 miles from Detroit. The evening McNamara was a contributor to the NAACP and the American Civil Liberties Union, a recognized egghead in a university community. This McNamara, a vivid, rambling conversationalist, first joined a monthly discussion group of 10 of Ann Arbor's leading businessmen-intellectuals. Then, his curiosity unslaked, he helped Prof. Ralph Gerard, the university's distinguished neurophysiologist, organize another evening discussion group of out-and-out eggheads (an art historian, a sociologist, a physicist, several professors, two other business executives) to explore ideas in new books.

The evening McNamara was home folks. When discussion groups met at the McNamara home, Mrs. McNamara served; the house remained comfortable, not fancy—a place "where you found kids' boots and kids' hockey sticks stacked in the entryway, not a picked-up house," says one friend. But the daytime McNamara was rising rapidly from division to division at Ford. As the salary of the once-broke professor climbed from Ford's $12,000 starting stipend to the $420,000 of 1960, the McNamaras became contributors—to civic improvement in Ann Arbor and Detroit, to an effort to establish an art theater in Michigan and to politics. Now, high-minded, non-favor-seeking political contributors are as scarce in politics as albino candidates. And as McNamara contributed across the board to Republicans here, Democrats there, be began to appear on the radar screens of politicians. But it was difficult to label him: In 1960, he gave his dollars and support to Prof. Paul Bagwell, Republican candidate for Governor, and Senator John F. Kennedy, Democratic candidate for President.

One cannot linger long over the dramatic timing that brought John F. Kennedy to the Presidency of the United States on Tuesday, November 8, 1960, and Robert S. McNamara to the presidency of the Ford Motor Co. the next day; or the frantic screening of the horizon by the Kennedy staff for a Secretary of Defense; or how McNamara's name was raised again and again during the hunt—by Wall Streeters, labor leaders, politicians, business leaders.

Two items of testimony stand out. The first is from the President's brother-in-law, Sargent Shriver, now Chief of the Peace Corps, who on December 7, 1960, flew to Michigan to explore with Robert McNamara two jobs—Secretary of Defense and Secretary of the Treasury. Shriver recalls that he was impressed by several things: The matter-of-fact way that McNamara moved to a discussion of the posts—without surprise, or arrogance, or false modesty, or self-depreciation; the ease with which he could rattle off the three or four main problems of both the Treasury and Defense; his worry about deserting the Fords, who had just made him president, and his total indifference to money. According to Shriver, McNamara leaned back in his chair at one point and remarked that, of course, he'd have to give up any stock or options in Ford; and that this would cost him several million dollars. "You know," McNamara added, "I've got more money now than anybody in my family ever dreamed of having. I've got more money than I'm ever going to need or use." He straightened his chair, and that was that. ("Like that," says Shriver. "That was all there was to the matter.")

The second item comes from his friend Congressman Neil Staebler, then Democratic national committeeman in Michigan, with whom McNamara discussed the Defense post the night before his decision. "It was as if," says Staebler, "McNamara were asking the question: 'Why should I hire McNamara for the job?'—as if McNamara were trying to see McNamara as the President saw him. It was as if he were trying to write a report on himself to himself. Could the job be done? Could you get all the people involved at the Pentagon to agree? Could the thing truly be unified? McNamara had seen enough throatcutting at Ford to prepare anybody for the Pentagon—but did anybody have the power to unify the Pentagon? And then, finally—I can't remember the words—there was this phrase: That maybe nobody could do the job; that maybe he couldn't last 6 months; maybe nobody was qualified; but that after all, he had been asked, and therefore he would try."

About 10 day later, Bob McNamara visited the then Secretary of Defense, Thomas Gates, for what was to be a short briefing on the duties he was about to assume. The session ran to 6 hours. When it was over, so the story is told at the White House, McNamara returned to the Ford Motor Co. suite at the Shoreham Hotel and telephoned President-elect Kennedy. "I've just been over talking with Tom Gates," said McNamara, "and you know—I think I can do that job."

Oh, Kennedy is said to have replied. Well, you know, I've been talking to Eisenhower this morning. And I think I can do that job too.

With this, the takeover of the Pentagon began.

To take over the military establishment of the United States is a stupefying task—rendered even more difficult than it might otherwise be by the stupefying character of the Pentagon itself.

Squat and ugly, dank and drafty, the tawny building on the Potomac mud flats is one of the most bleakly depressing anthills in the world. The first of its qualities is that it is huge. An enormous labyrinth of 7,000 offices, 1,900 toilets, 150 staircases, 17½ miles of dingy corridors, it rouses in almost all its 25,000 working citizens, whether clerks or generals, the fear they may be lost and forgotten. The second of its qualities, for those who are not lost and forgotten, is tension. Though promising young officers, just in from healthy field duty, insist that their new ulcers, headaches, flu and colds are symptoms of a specific disease called Pentagonitis, the medical staff of the Pentagon insists there is no such disease—it is simply nerves. And nervous tension increases at the Pentagon the higher one rises in the hierarchy. At the heights, the effects of an alternation between the humiliation of obedience and the ecstasy of command become more acute.

To understand the Pentagon, it is essential to grasp one fact—that only a handful of men in the building are important. Cut a wedge out of the huge perimeter between the fashionable Mall and River entrances; slice off this wedge the outer rim, the sunlit E ring; make the slice two layers thick, the 2d and 3rd floors—and then, in this tiny sliver of the world's biggest office building, you have trapped the 20 or 30 men who shape the military policy and strategy of America.

A new Secretary of Defense has only two ways of imposing his authority on the 3,500,000 men and women of the American Military Establishment, all of whom get orders from this building: One is by power of the budget; the second, by power of appointment. And since men write budgets, not vice versa, one should look first at the 20 or 30 individuals who direct the Nation's military effort—at the small team of civilians who man the Defense, Army, Navy, and Air Force policy staffs, then at the team of generals and admirals they are supposed to select and supervise in running the services and commands. Rarely, indeed, have both civilians and military teams offered so romantic an intertwining of old and new in American tradition as do McNamara's teams, which now, after 2 years, show the Secretary's emerging touch.

One is struck immediately, for example, by how topheavy McNamara's choices have been in ivy-leaguers. Deputy to McNamara, second man in the Department, is Roswell L. Gilpatric, Yale; followed by another Yale as Secretary of the Army, another Yale as Secretary of the Air Force, another Yale as Assistant Secretary of Defense for Manpower. A Harvard man and a Yale man serve as first and second in Defense's International Security Affairs Section, and a Princeton man serves as Assistant Secretary of Public Affairs. Yet it would be a narrow view to consider such a concentration of fashionable ivy-leaguers as an expression of social connections. All through the Kennedy administration runs the most intense, if unrecognized, desire to attach itself to the older traditions of American Government. And the Gilpatric-Vance-Zuckert-Nitze team at the Pentagon can be seen as the direct descendant of the great Ivy League team of Stimson-Lovett-McCloy-Patterson - Forrestal (again predominantly Yale) that directed American effort in World War II for another President from Harvard, Franklin D. Roosevelt. Smooth, polished, tough under their good manners, the Pentagon's current leaders are men shaped by a tradition of public service almost as old as the uniformed forces they direct. They are part of the invisible web of Government, gossip and private connections that links Pentagon with White House and State.

Yet one tradition can no longer stretch over the vast diversity of American life, and so, as a balance to his ivy-leaguers, McNamara has developed another civilian team that can be called only the think staff. Many journalists have tried to style the think staff: they are called by some, Randsters (for Rand Corp., which so heavily nourished their thinking), or technipols, or Defense intellectuals, or the whiz kids, or the Wizards of ODD. What is common to these people is that almost all of them have been trained since the war either in science or in defense analysis at the direct expense of the armed services of the United States. They are as much children of the Pentagon as its uniformed personnel, and are hated by the leadership of the armed services because now they no longer serve, but apparently direct the generals. If the Ivy League crowd is predominantly east coast-New York, then the think staff is predominantly west coast-California. The ivy-leaguers are older; the think staffers are, at first glance, rather academic, generally young, interested in war as a system of intellectual propositions, most at home with a piece of chalk and a blackboard.

It would be too much to inspect all of the top civilians to find the answer to the question: Who runs the Pentagon? Yet, certainly, the leaders of both civilian wings, as they jointly confront the military team, must be examined.

The leaders of the Ivy League team are almost all the kind of men, from the kind of families, who would have gone charging up San Juan Hill with Teddy Roosevelt. Chief among them is Roswell Gilpatric, tall, curly-haired, gray-eyed, Windsor knot to his necktie, an aficionado of Elizabethan poetry and yachting, extraordinarily able, closer to McNamara than anyone else. If ever Gilpatric were to leave his post to go back to his rich New York law practice, then the two chief rivals for the succession would be Paul Nitze (Harvard), silver-haired, graceful, the man chiefly responsible for the new seemingly frictionless alliance of Pentagon and State Department; and Cyrus Vance (Yale), the capable, abrasive, thinly handsome Secretary of the Army. All three are of finest New York polish; all three have moved from good prep schools to good colleges to distinguished marriages; and all three have enough wealth and devotion to make America's welfare their primary concern in life.

The leaders of the think staff wing are more difficult to group and define, partly because there is no hard-and-fast cutoff between Ivy Leaguer administrator and think staffer. Adam Yarmolinsky, for example, McNamara's personal counsel and troubleshooter, bridges both groups. By education an Ivy Leaguer, he is by temperament and function a think staffer. So is the Defense Department's General Counsel, the able John McNaughton. Senior among the pure think staffers, however, is probably Charles Hitch, 58, the Department's Comptroller, a mild-mannered, gentle Missourian, a one-time professor of economics. Clustered about Hitch are Alain Enthoven, a tall, darkly handsome Seattle-born economist of 32, and Henry S. Rowen, a professorial Bostonian, 37. These three were all research associates at the Air Force's Rand Corp. think factory in Santa Monica, Calif.; all three studied economics at Oxford. All helped transfer the British military doctrine of operations analysis to American military thinking.

To these must be added Dr. Harold Brown (New York, Bronx High School of Science and Columbia), a vastly impressive, if inscrutable man, who at 35 directs the expenditure of $5.5 billion in scientific research and engineering; and his deputy, John Rubel, 42, a lithe and graceful Chicago-born scientist, a thoroughly brilliant and charming man, who like his chief, won his laurels in the West, in California.

Together, these are the top civilians who direct the top military team of the Pentagon. Actually, the point where brook meets river, where civilian meshes with military, can be made more precise.

Each Monday afternoon at 2:30, McNamara and Gilpatric (they are so close that their appearance anywhere is called the Bob-and-Ros Act) descend from the third to the second floor, where, off the barred and barricaded ninth corridor, a bay leads to the "tank," the "Gold Room," the meeting place of the Joint Chiefs of Staff. Here, around the huge table, scarred by cigarette and cigar butts abandoned in anger at past disputes, McNamara and Gilpatric discuss and decide the problems and plans of American strategy with the uniformed Chiefs of Staff.

Two of the Chiefs are relatively new and untested. The Army Chief of Staff is Gen. Earle G. Wheeler. Lean, dark, tense, a chain-smoker, Wheeler is the most important new military personality on the Washington scene. Clear and precise of speech, he is one of the most lucid thinkers in the Pentagon; all acknowledge this. The criticism of this attractive man comes chiefly from those who insist he is a staff man, not a man of combat-command experience. Traditionally, the military thinking of a new administration shows itself in its choice of a new Army Chief of Staff, and Wheeler speaks the language of the new administration. Philosophically a child of the Army's tradition of extreme mobility, Wheeler voices a doctrine that would have appealed to Nathan Bedford Forrest as much as John Fitzgerald Kennedy. Had Maxwell Taylor not been available, Wheeler might have won nomination as Chairman of the Joint Chiefs to succeed Gen. Lyman Lemnitzer (whose blandness discouraged the administration, which sent him to Paris to soothe NATO). If Wheeler delivers as Army Chief of Staff, he should someday succeed to the chairmanship of the Joint Chiefs.

Adm. George W. Anderson, Chief of Naval Operations—a husky, masculine sailor and the most perfectly typecast of the four Chiefs—is also relatively untested in high combat command. The U.S. Navy is the closed service; it chooses its own leaders by its own promotion mechanisms, and civilians rarely dare interfere. (It took a near revolt by Congress to save Hyman Rickover when the Navy brotherhood wanted to dismiss the nuclear admiral.) Generally, the Navy offers for civilian ratification as Chief of Naval Operations only its finest, and Anderson runs a superbly efficient Navy. Like all Chiefs of Naval Operations, Anderson feels his basic responsibility is to national security—and only secondarily to any particular civilian administration installed over him. Traditionally, the Navy has been the most intellectual of the services. But the think staffers who rove the Pentagon have, finally, in this year's budget, also begun to close on the Navy, summoning it to account. And Anderson's resentment is as natural and bitter as that of any salt-sprayed seadog against any landbound civilian.

Wheeler and Anderson are the lesser Chiefs.

Then there are the greater Chiefs.

What separates the lesser from the greater Chiefs is "presence." America is running out of combat-tested leaders. Both Anderson and Wheeler belong to an untried generation of senior commanders. But the other two Chiefs, Gens. Maxwell Taylor and Curtis E. LeMay, are the last active personalities of America's military age of heroes. These two, when the world was troubled, commanded great forces in anger, and won. They are rivals, as they always have been. Only a respect for each other's achievements keeps them this side of outright clash. For if General LeMay is "Mr. Massive Retaliation" himself, then General Taylor is "Mr. Flexible Response."

General Taylor, 61, has begun to mellow but is still biting of phrase. As newly appointed Chairman of the Joint Chiefs, he has returned to the Pentagon from long exile, totally vindicated. Three years ago, as Chief of Staff, U.S. Army, he bade farewell to the armed services, crushed and dispirited by an Air Force strategy he despised. As a parting volley, he fired at his enemies a book called "The Uncertain Trumpet." No military blast ever hit target more squarely than did his book, which became the military bible of the New Frontiersmen, from the new President to the new Secretary of Defense, on down the line. Invited back to the arena of his torment as master of the beasts, General Taylor is the first Chairman of the Joint Chiefs since Omar Bradley to regard civilians as intelligent partners in a joint venture of defense. A soldier loyal to the tradition of his cloth, Taylor indignantly opposes any civilian interference in the choice of military leaders. But he is himself, par excellence, the choice of civilians to command the apparatus of American power.

Contrast Taylor with his archrival, Gen. Curtis LeMay, Chief of Staff, U.S. Air Force: Where Taylor is thin and intellectual (he speaks French, Japanese, German, knows arts, music, science as well as airborne jump tactics), LeMay is burly, bluff, primeval. Taylor is eloquent in argument; LeMay normally grunts. Taylor likes to read classics (in Greek and Latin) or play tennis; LeMay likes to hunt. Now on the defensive, the great LeMay settles down in his chair, silver haired and stout, his tunic unbuttoned, and regards civilian questioners warily, suspiciously, as if they were stalking him. LeMay created SAC. Dutiful, obedient to present strategy, he rumbles like a slumbering volcano. During the Cuban crisis, Taylor was for the escalated response, LeMay for the hard strike. Those who deal with both LeMay and McNamara report that no two men could be further apart in the way they think; yet LeMay has earned McNamara's hard respect. It was LeMay's drive and prowess that for 10 years made SAC the dominant chess piece on the board of world power; and it is behind SAC's shield that McNamara and Taylor have, finally, been able to redeploy the strength of America toward different ends.

The United States owes Curtis LeMay much. But if there is any thread to the story of 2 years of McNamara administration, it is the way in which the use of power has been brought back from LeMay's imagination and restored to civilian hands. In following this thread, we shall see not only how the Pentagon was taken over, but the particular art that distinguishes McNamara from other men.

At the heart of McNamara's art lie questions. The first tattoo rattled out of his office within 4 weeks of his arrival, as drafts of questions, seeking not answers but suggestions as to where and by what deadline answers could be had. Then, 6 weeks after taking office, McNamara fired the broadside known as "McNamara's 96 Trombones"—the famous 96 questions of March 1, 1961, each tagged with a deadline and the name of the man who must bring in the answer.

What of the missile gap? was a question McNamara had asked even before taking office.

All through 1960, the secret national intelligence estimates reported that Russia had an enormous margin of missile superiority; and appropriate leakage to the press by the armed services had made the gap a matter of clamorous political alarm. Now, on inquiry, it turned out that the separate intelligence services of the Army, Navy, and Air Force each had different measures of the gap and peril, but none could offer hard evidence. The Pentagon, McNamara decided, could not afford three rival intelligence services, competing with each other and warping the flow of information in order to bolster particular missile programs. There followed the decision to unify the three intelligence services in a Defense Intelligence Agency, which would coordinate and cross-check all information.

Even before the new Defense Intelligence Agency took over, the use of new intelligence methods had led to periodic reductions in estimates of the size of the missile gap. By September 1961, a major intelligence breakthrough of new sources established firmly that it was America, not Russia, that led in missile capacity—and by a wide margin. That margin has been maintained. The United States has today something more than 200 ICBM's ready to go, plus almost 200 target-ready Polaris missiles in submarines. It will have about 1,000 on-target missiles ready by the end of 1964, and approximately 2,000 on-target missiles by the end of 1967. Production capacity for the Minuteman is already beyond any current need. For the next 2 years, the U.S. Air Force will be adding on-target missiles at a rate of better than 1 every working day, to give us a total of 800 pushbutton-ready Minutemen by July 1, 1965. Russia's ready missile strength, in ICBM's that can hit the United States, is probably under 100. But it is growing.

McNamara's 1961 questions on organization and procedure brought information that the Army, Navy, and Air Force each maintained a division charged with examining its organization and procedure. But the Department of Defense, charged with supervising all three services, had none. Also, some 3,000 committees buzzed through the Pentagon, and McNamara could see little use in many of them. (Over 400 were abolished in his first 6 months in Office.) McNamara had pulled Ford out of similar confusion, first by questioning, then by seizing the comptroller's reins. Now, at the Pentagon, he established in the Secretary of Defense's Staff a brandnew Office of Organizational Management. Says an Assistant Secretary, "You must remember that, even in industry, McNamara is a new breed. Most industrial chiefs come up from the production or sales side. McNamara came up through the comptroller's side; in American industry, the comptroller's office is what the party secretary is in Russian Government."

Other McNamara questions probed procurement and supply, budget and arms production. In the years since Korea, electronics, missile, and other new weapons systems had jumped from 12 percent to 52 percent of the Pentagon's annual contract placement. How could competitive bidding be restored in this area of negotiated costs? How could the services be kept from bidding against each other for old-fashioned supplies? How could the missile race between services be controlled? A Defense Supply Agency for procuring all items of common use was set up, and space-missile development was concentrated under the Air Force.

Still other questions probed all international military commitments, from Morocco to Japan; the laboratories, procedures, perspectives of defense science; installations and logistics; Reserves and readiness; control and command. All answers were required to be "comprehensive and complete." Deputies, to spare McNamara from a torrent of paper, tried to boil the answers down. One recalls sending up a 5-page answer. "Back it came in 20 minutes with his own little handwriting: 'This is not sufficiently comprehensive and complete.' So we upped the answer to 9 pages. Back it came again. So I asked him what he wanted, and he looked at me and said, 'Just make it comprehensive and complete.' We finally gave him a white paper of 16 pages, and it stayed. When you figure there were 96 questions in the first round—and 34 more later—you know what his reading must have been."

This lust for detail offended many officers on the Joint Staff as intrusive, juvenile and amateurish. But one must see McNamara's performance for what it really was: an athlete's feat. The mind is a large muscle, and its ability to grasp, sort and organize information can reach an artistry as perfect as an outfielder's leap for a backhand catch. This ability, like any muscular ability, withers apparently with age; but McNamara at 46 possesses it to an extraordinary degree. He can sit almost impervious to interruption and chatter as he concentrates. His staff knows that, for McNamara, the most important hours are the "alone hours" when he reads and thinks. What he reads, he compresses in notes, absorbs—and then files. Off his large office is a pantrylike vault lined with loose-leaf notebooks. These are his personal notebooks. Here are all the studies, reports and analyses on which he has penciled the marginal notations that tie the information into a whole.

All this makes Robert McNamara sound a very forbidding man—unless one enjoys the performance of a beautiful mind at work. Normally, McNamara talks in a dry, reedy voice; but when, in conversation, he begins to clarify a point, patterning new associations, his enthusiasm will begin to carry him away. His voice will rise several decibels, his head will wag back and forth, a huge smile will light his face—and, suddenly, he is your favorite professor, kindled by the excitement of talk. Whenever a problem becomes complicated, McNamara's zest rises—as when he finally devised the questions for a study of military dollar-and-gold outflow. The questions were hunting tools. "Those figures are going to pop out, just pop out," he all but squealed to a friend, as if he had flushed a pheasant out of the bush.

Over the years, the armed services have developed an information-delivery system for their masters that reaches its pinnacle in the Pentagon briefing. A truly great Pentagon briefing, complete with five-colored charts, flip cards, illuminations and slides, photo blowups the size of a wall, colonels dancing attendance and voices in the darkness, is an artistic production, like a ballet. "But briefings," says a close associate of McNamara's, "evaporate like the morning dew. When the briefers disappear with their charts and slides, you ask yourself: What did they say? McNamara wants it in writing first, so he can question it, and wants it in writing after they go, so other people can come in and argue with it. That's the way he gets to decision—by asking questions." For the armed services, which had entertained, befuddled and informed a long line of civilian secretaries with briefing performances over the years, the adjustment to McNamara was slow and painful. "To be questioned by McNamara," said one unhappy victim, "is like being picked over by bees."

Slowly, as 1961 turned the corner into 1962, the pace of questions slackened. It became apparent that McNamara hugely enjoyed not only his job, but Washington life in general. And Washington, like Detroit before it, began to recognize the different McNamaras. There was a puckish McNamara—who, when briefed for the umpteenth time on communications and reassured that this particular phone would reach Gen. Lauris Norstad anywhere in Europe within 30 seconds, simply lifted the phone, asked for Norstad and demonstrated conclusively that when Lauris Norstad was naked, taking a shower, at home in Marnes-la-Coquette, he could not be reached in 30 seconds. There was another McNamara, one of Washington's most earnest self-improvement characters and eggheads (he was a charter member of Robert Kennedy's Hickory Hill study group); there was McNamara the cold automaton, who treated his generals "like provincial branch managers of Ford factories." There was also the McNamara who could laugh at both executives and eggheads, and enjoy being neither—as when a cherished professorial assistant struggled to close the door of his office, and McNamara strode over, closed it with a clap, then, with a twinkle and a laugh, said: "That's because I've met a payroll."

McNamara the bleak and McNamara the gay were both the same man. "He sits there at the table before a Cabinet meeting," recalls one watcher, "and he's cold business. Other Cabinet members come in, chat with each other, say hello, the way men do before a meeting begins. McNamara sits at his place, studies his papers, talks to no one. But, then, some night, there you are at a White House party, and you're supposed to be home at 2 o'clock in the morning, and who's still there twisting away? McNamara."

Like any man of size, McNamara can be seen from many angles. The best view offered this reporter was that of a scientist, John Rubel, deputy director of Defense Research, one of the prime architects of the destruction potential that overhangs the world.

"When he came in," says Rubel, "we were infinitely troubled people. Everyone is troubled—but we were 'troubled' troubled people. We didn't see how we could get out of some of our problems—this endless escalation of the arms race, this needless multiplication of strategic weapons. We couldn't see how we were going to get a grip on the enormous programs we were supposed to supervise; we were worried about command control of nuclear weapons; we were worried about response. You don't know how worried we were right here in the Pentagon—much more than the public worriers who do it out loud.

"And you know what is the most significant observation I've made since McNamara came? Just the enormous difference one man can make, the tremendous changes in practice one can bring about with no effort at all to alter the laws. All of us live, in one way or another, by reacting to our environment; he's changed the environment."

Let us see how the environment has changed; and let us follow the change by examining the key words in the logic that has shaped American power and strategy to new ends.

"Quantify" is a favorite McNamara word, which means simply "to measure." On his entry into office, McNamara found that the last Eisenhower budget had asked Congress to give the Air Force one new wing of B-52's, the superdreadnaughts of the air. But one wing of B-52's, with the tankers, missiles and ground support necessary to maintain it for 5 years, would cost $1 billion. By McNamara's logic, such an expenditure had to be measured, "quantified," or "balanced" (another favorite word of his) against other possibilities. The Air Force already had 14 B-52 wings, 2 B-58 wings and obsolescing squadrons of B-47's. More money for the B-52's might increase our striking power by 7 percent. But the same amount of money would buy and maintain 250 Minutemen missiles or 6 Polaris submarines. Which was the best way of doing what we wanted to do? Obviously, then "quantification" required a corollary judgment, and this judgment depended on "functions" (another key McNamara word).

How did each exertion of the Army, Navy, or Air Force fit the grand function or "functions" of our strategy? For a long time, scholars (as well as soldiers) had felt that the Defense effort was distorted by separate Army, Navy, and Air Force submission of budget demands to Congress. Most persuasive among the scholars who argued for a new approach was Charles Hitch, coauthor of "The Economics of Defense." Hitch advocated that all defense funds be allocated by function, by the purposes that animated them, not by the color of the uniform of the man who spent the money. McNamara read the book, then, immediately after he was nominated, recruited Hitch as comptroller of the Defense Department. Once installed, Hitch suggested to McNamara that they experiment by presenting a few programs to Congress as Defense requests, not Army, Air Force, or Navy requests. McNamara's reply was "No." There would be no experimental effort; instead, the entire Defense effort would be offered to Congress in terms of combined "programs" clarifying functions. Right then, and at that time.

Thus was born program packaging. And program packaging brought clarity out of confusion, making plain, for the first time, to friend and foe alike, the new direction of American strategy.

Two nuclear war program packages governed direct interchange of death with Russia: a strategic retaliatory forces program (which considered the Titan, Atlas, Polaris, Minuteman, and manned aircraft as a single family of weapons) and a complementary continental air and missile defense program (against the Russian nuclear threat).

But two conventional war programs—one for general purpose forces and the other for complementary sealift-airlift forces—directed attention back to the old-fashioned clash of men on battlefields.

It is significant that old-fashioned battlefield war is so much more expensive than new-fashioned nuclear war and growing more so. The nuclear war programs, now cut to $9.3 billion for 1964, can eliminate civilization from the globe and thus provide an alltime biggest bang for the buck. The conventional war programs now cost more than twice as much—$20.5 billion in next year's proposed budget. War, by American strategy, is to be brought back to the battlefields where men can best defend the women and children of the cities.

This has been the decision and the change. The civilians who control the Pentagon now offer the White House an entirely new instrumentation of power—and a doctrine to manage it. They now offer the President options. Since "options" is another key McNamara word that has colored all Washington thinking, we should examine what "options" means, and where the word has brought us.

"Options" means simply that civilized leadership should have at all times a variety of choices, an orchestration of forces, a range of responses that will permit instant dispatch of a company to quell a southern riot, a battalion to beef up the Panama Canal defenses, a division to stabilize the Congo—or a total commitment in a clash over Berlin.

The Pentagon still retains, as it must, the fixed contingency plans for war, which the Joint Chiefs freshen regularly (there are 228 such contingency plans, according to the latest official report). These plans are necessary, but they no longer control American response. American power is no longer remorsely locked in by them. McNamara's 1961 round of questions has been followed by another year of innovation. Underlying all the innovations lies the same urge to unlock, unfreeze, make flexible the retaliation to the United States to challenge. The speedup of the hard-base Minutemen program, guaranteeing and multiplying America's second-strike capacity, reduces SAC's previously critical vulnerability—and takes nervous fingers off nuclear triggers. The elaboration and reelaboration of signals and command communications (there is now an airborne command of SAC in the air 24 hours a day) give new assurance that SAC will not act by button response alone. Military programs run forward on 5-year plans; new procedures sensitively control, yet invite, changes in these programs.

Above all else, there is this achievement: The paper language of the laws that describe America's military leadership has finally become reality. The Army, Navy, and and Air Force are now service organizations—they train, equip, procure, and make ready Armed Forces that they no longer command. The forces they make ready are handed over to nine great unified and specified commands, which alone operate our military machine. These commands act only at the direct order of the civilian Secretary of Defense, who is advised by uniformed Chiefs of Staff beneath him and directed by the President above him.

Every turning in American strategy has been symbolized by a mighty new command. SAC in its day spoke American doctrine clearer than words. Today, no better symbol of the McNamara-Kennedy doctrine exists than the newest of the nine great commands, the administration's favorite and its own creation: Strike.

It takes time for the imagination to grasp what Strike Command (Stricom) is, what it means. A visitor may stand in a frost-covered meadow, at dawn, watching the sun glisten through the parachutes of 450 men as they soundlessly drop from the sky. Last night, these men were alerted 600 miles away at an Appalachian base. The two Stricom combat teams from which today's unit was drawn are always ready for exactly such no-notice alerts—on call to fly, and jump, within an hour and a half. If this were war, two full airborne divisions would follow them to the airfields, where Strike's planes would be arriving to airlift them into combat. Across the country, six more divisions would, in days, be ready for air haul or sealift. Every combat-ready element in the continental reserve—eight divisions, three air forces, atomic artillery battalions, new transport fleets, new communications units—would act as part of one command: Stricom.

Stricom is not only a new system of using power, it is in fact also new power. Eighteen months ago, had there been such a command, it would have found only three divisions available in the United States; now it calls on eight. Eighteen months ago, Army would have negotiated with Air Force for airlift; now Stricom commands its airlift, and that airlift has doubled, will shortly triple, in capacity. When Washington gives the word, Stricom moves—anywhere in the world, in any strength, to cow riots or confront empires.

At MacDill Air Force Base in Florida, Stricom headquarters bubbles with the excitement of ideas in ferment. There is, for example, the ferment of rediscovery, as Army and Air Force once again find themselves joined organically in a single unified command. Gen. Paul D. Adams of the Army, a silver-haired, chunky field commander, is boss of Stricom; his deputy is Lt. Gen. Bruce Holloway of the Air Force, a tall, soft-spoken wartime ace. They work together; they enjoy it. The officers under them have blended into a new, unified staff. New field tactics, new fire patterns, new air-support doctrines rise from conversations suspended too long by bureaucratic separation. In their offices or homes, Stricom officers keep packed three kits—one for arctic war, one for tropical war, one for temperate-zone war. When Stricom chooses the units that must move overnight to combat, it delivers also the leadership and plans to go with them. From its roster of 11 generals and 35 colonels (all combat veterans), Stricom is prepared to peel off at once, without notice, a Task Force Alpha that commands anything up to regimental size; a Task Force Bravo that commands elements up to corps size. If more is required, Stricom can lift itself and set up a headquarters for an entire Theater of Operations, ready to receive whatever the United States can mobilize.

Stricom is the best example of what McNamara, in another key phrase, calls useful power.

"Everyone missed the point about Cuba," the Secretary reminisced recently. "It wasn't just power. It's true, a year and a half ago, we didn't have the combat-ready ground divisions, the combat consumables. We didn't have sufficient power to apply. But we also didn't have the theory of application of force, if we had had the power.

"Massive retaliation as a form of power just wasn't credible in response to a situation like the Berlin Wall, or to a situation like Vietnam, or Cuba. Massive retaliation had given us no usable power to prevent the U.S.S.R. from expanding its interests in Cuba. So we had to develop forms of usable power.

"Now, I'm not an engine engineer. But people who drive an automobile know almost as much about engines as an engineer—they know what they want the engine to do. Enough people know enough about driving an automobile to determine the form and characteristics of the engine. I never had to know the characteristics of metal stress when I was at Ford. I feel I don't have to be an expert in combat leadership of troops to lay down what we need in useful power in a situation like Cuba. We have an actual difference of physical force today. We had three ready divisions in the United States in 1961—now we have eight combat-ready divisions with their backup.

"But the application of power, how it should be applied, is even more difficult than any concern with the type or quantity of power. This was a major part of the Cuban question—the President knew the reasons for conceiving this delicate application of power, this sophisticated use of power. But this sophistication had to come from the top of the Government. A naval commander who blockades wants to blockade—period. He wants to stop all ships. That's his job. What complicates his decision is that the actions he takes during the blockade are also telegraphic messages to the Soviet Union, a way of signaling our intentions in a world where both sides have the military power to destroy a large part of civilization. This situation requires that the important signals come from the highest political power in the country. As a result, we've had a basic shift in the level where decisions on the application of power take place.

"At least until the world has developed a workable rule of law in international affairs, the foundation of foreign policy is power—but it has to be usable power, controlled to serve reasonable political ends. And that's the way we're moving—from unreason to reason."

Which is all any reasonable citizen can reasonably ask of his leadership.

PROPOSED REVISION OF RULE XXXV—RESOLUTION

Mr. MORSE. Mr. President, before I discuss the major subject of my remarks tonight, I wish to submit a resolution and ask that it be appropriately referred.

The PRESIDING OFFICER. The resolution will be received and printed, and will be appropriately referred; and, without objection, it will be printed in the RECORD.

The resolution (S. Res. 127) was referred to the Committee on Rules and Administration, as follows:

Resolved, That the text of rule XXXV of the Standing Rules of the Senate is amended to read as follows:

"On a motion made and carried by vote of a majority of the Senators present and voting to close the doors of the Senate, on the discussion of any business which may, in the opinion of the Senate require secrecy, the Presiding Officer shall direct the galleries to be cleared; and during the discussion of such motion the doors shall remain closed."

Mr. MORSE. Mr. President, the majority leader commented a few minutes ago that he hoped that the Senate's secret session this afternoon would be the last of its kind in 25 years. I share that opinion. I have offered the resolution because I do not believe any two Members of the Senate at any time should have the authority, under rule XXXV, as they now have, to throw the Senate into a closed-doors session and have the galleries cleared and the public excluded from a discussion of the public's business. In a democracy, there is no substitute for a full public disclosure of the public's business.

I believe it is necessary to have in the Senate Manual a rule which permits a majority of the Senate to have the Senate close its doors and clear the galleries, but I do not believe that the galleries of the Senate of the United States should ever be cleared except by a majority vote of the Senate. I do not believe we can justify leaving in the rules an archaic rule which permits two Senators at any time to evict the public from the galleries of the U.S. Senate. I do not believe that such an action can be reconciled with democratic procedures. The public is protected in connection with matters of high secrecy by the application of the basic principle of a democracy—majority rule.

I attended the session this afternoon. In my judgment, practically little was said in that session which could not have been said to the public. I do not share the views of some flattering Senators that a great, important record was made in the U.S. Senate this afternoon. I think it was a record which it was unnecessary to make in secret. It is true that some classified matter was discussed; but I believe it would have been better discussed in the appropriate committee.

The Committee on Foreign Relations discusses much classified material; and every Member of this body, before any subject before the Committee on Foreign Relations is voted upon or considered on the floor of the Senate, has access to the file in the Committee on Foreign Relations.

How well I remember, in January 1955, when the Senate held its now historic debate on the Formosa resolution. The galleries were not cleared.

Mr. President, I do not know of any time in my 18 years of service in the Senate when we had an issue as vital to this country as the Formosa resolution.

We then had a meeting which lasted for a good many days; it was a joint meeting of the Foreign Relations Committee and the Armed Services Committee. It is true that we were handicapped a little in the debate on the Formosa resolution; but those who examine the record will see how we handled that situation. From the record, they will find that we said to the other Members of the Senate, when we were dealing with certain top-secret matters, "Go downstairs to the Foreign Relations Committee room, where the files are kept, and read for yourselves the confidential information on this matter."

I say to the Senate that it is better to do that than to run the danger of beginning a precedent in the Senate that whenever two Senators wish to do so, they can have the galleries cleared and throw the Senate into a secret session.

One of the greatest checks possible in a democracy is a check by the public upon the processes of the administration of government. I propose to press for this change in the rule; and I am satisfied that once the American people come to understand the implications of the rule, they too, will press for a change in it, because I am sure they will be as startled as many Senators were to discover the meaning of rule XXXV, which was applied today.

So much for that, Mr. President. I reflect on no one when I make these critical comments, because I am commenting critically on procedure. But this is another example of the old, archaic, bewhiskered rules of the Senate which need to be changed; and I hope the Senate will change rule XXXV at an early date.

AGRICULTURAL PRODUCTS AND FOREIGN POLICY

Mr. MORSE. Mr. President, some weeks ago the Senator from Virginia [Mr. Byrd] held a meeting of the Finance Committee to which he invited many Senators who are not members of that committee. It was a public hearing, and testimony was taken from agricultural leaders across the Nation. The hearing was devoted primarily to what was happening in connection with the poultry industry vis-a-vis U.S. foreign trade; and spokesmen for the poultry industry were there from most of the States. A great many witnesses were presented by the Senator from Virginia. Each of them spoke for 2 or 3 minutes, or in some instances for 4 minutes. They pointed out what the foreign policy of the United States, under the administration of the U.S. State Department, is doing to this segment of our agriculture; and during the hearings references were made to similar damage being done to a good many other segments of American agriculture.

As usual, spokesmen for the State Department sought to alibi for what I think is the inexcusable record of the State Department—and for a good many years it has continued to be inexcusable—in connection with the entire matter of providing adequate protection to American agriculture in connection with the administration of the U.S. foreign policy. At the hearing, the usual alibis were given—alibis in regard to inability to get international councils to meet, and about delays, and whatnot.

The Secretary of Agriculture, Mr. Freeman, was a witness there. I have a very high regard for him; and I thought that on that occasion he performed his duty very ably. The trouble was that his major thesis was wrong.

He was trying to defend a policy of the administration which, in my opinion, cannot be defended in the interests of the economy of the United States. Several times in his testimony he pointed out that we still sell to Europe more than we buy from Europe. That is the State Department line. But, of course, as I pointed out at the hearing, De Gaulle and other European leaders are trying to change that just as quickly as they can. So apparently the State Department thinks we should wait—with no action—until De Gaulle and the Common Market countries pick off our industries, one by one.

Furthermore, little attention or note was given by the State Department spokesmen who were at the meeting in regard to the balance-of-payments situation or in regard to the billions of dollars which we have poured into Europe to rehabilitate Europe and to put Europe industrially in a better position than she has ever before been in during all her history—including, for example, the building of the greatest, most efficient steel mills in the world, for the most efficient steel mills in the world are no longer in the United States. Instead, we have built them in Europe—for the most part with U.S. taxpayers' dollars.

Mr. President, I voted for most of that aid, and I would do so again, for, as I have previously said, we have a moral obligation to rebuild a war-torn Europe which was bled white in the defense of the United States, as well as in the defense of Europe. It also was in our national interest to grant this great amount of aid; and since World War II we have granted to Europe aid in the amount of more than $41,500 million.

But, Mr. President, those who participate in an alliance have mutual obligations; and I say most frankly and respectfully that too many of our allies have forgotten their mutual obligations to the United States.

There is no question about what De Gaulle is up to. Let me say to the Secretary of State that I have not been impressed by the pronouncements which have come from the State Department since the visit of the Secretary of State with De Gaulle. I wish to point now, as was pointed out at the meeting with the Finance Committee which the Senator from Virginia [Mr. Byrd] conducted, that I agree with those agricultural leaders, who made this matter very clear to this administration; and they also made it very clear to the Eisenhower administration, and they got from the Eisenhower administration the same treatment that they are getting from the Kennedy administration. I agree, as I said, with those agricultural leaders that this administration has a clear duty to take the necessary steps to put a check on the State Department and its negotiators in respect to what those negotiators have been doing in these international trade conferences, in respect to selling short American agriculture.

I say on the floor of the Senate tonight, as I said at that meeting called by the Senator from Virginia [Mr. Byrd], "Farmers of America, make clear to this administration that you do not intend to permit this administration to continue the liquidation of American agriculture in respects to its rights in relation to foreign trade. Make clear to this administration at the ballot box, for it is the only language that any administration ever understands in the last analysis."

At that meeting I tried to make that point clear to the Secretary of Agriculture. I told him I did not buy his argument that we ought to continue to countenance this discrimination against American agriculture merely because at the present time we sell more to Europe than we buy. That will not last very long.

As a result of the comments that I made at the meeting there apparently appeared in what is called a State Department Congressional Record Summary some quotations from my comments to that farm group and to the Senate Finance Committee. The quotations printed in the State Department Congressional Record Summary moved Mr. William R. Rivkin, U.S. Ambassador to Luxembourg, to write me a letter, which was certainly his privilege to do. I always welcome people in our foreign services expressing their points of view to those of us who serve the people in the Senate. I shall read that letter and my reply:

American Embassy,
Luxembourg, Luxembourg,
March 18, 1963.

Hon. Wayne Morse,
U.S. Senate.

Dear Senator Morse: I recently noted with interest a quotation in the State Department Congressional Record Summary in which you expressed grave concern that the State Department would not protect the interests of American poultry producers in the continuing negotiations with the European Economic Community.

I for one know that we have vigorously and continuously sought to defend and protect American interests in direct approaches to members of the Commission; the Minister of Agriculture of Luxembourg; the Prime Minister of Luxembourg; the Chairman and officers of the Centrale Paysanne (Farmers Association of Luxembourg); Ambassadors from Western Europe assigned to Luxembourg; private agricultural interests in Luxembourg; mayors of Luxembourg cities and whomever we thought might in any way have a voice in a resolution of this problem or who was in any manner involved therein.

These approaches have been made in a manner that could leave no uncertainty in the minds of the listener as to American concern, not only in the agricultural community but in the White House, the Department of State and the Congress. So blunt in fact has been our approach from time to time that what might be considered the niceties of diplomacy have been eschewed. They know full well that we regard elimination of discrimination against our poultry as the very test of their good faith and as a most meaningful harbinger of attitudes which will determine the course of our forthcoming TEA negotiations.

I know from my own experience here that Ambassador Tuthill in Brussels as well as other American Ambassadors serving in Western Europe have similarly pressed our case.

I should like to know therefore what it is that you think that the State Department or those of us who are serving here as Ambassadors can do that we have not done and are not doing.

Respectfully yours,

William R. Rivkin,
Ambassador.

I replied, and I sent a copy of my letter of reply to the Secretary of State, Mr. Rusk, and to the Under Secretary of State, Mr. Ball. My letter reads as follows:

April 11, 1963.

Hon. William R. Rivkin,
Ambassador to Luxembourg,
American Embassy,
Luxembourg, Luxembourg.

Dear Mr. Ambassador: The statements of mine relative to the inadequacy of State Department efforts to protect American producers in trade negotiations are based on one thing—my 19 years of experience with the Department in such matters.

It has been my sad but consistent experience that the State Department operates on the theory that the United States is so big and so rich that we can absorb whatever trade inequity another country imposes on us without effective complaint or retaliation. Too much the same attitude has prevailed in connection with the foreign aid program. The net result has been the very bad balance-of-payments situation that is draining our economic strength.

I know very well that whenever this problem is raised in connection with one given trade problem, the answer always comes back that because our overall trade balance is favorable, we need not worry about the loss of our poultry market, or our fruit market in Europe or any other trade problem a Member of Congress seeks to raise. We are told that this country can stand it because we have an advantage in other products.

That argument is no longer acceptable to me. Our total international economic situation is not good, and it must be improved wherever and whenever it can, in whatever area possible. If our trade balance is still favorable, it must be made more favorable.

Take the market for Oregon fruit in France, a subject on which I have a good deal of background. Late last fall, France imposed a discriminatory quota on U.S. fruit, allowing imports from Switzerland and other European countries to continue to come in.

The fall session of GATT found the French action a violation of GATT and authorized the United States to take retaliatory action against French imports. We have not yet been able to prevail upon the State Department to take that action. We have received a lot of soothing syrup about the continuation of negotiations, but the Christmas fruit market is long gone and our growers have already suffered. This inaction will only encourage France and other nations to do the same thing later, since they apparently can feel safe from American retaliation no matter what they do to us.

Very much the same result occurred with respect to imports of lumber from Canada. With the help of the Canadian Government, Canadian producers of softwood lumber have greatly improved their competitive situation in the United States. The Canadian share of the U.S. market for this lumber has risen from 8.2 percent 10 years ago to 15 percent today.

Again, the State Department did little but defend the Canadian action, on the ground that we continue to have an advantage in Canadian trade in other products. American producers and their employees have had to suffer the consequences of what I consider a raid upon the American lumber market carried out with the assistance of the Canadian Government. As a result of all these excuses offered for foreign governments, our balance-of-payments deficit is just about as bad as when this administration took office.

I can almost hear you saying that these matters must be considered within the context of our overall policy and overall relations with each nation. That is what we always hear from State Department people. We are beginning to get the same line in connection with foreign aid.

I have listened to all of that I am going to listen to. I am no longer interested in anything but results, and I am satisfied that the only way the United States can get results in either the trade program or foreign aid is for Congress to act.

I should like to digress from the letter long enough to say that at the meeting with the farmers and the Finance Committee, that is exactly what I said, but in much greater detail. I said to those farmers, "You have them up here sitting in front of you, these political representatives of yours. Make clear to them what it is you expect from them by way of service in protecting the economy of our country. If you do not get it from them, then take care of them in the only way that they can be taken care of in a democracy when they do not protect the public interest."

I say to Members of Congress and to this administration that that issue is drawing itself clearer and clearer week by week and month by month as we approach 1964.

I happen to believe, Mr. President, that on both sides of this aisle and on both sides of the aisle in the House of Representatives in the elections of 1964 there will be an accounting in respect to the record which Members of Congress make relative to what they do to protect the economic interests of the people of this country in this whole matter of the relations of economic problems to foreign policy.

Let me say to the people in the State Department who have never faced a ballot box, who have never held an elective office, who have no responsibility to the voters as do elected officials, that the time has come for this Congress, in this session, to see to it that the checks are put on them as the checks have never been put upon them for years in this country.

As one member of the Committee on Foreign Relations, I repeat my notice to this administration that I propose to do exactly that to the extent of my ability in the consideration of every foreign policy economic question that comes before the Committee on Foreign Relations of the Senate in this session of the Congress.

Mr. President, I continue to read from the letter:

We have left too much of both programs to the discretion of the President and the State Department. I am not telling you, Mr. Ambassador, or the Department, in what ways and by what methods you should exercise your discretion because that is supposed to be your job, not mine. If you have to ask what to do, then you obviously are unqualified for your post. I have simply concluded that your discretionary powers and those of your colleagues should be severely curbed, and that statutory protection for American producers and taxpayers must be written more fully into law.

Sincerely yours,

Wayne Morse.

Mr. President, I ask unanimous consent that the entire letter be printed in the Record at this point.

There being no objection, the letter was ordered to be printed in the Record, as follows:

April 11, 1963.

Hon. William R. Rivkin,
Ambassador to Luxembourg,
American Embassy,
Luxembourg, Luxembourg.

Dear Mr. Ambassador: The statements of mine relative to the inadequacy of State Department efforts to protect American producers in trade negotiations are based on one thing—my 19 years of experience with the Department in such matters.

It has been my sad but consistent experience that the State Department operates on the theory that the United States is so big and so rich that we can absorb whatever trade inequity another country imposes on us without effective complaint or retaliation. Too much the same attitude has prevailed in connection with the foreign aid program. The net result has been the very bad balance-of-payments situation that is draining our economic strength.

I know very well that whenever this problem is raised in connection with one given trade problem, the answer always comes back that because our overall trade balance is favorable, we need not worry about the loss of our poultry market, or our fruit maket in Europe or any other trade problem a Member of Congress seeks to raise. We are told that this country can stand it because we have an advantage in other products.

That argument is no longer acceptable to me. Our total international economic situation is not good, and it must be improved wherever and whenever it can, in whatever area possible. If our trade balance is still favorable, it must be made more favorable.

Take the market for Oregon fruit in France, a subject on which I have a good deal of background. Late last fall, France imposed a discriminatory quota on U.S. fruit, allowing imports from Switzerland and other European countries to continue to come in.

The fall session of GATT found the French action a violation of GATT and authorized the United States to take retaliatory action against French imports. We have not yet been able to prevail upon the State Department to take that action. We have received a lot of soothing sirup about the continuation of negotiations, but the Christmas fruit market is long gone and our growers have already suffered. This inaction will only encourage France and other nations to do the same thing later, since they apparently can feel safe from American retaliation no matter what they do to us.

Very much the same result occurred with respect to imports of lumber from Canada. With the help of the Canadian Government, Canadian producers of softwood lumber have greatly improved their competitive situation in the United States. The Canadian share of the U.S. market for this lumber has risen from 8.2 percent 10 years ago to 15 percent today.

Again, the State Department did little but defend the Canadian action, on the ground that we continue to have an advantage in Canadian trade in other products. American producers and their employees have had to suffer the consequences of what I consider a raid upon the American lumber market carried out with the assistance of the Canadian Government. As a result of all these excuses offered for foreign governments, our balance-of-payments deficit is just about as bad as when this administration took office.

I can almost hear you saying that these matters must be considered within the context of our overall policy and overall relations with each nation. That is what we always hear from State Department people. We are beginning to get the same line in connection with foreign aid.

I have listened to all of that I am going to listen to. I am no longer interested in anything but results, and I am satisfied that the only way the United States can get results in either the trade program or foreign aid is for Congress to act. We have left too much of both programs to the discretion of the President and the State Department. I am not telling you, Mr. Ambassador, or the Department, in what ways and by what methods you should exercise your discretion because that is supposed to be your job, not mine. If you have to ask what to do, then you obviously are unqualified for your post. I have simply concluded that your discretionary powers and those of your colleagues should be severely curbed, and that statutory protection for American producers and taxpayers must be written more fully into law.

Sincerely yours,

WAYNE MORSE.

Mr. MORSE. I am not happy, Mr. President, to have to serve this notice on my administration, nor am I happy to find it necessary to write that letter to an Ambassador, but I wish to make it very clear to our Ambassadors that, by and large, in this field I do not think they are doing a good job. I wish to say to the representatives of the United States, acting through the State Department, at these international economic conferences, "I think that your record is a very poor record in protecting the vital economic lifeline of this country."

The strongest defense weapon of this country is our economy. I do not propose to sit silent in the Senate or in the Committee on Foreign Relations and not do everything I can to stop what I think is a very bad record being made by the State Department in this whole matter of protecting the best economic interests of the United States in respect to these matters of international negotiations in the field of our foreign trade interests.

TONGUE POINT NAVAL BASE, ASTORIA, OREG.

Mr. MORSE. I turn now, Mr. President, to another very serious matter. I do it in a spirit and out of a motivation of wanting to help my administration. The best way I can help my administration tonight is to warn it that its failure to act on the basis of the evidence which the Democratic members of the Oregon delegation have submitted to it over and over again in respect to putting the Tongue Point Naval Base at Astoria, Oreg., to work in connection with a Federal program is developing into what may very well prove to be in the months ahead a serious scandal which will embarrass the Kennedy administration.

The record of the part which the Democratic members of the Oregon delegation have played over the months on the Tongue Point issue is a record which must go into the RECORD tonight. I have gone through the voluminous files in my office dealing with the Tongue Point Naval installation in Astoria, and I have selected from that file the pertinent and important documents a reading of which will leave no room for doubt in the mind of anyone who seeks to be objective that this administration cannot justify under any circumstances the junking of the Tongue Point Naval Base.

Mr. President, this is no temporary installation. This is one of the finest permanent installations, consisting of permanent facilities, that one can find not now in use by the Federal Government anywhere in the United States.

Before I get through putting this record into the RECORD, I will leave no room for doubt that what I have just said has been verified by high administration officials themselves.

Yet, Mr. President, Tongue Point Naval Base has been declared surplus, and the General Services Administration impresses the Democratic members of the Oregon delegation as speeding ahead with full steam to get rid of it as quickly as it can, thinking by getting rid of it it will have solved the problem. I warn the General Services Administration tonight, "If you get rid of it before we have had an opportunity for a thorough consideration and full airing of this problem, then your problems have only started with regard to the Tongue Point Naval Base."

Mr. President, this case is at the White House, and the Democratic members of the Oregon delegation, through the senior Senator from Oregon, have had assurances from the White House that Tongue Point Naval Base will not be junked until there has been further full consideration of its use as a Federal project by the Federal Government. There are many projects which could be located there, and we have outlined them to the President in great detail, as well as to his assistants.

Yet we understand that today, this afternoon, an official of the General Services Administration held a meeting in Oregon with some prospective and anxious possible purchasers of Tongue Point, who hope to get it for a pittance. There was an exchange of wires between the General Services Administration and the senior Senator from Oregon this afternoon, which I shall shortly put into the RECORD.

Let the record be perfectly clear that the senior Senator from Oregon represents the Democratic members of the Oregon delegation in respect to this matter, for this has been a project I have been working on in behalf of those members now for many months. I repeat tonight, as I did in the wires this afternoon, that I serve notice on the General Services Administration not to dispose of this property until there has been ample opportunity given to various agencies of the Government, at the White House request, to consider certain programs which we are recommending and proposing might be located at Tongue Point.

What this administration needs is some imagination in regard to the use of Tongue Point.

I hold in my hand a brochure on Tongue Point. I only regret that the pictures cannot be put in the RECORD, but the pictures will be available to any Member of the Senate who is interested in this controversy, because the controversy is not going to end with the speech of the Senator from Oregon tonight.

Here are permanent buildings, as permanent, well built, and architecturally desirable as some of the finest public buildings of the Federal Government in Washington, D.C.

Not only that, Mr. President; here is a project on which permanent homes, expensive homes, valuable homes, accommodating more than 500 family units, have been built, a large residential area built on a beautiful bluff overlooking the Pacific Ocean.

Admirals know how to take care of themselves in supplying themselves with living conditions when they have the opportunity, as they did when Tongue Point was built. The Democratic members of the Oregon delegation just simply say to this administration, "You are not going to junk them without a fight, and a serious fight." For, Mr. President, to junk this base would be such a waste of the taxpayers' money that I have the right to say to this administration, "Justify for me, will you, a single dollar that you are asking to be spent on a single new installation for the armed services until you first make an economical use of Tongue Point." And I do not propose to vote for any new installations for the Military Establishment in respect to any instance where I am satisfied the installation cannot be justified as long as Tongue Point remains unused.

I say this calls for some imagination. As will be seen in a part of this RECORD, I notified the President, many months ago, that I had come to the conclusion that one of the reasons why the Military Establishment, or any branch thereof, does not want to use Tongue Point for any of the new expansion programs of the Military Establishment is that it is not located near nightclubs and various extracurricular activity resorts, dives that may be enjoyable to Federal personnel, but a consideration of which has no place in the determination of whether or not Tongue Point shall be used for a Federal program.

The sad thing is, Mr. President, that we happen to know that underneath the objections of some of the branches of the Military Establishment to the use of Tongue Point has been their pointing out that it is not a place where some of these extracurricular activities can be indulged in, as they can be at Puget Sound, or San Francisco Bay, or San Pedro Bay.

I have made clear to the White House that that objection had better be rejected; that the Military Establishment ought to be told, in no uncertain terms, "It is rejected."

I had a dispute with one of the Navy admirals, as did my colleague from Oregon [Mrs. NEUBERGER], about a year ago—and that material will be put into the RECORD later—with respect to the Geodetic Survey expansion program; and all the alibis one could possibly imagine that an admiral would use for not wanting to use Tongue Point will be found in the communication which I shall put in the RECORD. My colleague from Oregon [Mrs. NEUBERGER] and I answered it point by point, and we made it very clear to the President what our answer was, and we made it very clear to the Secretary of Commerce what our answer was.

A short time ago we received an answer from the Secretary of Commerce, which I shall read and put into the RECORD, apologizing to us, admitting we were right and the admiral was wrong, but telling us that in the meantime contracts had been entered into and they could not get out of them and the Geodetic Survey expansion program had to be placed elsewhere.

Tell it to the taxpayers of my State. I also say to the occupant of the White House, "Tell it to the taxpayers of my State." Unless this matter is settled equitably and fairly, he is going to have an opportunity to tell it to the taxpayers of my State, because in 1964 they are going to know what his answer is, if there is a failure to do justice to the taxpayers of my State and the Nation in respect to such installations as Tongue Point.

The senior Senator from Oregon has fought for the economic use of facilities elsewhere in the United States, too. Over the years I have taken the same position in regard to installations elsewhere in the country, as well as in my own State. This installation being in my own State, I have to plead a special knowledge of the facts.

I say to the General Services Administration that a proposal I understand they have under consideration, to sell this property to a few private businessmen, in the neighborhood of about $1 million, would be a scandalous return to the taxpayers of this country for this property, in which the taxpayers have more than $14 million invested. In addition, the value of the property has gone up since the United States built the houses and the installation.

I will put the figures on Tongue Point in the RECORD in a moment. Tongue Point is an installation of more than 800 acres. There is one area on the installation that contains a huge stone quarry. I am told by competent roadbuilders that the stone there is unmatched for many, many miles around. I am advised that the stone in that area, alone, is worth at least one and a half million dollars.

Mr. President, do you think the senior Senator from Oregon and the other Democratic members of the Oregon delegation are going to sit here in the Congress and permit our administration to be "taken" by the General Services Administration with that kind of shocking scandal?

There is no other answer to this matter than for the White House itself to take a hand in it, as it has already started to do, and make clear to the Government departments that this fine installation is not going to be junked, but it is going to be put to work for the taxpayers of this country, and it is going to earn a return that will justify the original investment by the taxpayers, where it can repay itself over and over again into the Treasury of the United States.

Mr. President, the naval base was closed by the Navy December 1959. I asked for the facts. I became perfectly satisfied, and said so to the people of my State; and it was not good politics to do so. I have always demonstrated that I will follow where the facts lead. In taking the stand I took I was subjected to considerable criticism at the time. However, I went into the Navy's case for the closing of the Tongue Point base for the use to which the Navy was then putting it. I became satisfied that the Navy was right. Tongue Point Naval Base was obsolete to the use that the Navy had been putting it to, because that use was no longer needed by the Navy.

I have never asked and will never ask for the keeping in operation of a Federal installation which has become obsolete as far as its then present use is concerned.

I do not propose to sit here and knowingly vote to waste the taxpayers' money. I said at the time I was satisfied that this base, along with 70 others, which the Federal Government closed at that time, was a sound program as far as those installations about which I knew the facts were concerned.

I learned the facts about Tongue Point. I decided the Navy was right. I proceeded immediately then to say to my Government, "However, you cannot junk this fine installation. We must find another Federal use for it."

Mr. President, I do not care for any noise from the press gallery when I am making a speech.

The PRESIDING OFFICER (Mr. INOUYE in the chair). The press gallery will be in order.

Mr. MORSE. I proceeded then to work, along with my Democratic colleagues in the Oregon delegation, in trying to find some other Federal use for this project. I worked with my State government to see if there was another use to which it could be put for State purposes, such as a community college, or some use in connection with some other need in the educational system, or for a possible vocational training center.

I have worked on this matter month after month. If we look at the statistics of the project it will be seen that it is a project that cannot justifiably be junked. It is 871.9 acres of land. It cost the Federal Government to acquire and build the facilities, $13,944,721.46.

I ask unanimous consent to insert in the RECORD at this point the statement made by the Department of the Navy at the time that they issued the first notice that they were going to close Tongue Point as far as the then naval use was concerned.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SUBMITTED BY: DEPARTMENT OF THE NAVY, CHIEF, BUREAU OF YARDS AND DOCKS, DISPOSAL REPORT NO. 81

Station designation: Columbia River group, Pacific Reserve Fleet, Tongue Point, Astoria, Oreg.

Former use: Headquarters, Pacific Reserve Fleet.

Area, 871.29 acres; land, $18,400.46; acquisition cost improvements, $13,926,321; total, $13,944,721.46.

Consideration: none (to be reported to GSA as excess).

1. The Department of the Navy proposes to report to the General Services Administration 871.29 acres of excess land, together with improvements located thereon, located approximately 5 miles east of the city of Astoria, Oreg., at Tongue Point. This property is excess to the current and future needs of the Navy and it is proposed that it be reported to the General Services Administration for disposal without restriction, except for the reservation for access and utility lines to serve the proposed joint Army Reserve Center and Naval Reserve Electronics Facility and the U.S. Coast Guard.

2. This property was originally acquired for the establishment of the Naval Air Station, Tongue Point. Since the disestablishment of the Air Station, the property has been utilized by the Columbia River Group, Pacific Reserve Fleet, which is scheduled for disestablishment on January 31, 1962. However, the property will continue to be required, on a diminishing basis, until June 30, 1962, the presently scheduled completion date for the shipment of personal property from the facility, which will be accomplished by the Naval Supply Depot, Seattle.

3. The property has been screened with the Departments of the Army and the Air Force and no defense requirement has materialized.

4. The property was acquired by the Government at a cost of $18,400.46 as follows: 729.84 acres by various deeds from Clatsop County, Oreg.; 141.45 acres by five condemnation actions.

The improvements consist of approximately 320 buildings and structures, of which about 120 are housing or barracks type buildings. Others include the station hospital, recreational and service facilities, four flammable storage buildings, ammunition storage and 108 high-explosive magazines, 19 covered storage (general warehouse), 3 hangar-type buildings (general warehouse and administration offices), marine fueling and other industrial-type facilities. In addition, the property contains a radio transmitter antenna, 10 piers comprising a total of 349,730 square feet of space, 3,620 lineal feet of railroad trackage, roads, streets, sidewalks, paved parking areas, street lighting, fire alarms, TV antennae and distribution system, and propane, steam, water, electric, and compressed air distribution systems, and storm and sanitary sewers including sewage treatment facilities. These improvements, including precut structural timbers, intended for use in the repair of pier No. 8, have a plant account value of $13,926,321. There are no runways at this activity as it was originally constructed as a seaplane base.

5. The plans of the Navy Department do not include the acquisition of any land or improvements for similar use at or near the

station excess property within the foreseeable future.

6. The estimated annual protection and maintenance costs of the property is $204,400.

7. This submission is in accordance with the provisions of section 511, Public Law 86-500.

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the RECORD at this point certain letters taken from my files on Tongue Point, in their chronological order. They show clearly the history of this case up to March 17, 1963.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MAY 21, 1960.

Hon. WILLIAM B. FRANKE,
Secretary of the Navy, Department of the Navy, Washington, D.C.

DEAR MR. SECRETARY: Mr. Charles DeFoe, manager of the Astoria Chamber of Commerce, Astoria, Oreg., has written to me, as follows, with respect to the Tongue Point installation:

"Firstly, Tongue Point is still losing personnel each week, and reports have it they will suffer a major cut after their new budget becomes effective July 1. Naturally with the type of operations at the base, they are having a rough time competing for an adequate budget; and in all likelihood will continue to experience budget cuts continually hereafter, which practically speaking is all very logical.

"However, as you well know, Tongue Point is a fine base, has some excellent facilities, with most of the buildings and all the postwar housing rated as Class A. There must be some additional activity for which the base is suited, especially something that could fit in with the current operations of the station.

"Another Navy inspection team was here last week and my sources at the base tell me they were making further inquiry as to the stations suitability for a missile personnel training school. Maybe you can learn something about this.

"Since the original 371 acres of Tongue Point was given the Navy by the citizens of Clatsop County, and since it is the only naval station in Oregon and since its activity is so vital to our economy maybe you could make a case of it when reviewing Navy budgets and other Navy proposals. It's too darn good of a station to let dry up and blow away."

Apparently, the above quoted comments were prompted by the forthcoming reduction in force of 30 civilian employees as announced in Commander Barackman's letter addressed to me under date of May 11 (Refer OLA:ADC:EER:atp).

I agree with Mr. DeFoe's observation that the Tongue Point installation might very well be put to good use for other important functions carried out by the Department of the Navy. I assume that the matter of making more complete and full use of the Tongue Point installation is now under study by the Department. Any information you may be able to supply in that respect will be appreciated.

Sincerely yours,

WAYNE MORSE.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, D.C., June 16, 1960.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR MORSE: This is in reply to your letter of May 21, 1960, in which you inquired concerning the Navy's plans for utilization of Naval Station, Tongue Point, Astoria, Oreg.

You will recall that the naval station was disestablished on December 31, 1959, and its facilities were transferred to the Commander, Columbia River Group, Pacific Reserve Fleet. I know that you are aware that the Columbia River Group does not constitute a base loading of suitable size to utilize fully our fine facilities at Tongue Point. Further, you are aware of the fact that our entire Reserve Fleet is dwindling as more and more stockpiled ships become obsolete. For these reasons I can well appreciate your concern about the future of Tongue Point.

The Navy shares your concern and is endeavoring to find means of utilizing Naval Station, Tongue Point more fully. In early May of this year a team of planning officers visited the area for the purpose of becoming fully acquainted with the extent and condition of facilities there so that they could more intelligently determine what possible future use might be made of the station. The observations of the team were encouraging, but their studies have not as yet been completed and a decision relative to their findings has not been reached.

As soon as a decision has been made, you will be informed. Meanwhile, I trust that the foregoing information will be sufficient for your immediate needs.

Sincerely yours,

F. A. BANTZ,
Under Secretary of the Navy.

ASTORIA CHAMBER OF COMMERCE,
Astoria, Oreg., June 29, 1960.

Senator WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: I sincerely appreciate the interest you have taken relative to certain Federal projects in the Astoria area.

Your help in bringing to the attention of the National Park Service the need for an immediate park superintendent at Fort Clatsop was most helpful. Last week Mr. Charles T. Peterson arrived at Fort Clatsop, and has taken necessary steps for hosting the visitors at the fort. I am sure this is only the beginning of a great development at Fort Clatsop, something that will be beneficial to all of Oregon.

I have been informed (unofficially), by local naval personnel, that the prospects for the missile personnel training school at Tongue Point are very good. From what I have been able to learn, the present station offers most everything the Navy is seeking, and that a definite decision will be made soon. Any further help you can give us on this will be most appreciated. The continued loss of personnel at Tongue Point is of great concern to all of us in the Lower Columbia area.

The contractor has begun work on the Columbia River bar jetty, which is so important to the water commerce of this area, and I wish to extend our thanks to you for helping to secure the appropriations for this vital project.

All of us in Astoria appreciate your continued interest and support on these important matters.

Sincerely yours,

CHARLES DEFOE,
Manager.

JULY 7, 1960.

Mr. CHARLES DEFOE,
Manager, Astoria Chamber of Commerce, Astoria, Oreg.

DEAR MR. DEFOE: Thank you very much for your letter of June 29. I appreciate your very helpful comments concerning local developments on a number of problems of interest to the city of Astoria and the Astoria Chamber of Commerce.

I was particularly interested to learn that the Department of the Navy is giving serious consideration to the use of the Tongue Point facilities for the missile personnel training school. It seems to me that the use of this facility for training school purposes would be most wise. I am informing the Navy Department of my concurrence on this point.

As soon as I have any further news of importance, I shall get in touch with you again.

In the meantime, I send kindest regards.

Sincerely,

WAYNE MORSE.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, D.C., July 11, 1960.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR MORSE: The Secretary of the Navy has asked me to acknowledge your inquiry of July 7, 1960, concerning the possibility of the Navy making use of the facilities at Tongue Point, Oreg., for a missile personnel training school.

This matter is receiving prompt attention and you may expect a reply shortly.

Sincerely yours,

B. A. ROBISON,
Commander, U.S. Navy Congressional Liaison Division.

JULY 7, 1960.

Hon. WILLIAM B. FRANKE,
Secretary of the Navy,
Department of the Navy,
Washington, D.C.

DEAR MR. SECRETARY: It is my understanding that the Department of the Navy is giving consideration to the possibility of making use of the facilities at Tongue Point, Oreg., for a missile personnel training school.

It is my sincere hope that the Department will be able to make use of the existing facilities at this installation for training school purposes or for the many other governmental purposes to which the Tongue Point facility might be devoted.

Should the Department of the Navy decide to expand its operations at Tongue Point, I know that you can count upon the wholehearted concurrence of local and civic business leaders as well as the entire Oregon delegation.

As soon as a decision has been reached concerning the possibility of using Tongue Point for a missile personnel training school, I would appreciate information in that respect.

Sincerely,

WAYNE MORSE.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, D.C., July 28, 1960.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR MORSE: This is in reply to your letter of July 7, 1960. wherein you requested knowledge of any decision regarding utilization of the facilities at Tongue Point for a missile personnel training school.

I regret to inform you that very recently it was decided not to locate the West Coast Missile Training School at Tongue Point. Reasons for this decision were threefold. First, it was found that costs to convert the hangars to classrooms and laboratory use would be excessive as compared with other possible locations. Secondly, since most of the students for the school will be entering from the San Diego area, transportation costs and time consumed in transporting students to Tongue Point would be excessive. Finally, it was determined that locating this school at Tongue Point would allow for no possible expansion in future years without providing expensive new construction.

You will recall from my letter of June 16, 1960, that we are attempting to find means of utilizing facilities at Tongue Point more fully than at the present time. You may be assured that these studies will continue.

Sincerely yours,

F. A. Bantz,
Under Secretary of the Navy.

July 28, 1960.

Mr. Charles DeFoe,
Manager, Astoria Chamber of Commerce, Astoria, Oreg.

Dear Mr. DeFoe: From the attached copy of a letter dated July 28, 1960, from the Department of the Navy, it would appear that the Navy Department has decided against locating the West Coast Missile School at Tongue Point. While I cannot concur in the decision of the Department in this instance, you can understand I am sure that in such matters at this time the decision of the Department is necessarily controlling.

I was pleased to learn, however, from the final paragraph of Under Secretary Bantz' letter that the Navy is still interested in utilizing the Tongue Point facilities more fully than at present. Let us hope that the study being carried on will result in concrete proposals.

With kindest regards,

Sincerely,

Wayne Morse.

U.S. Senate,
December 13, 1960.

Mr. W. J. Troudt,
Chairman, Columbia River Marine Industries and Affiliates, Portland, Oreg.

Dear Mr. Troudt: Your recent letter concerning developments at the Tongue Point Naval Station, Astoria, was placed on my desk in Washington, D.C., for my personal attention. Today, upon a stopover from New York, where I am serving as a delegate to the United Nations General Assembly, I read the comments you and the cosigners of your letter supplied.

I share your apprehensions over the conditions outlined in your letter. My interest in the maritime economy of the Columbia and Willamette River areas has been deep and continuing. Earlier this year, in recognition of the problem of the gradual withdrawal of Navy Department activities at Tongue Point, I communicated with Navy Secretary Franke, expressing concern over the Tongue Point situation, and urged that he study the possibility of initiating other naval activities at this station. Under Secretary Bantz replied under date of June 16, 1960 and July 28, 1960. Copies of these replies are enclosed. Needless to say, I was disappointed to learn that the Navy decided against locating the West Coast Missile Training School at Tongue Point.

Today I discussed this matter further with top Navy Department officials. They advised me that the prospects for more complete utilization of the Tongue Point installation do not appear any better at the present time than they were when Under Secretary Bantz wrote to me in July. They indicated that their studies would continue because they, too, desire to have maximum rather than partial use of any facility under the jurisdiction of the Department.

At this point, it occurs to me that it might be well to supply a few examples of the Columbia River projects for which I have worked over the years in the interest of our Columbia River maritime industries.

You are probably aware that back in 1948 I led the Oregon delegation in Congress in a hard-fought battle to bring the National Defense reserve fleet ships, then under the jurisdiction of the Maritime Commission, to the Astoria area so that they could be berthed in Cathlamet Bay. We won that battle against tremendous competition from Puget Sound interests who came to Washington, D.C., to plead for the placing of these Reserve ships in Puget Sound. We deserved to win, because the merits were on our side. I presented the case on behalf of Astoria to Maritime Commission and Navy Department officials. My presentation prevailed, because I had received excellent briefings from the people in Oregon who were directly concerned with these projects.

In 1953 Oregon grain growers and grower associations informed me of the serious lack of storage facilities for the 1954 wheat and barley crops. They made the very wise suggestion that the layup Liberty ship fleet in Astoria be made available by the Government for grain storage. I took this up with the Department of Defense, Department of Agriculture, and Maritime Administration along with other members of the Oregon delegation, and I had the pleasure of being advised on February 16, 1954, that the Department of Agriculture and other agencies had approved the use of 83 layup ships at Astoria for grain storage purposes.

Just 1 year after the ship grain storage was initiated, Washington State interests sought to have 75 ships of the Astoria reserve fleet taken to Puget Sound for further storage use in that area. Once again our Oregon delegation made strong representation on behalf of keeping the storage fleet in Astoria, and the case we presented on the merits convinced the Government officials. On March 11, 1955, the Department of Agriculture issued a release to the effect that the 75 Liberty ships would remain in Astoria.

In 1956 we were confronted with the possibility that reconditioning of the ships *Mariposa* and *Monterey*, involving a $28.8 million project would take place outside the Columbia River area. Recognizing the importance of this multimillion-dollar project for the State of Oregon, I spent many hours in conferences with various Government officials to convince them, as I was convinced, that the work on these ships should be done in our own drydock in Portland. Other members of the Oregon delegation did likewise, and the result was a victory for Oregon's maritime industries. This was another success we achieved, because we had excellent briefing from local interests.

I cite the foregoing to indicate that whenever there is the slightest possibility that Oregon is in a competitive position to receive Federal Government and military awards or installations, I intend to work to the best of my ability to assure that Oregon's case is considered thoroughly by the appropriate departments and that the case in favor of Oregon may be the strongest possible. In all these instances I serve, as I have often said, as legislative counsel on behalf of Oregon. But I depend upon the local interested parties to give me the facts so that I can present them effectively.

In discussing the Tongue Point situation with Navy officials today, I was told that the studies mentioned in Under Secretary Bantz' letter of July 28, 1960, relative to full use of the facilities at Tongue Point will continue. As soon as the new administration takes over, I shall request further consideration of ways and means to better utilize this installation.

In a further effort to be of help, as soon as Congress convenes in January, I shall discuss with the chairman of the Senate Armed Services Committee the importance, from the standpoint of national defense, of placing not only defense facilities in Oregon, but the wisdom of expanding our present installations. I shall ask that this be considered particularly with respect to the provisions of the military construction authorization bill. In addition, I shall discuss with the chairman of the Senate Committee on Banking and Currency and particularly with my good friend, Senator Paul Douglas, of that committee, the importance of considering Astoria in connection with our efforts to further assist the economies of areas that have been hit by unemployment and losses of business and industry. The facts you supplied concerning the disproportionate expenditures by the military in Oregon as compared to California and Washington reflect a condition that has existed for many years. In the past I have called this matter to the attention of the people at the Pentagon and have emphasized the importance of installing the maximum number of defense facilities in Oregon. After all, Oregon is at Russia's back door and would be a primary target in the event of a surprise attack from Russia. Our demands for more defense facilities were almost met, in part, about 4 years ago when the Woodburn-St. Paul Air Base, for which I worked for many months, was about to be approved, a change in our defense program with respect to the use of manned aircraft resulted in the Pentagon's abandonment of this airport project.

As I indicated above, I shall continue to work on these various projects through the administration and through the appropriate Senate committees. You and other businessmen engaged in Oregon's marine industries can help in this respect by supplying suggestions concerning specific installations that might logically be placed in our State. I shall follow through vigorously on those suggestions.

You may be sure of my continuing interest on this problem and of my willingness to be of help at all times. Would you kindly advise the cosigners of your letter concerning this reply?

With best wishes of the season.

Sincerely,

Wayne Morse.

Astoria Chamber of Commerce,
Astoria, Oreg., January 5, 1961.

Hon. Wayne Morse,
U.S. Senate,
Senate Office Building,
Washington, D.C.

Dear Senator Morse: The Tongue Point Study Committee of the Astoria Chamber of Commerce has instructed me to call your attention to the following information and urge your immediate attention.

At the close of World War II, more than 450 Navy vessels were mothballed at Tongue Point. With the obsolescence of these vessels, and being considered no longer useful in combat, there has been a rapid decline in the number of Navy vessels based here. Today there are less than 96, with all indications that in a short time, these too will be scrapped or removed from Tongue Point. The Navy has indicated, in the reliable information that we have available to us, that as a reserve fleet base, Tongue Point has no further use.

The Navy is aware of the fact that Tongue Point houses and service buildings are far beyond the quality of temporary war type construction, and were built at a cost of more than $40 million, with a replacement cost today of twice that amount. This permanent, well-kept facility can accommodate handily, 3,000 military personnel and their families, plus 500 civilian employees.

We also wish to remind you that Oregon has long been ignored when it has come time to divide the defense dollars spent by the United States. Quoting from a recent article in the Oregonian by staff writer Erick Wentworth, California has 26 naval facilities, Washington has 8, while Oregon has only 1, this being Tongue Point at Astoria, and it being used only to a bare minimum.

The article further stated that Oregon was getting back only $2 from the Government for every $17 paid in Federal taxes, while California was receiving $34 for every $17, and that Oregon businessmen are finding it harder and harder to compete with California and Washington interests because of Oregon's lack of military facilities.

Therefore, we are calling on you, as an elected representative of the people in the State of Oregon to explore every possibility of the Navy or some other Armed Forces department to utilize the facility of Tongue Point to its maximum potential. Such possibilities which we might suggest are: training school for missiles, submarines, coast guard; a helicopter training base; research and development facility; submarine base; and the like.

A complete brochure is now being prepared, which will be mailed to you very soon. It will contain all of the statistics, data and information, including pictures, of Tongue Point. This information will help you in your efforts to promote this facility.

Sincerely yours,

FORREST VAUGHN,
Chairman, Tongue Point Study Committee, Astoria Chamber of Commerce.

FEBRUARY 20, 1961.

Hon. JOHN CONNALLY,
Secretary of the Navy,
Washington D.C.

DEAR MR. SECRETARY: It is my understanding that an installations task force of the Department of the Navy is now making a thorough study of the facilities at the Tongue Point Oregon Naval Station for the purpose of determining the best possible utilization of this installation.

My intense interest in Tongue Point goes back to my first term in the U.S. Senate when I led the fight on behalf of the Oregon congressional delegation to have Tongue Point designated as storage area for national defense reserve fleet ships. We were confronted with strong opposition from Puget Sound and California interests who contended that the reserve fleet ships should be placed in their respective States. We won that battle on the merits, because our facts in support of Tongue Point as the best location for the reserve fleet could not be refuted. In my opinion, an equally strong case can be made today in support of full utilization of the Tongue Point Naval Station for a military defense installation.

As you know, there are many fine, well-constructed buildings at Tongue Point which could be converted to various defense uses at minimum cost to the Government. In fact, if there is any project of the military establishment now under consideration which calls for the construction of a sizeable quantity of new buildings, it seems to me that it would be extremely wise, from the standpoint of economy in Government, to utilize the existing Tongue Point facilities in lieu of new construction.

I am greatly impressed by the very pursuasive facts presented by numerous Oregon individuals and groups, including the Tongue Point Study Committee of the Astoria Chamber of Commerce, on behalf of full utilization of Tongue Point. The facts that have been assembled in this case demonstrate very convincingly that Tongue Point would be ideally suited for use as a missile personnel training school, training schools for submarine or helicopter personnel, a Coast Guard installation, or a submarine base. It could also be put to excellent use as a general research and development facility.

Tongue Point is in the near vicinity of the city of Astoria, Oreg. Astoria is in a position to supply all of the requirements of a major defense installation. It has an ample supply of low-cost electric power, fine water supply and sewerage facilities, and excellent housing for personnel of a defense installation. The port of Astoria is one of the major deep water ports of the west coast and the harbor installations are available to handle a maximum volume of water traffic. Astoria has ample rail transportation facilities connecting with all of the major western railroads.

Recreation facilities in the immediate area of Astoria are among the finest in the entire United States. Water sports, deep sea fishing, fine beaches and mountain areas are practically at Astoria's door. Geographically and climatically, Astoria offers everything to be desired for a defense installation and for the personnel of such an installation.

In addition to Tongue Point's ideal location and its excellent facilities, there are other compelling reasons why serious consideration should be given to full utilization of the Tongue Point Naval Station. The entire State of Oregon, and the Astoria area in particular, have been hit hard economically in recent months. Astoria has a serious unemployment problem and if the fine skilled labor force of that city is to be retained, we must find ways and means to improve the employment situation. Since World War II we have had a large number of individuals skilled in ship repair and industrial operations as well as in management activities on hand in Astoria. This is a fine defense reserve which should be retained for defense emergency purposes.

Another point—one which I brought to the attention of President Kennedy recently, and the importance of which cannot be underestimated—is the fact that for many years, going back to the post-World War I period, Oregon has not had its fair share of defense and other Government installations. I make this plea on behalf of Astoria as well as the entire State of Oregon for serious consideration by the Department of the Navy of a greatly expanded program of defense installations for Oregon.

I make this plea for military and other Government installations for Oregon, not as a make-work program but on the basis that Oregon has been neglected in this respect for many years. As a matter of fact, we are militarily at the back door of the Soviet Union. In the event of a surprise attack on the part of the Communists we would be in the frontline of defense operations. Thus, we must have at the earliest possible date a maximum of defense installations in our State. The Tongue Point project is but one of many which should be considered for the State of Oregon.

I urge that this request be given thorough study on your part and would appreciate having your views at your earliest convenience.

With every good wish.

Sincerely yours,

WAYNE MORSE.

ASTORIA, OREG., *February 9, 1962.*

The Honorable WAYNE MORSE,
Senator, The State of Oregon,
Senate Office Building, Washington, D.C.

DEAR SENATOR MORSE: Clatsop County Tongue Point Corp., established in 1919 and equipped with stockholder's promissory notes as security, obtained $100,000 from four Clatsop County banks and purchased approximately 223 acres of land near Tongue Point in the name of Clatsop County. A $100,000 tax was levied on the people in 1920 to pay the several banks and retire the promissory notes. In January 1921, Clatsop County deeded said land to the United States of America in expectation of a permanent naval installation similar to that in Bremerton.

Finally, with the advent of World War II a lesser impermanent naval installation was authorized for Tongue Point. Even this modest installation was not ours until Clatsop County acquired and deeded to the United States of America a $58,000 bridge and access road in 1930, 133 acres in 1941–42, 290 acres in 1949 and 269 acres in 1950. I am enclosing transcripts from the deed records of Clatsop County to confirm our community effort to secure a permanent naval installation in our community and state.

Our economy has been disrupted through the years by numerous closures of United States of America installations. The several closures follow:

Installation	Maximum complement	Established	Closed
Port docks, naval station		1942	1945
Airport, naval air station		1942	1945
Fort Stevens	3,780	1862	1946
Naval hospital		1943	1946
Tongue Point, naval air station		1939	1946
Immigration Service office			1958
Tongue Point, assistant industrial manager			1958
Federal Bureau of Investigation		1950	1959
Fish and Wildlife market news service		1940	1960
Port security office	20	1942	1960
Coast project office			1961
Tongue Point Naval Reserve Fleet	3,449	1946	1961
Radar bomb scoring squadron	70	1960	1962

The Pillsbury Flour Mill Co. produced flour for export from 1920 through 1961 with employment up to 125. Federal financed competition in South America and the Philippines is responsible for this closure. Many in our community believe the many Federal dams on the Columbia River have adversely affected our fishing industry.

The people of Clatsop County would convert Tongue Point into an industrial park. Through aggressive action, we would attract an industry or industries with permanent payroll and taxes. A bill is now before the Congress which would return Tongue Point to Clatsop County free of charge.

We believe the Federal Government is morally obligated to return Tongue Point to Clatsop County without charge. Your assistance is asked to hunt for ways to make Tongue Point available to Clatsop County on the most favorable terms.

Sincerely,

GUY BOYINGTON,
County Judge, Clatsop County.
VERNE STRATTON,
Commissioner.
WALTER H. NELSON,
Commissioner.

FEBRUARY 28, 1962.

The Honorable GUY BOYINGTON,
County Judge.
The Honorable VERNE STRATTON,
Commissioner.
The Honorable WALTER H. NELSON,
Commissioner.
Clatsop County Court, Astoria, Oreg.

GENTLEMEN: This will acknowledge your recent letter in which you provided very helpful information concerning the history of the proceedings and actions, including the transfers of land to the United States, which led to the establishment of the Tongue Point Naval Base.

At the outset, I should point out that for many months I have cooperated to the greatest possible extent with local interests in Clatsop County, including businessmen, service organizations and interested citizens, as well as with State officials, in exploring every alternative for full utilization of the Tongue Point Naval Base by various Federal agencies. Some of the possibilities we have investigated include a Polaris submarine base, a substantial Coast Guard installation, a Coast and Geodetic Survey headquarters, an oceanographic research institute, a missile personnel training school, and a school for submarine or helicopter personnel. The Federal survey team which visited Astoria last year to explore the possibilities at Tongue Point came to Oregon at my request.

I shall do everything I can to assist Clatsop County in converting Tongue Point into an industrial park. As you know, I cooperated fully with State officials in connection with the Boardman Space Age Industrial Park, and it will be my pleasure to work closely with you in attracting private industry to Astoria.

With specific reference to the proposed conveyance of the Tongue Point Naval Base to Clatsop County, you are probably aware of the fact that under existing law, preferences are granted State agencies in the acquisition of surplus Federal real property. Transfers for public park or public recreational area purposes may be made at 50 percent of fair value; transfers of historical monuments may be made gratuitously; conveyances for public health or educational purposes may be made with up to 100 percent public benefit allowance as determined by the Department of Health, Education, and Welfare, and Federal lands may be conveyed without consideration for wildlife conservation.

Also, it is quite likely the Federal Government could negotiate a sale of the Tongue Point property at fair market value under the procedure outlined in 40 U.S.C. 484 (e) (3) (H).

The details concerning the transfers mentioned in the preceding paragraphs are set forth in the General Services Administration's pamphlet entitled, "Disposal of Surplus Real Property," a copy of which is enclosed for your information.

In all frankness, I should tell you that I could not support a proposed gratuitous transfer of the Tongue Point Naval Base. The land and buildings comprising the base legally belong to all of the people of the United States, including the people of Oregon. For many years, I have taken the position in the Senate that the property of the American people should not, in good conscience, be given away regardless of how meritorious the proposed transfer might be. This principle has come to be known in the Congress as the "Morse formula." My insistence upon the uniform application of the principle in every State of the Union, including Oregon, has saved the taxpayers of the United States millions of dollars. I can assure you that it has not been easy to apply this principle insofar as the proposed transferees and their congressional sponsors are concerned, but I am satisfied that the great majority of the Members of the Congress appreciate the fact that I have been willing to defend this principle in every case, without exception.

Under the Morse formula, where the Federal property is to be transferred for a nonpublic use, payment of 100 percent of fair appraised market value is required. Where the transfer is for a true public purpose such as a public park, a courthouse, a public library, or school, the Morse formula, in recognition of the local public benefits conferred, permits the transfer of 50 percent of fair appraised market value. A thorough examination of the precedents does not disclose any ground for a possible exception in this area.

In view of the fact that Clatsop County proposes to acquire Tongue Point for industrial park purposes, I would urge that serious consideration be given at this stage to proceeding under 40 U.S.C. 484(e) (3) (H) for an acquisition under a negotiated sale at fair market value. I shall do everything I can to assist in the working out of such a negotiated sale.

In order that there may be no misunderstanding, I should point out that proponents of a gratuitous transfer to Clatsop County have suggested that this might be a case calling for an application of the principle of the Roseburg Veterans Hospital case (CONGRESSIONAL RECORD, vol. 102, pt. 7, p. 9324) inasmuch as substantial portions of the lands comprising the naval base were donated.

In the Roseburg Veterans Hospital case, I pointed out that the appropriate Federal agency had agreed that an unimproved portion of the donated land should be returned to the donor city inasmuch as it was no longer needed for the original hospital purposes for which the land was granted to the United States.

The facts of that case differ from the case now under consideration because Clatsop County seeks a gratuitous transfer of the entire base, not merely an undeveloped portion as in the Roseburg Veterans Hospital case, and no Government agency has found that there should be a gratuitous transfer of any portion of this base to Clatsop County.

My work on behalf of the Astoria area and my cooperation with you shall continue until we find some worthwhile maximum use for the Tongue Point Base.

With kindest regards.

Sincerely,

WAYNE MORSE.

MARCH 22, 1961.

The Honorable ROBERT S. MCNAMARA,
Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: In the interest of the United States and the State of Oregon, I most respectfully urge your personal and thorough consideration of action directed toward restoration to maximum use of the excellent and strategically located facilities of the Tongue Point Naval Station, Astoria, Oreg.

Unquestionably, the interest of the United States would be served by placing this installation on a full-capacity operational basis. Located near the mouth of the Columbia River, it offers, for immediate Government use, a fine assortment of permanent buildings, including an administration building, warehouses, offices, a hospital, a heating plant, several shops, and almost 500 housing units. The installation also has eight well-constructed piers, a marginal wharf and three seaplant ramps. From the standpoint of economy in Government, the Tongue Point buildings and port installations which are ready for immediate use should be considered as an alternative to the construction of costly, new defense facilities in other parts of the Nation.

The Federal uses to which the Tongue Point Naval Station could be devoted are many. The President has pointed out the need for a speedup in an oceanography program. It would be difficult to select a better location in which to carry an oceanographic research. It could be utilized as a submarine training base, a missile training base, an Air Force training base, a Coast Guard installation, as well as for defense training and research programs.

All of the advantages of a major city are in the immediate vicinity. The city of Astoria, to which the Tongue Point Naval Base is adjacent, is in a position to supply all of the requirements of a major defense installation. It has an ample supply of low-cost electric power, fine water supply and sewage facilities, and excellent housing for personnel of a defense installation. The port of Astoria is one of the major deepwater ports of the west coast and the harbor installations are capable of handling a very substantial volume of water traffic. Astoria has an excellent airport and it has ample rail transportation facilities which connect with all of the major western railroads.

Recreation facilities in the immediate area of Astoria are among the finest in the entire United States. Water sports, deep sea fishing, fine beaches and mountain areas are practically at Astoria's door. Geographically and climatically, Astoria offers everything to be desired for a defense installation and for the personnel of such an installation.

From the standpoint of the State of Oregon, as well as the Nation, full utilization of the Tongue Point Naval Station is of tremendous importance.

A serious economic emergency confronts the State of Oregon. Our major industry is lumber and I am deeply concerned over the fact that lumber mills throughout the State have been shutting down or have been working on reduced schedules. The latest statistics made available to me from the Department of Labor show that unemployment in Oregon is at one of the highest levels in the Nation. In Oregon we need new defense installations instead of action by the Defense Department which will shut down one of the few installations of this type in the State. The city of Astoria, like other Oregon cities, has a serious unemployment problem and if the fine skilled labor force of that city is to be retained for immediate call in case of a defense emergency, we must find ways and means to improve the employment situation of the area. Since World War II there have resided in Astoria many individuals who are skilled in ship repair, industrial operations, and in management activities. This fine defense reserve should be on hand for emergency purposes.

Another point of vital importance is one which I have brought to the attention of President Kennedy, namely, that for many years, going back to the post-World War I period, Oregon has not received its fair share of defense and other Government installations. Recently I inserted in the CONGRESSIONAL RECORD a Senate joint memorial adopted by the 51st Legislative Assembly of Oregon, pointing out the indisputable fact that California has 20 U.S. naval installations, the State of Washington 8, and the State of Oregon only 1—which is now threatened by deactivation. The memorial also reminded us of the fact that in 1960 California had 23.7 percent of the total prime military contracts awarded by the Federal Government. Washington had 3.5 percent and Oregon only one-tenth of 1 percent of these contracts.

These figures point to either discrimination against the State of Oregon or disregard of the State in the locating of defense installations and the awarding of defense contracts. They warrant immediate action upon the part of the Department of Defense whereby an expanded program of defense installations and defense contracts may be channeled to Oregon.

I make this plea for military and other Government installations for Oregon, not as a makework program but on the basis that Oregon has been neglected in this respect for many years. As a matter of fact, we are militarily at the back door of the Soviet Union. In the event of a surprise attack on the part of the Communists we would be in the frontline of defense operations. Thus, we must have at the earliest possible date a maximum of defense installations in our State. The Tongue Point project is but one of many which should be considered for the State of Oregon.

Finally, in fairness to you I point out most respectfully, that if the Department of Defense should decide to deactivate the Tongue Point naval installation, I would be constrained to examine with care any military construction authorization requests for projects here at home for which the Tongue Point installation might be substituted.

I urge that this request be given thorough study on your part and would appreciate having your views at your earliest convenience.

With best regards.

Sincerely,

WAYNE MORSE.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, D.C., March 30, 1961.
Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: As indicated in his special message on the defense budget, the President has directed the Secretary of Defense to inactivate, and dispose of, where feasible, bases and installations which are clearly surplus to the present and future needs of the Military Establishment. In accordance with this directive, the Secretary of Defense, in consultation with the military departments and other appropriate offices of the Defense Department, has determined that 52 installations, or components thereof, in the United States fit within the category described above, and steps are being taken to accomplish the various actions required in each case.

Although in many cases these actions will cause hardships to the communities and individuals involved, the actions cannot be deferred. Every practicable effort will be taken to alleviate these hardships.

The Department of the Navy installation affected in your congressional area of interest is set forth in the attached fact sheets for your information.

Sincerely,
ROBERT E. M. WARD,
Rear Admiral, U.S. Navy,
Chief of Legislative Affairs.

FACT SHEET A

Fact sheet on: Columbia River group, Pacific Reserve Fleet at Astoria (Tongue Point), Oreg.

Brief of mission: Inactivation, preservation, maintenance and security of assigned ships of the Pacific Reserve Fleet.

Nature of action: Disestablishment of group and reduction of real estate to caretaker status.

Reasons for action: (a) All of the ships in the Navy Reserve Fleets on both coasts are of World War II vintage. Continuing reappraisals of these ships for naval potential has resulted in a progressive decrease in the total number in reserve. Those found unfit for or excess to modern naval requirements are disposed of. Reserve fleet ships have been dispersed by types among several groups (at present, 11). In order to realize the maximum economies from disposal it is necessary to periodically consolidate the surviving ships into fewer groups thereby reducing administrative overhead and other general costs of maintaining and servicing ships; (b) in fiscal year 1962 it becomes both feasible and economically prudent to disestablish one group from the Pacific Reserve Fleet. Of five groups on the Pacific coast (Bremerton, Columbia River, Mare Island, Stockton, and San Diego), the Columbia River group has been selected for disestablishment for the following reasons:

(1) Fewer tows from Columbia River than from any other group will be required to reberth ships and craft which will be retained. There are now 62 ships at Columbia River (largest being an LST) of which 32 have been authorized for disposal or foreign transfer; there are also 28 service craft (small harbor units including barges) of which several will be disposed of. It is estimated that a maximum of about 30 tows will be needed to reberth the ships and craft retained. The next smallest group at Stockton, Calif., has 58 ships (mostly destroyer escorts and destroyers) none of which are scheduled for disposal; it is estimated that at least 50 tows would be required to reberth this group of larger ships, all of which have long-term retention value. It is worth noting at this point that Stockton and Mare Island acquired a number of long-term retention ships when the San Francisco group was disestablished in fiscal year 1960.

(2) Maximum reduction of overhead costs can be realized by disestablishment of the Columbia River group. All other Pacific coast sites have existing basic shore establishment support organizations which must be maintained operational for other Navy requirements (e.g. Navy shipyards, supply depots, schools, operating bases, training commands, etc.). The shore establishment at Columbia River serves no other purpose than to support the Reserve fleet group. Estimated dollar savings to the Navy by disestablishing the Columbia River group and placing real estate in a caretaker status are: Fiscal year 1962, $550,000, and in fiscal year 1963 and each subsequent year, $1,435,000. In addition, about 550 military personnel can be made available for reassignment to other than Reserve fleet duty.

(3) Other remaining sites are adjacent or proximate to Navy industrial facilities (shipyards) for emergency activation. At these locations there are ready at hand the special technical "knowhow," craftsmen, shops, and so forth, necessary for immediate application to the work and problems of earliest possible emergency activation of Navy ships. In this connection, being World War II ships which have had no modernization, there is substantial and highly technical work involved in making them effective for modern warfare.

Action: The Columbia River group, Pacific Reserve Fleet will be disestablished about January 31, 1962. The real estate, buildings, and fixtures will be placed in a caretaker status. Reserve ships and craft now berthed at Columbia River group and which are planned for continued retention by the Navy will be towed out and reberthed primarily at Bremerton but with some being distributed to San Diego, Stockton, and Mare Island. The present (March 1) personnel strength at the site is 63 officers, 492 enlisted men and 239 civilians; this will be reduced to a custodial force of 1 officer and 21 civilian employees by January 31, 1962. Details of the personnel phase down are shown below under "personnel statistics." When placed in a custodial status, management of the real estate and facilities will be transferred to the Commandant 13th Naval District at Seattle from the Commander Pacific Reserve Fleet at San Francisco.

a. This facility has been utilized below potential for several years. The Department of the Navy has during this time sought without success to increase or find an alternate utilization through possible transfer to the site of other activities of the Navy. Such utilization by the Navy does not appear feasible. A continuing effort will be made in the Department of Defense to find a substitute tenant; through the General Services Administration other agencies of the Federal Government will also be solicited for possible utilization.

Vital statistics: Personnel statistics—(a) There are 256 civilian employees on board as of March 1, 1961; (b) estimated yearly salaries of these employees, $1,290,000; (c) predicted reduction in civilian positions, 235 (see subpar. (h) below for phasedown schedule); (d) number of positions to be transferred to other activities, none. The commander of the Columbia River group will provide maximum assistance to employees being separated in obtaining other employment through State and Federal agencies; (e) military personnel on board as of March 1, 1961: officers 65; enlisted 513 and total, 578; (f) estimated annual military salaries, $1,900,000; (g) predicted military personnel reductions, 577; (h) schedule of anticipated personnel phasedown.

Personnel strength as of 1st day of month indicated

	March 1961	July 1961	October 1961	November 1961	January 1962	February et seq. 1962
Officers	65	44	40	6	3	1
Enlisted	513	315	200	7	7	0
Civilian	256	230	179	147	72	21

GENERAL DESCRIPTION OF INSTALLATION

a. The Columbia River group of the Pacific Reserve Fleet is located at Tongue Point, Oreg., about 4 miles north of Astoria.

b. Land area in acres and acquisition cost: 920 acres, $618,882 (Government owned).

c. Total value of plant account: land, $618,882; buildings, $14,675,000, and equipment, $1,579,000.

d. Predominant type of building construction: permanent, 152; semipermanent, 107; temporary, 10.

FINANCIAL OPERATIONS

a. Maintenance and operating costs of Columbia River group:

Fiscal year	Amount	Estimated savings over fiscal year 1961 costs
1959	$1,924,000	
1960	1,875,000	
1961	1,685,000	
1962	1,135,000	$550,000
1963	250,000	1,435,000

(b) Estimated costs of disestablishing the Columbia River group are included in the maintenance and operating expense for the group in fiscal year 1962. These expenses include: Redistribution of material for utilization elsewhere; closing up buildings as vacated and placing them in a secure condition for caretaker status; towing of ships and craft to new berthing area; and disposal of excess and obsolete property (including ships most of which have already been prepared).

(c) Effect on other areas: There will be no increase in costs or military personnel at other reserve fleet sites on the Pacific coast by virtue of this disestablishment. Ships from Columbia River group will be berthed in under utilized facilities at other sites which space is a product of previous and continuing disposal of excess and obsolete ships.

OPERATIONS

(a) Approximate numbers of reserve ships and craft berthed at Columbia River group: End fiscal year 1959, 180; end fiscal year 1960, 150; March 1, 1961, 90 (of which 33 are in process of disposal or foreign transfer). The foregoing illustrates the declining utilization of the Columbia River group.

DEFENSE DEPARTMENT TO DISCONTINUE OR REDUCE OPERATIONS AT 73 LOCATIONS

Plans to discontinue or modify operations at 73 installations and activities in the United States and in foreign countries, as indicated in President Kennedy's special message on the Defense budget, were announced today by the Department of Defense.

Those installations and activities which are located in the continental United States were specifically identified by the Department. Those located outside the continental United States were not listed at this time pending notification of the governments of the countries concerned.

These plans result from a continuing study of Department of Defense installations initiated by the Secretary of Defense on instructions from the President. In his state of the Union message on January 30, the President announced that he had directed the Secretary of Defense to appraise the opportunities of eliminating obsolete bases and report his preliminary conclusions by the end of February.

There are approximately 6,700 separately identifiable defense installations and activities of all types, 2,230 of which are outside the continental United States. Each must be specifically evaluated against military requirements for peacetime and mobilization purposes. This is being done systematically and will be continued.

As the first step, 73 domestic and foreign installations and activities have been identified which are excess to Department of Defense needs and can be discontinued or reduced in scope in order to produce future significant savings. The costs of closing these installations will more than offset anticipated savings in fiscal year 1962, but savings of over $220 million in annual operating expense will be realized in future years.

Of the domestic installations, 36 will be declared excess and made available for use by other Federal agencies, or disposal by sale. Industrial plants which might be needed to support a mobilization effort would be sold under contracts containing a recapture clause.

Reasons for these actions include:

1. Changes in missions, weapons systems and force levels have reduced the need for some facilities such as air bases and training stations;
2. Certain industrial installations are no longer required as part of the Government-owned production base;
3. Some overhaul and repair facilities are operating at less than economical capacity;
4. Reductions in inventory achieved through improved property disposal and utilization programs have resulted in freeing several million square feet of storage space at major supply installations in the Continental United States;
5. Workloads at some facilities can be redistributed to other more modern and efficient installations and save personnel and overhead costs.

Major actions will be phased to minimize the impact on the employees and communities concerned to allow adequate time to work with employees in planning their relocation and reemployment and with community leaders on community readjustments. Special procedures are being developed at the direction of Secretary McNamara to assure that all possible steps are taken to minimize the impact on employees and communities. This will involve cooperation with Federal, State and local agencies and groups concerned.

The location of the installations to be reduced or discontinued in the continental United States, and the action to be taken is attached.

LIST OF DEFENSE INSTALLATIONS TO BE REDUCED OR DISCONTINUED IN THE CONTINENTAL UNITED STATES

Alabama—Ordnance Depot Activity (Army) located at Redstone Arsenal: Phase-out this reserve storage depot in the near future and transfer facility to Missile Command at Redstone.

California—Alameda Administration Center (Army), Alameda, Calif. Declare unneeded portions excess during next 2 years, and turn over to General Services Administration for disposition. Three warehouses to be transferred to Navy. Perishable shipment activity to remain. Benicia Arsenal (Army), Benicia, Calif. Inactivate, declare excess and turn over to General Services Administration for disposition. To be phased out over 3-year period. Air Force Plant No. 10 (Northrup), Hawthorne, Calif. Declare excess in fiscal year 1962. Turn over to General Services Administration to negotiate sale to contractor. Star Com Minor Relay Station (Army), Los Angeles, Calif. Discontinue by fiscal year 1963. Transfer traffic for Los Angeles users to the major relay station at Davis, Calif. Elliott Annex to Naval Supply Center, San Diego, Calif. Inactivate, declare excess and turn over to General Services Administration for disposition in fiscal year 1962.

Nuclear Weapons Supply Annex (Navy), San Diego, Calif. Inactivate and declare unneeded portions excess in near future. Turn over to General Services Administration for disposition. Government facilities at Bethlehem Steel Corp. (Navy), San Francisco, Calif. Declare excess and turn over to General Services Administration for disposition in near future.

Delaware—Lenape Ordnance Modification Center (Army), Newark, Del. Declare excess and turn over to General Services Administration for disposition in fiscal year 1962.

Florida—Atlantic Reserve Fleet site located at Green Cove Springs, Fla. Inactivate, declare excess, and turn over to General Services Administration for disposition. Transfer ships having continuing potential to other sites. Phase out during fiscal year 1962. Naval Industrial Shipyard, Tampa, Fla. Declare excess and turn over to General Services Administration for disposition in fiscal year 1963.

Illinois—Chicago Administration Center Buildings (Army), Chicago, Ill. Transfer to General Services Administration ownership and operation effective July 1, 1961.

Indiana—Air Force Plant No. 30 (General Motors), Indianapolis, Ind. Declare excess. To be phased out during next 3 years. Return to city, which owns the land.

Kansas—Naval Air Technical Training Unit, located at Naval Air Station, Olathe, Kans. Transfer to Glynco, Ga., to consolidate air control training. Buildings vacated remain as part of station.

Kentucky—Louisville Medical Depot, (Army), Louisville, Ky. Inactivate, declare excess and turn over to General Services Administration for disposition. To be phased out over 1 to 2 years.

Louisiana—Headquarters, 8th Naval District and Naval Station, New Orleans, La. Disestablish during fiscal year 1962. Inactivate station, declare excess and turn over to General Services Administration for disposition. Transfer headquarters and accounts office elsewhere. Other naval activities in New Orleans area are not affected.

Maine—Long Island (Maine) Storage Annex of the Naval Fuel Depot, Casco Bay, Maine. Reduce to partial maintenance status by July 1, 1962. Presque Isle Air Force Base, Presque Isle, Maine. Inactivate, declare excess and turn over to General Services Administration for disposition. (Family housing units will be retained for use by personnel at Loring, Maine. Inactivation will be in fiscal year 1962.

Maryland—Inspection and test performed at U.S. Naval Engineering Experiment Station, Annapolis, Md. Reduce operation by relying on manufacturers to perform more inspections and tests. (The work represents about 10 percent of station.)

Massachusetts—Atlantic reserve fleet site located at Boston Naval Shipyard, Boston, Mass. Inactivate and transfer ships with continuing potential to other sites during during fiscal year 1962. Facility remains as part of shipyard complex. Air Force Plant No. 69 (General Electric), Pittsfield, Mass. Declare excess and turn over to General Services Administration for disposition. To be phased out during next 3 years. Air Force Plant No. 29 (General Electric), West Lynn, Mass. Declare excess during fiscal year 1962 and turn over to General Services Administration to negotiate sale to contractor.

Michigan—Grand Blanc Storage Facility No. 1 (Army), Grand Blanc, Mich. Declare as excess and turn over to General Services Administration for disposition. Facility will be vacated during next 2 years.

Mississippi—Supply Operations on Construction Battalion Center (Navy), Gulfport, Miss. Complete planned curtailment of supply operations during fiscal year 1962.

Missouri—Area Support Center (Army), St. Louis, Mo. Transfer to General Services Administration ownership and operation, effective July 1, 1961.

St. Louis Ordnance Plant (Army), St. Louis, Mo. Declare excess and turn over to General Services Administration for disposition. Two existing production lines will be moved to another Government-owned facility. This action will occur during the next 2 years.

New Jersey—Government facilities at New York Shipbuilding Corp. (Navy), Camden, N.J. Declare excess and turn over to General Services Administration for disposition in near future. Government facilities at Bethlehem Steel Corp. (Navy) at Hoboken, N.J. Proceed with negotiations to sell to contractor who has option to purchase. Raritan Arsenal (Army), Metuchen, N.J. Phase out over 3-year period. Declare excess and turn over to General Services Administration for disposition.

New Mexico—Kirtland Air Force Base, Albuquerque, N. Mex. Negotiate arrangements with city to permit Air Force to remain as a tenant, with city to have full title and control of runways, taxiways, and northwest portion of the field.

New York—Air Force Plant No. 38 (Bell Aircraft Plant), Modeltown, N.Y. Declare excess and turn over to General Services Administration for disposition. To be accomplished during next 3 years.

Air Force Plant No. 68 (Olin Mathieson), Modeltown, N.Y. Declare excess and turn over to General Services Administration for disposition during fiscal year 1962. U.S. Army Building, 39 Whitehall Street, New York. N.Y. Vacate, declare excess and turn over to General Services Administration for disposition. To be vacated during next 12 months. Medical Maintenance Activity located at Schenectady General Depot (Army), Schenectady, N.Y. Phase out during next few months. Facility remains as part of depot complex.

Ohio—Cincinnati Ordnance District Storage Facility (Army), Kings Mills, Ohio. Declare excess and turn over to General Services Administration for disposition within the next few months. Rossford Ordnance Depot, (Army), Toledo, Ohio. Inactivate, declare excess and turn over to General Services Administration for disposition. To be phased out over 3-year period.

Oregon—Pacific Reserve Fleet site, located at Tongue Point, Oreg. Inactivate, declare excess and turn over to General Services Administration for disposition. Transfer ships having continuing potential to other sites. Phase out during fiscal year 1962.

Pennsylvania—Government (Navy) facilities at Erie Forge and Steel Corp., Erie, Pa. Sale to contractor. Storage Annex, Olmstead Air Force Base, Middletown, Pa. Inactivate, declare excess and turn over to General Services Administration for disposition during fiscal year 1962. Air Force Plant No. 32 (AVCO), Williamsport, Pa. Declare excess in fiscal year 1962 and turn over to General Services Administration to negotiate sale to contractor.

Texas—Air Force Reserve Unit, located at Dallas Naval Air Station, Dallas, Tex. Transfer to Carswell Air Force Base, Fort Worth, Tex., in fiscal year 1963. Facilities vacated will revert back to Navy. Laughlin Air Force Base, Del Rio, Tex. Inactivate, declare excess, and turn over to General Services Administration for disposition. Present mission will be relocated during fiscal year 1962. South Field of Naval Auxiliary

Air Station, Kingsville, Tex. Inactivate and place field in standby status. Transfer Training Squadron Seven to Naval Air Station, Meridian, Miss., in near future.

Atlantic Reserve Fleet site located at Orange, Tex. Reduce maintenance operation by consolidating at this site Reserve ships with low mobilization priority and long-term potential. To be accomplished during fiscal year 1962. U.S. Naval Auxiliary Air Station, Port Isabel, Tex. Inactivate, declare excess and turn over to General Services Administration for disposition in near future. Harlingen Air Force Base, Harlingen, Tex. Inactivate, declare excess, and turn over to General Services Administration for disposition. Transfer mission to Connally Air Force Base during fiscal year 1962.

Utah—Naval Supply Depot, Clearfield, Ogden, Utah. Disestablish supply mission and phase out stocks over next 4 years. Lease available space or declare excess and turn over to General Services Administration for disposition.

Vermont—Air Force Plant No. 55 (11,000-acre tract), Burlington, Vt. Declare 8,800 acres excess and turn over to General Services Administration for disposition. Army to use balance of property for Army National Guard. To be phased out over 3-year period.

Washington—Camp Hanford (Army), Richland, Wash. Phaseout over next 2 years and return property to Atomic Energy Commission. Mount Rainier Ordnance Depot (Army), Tacoma, Wash. Inactivate and phaseout over 3-year period. Property will be held in standby. U.S. Naval Degaussing Station, Bremerton, Wash. Reduce to partial maintenance status in the near future. Government (Navy) facilities at Isaacson Iron Works, Seattle, Wash. Sale to contractor at fair market value.

Assistant Secretary of Defense,
Washington, D.C., March 31, 1961.

Hon. Wayne Morse,
U.S. Senate.

Dear Senator Morse: This is in further reply to your letter of March 22, 1961, which urged that a thorough study be made of possible Defense Department use of the naval installation at Tongue Point, Astoria, Oreg.

The unused capability of this installation has been the subject of several studies in the recent past, both in connection with decisions for housing new activities, and in consideration of potential advantages that might be derived from moving existing activities from present locations to Tongue Point. The scope of these considerations has not been limited to Navy but has encompassed Army, Air Force, and Marine Corps activities as well. A plan for effective, economical utilization of Tongue Point has not as yet evolved and to avoid possible misunderstanding, I must point out that the prospects for such utilization are not encouraging.

Conditions of unemployment in many areas of the country are deplored, however, it continues to be the responsibility of the Department of Defense to administer resources available to it in the most effective possible manner consistent with evolutions in weapons systems and changing military requirements for both intermediate and long-term periods. Within this management concept, it is inevitable that expenditures to modernize and expand essential installations will be required whereas excess installations will be disposed of.

Tongue Point is well recognized as a potential asset and you may be assured in the event its effective utilization within a balanced Defense program becomes evident that decisions to implement such action will be expedited. It is regretted that circumstances preclude a more optimistic forecast for Tongue Point at this time.

Sincerely yours,

Edward J. Sheridan.

April 5, 1961.

Hon. Dan A. Thiel,
Oregon State Senate,
Salem, Oreg.

Dear Senator Thiel: Thank you very much for your letter of March 31 concerning the Tongue Point naval installation. It was with deep concern that I received the news of the closure of this and other defense installations in many parts of the country.

As you probably know, I do not understand the meaning of the word "quit," and I shall continue to do everything possible to convince the administration that the excellent Tongue Point facilities should be put to work for some usable Government function.

I agree with you completely that the Tongue Point base would make a fine site for an oceanography research laboratory. As you may recall, I have mentioned this in discussing Tongue Point on a number of occasions and I shall continue to remind the new administration that it would be difficult to find a better site for an oceanography research center than at Tongue Point.

I appreciated hearing from you.

Sincerely,

Wayne Morse.

State of Oregon,
Oregon State Senate,
Salem, March 31, 1961.

Hon. Wayne Morse,
U.S. Senate,
Washington, D.C.

Dear Senator Morse: With the advent of the proposed closing of the Tongue Point Pacific Reserve Fleet at Astoria, Oreg., as a general curtailment order from the Defense Department phasing out this type of defense installation throughout the United States, I respectfully urge your full support to consider this site as an exceptional and ideal plant to establish a research laboratory for the study of the secrets of the ocean. "Our own survival may hinge upon it" quoting President Kennedy in his request before Congress on Wednesday, March 29.

This site, as you are well aware, affords ideal quarters for an oceanography educational center and could well become the headquarters for the entire Northwest of the United States as well as the States of Alaska and Hawaii.

I need not qualify the appointments this base presently possesses such as permanent buildings, hangars, living quarters, hospital, recreation buildings, laundry, workshops, et cetera, including central heating facilities.

Its location near the Pacific Ocean, deep-water features, and thousands of feet of ship piers, with air, rail, and ideal highway connections, affords an ideal natural location. With the proper utilization, this unit could well encompass the State of Oregon's high educational field of fisheries as the seafoods study in the ocean has yet much to be analyzed and researched for its nutrition benefits for a growing country.

I was delighted with the President's request for funds from Congress for such a program and ask your full cooperation in this endeavor. The defense of our country must and will be dependent more and more upon knowledge and research analysis in this vast area, encompassing the field of science.

Very truly yours,

Dan A. Thiel.

April 6, 1961.

Mr. Norris E. Johnson,
Manager, Astoria Chamber of Commerce,
Astoria, Oreg.

Dear Mr. Johnson: This will acknowledge, with thanks, your letter of March 20 concerning the Tongue Point naval installation.

I was deeply concerned, as I know you were, to receive the news that the Department of Defense will close down the Tongue Point installation as well as many other defense installations throughout the Nation.

In cases of this type I do not know the meaning of the word "quit," and you may be sure that I shall continue to do everything I can do to convince the administration that some usable Federal installation should be placed at Tongue Point. I was greatly impressed by the brochure prepared by the Astoria Chamber of Commerce relative to Tongue Point and I feel that such excellent facilities as these should not be allowed to remain idle for any appreciable length of time. Recently the new administration announced a rather extensive oceanography research program. It seems to me that the Tongue Point station would be ideally suited as a research center for oceanography and I have so advised the administration.

I shall look forward to receiving your new brochure on the maritime base and I do hope that from time to time you will let me have your suggestions as to actions I can take back here to be of help on these and any other matters of interest to your chamber.

With kindest regards,

Sincerely,

Wayne Morse.

Astoria Chamber of Commerce,
Astoria, Oreg., March 20, 1961.

Hon. Wayne Morse,
U.S. Senate,
Senate Office Building,
Washington, D.C.

Good Morning Senator Morse: I wish to take this opportunity to personally express the sincere thanks and appreciation for all of the people of Astoria and Oregon for the work you have done on behalf of Tongue Point. We are indeed grateful.

Incidentally, I replaced Mr. Charles DeFoe as manager of the Asoria Chamber of Commerce only recently. Mr. DeFoe is now in Wyoming with that State's retail association. I came to Astoria from McMinnville where I was manager of their chamber for the past 2½ years. Prior to my coming to this great State I was in Montana and originally from Minnesota. Senator Mansfield and Senator Humphrey are both acquaintances of mine and I have had the pleasure of working with them on projects in their two States.

The Oregon press has picked up your action on behalf of Tongue Point and have released numerous stories and editorials. As our brochure has pointed out, and as you personally know, Tongue Point is an outstanding facility. Further, Oregon has not had much consideration when it has been time to dole out the defense dollars, as has Washington and California.

I want to call your attention to a sister facility at Tongue Point, namely the Maritime Reserve Fleet Base at Astoria. Presently there are approximately 250 vessels moored here of which 40 are of the priority Victory ships and the balance the Liberty ships that are being rapidly scrapped. It is obvious to us that this big multimillion dollar installation will soon be abandoned in favor of other areas because the Liberty ships are going out, but no other priority ships come in to take their place. Rather these top priority ships are being moored in salt water basins elsewhere, such as at Olympia, where they are rusting and corroding rapidly. We have observed ships that have been moored here for more than 7 years that are in top condition due to our fresh water moorage basin. This compares with the corroding of barnacles and marine growth, plus deep pitting that takes place in salt water basins. In response to our inquiry as to why we do not get ships is that the maritime people want the ships "close to a Navy yard" for greater savings in dollars and in time to put them in operation in time of need. Nonsense. What about the facilities we have for that purpose right here in the Columbia River at Portland? They can handle the job handily.

We plan on preparing a factually and pictorial brochure on the maritime base as we have done on Tongue Point, if we can receive official release and permission to get pictures made and data compiled. Of course, you will receive such material.

Thank you again very much, for your efforts. We have just begun the fight. We will stop only after Tongue Point and Oregon receives its just share. I know this is your intentions too.

With kindest regards.

NORRIS E. JOHNSON,
Manager, Astoria Chamber of Commerce.

JULY 6, 1961.

Mr. GLENN JACKSON,
Medford, Oreg.

DEAR GLENN: The other day, after your long distance telephone call to Bill Berg, I wrote to the Secretary of the Navy suggesting that the Navy continue the maintenance of Tongue Point after the closure and that the replacement pier timbers be retained on site.

Assistant Secretary BeLieu replied under date of June 29, and I enclose a copy of his letter for your information. Although the Navy will not have actual custody, I was very much encouraged to observe that a security force will remain at Tongue Point until a purchaser has been found or, I might add, until we find a new and beneficial Federal use for the installation.

With best personal regards.

Sincerely,

WAYNE MORSE.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, D.C., June 29, 1961.

Hon. WAYNE MORSE,
U.S. Senate, Washington, D.C.

MY DEAR SENATOR: This is in reply to your letter of June 20, 1961, relative to safeguarding Tongue Point, Oreg., plant account following its declaration as excess.

Regulations of the General Services Administration require that following a declaration of property as excess by a department or agency of the Government, the holding agency which in this case will be the Navy, continue responsible for the care, handling, protection, and maintenance of such property for 1 year following the excess declaration. Subsequently, the GSA would assume this responsibility.

You may be assured that the Navy will discharge these responsibilities adequately. In fact special steps are being taken with regard to the security force remaining at Tongue Point in view of its relatively isolated location, high value, and excellent state of repair. I sincerely hope that the 1-year period will be sufficient for the State of Oregon to find a purchaser of this fine property. If this proves not to be the case, it is suggested that the Administrator of GSA be alerted to your concern.

With regard to your excellent suggestion regarding disposition of the replacement pier timbers now stored on site, arrangements have been made for leaving them intact so that they may be used subsequently for the purpose intended.

Your interest and sound advice in these matters have been deeply appreciated.

Sincerely yours,

KENNETH E. BELIEU,
Assistant Secretary of the Navy (Installations and Logistics).

JUNE 20, 1961.

Re Tongue Point Naval Base, Oreg.
Hon. JOHN BOWDEN CONNALLY, Jr.
Secretary of the Navy,
Washington, D.C.

DEAR MR. SECRETARY: Last Saturday I had a long-distance telephone conversation with an Oregon businessman who expressed his deep concern over the maintenance of the Tongue Point Naval Base after the Department of the Navy withdraws from this installation. The businessman raised two points which I shall discuss in the order of their importance in the paragraphs that follow.

First, he urged in the strongest possible terms that the base be manned by an adequate custodial force after the closure. It was his opinion, and I think there is a great deal of merit in his view, that as soon as signs are placed on the premises indicating that the property has been transferred to the General Services Administration for disposal, vandalism immediately sets in. Apparently, a for sale sign is an invitation to vandals to break windows, steal fixtures, and to do other actions substantially deteriorating the property. The businessman urged that the Department of the Navy retain the property in its possession for a sufficient length of time to give Oregon businessmen and industrialists an opportunity to notify potential purchasers so that there may be a prompt purchase of the base as soon as it is turned over to the General Services Administration for disposal as property in excess of the needs of the Government.

If an arrangement could be made to have the Navy Department maintain the property after the present use of the facility terminates, I believe that such maintenance would be in the best interest of the Government because the depreciation of the property would be negligible. At your convenience I would appreciate receiving a report on this suggestion for transmittal to Oregonians who brought the matter to my attention.

The second point that was raised in my conference with the Oregon businessman relates to the material that is now stored at the Tongue Point Naval Base to be used for reconstruction of one of the piers upon which a railroad track is situated. Apparently the timber on the pier had reached the stage at which it would have to be replaced. The timber was cut to size, shipped to the base, and was piled awaiting the reconstruction work. The reconstruction was stopped as soon as it was learned that the base was to be deactivated. It was suggested to me that in the long run the Government would benefit if the timber were left at Tongue Point to be used on the reconstruction of the pier when the installation is sold. In any event, it would seem that timber cut to special dimensions would have somewhat limited use elsewhere and the cost of shipping it back to the Bremerton Navy Yard would be substantial.

At your convenience, I would also like to have your views relative to the suggestion that was made for retention of this timber at its present location.

With appreciation.

Sincerely,

WAYNE MORSE.

News editor, KVAS, Astoria, Oreg.

JULY 21, 1961.

On July 11 I informed you of a visit to Astoria tentatively scheduled by team of Federal Government officials for August 31 to explore potential Federal, State, local government or educational institute uses of Tongue Point Naval Base and to assist local community in attracting new industry.

Since then I have been in close touch with Defense Department economic adviser and have urged earliest possible date for team visit.

Pleased to advise date of team's arrival has been scheduled definitely for July 31 and you may make your plans accordingly.

Also pleased to learn that Defense Secretary McNamara has urged Commerce Secretary Hodges to give sympathetic consideration to proposals to designate Highway No. 30 from Portland to Astoria as part of Interstate Highway System. If favorable action should be taken on this proposal, it would not only strengthen community attractiveness for tourist and travel purposes but would also strengthen community attractiveness for commercial and industrial enterprises.

WAYNE MORSE,
U.S. Senator.

Mr. MORSE. Mr. President, in offering these letters, I wish to say that these are but a very few of the letters that could be taken from my files, and similar letters from the files of other Democratic members of the Oregon delegation. However, I thought tonight I would put these letters in the RECORD because they will give to the General Services Administration and to the White House a very clear record as to what the delegation has been doing in trying to get the administration to recognize, before it is too late, that a junking of Tongue Point would amount to an unjustified and unconscionable economic waste on the part of the administration, with respect to which it would rightly and justifiably be held to an accounting if it engaged in such a waste.

Mr. President, we seem to be getting nowhere fast with regard to our attempt to save Tongue Point for Federal use. As a result, on March 17, 1962, with the approval of my delegation, I wrote a letter to the President of the United States, which I shall read:

MARCH 17, 1962.

Hon. JOHN F. KENNEDY,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: When I talked to you the other day, I mentioned that I was deeply concerned over a recent development having a direct relationship to the State of Oregon, and I suggested that you discuss this matter with your assistant, Mr. Dungan, whom I had briefed on the subject earlier in the afternoon.

The problem to which I allude—the decision of the Coast and Geodetic Survey against the use of the Tongue Point Naval Base at Astoria for expansion of its oceanographic activities—is so serious that I regard it as deserving of your personal consideration.

The shocking aspect of the situation is this: The U.S. Coast and Geodetic Survey, for good and sufficient reasons, must seek additional facilities for its oceanographic base which is now located at Seattle. But for reasons I regard as wholly unsatisfactory, this agency is bypassing the Government installation at Tongue Point Naval Base, Astoria, Oreg., which would be ideally suited for use as an oceanographic base and which is ready for immediate occupancy. Rather than use an existing facility consisting of permanent buildings and pier facilities adjacent to deepwater navigation, the Coast and Geodetic Survey proposes to build, at the taxpayers' expense, new facilities at Seattle, costing hundreds of thousands of dollars.

Actions such as those proposed by the Coast and Geodetic Survey under the circumstances of this case defy rational explanation to the taxpayers of the United States. The people of Oregon are at a loss to understand why a permanent installation such as Tongue Point should stand idle while the Federal Government spends hundreds of thousands of dollars to build new facilities to serve purposes which could be carried on with high efficiency at Tongue Point.

There is enclosed for your consideration an excellent brochure on the Tongue Point Naval Station prepared for my use by the Astoria Chamber of Commerce. It presents in impressive fashion the full story of what is available at Tongue Point. The photographs, descriptive materials, maps and charts in this brochure will, I am sure, convince you, as it did me, that the Federal Government should make the maximum use of Tongue Point by agencies of the Federal Government.

In a letter I addressed to Admiral Karo today, a copy of which is enclosed, I indicated that this matter is being brought to your attention for thorough consideration. In the interest of economy and efficiency in Government, I most respectfully urge that the action of the Coast and Geodetic Survey be reviewed by a member of your personal staff; that proceedings for the issuance of invitations for bids for the construction of new facilities at the Geodetic Survey ship base be held in abeyance pending review of the proposed expansion, and that if necessary, interested local individuals and groups, including those at Astoria, be requested to present their views, either in writing or in person.

As I have indicated on a number of occasions, for 8 years during the Eisenhower administration, Oregon was discriminated against in the allotment of Federal contracts and Federal installations.

The issue of discrimination against Oregon in preference to Washington and California when it comes to the expenditure of Federal dollars on a per capita basis or on the basis of any other criterion such as the number of military installations, regional offices of Federal agencies and other Federal projects has stirred up the people of Oregon into a very serious and critical state of mind. The Oregon delegation is simply without any basis in fact in trying to justify a failure on the part of the Federal Government to make use of the multimillion-dollar Tongue Point installation.

Frankly, Mr. President, what is needed is instructions from the White House to the appropriate officials in your administration to proceed without further delay to make use of Tongue Point with any such agency as the Geodetic Survey expansion program or any other agency that is seeking money for new installations of this type. Such expenditures simply cannot be justified so long as this very fine installation at Tongue Point remains unused.

Although I regret that it is necessary to ask you to take time from your extremely busy schedule to consider domestic problems of this type, I believe that the waste in Government operations which is proposed in this instance makes the case of sufficient importance to warrant your personal consideration. I am sure your review of this case would constitute a step in the right direction toward correcting this longstanding discrimination against Oregon.

With appreciation and my best personal regards.

Respectfully,

Wayne Morse.

Mr. President, under date of March 17, 1962, I addressed a letter to Admiral Karo, a copy of which, as I noted in reading the previous letter, was sent to the President.

My colleague from Oregon [Mrs. Neuberger] also wrote a letter to Admiral Karo, protesting the decision which he had made against the use of Tongue Point and his setting forth, in the letter which he wrote to us, what he considered to be a chain of non sequiturs.

In my letter of March 17, 1962, to Admiral Karo, I wrote:

Dear Admiral Karo: This will acknowledge your letter of March 15, in which you commented with respect to the proposed expansion of the oceanographic base facilities and establishment of an oceanographic center in Seattle, Wash. I appreciated your courtesy in also supplying detailed information as to ship base requirements for which bids will be invited, in cooperation with the General Services Administration, for long-term leasing of oceanographic base facilities.

Mr. President, the General Services Administration has been involved in this matter in several respects. It has been involved in the leasing arrangements connected with the location of the oceanography program of the Coast and Geodetic Survey in Seattle. I do not believe its record bespeaks any justification for great compliments. I have a little suspicion that one of the reasons why the General Services Administration has been pressing so hard for such a fast disposal of Tongue Point is that it would like to get the subject behind it.

General Services Administration also has obligations to the taxpayers. It cannot justify the wasteful disposal of any piece of Federal property. I am one "watchdog" who does not intend to let General Services Administration get by with such action at Tongue Point, to the extent that I can do anything to prevent it.

I return to my letter to Admiral Karo:

Your report of March 15 has been studied very carefully. It is completely unsatisfactory in its attempt to explain why the Coast and Geodetic Survey is against the use of the very fine and immediately available facility at Tongue Point Naval Base. Frankly, the factors you listed against the Tongue Point Naval Base are so unconvincing that I shall make only the following brief comments:

The bar at the mouth of the Columbia River has been navigable for well over a century and has been used by vessels of many types, both large and small, during that period. In recent years, the mouth of the Columbia River has been deepened and the navigability improved under a major Corps of Engineers project, for which I have vigorously sought, and succeeded in obtaining, maximum appropriations. In view of the major works that have been completed at the mouth of the Columbia, I am not convinced, and I know the people of Astoria and Oregon will not be convinced, by your statement to the effect that the crossing of the bar can be hazardous and may result in expensive delays to survey operations.

Your second point, namely, that the oceanographic facility would require only very small portions of the Tongue Point Naval Base is beside the point. No one is contending that the entire base should be utilized completely at the outset by any one Federal Government agency. We have long contemplated the possibility that several Government agencies could make use of this excellent and permanent facility on an efficient and economical basis.

The third point you mentioned against the use of the Tongue Point Naval Base has little merit. The cost of moving personnel from Seattle to Astoria would be comparatively minor, especially when we recall that Government personnel are almost daily being transferred by Government agencies, at Government expense, across the length and breadth of the United States. Technically trained career employees who are dedicated to their work will follow the Government installations wherever it may be relocated and if they do not desire to transfer, I am satisfied there are others of equal competence who can take their places.

Your fourth point alludes to the fact that Seattle provides a good labor market for the recruitment of vessel employees. So does Astoria, and so do the other port areas on the Columbia River. You state that medical facilities furnished by the Government for vessel employees and their dependents are not available at Tongue Point. If these facilities are not presently available at Tongue Point, it is attributable to the fact that there are no patients to be served at this time. You are aware, I assume, that there is an excellent hospital building on the Tongue Point Base. This can be made ready on short notice to provide whatever medical facilities may be required for vessel employees.

The fifth point you raise against Tongue Point hardly deserves comment. If Tongue Point should be utilized as an oceanographic center, I have no doubt that Astoria or public bodies can supply public transportation and other personal conveniences. Above all, your fifth point loses sight of the fact that Federal Government installations are designed to foster the interest of the Government. The convenience of the Government and the interests of the Government are the primary considerations.

The Federal Government survey team which visited Astoria last year at my request had an opportunity to observe not only the Tongue Point installation but also the Astoria community. I am sure they found excellent housing for personnel at Tongue Point and that Astoria offers every type of facility and accommodation that can be desired by personnel stationed at Tongue Point. Astoria has an abundance of fine schools, excellent highways, deepwater navigation, railroad and truck transportation facilities, airline and bus transportation. A very healthy climate and nearby mountain and seashore areas contribute to the pleasure of living in this remarkably fine area of the Pacific coast.

It seems to me to be unthinkable that the Coast and Geodetic Survey should decide to expand its facilities in Seattle at the expense of hundreds of thousands of dollars of the taxpayers' money when a multimillion dollar permanent Government installation on deep water can be utilized at very little cost to the Federal Government for oceanographic facilities and an oceanographic ship base. It is my opinion that there is a very strong presumption in favor of the use of this nearby existing facility and against the expenditure of huge sums of Federal money to create a new facility in the same general coastal area.

In fairness to you, I should point out that I intend to take this matter to higher authority at the White House level with the request that your decision to expand the facilities and ship base at Seattle be thoroughly reviewed. I am fully convinced that the course of action I am following is in the interest of good government and economy for the taxpayers of the United States.

Sincerely yours,

Wayne Morse.

Unfortunately, Admiral Karo, with the assistance of General Services Administration, went full speed ahead and as rapidly as possible, as will be seen in a moment when I read another interesting document, and negotiated some contracts for the location of their expanded program at Seattle. In my judgment, they were guilty of an affront to the White House and to the Department of Commerce, because I had given Admiral Karo notice that this subject would be taken up at the White House level.

As I have made clear to the President on other occasions, what are needed in the Pentagon are some orders from the White House on such matters as this, for apparently there are in the Pentagon Building too many persons who think they can give the White House a runaround; and as we look at the record in this case, I am afraid that is what they have been succeeding in doing. But that is not the fault of the President, because in most instances he is not aware that they are following that course of action.

But, Mr. President, the White House has notice of it in this case; and in this case the time has come for those in the Pentagon to get some orders from the White House, and the time has also come for some Cabinet officers in charge of some other agencies and departments to take a look at the kind of waste of money the General Services Administration apparently contemplates by going forward with an attempted negotiated sale of this base at far, far below its value, and thereby, in my judgment, "laying an egg" of scandal for this administration, to be hatched in the heat of the 1964 campaign.

As a Democrat and as a loyal supporter of the President, I can do no more tonight than warn him that this one cannot be "swept under the rug." A State is aroused. My State is entitled to justice from the White House, as regards the use of Tongue Point; and I do not propose to let the people of my State down on this issue, even though it brings me into conflict with my administration, for my administration will be dead wrong if it does not put Tongue Point to Federal use.

My administration will be guilty of an unconscionable, shocking waste of the taxpayers' money if it junks Tongue Point for a price anywhere near $1 million.

Let me say to the business interests in Astoria, Oreg., for some of them will not be happy with my words tonight, inasmuch as a group of them would like to get Tongue Point for a million dollars, or thereabouts—that, of course, if Tongue Point is going to be junked, if the President tells me he is going to approve a junking of Tongue Point for a million dollars, if that is the decision from on high, then I will do the best I can to see to it that the business interests of my State get every opportunity to "get in" on Tongue Point. But I will do that with a sad heart, Mr. President, for that is not good for the economy of my State. I know the various proposals being made for so-called industrial use of some of the facilities at Tongue Point; but let me say to the people of Astoria that the jobs which would be created from that kind of use of Tongue Point would be but a pittance of economic return to my State, compared to what the economic return to my State would be if Tongue Point were put to a fit and proper use. The difference between the two is the difference between pennies and dollars, Mr. President, for any one of the several potential Federal projects now under consideration at various levels of this administration, including the White House, would result in a tremendous economic lift to the Astoria area, which is one of the most economically depressed areas in all the West.

Mr. President, we are talking about an economic area in my State which has gone through the economic wringer since Tongue Point Naval Base was closed. Tongue Point Naval Base became the economic lifeline of the Astoria area. But since then, businesses have closed, and hundreds and hundreds of people have moved away.

I say to this administration, come with me to Astoria, and take a look at the economic hardships you have caused by closing the Tongue Point Naval Base. I have not taken the position that you were wrong in closing it, insofar as the use to which it was being put by the Navy was concerned. I did not take the position that under no circumstances should you close it. I never have, nor will I, take such a position under such a fact situation.

But, Mr. President, I say to this administration, from the very beginning I did say, "All right; it no longer is useful for the use to which the Navy has been putting it. The Navy no longer needs it for that purpose. But do not destroy this fine base. Put it to other Federal uses. Do not be adding to your budget requests millions of dollars for the construction of Federal facilities or services elsewhere, when many of those services could be moved to Tongue Point, and thus would put this base to economic use which would be to the advantage of both parties and would also be to the advantage of the economic position of the State of Oregon."

That has been my position, and it is my position of equity tonight. We are entitled to a fair deal from this administration. We are entitled to have this administration move forward in Astoria in keeping with its promises of a progressive program for the welfare of the American people.

The facts are on the side of the Democratic members of the Oregon delegation, and the justice is on the side of the Democratic members of the Oregon delegation and the people of Oregon. I do not believe, I refuse to believe, that once the President fully understands the symbolism of the Tongue Point case, he will not make clear to the officials of his administration that he wants no more "run around" such as we got from the Geodetic Survey, under the directorship of Admiral Karo, as regards putting to use, for a Federal purpose, the facility of Tongue Point.

Mr. President, I have received certain other letters which deal with this problem. I ask unanimous consent that they be printed in the Record, in chronological order.

There being no objection, the letters were ordered to be printed in the Record, as follows:

The White House,
Washington, D.C., February 5, 1963.

Hon. Wayne Morse,
U.S. Senate,
Washington, D.C.

Dear Senator: Just a hasty note to acknowledge the copy of your letter of January 31 on the Tongue Point facility.

At the meeting last week of congressional liaison representatives at the White House I discussed the urgency in my opinion of utilizing this fine establishment. Commerce is giving it a real hard look. I will advise you of developments.

With kind personal regards, I am,
Sincerely,
Lawrence F. O'Brien,
Special Assistant to the President.

Hon. Wayne Morse,
U.S. Senate,
Washington, D.C.

Dear Senator: In the absence of Secretary Hodges, who is out of the country, I wish to acknowledge receipt of your letter of January 31, 1963, concerning Tongue Point Naval Base, Oreg. In accordance with your request to have an independent review within the Commerce Department regarding Tongue Point facilities, I shall look into this entire matter and make a report as soon as possible. As soon as I have completed this study I shall be in further touch with you.

Mr. Ralph Dungan of the White House has called regarding this matter and I shall see that he is kept abreast of any developments.

Many thanks for your kind wishes.
Sincerely yours,
Eugene P. Foley.

Mr. MORSE. Mr. President, let me refer now to a letter dated January 31, 1963, which I addressed to the Secretary of Commerce, Mr. Hodges. Because of the lateness of the hour, I shall not take time to read this long letter. But, Mr. President, it is a letter in which I call the attention of the Secretary of Commerce to the record which the Geodetic Survey had been making in respect to Tongue Point; and the Geodetic Survey falls under the jurisdiction of the Secretary of Commerce. It is a letter in which I enclosed the correspondence that I had in behalf of the Democratic members of the Oregon delegation with Admiral Karo, the Director of the Geodetic Survey. It is a letter in which I presented to the Secretary of Commerce the merits of the position of the Oregon delegation and the procedure that we had been following with the administration in trying to get it to take the necessary action to prevent the great injustice that it continues to visit upon the Astoria community and the people of my State. I ask unanimous consent that the entire letter be printed at this point in the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

January 31, 1963.

Hon. Luther H. Hodges,
Secretary of Commerce,
Department of Commerce,
Washington, D.C.

Dear Mr. Secretary: It was most kind of you to take time out of your very busy schedule to consider my comments relative to the Tongue Point Naval Base, Oreg. The conference with you was particularly appreciated because the full utilization of the Tongue Point facility has become one of the major objectives of the entire Oregon congressional delegation and the leadership of the State government of Oregon.

Early last year, I was informed of plans that were then under consideration for the expansion of the Coast and Geodetic Survey at its oceanographic center in Seattle, Washington. The availability of Tongue Point for this purpose was made known to Admiral Karo, Director of the Coast and Geodetic Survey, and under date of March 15, 1962, Admiral Karo wrote to me supplying an adverse report concerning the possible use of Tongue Point. A copy of Admiral Karo's letter is enclosed. In my reply to Admiral Karo I informed him that I completely disagreed with his reasoning. A copy of my reply letter of March 17, 1962, is attached. On the same date, I wrote to the President pointing out to him the importance of placing any expanded Coast and Geodetic Survey facilities at Tongue Point and alluded to the fact that it is extremely difficult to try to explain our failure to use the multimillion-dollar installation while expanding other facilities for which Tongue Point is ideally suited. A copy of my letter to the President is also enclosed.

According to the latest information I have received, the Coast and Geodetic Survey is giving consideration to other locations, such as San Francisco, for expansion of the Survey's program.

I wish to emphasize, Mr. Secretary, that the great bulk of the installations at Tongue Point are permanent in nature, are completely modern and are ready for immediate use. They will last for scores of years. The living quarters on the hill overlooking Tongue Point consist of permanent homes, not barracks housing. These homes have been kept up extremely well, have spacious lawns and are located on paved streets. They are ideal for family use. The business center of the city of Astoria, 5 or 6 miles distant, contains department stores, shopping centers, theaters, hotels and restaurants and the Astoria area is noted for its excellent recreational facilities. In addition, the chairman of the State Highway Commission of Oregon has assured me that if highway transportation between Portland and Astoria is regarded as a problem in this instance, the State of Oregon stands ready to supply $3.5 million immediately in highway improvements on the lower Columbia River highway. This would make the Portland-Astoria highway one of the finest superhighways in Oregon.

In view of the foregoing considerations and many others, the Tongue Point installation, which is both ideally situated and equipped, should be given serious consideration for expansion of the activities of the Survey.

Although it is not admitted openly by any of the top people in the Coast and Geodetic Survey, I feel that one of the reasons for their reluctance to make use of Tongue Point is the feeling that outside entertainment facilities in Astoria are not comparable to those in Seattle, San Francisco, or other large metropolitan areas. I commented on this last summer when I wrote to the President. In my memorandum to the President, I said:

"We recognize that Astoria, Oreg., does not provide Navy personnel or other Federal Government personnel with the variety of so-called extra curricular living enjoyments available at Puget Sound, San Francisco Bay, or the Los Angeles-San Pedro area. However, Astoria, Oreg., does provide fine living conditions for Government personnel, and our military personnel and other Government personnel should have it made very clear to them that Government services are going to be located not in accordance with the whims of Federal personnel but in accordance with a system of fair distribution of Government services among the States and in the best interests of the Federal Government. I am convinced, Mr. President, that if the Tongue Point Base were located in Puget Sound or the San Francisco Bay area or the Los Angeles-San Pedro area, the Defense Department would have climbed all over itself in its haste to find a use for it.

"In the long drawn out discussions with your staff advisers and various officials of the Pentagon Building and other Departments, we have suggested that Tongue Point be used in connection with expanding facilities for the Coast and Geodetic Survey. Some weeks ago, we notified Mr. Larry O'Brien of the controversy we were having with Admiral Karo concerning his proposal to expand Coast and Geodetic facilities at Puget Sound. In behalf of the Oregon delegation, I answered point by point his lame excuses for preferring Puget Sound over Tongue Point. I said at the time and repeat now that what should have happened was that the White House should have ordered him to make use of Tongue Point, because I am satisfied that if you had been given the opportunity to review his rationalizations, you would have rejected them as did not only the Oregon delegation but one newspaper after another in Oregon which blasted your administration for Admiral Karo's silly performance in rejecting Tongue Point."

Frankly, Mr. Secretary, I am convinced that Admiral Karo and his associates are unable to consider this case with complete objectivity. I am strongly of the opinion that nothing would be gained in the interest of fair consideration of Tongue Point if Admiral Karo and his associates were given the assignment of reviewing the possible use of Tongue Point. Efficiency and economy in Government, I feel, require an independent review within the Department of Commerce. This is all I ask because I am satisfied that such an independent review would reveal that Tongue Point is a highly desirable facility for expanded activities of the Coast and Geodetic Survey.

Again, my appreciation and best personal regards.

Sincerely,

WAYNE MORSE.

Mr. MORSE. Mr. President, I also ask unanimous consent to include the information that we received from the Geodetic Survey setting forth the set of specifications that they would need for any facility that they were to move into. They are specifications which Tongue Point completely met and more than met, as the Secretary of Commerce subsequently admitted was true, but only after contracts had been entered into which the Secretary found were binding upon the Federal Government, and therefore made the move to Seattle necessary.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

SHIP BASE REQUIREMENTS—SEATTLE

The Coast and Geodetic Survey will require a ship base and oceanographic laboratory in the fresh water area of Lake Union or Lake Washington, in the vicinity of Seattle, Wash., by June 1, 1963. The base must have facilities capable of berthing eight ships; a small boat basin of sufficient size to accomodate five launches; sufficient buildings space for use as warehouses, workshops, administrative offices, drafting offices, oceanographic laboratories (wet and dry) and a centralized utilities building for distribution of heat, water, and electricity throughout the base. A shed for small boat covered storage, an open storage area, parking areas and vehicular access and maneuvering areas are also required.

In order to assist the contractor in planning completion of the base the required availability of space for occupancy is listed as follows:

1. Warehouse space to be completed by June 1, 1963. If construction is not completed by the date specified, the contractor will provide temporary warehouse space at another location.

2. Wharfage, including the completed piping for steam, water, sewage disposal and electrical connections at all ship berths will be required by September 1, 1963. The water, electrical and sewage disposal connections to be ready for use by the specified date. (See note below.)

3. Office space to be completed by September 1, 1963.

4. Laboratories, shops and boat shed to be completed by September 1, 1963.

5. Final implementation of service utilities, including heat for buildings, to be completed by September 30, 1963.

The following is a general breakdown of space requirements for the base:

1. Dockage:

	Linear feet
4 ships at 310 feet overall length (52-foot beam)	1,240
2 ships at 212 feet overall length (42-foot beam)	424
2 ships at 163 feet overall length (33-foot beam)	326
25 feet clearance between stem and stern of berthed ships (7 by 25)	175
Total	2,165

(NOTE.—Adequate sewage disposal facilities for docked vessels, as well as for the ship base, shall be provided in conformance with applicable city, county, and port regulations. Water, and electric powerlines shall be routed through the utility and boiler room for control and distribution purposes.)

Berthing facilities can be in the form of either slips and/or piers so arranged to accommodate the eight listed ships.

The dockage must be in a single area directly adjacent to area occupied by buildings of the base.

If piers are used for dockage they shall have minimum clear deck width of 25 feet with not less than 150 feet clearance between piers. If a slip, or slips, are used, the alongside deck for loading and offloading shall be clear for at least 30 feet. Slips are to be of such width as to allow two 52-foot beam ships to be berthed abreast with maneuvering space between ships.

The minimum required water depth alongside of piers and/or slips is 25 feet at low water.

All individual ship berths must have steam heat, water, electricity, and sewer connections.

2. Small boat basin:

	Square feet
5 launches at 36-foot length plus piers for landing platforms	4,000
Maneuvering room within the basin	5,000
Total	9,000

The small boat basin shall be adjacent to the land area of the base. It is to have weather protection from all directions. Landing platforms shall be low-level piers of 2-feet height above lake level. The piers shall have the minimum width of 6 feet. There shall be a sufficient number of piers to individually tie up five 36-foot launches and four skiffs. Ample space for maneuvering the launches within the basin shall be provided. Two floodlights of sufficient intensity to light up the entire area of the basin is required.

3. HEATED SPACE

	Number of employees[1]		Square feet
	Male	Female	
Offices, general:			
Administration	4	1	700
Personnel	1	1	400
Laboratory (offices)	8	5	2,000
Field parties	4		500
Subtotal			3,600
Offices, drafting:			
Ship office	6		1,600
Processing office	5	1	2,200
Laboratory (drafting room)	1		200
Subtotal			4,000
Laboratory:			
Oceanographic:			
Wet	5	1	1,200
Dry (see 4(b))			1,600
Electronic	2		1,200
Subtotal			4,000
Special purpose (special to USC and GS):			
Conference (office grade)			500
Library (office grade)			500
Vault (see specifications)			200
Workshops			4,500
Subtotal			5,700
Grand total			17,300

[1] Initial number beginning in 1963 with gradual annual increases.

4. General requirements for heated space:

(a) Wet laboratory (oceanographic), 1,200 square feet: The wet laboratory can be on any floor level, preferably the ground floor. It shall be located in the same area of the base as the rest of the laboratory complex. It shall have 115-volt electrical outlets spaced at 6 feet along all permanent walls; hot and cold running water at a height of 4 feet and spaced at 14 feet or less along the length of permanent walls; sewer connections, suitable for servicing kitchen-type sink at each pair of water outlets. Movable wall partitions of Johns-Manville Transite wall universal type or E. F. Hauserman Co. Masterwalls type, or equivalent, which can be arranged to suit the user, shall be installed throughout the wet laboratory. The laboratory rooms shall be heated and have lighting suitable for drafting purposes. Floor load requirements are 100 pounds per square foot.

(b) Dry laboratory (oceanographic), 1,600 square feet: This laboratory to be general office type of space for special equipment. It is to be adjacent to the library and conference room and to the oceanographic laboratory offices. It is to be heated and have general office type lighting. The facility may occupy any floor, preferable location would be adjoining or above the wet laboratory. Floor load requirements are 100 pounds per square foot.

(c) Electronics laboratory, 1,200 square feet: This laboratory, due to handling of heavy gear, shall be located on the ground floor. It shall be heated and have drafting room type lighting. Floor load requirements are 150 pounds per square foot.

(d) Special-purpose space:

	Square feet
Library	500
Conference room	500
Vault	200
Workshops (see item (g))	4,500
Total	5,700

The library and conference room should be adjacent to the dry laboratory and general office space. Heating required.

The vault is to be walk-in type and fully fireproof including the door. Only a conventional lock for minimum security is required. The type of construction of the vault will determine the floor on which it may be located. It should be readily accessible to dry laboratory, processing office, and ship office. Floor load limits shall be 150 pounds per square foot. Heating and lighting are required.

(e) Drafting offices:

	Square feet
Processing office	2,200
Ship office	1,600
Oceanographic offices	200
Total	4,000

The drafting offices may occupy any floor. They shall be open space equipped with lights suitable for drafting. Floor load requirements are 100 pounds per square foot. Heating required.

The 200 square feet of drafting space required in the oceanographic offices may be a portion of a room within the offices having suitable lighting for drafting purposes. If so located, the 200 square feet shall be added to the space required by the laboratory offices.

(f) General office space:

	Square feet
Administration	700
Personnel	400
Oceanographic laboratory	2,000
Field parties	500
Total	3,600

The general office space may occupy any floor; however, the 2,000 square feet required for the oceanographic laboratory offices is to be in the vicinity to the dry laboratory space.

All general office space shall be heated and have adequate lighting. Floor load requirements are 100 pounds per square foot.

The space for the oceanographic laboratory offices shall be divided into five separate offices of approximately equal size. Movable wall partitions, as referred to in item (a) wet laboratory, shall be used for dividing the space.

(g) Workshops:

	Square feet
Carpenter and machine shop	1,500
Boat repair shop	2,000
Crating, shipping, and receiving shop	1,000
Total	4,500

The workshops shall be on the ground floor of buildings. They should be interconnected and so arranged as to place the boat repair shop nearest the water edge.

The boat repair shop shall be of 40 feet minimum width with two 16-foot-wide doors opening to the outside and high enough to allow entrance of a 36-foot launch and cradle.

The carpenter and machineshop shall have at least one 12-foot-wide door opening to the outside.

The crating, shipping, and receiving shop shall have an 8-foot-wide door at a truck loading dock. The dock shall be truck bed height.

All shops shall be heated and be fully lighted. Fire prevention facilities shall be provided. Floor load requirements are 300 pounds per square foot.

5. Warehouse space, 10,000 square feet: Warehouse space to be on ground floor of buildings. Multiple buildings may be used if the minimum space requirements are met. Adequate lighting and fire prevention facilities are required. Ample size doorways for easy access to all parts of warehouse area are required. Floor loading requirements are 400 pounds per square foot.

6. Small-boat storage shed, 4,000 square feet: The shed shall be in the vicinity of the small-boat basin and adjacent to the boat repair shop if possible. (In order that boats up to 36 feet may be hoisted from the water into the shed.) (Boat hoist to be furnished later by agency.)

Minimum width of shed cover shall be 35 feet. The length of the shed shall be dictated by location. Floor load requirements are 400 pounds per square foot.

7. Open storage area, 5,000 square feet: The open storage area can be located anywhere on the base but shall be all in one area. It shall be used for storage of items that can be left in the open such as propellors, boat cradles, etc.

8. Vehicular parking space, 9,500 square feet: 50 vehicles at 190 square feet per vehicle. The parking space can be distributed throughout the base.

9. Access and vehicle maneuvering space: Ample vehicular access to all buildings, parking areas, storage areas, berthing areas, the small-boat basin and storage shed shall be provided.

10. Special requirements: (a) Utilities building and boiler room, 1,600 square feet.

This utilities building can be located anywhere on the base (ground floor). It shall have the capacity of providing—

(1) Electrical power, 440 volts, 60 cycle, 3 phase:

	Kilowatt-hours per day
4 ships, 250 kilowatts each (1,000 kilowatt-hours)	24,000
2 ships, 150 kilowatts each (300 kilowatt-hours)	7,200
2 ships, 80 kilowatts each (160 kilowatt-hours)	3,840
Base buildings 60 kilowatts	1,440
Total	36,480

(2) Potable water:

	Gallons per day
8 ships at 2,600 gallons per day	20,800
Base facilities	500
Total	21,300

(NOTE.—Ships flushing and fire main waters not included.)

(3) Steam (35 p.s.i. at shipside):

	Pounds per hour
4 ships, 2,000 pounds per hour each	8,000
2 ships, 1,800 pounds per hour each	3,600
2 ships, 1,000 pounds per hour each	2,000
Base buildings, approximately	1,200
Total	14,800

(NOTE.—Total steam demand, except for heating of buildings, will not be required until the base is in full operation. This may not be needed until early 1964 or later.)

The utilities building shall have connections to all ship berths and buildings requiring the service utilities.

(b) Security: The base grounds shall be surrounded by an 8-foot-high link-wire security fence. Fire prevention facilities are required throughout the base and buildings. Floodlighting of sufficient intensity and placement as to light up all the base grounds and wharf areas are required.

11. Surfacing of grounds: Except for landscaping areas, the entire area of the base shall be surfaced. All access, vehicular maneuvering and open storage areas shall be surfaced by blacktop or concrete of suitable strength to withstand heavy loads. Parking shall be surfaced by blacktop or crushed rock. Piers or access areas alongside slips shall be surfaced with wood, blacktop or concrete according to methods of construction.

Appropriate drainage for the entire base shall be provided.

(NOTE.—A fuel tank of at least 15,000 gallons capacity shall be provided, in conformance with all applicable safety codes, and located in such a manner as to not interfere with operation of the base. A large boiler for the above dockside steam requirements and a smaller boiler for office heat requirements, provided with a manifold distribution header for operation of either or both boilers (at the same pressure) shall be furnished.)

NOTES CONCERNING TONGUE POINT INSTALLATION

This project cost the Federal Government approximately $18 million. It was declared excess to the needs of the Navy and was turned over to the General Services Administration as surplus property. The General Services Administration has appraised it most recently at $1 million.

The attached brochure supplied by the Astoria Chamber of Commerce contains a complete description of the facility. Its main installations are the following: A mooring basin, eight berthing piers, including several which admit deep-draft ships, a marginal wharf, seaplane ramps, marine fuel storage and fueling facilities, three buildings consisting of ship facilities, ammunition storage, magazine hangars, supply offices, warehouses, a lumber storage yard, a vehicle storage shed, dispensary and hospital building, administrative headquarters and other office buildings, all of permanent nature, almost 400 family units, barracks buildings, a gymnasium and theater, a steam generating plant, a sewage treatment facility, a railroad spur and railroad siding and various miscellaneous buildings.

Several months ago, we communicated with Admiral Karo, pointing out the availability of this excellent facility for an installation of the Coast and Geodetic Survey of the Department of Commerce.

Under date of March 15, Admiral Karo supplied a report indicating that the Coast and Geodetic Survey would stay in Seattle, and maintain its oceanographic center there. On March 17, 1962, we wrote to Admiral Karo indicating that his reply was not satisfactory. Copies of this correspondence are enclosed.

It is our understanding that proposals are now being made for expansion of the Coast and Geodetic Survey Center in Washington State.

Tongue Point, with all of its facilities, would make an ideal location, situated as it is on the Columbia River.

The State of Oregon would cooperate in every way possible if the Coast and Geodetic Survey were to come to Tongue Point. Oregon State University is establishing an oceanographic center on Yaquina Bay, and this center will be the source of a great many technicians who will graduate from Oregon State and will become available locally for work at an oceanographic center.

If the Coast and Geodetic Survey were to come to Tongue Point, the State would begin an immediate $3.5 million highway improvement program on the Columbia River Highway between Portland and Astoria. This would be a through highway, permitting rapid transportation between Portland and Astoria.

Astoria offers every facility needed by personnel, and the State of Oregon will do everything possible to apprise the Coast and Geodetic Survey of these facilities and the advantages of living in this very desirable area of Oregon.

Mr. MORSE. All one would have to do would be to read the specifications of facilities needed for the Geodetic Survey and then study the facilities available at Tongue Point to understand why I wrote such a letter of understatement to Admiral Karo in protest of this inexcusable, unjustifiable position.

I turn next to a letter that I wrote to Mr. Ralph A. Dungan, Special Assistant to the President, under date of March 5, 1963, in which I discuss another use of part of Tongue Point. It is well known that some of the Washington personnel of the Geodetic Survey will be moved out of Washington, D.C. I called the attention of Mr. Dungan to the fact that I knew of no facility that could better accommodate this latest proposed move of another part of the Geodetic Survey program. I pointed out, of course, that in view of the treatment that the Democratic members of the Oregon delegation has received in regard to the matter, I thought we had a special equity in the premises. I wrote to Mr. Dungan because many months ago, in a personal conference with the President of the United States about Tongue Point, he called in Mr. Dungan and personally assigned to Mr. Dungan the Tongue Point matter with instructions that Mr. Dungan was to work with me in regard to Tongue Point and see what could be done in order to try to find a suitable Federal use of Tongue Point.

I desire to say, as I have said in some letters that I shall shortly introduce in the RECORD, that I could not have received finer cooperation than I have received from Mr. Dungan. He has never failed to extend to the Democratic members of the Oregon delegation every possible consideration of our interests in respect to getting some Federal service or agency moved into Tongue Point. I know I am correct when I say that Mr. Dungan is completely sold on Tongue Point. He thoroughly agrees with the Democratic members of the Oregon delegation that something must be done to put Tongue Point to Federal use. It is in fairness to him that I should make that statement. I have no criticism of the handling of our problem at the White House level. The difficulty is outside the White House level. I hope that the White House will do something about that.

I ask unanimous consent to have printed at this point in the RECORD the letter which I wrote to Mr. Ralph A. Dungan dated March 5.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 5, 1963.

Mr. RALPH A. DUNGAN,
Special Assistant to the President,
White House, Washington, D.C.

DEAR RALPH: This supplements my telephone conversation of the other day with reference to the desirability of assigning Coast and Geodetic Survey personnel now in Washington, D.C., to the Tongue Point Naval Base, Oregon.

It is my understanding that many States have requested that the Coast and Geodetic Survey personnel who are scheduled to leave Washington, D.C., should be assigned to their respective States, and I further understand that there will be an immediate need for approximately 250,000 square feet of floor space in connection with relocated facilities. Although I have not had an opportunity to check out precisely the area of floor space now on hand for use at Tongue Point.

I believe that it is well in excess of the amount required by the Coast and Geodetic Survey. If the requisite floor space is not presently on hand at Tongue Point, I have the assurance of top officials of the State of Oregon that the State will immediately undertake the construction of whatever floor space may be required by the Government for use at Tongue Point. This could be done on a lease-purchase basis and the construction would conform wholly to Government specifications.

It seems to me, Ralph, that the existing ideal housing for personnel and the excellently situated and improved Tongue Point installations, when coupled with the offer of the State of Oregon to initiate the immediate construction of a top quality highway between Portland and Astoria and the willingness of Oregon to build on a lease-purchase basis, whatever facilities may be needed by the Coast and Geodetic Survey at Tongue Point, make Tongue Point the most practical, suitable and economical location in the entire United States for the Coast and Geodetic Survey's relocated facility.

It is my hope that in the very near future there will be a favorable decision on my request for this specific utilization of Tongue Point.

With appreciation and best personal regards.

Sincerely,

WAYNE MORSE.

Mr. MORSE. Some weeks ago the Democratic members of the Oregon delegation had a conference with the Secretary of Commerce. I presented the case for the delegation on Tongue Point. The delegation protested the treatment that we had received from the administration in respect to Tongue Point. At that time I said:

> Mr. Secretary, we have but one request, because of our confidence in you, and that is that you appoint an independent survey team. You appoint a team of people not connected at all with the Geodetic Survey or with any other agency, other than the Department of Commerce, to go out to Tongue Point, survey the installation, and survey the written record that you will find in the files of the Department of Commerce and the written record that you will find in the office of Mr. Robert Dungan at the White House level, for the record in Mr. Dungan's office, I am assured, will be made available to you.

The Secretary of Commerce agreed to do just that. That is all we asked for.

On the date of March 18, 1963, I received the following letter from the Secretary of Commerce:

THE SECRETARY OF COMMERCE,
Washington, D.C., March 18, 1963.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: I have reviewed in detail the decision made last year by the Coast and Geodetic Survey to locate its Northwest Pacific ship base and oceanographic laboratory in Seattle rather than Tongue Point, Oreg. I have concluded that the overall economy of the Government would have been better served if the base had been located at Tongue Point. Unfortunately, we cannot retrace our steps and revoke the contract that was entered into without my personal knowledge by GSA August 13, 1962, on behalf of the Coast and Geodetic Survey for a site in Seattle. That contract is binding and it is impossible for the Government to escape its terms.

I digress from the letter for a moment to say that I am fast becoming satisfied that the GSA needs an investigation from top to bottom in its handling of surplus property of the Federal Government and in the handling of such contracts as the one to which reference is made, for if GSA went ahead and negotiated that contract, and the Secretary of Commerce, who has jurisdiction over the Geodetic Survey, was not even aware of it, somebody at the GSA ought to be fired. There is complete inefficiency and malfeasance in office.

The GSA has not heard the last of this matter, for I intend to proceed to find out all I can about the procedures of the GSA to see what checks on procedure may be needed to be imposed on the GSA. I think it is pretty shocking that the Department of Commerce, which has jurisdiction over the Coast and Geodetic Survey, was not even aware of lease contracts that were negotiated by the GSA without, as he says, the personal knowledge of the Secretary of Commerce.

So, Mr. President, this is why I have a suspicion as to why the GSA is apparently going ahead with such breakneck speed to get Tongue Point behind it. GSA is worried about this group of Oregon Democratic Members of Congress, and has good reason to be worried about it, for we are not at all happy with the record. And the Kennedy administration had better take a long, hard look at what they are doing, because when the public business becomes involved, so far as the senior Senator from Oregon is concerned, partisanship is out the window.

I am just as much opposed to Democratic malfeasance as I am to Republican malfeasance. I represent all the people of my State—those who voted for me and those who voted against me, Democrats and Republicans alike—so long as I have the responsibility of serving my term in the Senate. Any time any official of my administration follows the course of action that does not protect the public interest, he will not get silence from the Senator from Oregon.

Mr. President, I continue to read the letter from the Secretary of Commerce of March 18:

> If it had not been for your forceful presentation of the comparative advantages of Tongue Point over the Seattle location, this matter would not have been as carefully reviewed by me as it ultimately was. I may offer little comfort to you or your constituents at this late date, but it may give you some satisfaction to learn that because of the mistakes made in the Tongue Point decision, I intend to see that similar decisions in the future are more carefully made and at a much higher level than this one. I want to apologize to you for this most unfortunate incident on behalf of the Department of Commerce. I also want to apologize for the fact that you were never definitely notified that the Coast and Geodetic Survey had reached a final decision on the subject.
>
> This was handled badly and, I may say, somewhat arbitrarily by Admiral Karo of the Coast and Geodetic Survey.
>
> Sincerely yours,
>
> LUTHER H. HODGES,
> *Secretary of Commerce.*

Mr. President, I ask unanimous consent that the entire letter may be printed in the RECORD at this point, so that it will not contain the digressions in which I engaged when I read the first part of it, and then spoke, and then read the second part.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF COMMERCE,
Washington, D.C., March 18, 1963.
Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: I have reviewed in detail the decision made last year by the Coast and Geodetic Survey to locate its Northwest Pacific ship base and oceanographic laboratory in Seattle rather than Tongue Point, Oreg. I have concluded that the overall economy of the Government would have been better served if the base had been located at Tongue Point. Unfortunately, we cannot retrace our steps and revoke the contract that was entered into without my personal knowledge by GSA August 13, 1962, on behalf of the Coast and Geodetic Survey for a site in Seattle. That contract is binding and it is impossible for the Government to escape its terms.

If it had not been for your forceful presentation of the comparative advantages of Tongue Point over the Seattle location, this matter would not have been as carefully reviewed by me as it ultimately was. I may offer little comfort to you or to your constituents at this late date, but it may give you some satisfaction to learn that because of the mistakes made in the Tongue Point decision, I intend to see that similar decisions in the future are more carefully made and at a much higher level than this one. I want to apologize to you for this most unfortunate incident on behalf of the Department of Commerce. I also want to apologize for the fact that you were never definitely notified that the Coast and Geodetic Survey had reached a final decision on the subject.

This was handled badly and I may say somewhat arbitrarily by Admiral Karo of the Coast and Geodetic Survey.

Sincerely yours,

LUTHER H. HODGES,
Secretary of Commerce.

Mr. MORSE. Mr. President, I wrote to Secretary Hodges in response to that letter as follows:

APRIL 9, 1963.

Hon. LUTHER H. HODGES,
Secretary of Commerce,
Washington, D.C.

DEAR MR. SECRETARY: I want you to know that I deeply appreciate your letter of March 18, 1963, in which you so forthrightly and in keeping with your intellectual honesty stated in part in regard to the Oregon Tongue Point controversy;

"I have reviewed in detail the decision made last year by the Coast and Geodetic Survey to locate its Northwest Pacific ship base and oceanographic laboratory in Seattle rather than Tongue Point, Oreg. I have concluded that the overall economy of the Government would have been better served if the base had been located at Tongue Point."

Since receiving your letter, I have been conferring with other officials in the administration in an endeavor to see what can be done to put the excellent facilities of Tongue Point to Federal use. The several hundred fine family dwelling units, plus the permanently constructed, excellent public buildings on this base, are the best exhibit and proof I can offer that the Federal Government cannot justify junking this installation while at the same time the administration is making budget requests calling for appropriations for additional millions of dollars for new Federal installations elsewhere.

The Tongue Point issue has become such a cause celebre in my State that I cannot justify voting for appropriation requests by this administration for new installations elsewhere while it continues to waste the taxpayers' money by junking Tongue Point.

There are many Federal uses to which Tongue Point can and should be put to use. In my opinion, Tongue Point should receive priority consideration for any transfer of the Coast and Geodetic Survey personnel out of Washington, D.C. Tongue Point should receive priority consideration for any expansion of any military service of any branches of the service that could possibly make use of this fine facility.

Furthermore, the State Department and the Peace Corps should give favorable consideration to the use of Tongue Point for a technical assistance training center where hundreds of young people could and should be brought from the underdeveloped countries of the world for a 6 to 12 months' vocational training program.

Apparently what is needed most on the part of the various officials within the departments of the administration is the use of some imagination and objective foresight in respect to the great potentialities of the Tongue Point base as a vehicle for carrying forward some of the forward-looking programs, both domestic and foreign, of the present administration.

I want to assure you that my confidence in you is such that I would be perfectly satisfied if the administration would only charge you with complete responsibility to make whatever decisions are necessary to put Tongue Point to use on its merits for any one of several sound Federal programs for which it is so well suited.

With best wishes always.

Yours respectfully,

WAYNE MORSE.

Mr. President, I sent a letter dated March 28 to Mr. Ralph A. Dungan, special assistant to the President, and I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 28, 1963.

Re Tongue Point Naval Base.
Mr. RALPH A. DUNGAN,
Special Assistant to the President,
The White House,
Washington, D.C.

DEAR RALPH: Enclosed is a photostatic copy of a letter dated March 18, addressed to me by Secretary Hodges. As you will note, the Secretary concluded that overall economy in the operation of the Federal Government "would have been better served if the base had been located at Tongue Point," when the status of the Northwest Pacific ship base and oceanographic laboratory at Seattle was under consideration last year.

To say the least, this is a very difficult situation for me to explain to my constituents. Under the circumstances, I feel it is imperative that the President's attention should be called to the justice of my claim that the Washington, D.C., Coast and Geodetic Survey, or a substantial portion thereof, should be transferred to Tongue Point.

The entire State of Oregon is stirred up about Tongue Point not being used; every time I visit the State I receive numerous questions on this topic, and frankly, I don't have the answers.

I think the least this administration can do is to grant the State of Oregon favorable consideration on my request for the transfer of all, or a substantial portion of, the Washington, D.C., Coast and Geodetic Survey to Tongue Point, Oreg. Secretary Hodges' attached letter certainly constitutes the best possible evidence in support of such action.

With best personal regards.

Sincerely,

Wayne Morse.

Mr. MORSE. Mr. President, with the letter I enclosed a photostatic copy of the letter I received from the Secretary of Commerce, and I pointed out again that the Democratic members of the Oregon delegation were very much stirred and disturbed about this development. I again, in behalf of the delegation, advised Mr. Dungan that in my opinion the White House had a clear duty to see that fair treatment was given to my State in respect to this matter.

After that, Mr. President, there were a series of disturbing reports and rumors that GSA was doing everything it could in Oregon to speed up the disposal of Tongue Point.

I had been told by Mr. Dungan that the White House had put in a stop order against any quick disposal of Tongue Point until there could be the completion of a thorough review by Mr. Dungan, in behalf of the President of the United States, as to the possible use of the Tongue Point facility for some Federal purpose. But, irrespective of the fact that Mr. Dungan had assured me that such a stop order was in effect, we continued to get reports, which I considered to be very reliable, from very high State officials in my State that there seemed to be a full head of steam being generated by the GSA to get rid of Tongue Point.

So one of my many calls to Ralph Dungan was to report the information that these State officials had given me. He called me back and asked me to call Mr. Boutin in the GSA. I was unable to reach Mr. Boutin. I have not been able to reach him, but I did reach a Mr. Walter Moreland, and he talked with me over the telephone. He stated that they were, of course, considering various possibilities for the disposal of Tongue Point, under the rules and regulations of the GSA—the typical report one gets from a bureaucrat—but he wanted me to know that there would be an adequate time element, before there would be any disposal, for the consideration of the delegation, and, of course, before a final decision was made they would have to come before the appropriate committees of Congress, and that the time element might be 4, 5, or 6 weeks.

I patiently related to Mr. Moreland the history of the case, the White House interest in it, the assurance of Mr. Dungan that GSA would not dispose of the case until there had been adequate time for the White House to complete the review it was undertaking, in an endeavor to find a Federal use of the property.

I thought the matter was settled for a while, but subsequent events, which I shall relate shortly, give further reason for my developing in this matter something that is not very typical of me—suspicion. I do not very often engage in suspicions, but I am suspicious of the GSA—let the Record show it—and I think I have cause to be. But before I discuss the last incident which occurred today in regard to reports of GSA activity in Oregon, and after I had talked to Members of the Oregon delegation in regard to storm clouds developing in the sky again over Tongue Point, I wrote a letter to the President, which reads as follows:

April 10, 1963.

The Honorable John F. Kennedy,
The White House,
Washington, D.C.

Dear Mr. President: I would not think of bothering you again with the Oregon Tongue Point installation issue if I did not know that a critical situation is developing in regard to it that is bound to embarrass your administration unless something is done to prevent it. I am writing to you in behalf of the entire Oregon delegation with the approval of the members of the delegation, because each one of them shares my concern about the failure of your administration to make use of the Tongue Point installation for some Federal program for which it is suitable.

Recently, Secretary of Commerce Luther H. Hodges wrote me a letter in which he apologized for the failure of the Department of Commerce last year to locate the Northwest Pacific ship base and oceanographic laboratory of the Coast and Geodetic Survey at Tongue Point rather than at Seattle. He admitted in his letter that the matter had been "handled badly and I may say somewhat arbitrarily by Admiral Karo of the Coast and Geodetic Survey."

You may recall that at the time Senator Neuberger and I both protested the way the matter had been handled by the Director of the Coast and Geodetic Survey.

I am enclosing a copy of Secretary Hodges' letter and a copy of my reply.

Needless to say, the people of Oregon take little comfort in the fact that our case was a meritorious one for the location of the Geodetic Survey expansion program at Tongue Point, but we lost the decision because of an arbitrary course of action followed by the administrators of the Coast and Geodetic Survey.

The real danger, Mr. President, is that the General Services Administration may end up disposing of the Tongue Point installation, consisting of more than 800 acres of land and some 500 first-class family housing units, plus excellent permanent public buildings, for about $1 million. The Government investment in the project is more than $14 million. The economic potential of the installation to the economy of Oregon would amount to several millions of dollars a year if your administration would only insist that some very worthwhile Federal program be located there rather than spend millions of dollars for new installations elsewhere for servicing some program that could just as well be located at Tongue Point. What I am very anxious for you to understand is that if Tongue Point is junked for a price of around $1 million, such action will take on the proportions of a scandal in Oregon, and I want to do everything I can to fulfill my obligation to you by making certain that you have due notice of the seriousness of this situation.

Ralph Dungan, with whom I have been working on the Tongue Point problem at your request, has been doing a grand job, and I want to assure you that the entire Oregon delegation is deeply grateful to him for his never-failing cooperation.

I am making this plea directly to you, because all of us on the Oregon delegation believe it is very important that the recommendations made by Ralph Dungan with respect to Tongue Point should be recognized by various Government departments and agencies to be White House policy.

The Oregon delegation is at your service and that of Mr. Dungan in connection with any information or further assistance you may need from any of us in regard to Tongue Point.

With best wishes, always.

Yours respectfully,

Wayne Morse.

Mr. President, this morning I received a very disturbing long-distance telephone call from Mr. Glenn Jackson, chairman of the Oregon State Highway Commission, one of the most prominent business leaders in my State, a great, dedicated public servant, a man who is a philanthropist, who has worked for great charitable causes, whose devotion to the best interests of the State in regard to one program after another is so outstanding that if one were to name the 10 most outstanding citizens in Oregon at the present time, in my judgment, Mr. Jackson would have to be included in the list.

I say this about Mr. Jackson because, Mr. President, I want you to know that when the Democratic Members of the Oregon delegation hear from Mr. Jackson, we are hearing from a man whose reliability is beyond question. He is a man, incidentally, although Republican, who is well known by this administration, and has worked closely on a nonpartisan basis on projects that involve the general welfare, irrespective of the partisanship of any administration that may be in majority control in Washington, D.C., at any time.

For 19 years through various administrations in Washington, I have worked closely with Mr. Jackson in behalf of the interests of Oregon, as those interests relate to the Federal Government.

So when he called this morning and suggested that we look into other matters, it is true, and told me that GSA was holding a meeting out in Oregon today with certain business interests, with the hope of speeding up a consummation of a purchase of Tongue Point, I explained to him the latest developments in regard to Tongue Point. I told him of my telephone conversation of a few days ago with Mr. Moreland, of GSA, and of what I consider to be assurances that there was not going to be any precipitate action with regard to Tongue Point, but that there was going to be continued time for the White House to complete its study of possible Federal use of Tongue Point, and I told him that I was willing to take judicial notice of the fact that there was not any basis in fact for any such rumor. I told him that I would get in touch with GSA and with the White House and check it with them, although I was sure that I did not have to worry about it at all.

Mr. Dungan happened to be out of the city today. However I did get in touch with two other Presidential assistants at the White House. They assured me that they would look into the matter immediately, I happen to know that they did. I could not reach Mr. Boutin, the Administrator of GSA. My administrative assistant did get in touch with one of his assistants and got an account of the situation from him. I sent Mr. Boutin a telegram, which reads as follows:

> APRIL 11, 1963.
>
> Mr. BERNARD L. BOUTIN,
> *Administrator, General Services Administration, Washington, D.C.:*
>
> I have just received a disturbing report from Glenn Jackson, chairman of Oregon State Highway Commission, that GSA is about to close deal with group of businessmen in Astoria, Oreg., for sale of Tongue Point installation for purchase price in neighborhood of $1 million. Just a few days ago Walter Moreland of your staff assured me at request of Ralph Dungan of White House staff that no such sale of Tongue Point was presently contemplated and that under no circumstances would a sale of Tongue Point be completed without both my office and the White House notified in advance. I hope Jackson's report to me this morning is another unfounded rumor with respect to Tongue Point.
>
> Just yesterday, I had a long conference with Dungan about Tongue Point, and he assured me that the White House had requested GSA not to dispose of Tongue Point until the White House had given further consideration to use of Tongue Point base for one of several Federal purposes now under consideration. As I notified President Kennedy yesterday in a letter, any sale of Tongue Point base by GSA for any such figure as $1 million would be scandalous.
>
> Therefore, I respectfully request that my office be notified well in advance of any proposal of GSA to complete any final negotiations for sale of Tongue Point. This matter is so serious from the standpoint of public policy questions involved that I shall discuss it at some length on floor of Senate today. Immediate response to Commissioner Jackson's report to me is requested.
>
> WAYNE MORSE,
> *U.S. Senator.*

Mr. President, in the telephone conversation that my administrative assistant had with one of Mr. Boutin's assistants, he was told, in effect, that there was a conference being held in Oregon today, but that it was just a preparatory step, one of those procedural steps, for the purpose of discussing the matter with the businessmen who had interested themselves in the possible purchase of Tongue Point, and that the purpose of the meeting was explained to them, with the procedures that they would have to go through, and the procedures that were binding upon GSA.

If that is the purpose of the meeting, no one can have any objection, certainly not I. Certainly a group of businessmen in my State are entitled, as a matter of right, to sit down with representatives of GSA and have explained to them the procedures that they would have to follow if it fell finally to the lot of GSA to dispose of the property.

I hope that in that conference with the Oregon businessmen today, the representative of GSA made clear to them the interest of the Federal Government in trying to find a Federal use for Tongue Point.

I hope that the representative of GSA at the Oregon meeting today pointed out that every effort was being made by the Government to find a suitable Federal use for this very valuable property.

I hope that the representative of GSA at the Oregon meeting today made clear the position of the Democratic members of the Oregon delegation.

I hope the GSA representative made clear to the Oregon businessmen that the Democrats in the Oregon delegation have been doing their best to negotiate an agreement whereby the Tongue Point base will be put to Federal use, because of its vital value to the economy of the State, and because of the equitable justice that such an arrangement would deal to the taxpayers of the country as a whole.

There was telephoned to my office a telegram. It was subsequently sent, and I imagine it has now been received, from GSA, signed by Mr. Robert T. Daly, Acting Administrator, GSA, Mr. Boutin being out of town. It was addressed to me. It reads as follows:

> Hon. WAYNE MORSE,
> *U.S. Senate,*
> *Washington, D.C:*
>
> Reurtel April 11, the report that GSA is about to close a sale of the former Tongue Point Naval Station at Astoria, Oreg., is an unfounded rumor. The following advice, previously furnished during your telephone conservation with Mr. Walter Moreland, is confirmed:
>
> (1) Should the city of Astoria submit a negotiated sale offer for the property, the consideration of such proposal by GSA and, if the offer were found to be acceptable, the submission of an explanatory statement to the House and Senate Government Operations Committees in advance of the negotiated sale as provided by law, would require a minimum of 5 weeks' time;
>
> (2) Any sale of the property by public bidding after advertising would also require at least 5 weeks' time.
>
> In accordance with your request, you will be notified well in advance of any sale of the property.
>
> ROBERT T. DALY,
> *Acting Administrator, GSA.*

Mr. President, I appreciate the telegram. I only hope that the General Services Administration made that very clear to the Oregon businessmen in the conference that was held this afternoon.

I speak in complete defense of Mr. Glenn Jackson, Chairman of the Oregon Highway Commission, who reported to me this morning that his information came directly from parties in interest. They could very well have been mistaken, and apparently were mistaken, if they thought that the meeting they were going to attend today was a meeting in which they had no chance to negotiate the final purchase of the property. But I am greatly indebted to Mr. Jackson for keeping the Democratic members of the Oregon delegation informed. He has performed another fine service in doing so.

Let me say also in his defense that if the Government is going to make the final decision to dispose of Tongue Point to private interests in our State, Mr. Jackson will be in there, doing everything he can to see to it that the maximum use of Tongue Point is made to the extent of its capacities by private interests in our State. But Mr. Jackson knows that private interests in our State cannot begin to make economic use of Tongue Point to the dollar return to our State which the Federal Government could do. That is why this dedicated public servant has been cooperating with the Democratic members of the Oregon delegation in an endeavor to have Tongue Point used for a Federal purpose.

As he has said to me many times:

> Let me know the moment you become satisfied that the Federal Government has turned thumbs down permanently as to any use of Tongue Point for Federal use. Then we shall have to get busy and do the best salvage job we can in making whatever use of those parts of Tongue Point that private industry can use.

I stress that, in my opinion, Mr. Jackson has been completely right, as are the Democratic members of the Oregon delegation, in taking the position that the Federal Government simply cannot justify the turning over of Tongue Point to a minimum use, so far as the economic advantage to our State is concerned, when it has an obligation to put it to maximum use for the benefit of Oregon.

Yesterday, in my conference with Mr. Dungan, there was associated with me Mr. Frederick Rarig, who is chairman of the board of directors of International House, of the University of Pennsylvania. He has been a special consultant to the State Department for some time in connection with the whole foreign student exchange program and the other programs of the State Department which have had to do with bringing over young people from the underdeveloped areas of the world, particularly Africa. Although the program has encompassed other students, Mr. Rarig's interest has been primarily limited to African young men and women who have been brought to the United States. He is one of the most brilliant lawyers I know. At one time he was an Assistant Attorney General of the United States, one of the top men in the Antitrust Division, not only a close adviser to the Attorney General, but also called in by President Roosevelt for special consultation on some of the antitrust problems which have faced the country.

I mention this because I desire to have the RECORD show again the caliber of man who has interested himself in a program which could very well involve Tongue Point. Without my knowledge, sometime last year Mr. Rarig, in connection with his student exchange work, flew to the West Coast and inspected Tongue Point. Do not forget that he is a dedicated citizen, who works on a volunteer basis and who, incidentally, also has raised, by way of volunteer contributions from many people throughout the country, but mostly in the East, a good many thousands of dollars to be used as assistance to the foreign students. He saw in Tongue Point a great potential as the facility to be used by the State Department and the Peace Corps in a combined cooperative program for the bringing of a large number of young men and women from the underdeveloped areas of the world to Tongue Point for special training, sometimes called vocational training. I understand that in some places in the State Department "vocational training" is almost an ugly phrase; that "leadership training" is more acceptable. Yet, as Mr. Rarig points out, what the young people who come from Africa, Latin America, and southeast Asia need is some training in technical skills, training which will enable them to go back into the villages of the underdeveloped areas and be of assistance in any one or more of a number of vocational training areas, in which special skills are completely lacking in many of those villages.

Such skills include training in the use of tools, repairing of machinery, operating tractors and farm machinery, and the like. As Mr. Rarig puts it, that kind of training will do more good in many of those villages than a Ph. D. degree. Important as it is that we train doctors, important as it is that we train Government servants, important as it is that we train people in the so-called higher echelons of the economic strata, the greater need is to provide technical training, vocational training, and long service training to hundreds and hundreds of young people who could be brought to such a center as Tongue Point for from 6 to 12 months.

Housing facilities are located there. In addition to family housing units, such as I have talked about, there are dormitories of a high-class barracks type—made to order, as Mr. Rarig says. Let him speak, as he has at the State Department, as he did some months ago at the Peace Corps, as he did yesterday in a conference with Mr. Dungan.

I merely cite this, as I did in my letter to Mr. Hodges, as one of the potential uses of Tongue Point, for Mr. Rarig has done just that on a smaller scale at Lincoln University, because last year the State Department was finally convinced, rather belatedly, to do something about the young African students who, during a vacation period between the closing of school in June and the starting of school in the last part of September or the early part of October, were found walking the streets in many of the metropolitan areas of our country. That is not the way to build up good will ambassadors to be sent back to Africa. They were getting themselves into many difficulties and trouble; in some instances, they had no money.

So this great, public-spirited man of Philadelphia, this brilliant counsel of Rohm & Haas, persuaded the State Department to set aside a little money to support a program that he initiated or inaugurated at Lincoln University, a program of the kind of training in technical skills that I have already mentioned.

As he said yesterday:

> We taught those young Africans how to drive an automobile. Many of them never expected they would sit behind an automobile steering wheel; but most of them got driver's licenses before the summer was over.

Mr. President, I wish you could have heard him describe to Mr. Dungan and to me, yesterday afternoon, the psychological therapy of that training on those young people and what it meant to them from the standpoint of individual prestige and a sense of accomplishment in Western ways. He said that he explained to them:

> In your country, apparently many of you think it should be beneath your dignity to use your hands in the soil. But let me point out to you that in a democracy we take the position that any leader should be well informed and well versed in, and have some experience with, the development of food and fiber. You ought to know the chemistry and the scientific facts involved in the development of man's sustenance from the soil.

He said there was a complete change in their attitude after the leaders and teachers at Lincoln University took them through courses—courses which really were rather elementary, but to them were full of knowledge theretofore unknown to them—in agriculture and in other subjects. They were taught how to tear down a tractor and put it together again. The girls were taught courses in business, typing, and stenography.

He told a dramatic story. His conclusion was that such training could not be given nearly as well in the little hamlets and towns of Africa or Latin America or southeast Asia. It is his belief that it would be most advantageous if in those hamlets and towns there were picked out not only the few students capable of competing in American universities—and he had plenty to say about some of the serious mistakes and the drawbacks involved in that program, too, Mr. President; and we are making some terrible mistakes in the student exchange program—but also groups of young men and young women who would be capable of coming to the United States and spending 6 months or a year at Tongue Point or at a similar center in the Midwest or at one on the east coast. His program calls for three such centers, and also for enlarging the program at Lincoln University. He said:

> If that is done, I guarantee that, year by year, there will be returned to those countries groups of ambassadors who, after that training in the United States, will, when they return to their native lands, constitute one of the best defenses we shall have against the constant threat of communism in those lands.

Mr. President, to make use of Tongue Point for such a facility calls for imagination, foresight, and understanding of the needs of individual people in the underdeveloped areas of the world. We are just "muffing the ball" in connection with such a program. We are pouring millions of dollars into our so-called foreign aid program; but this gentleman has a constructive program based on imagination and foresight; and he is asking for three centers of vocational training in this country—one on the west coast, one in the Middle West, and one on the east coast.

He said:

> I have gone through Tongue Point. The Senator did not know about that; but after I found out about those facilities, I came to him.

And so he did.

Mr. President, I wish to say that such a program offers much to the State Department and to the Peace Corps. He has had a conference with Mr. Shriver; and in the conference he pointed out that the Peace Corps should work both ways—that we should send American young men and young women abroad, but we should also bring to the United States young men and young women from these countries. Furthermore, at such centers American young people could receive training while they were associated with the young men and the young women from those foreign lands, before those young Americans were sent to those lands.

Consider Ghana or Sierra Leone or any other African country: Suppose that half a dozen or a dozen young people from one of those countries were studying at the center, and suppose that half a dozen or a dozen American young people were also studying there. What a wonderfully constructive program could be worked out by means of such an association of the the two groups, before those young Americans went to the foreign countries.

Mr. President, Mr. Rarig left with us his notes on the foreign student problem, and also his recommendations in regard to a U.S. program for foreign students, particularly Africans and Latin Americans. I ask unanimous consent that these two memorandums be printed at this point in the RECORD.

There being no objection, the memorandums were ordered to be printed in the RECORD, as follows:

NOTES ON FOREIGN STUDENT PROBLEM

(By F. J. Rarig)

The community experiences of foreign students during their stay in the United States are of great and lasting importance to them and of even greater importance to us. Good community experience can make up for failure of academic programs due either to poor academic performance or academic achievement unrelated to home environment. It can be argued with considerable force that the community experience constitutes for many students their true educational experience in the United States.

Our National Government should develop techniques and programs to assure constructive community experience. Our objective should be to send these students back home more truly sophisticated, mature people who have developed a better appreciation of their own culture, as well as a familiarity with the 20th century industrialized world. They should return home with real insight into the true nature of the struggle for social justice and the function of freedom.

United States has almost unlimited resources to do a superb, sensitive job of community exposure and orientation to 20th century mechanical, industrialized, supermarket society.

United States is also superbly equipped to demonstrate the effectiveness of democratic government as a creative social, economic, and cultural force. Most students think the choice is between communism and capitalism. They have no appreciation of the creative role government plays in the United States at all levels.

To date our program is utterly unrealistic and fails to make use of more than a fraction of our available resources. We have pretended that this is purely an academic exercise and that the job can be done by our schools and colleges. We have largely neglected the opportunity which the presence of these students offers us to "infect them with the spirit of liberty." In the process of carrying out the fiction that this is an academic problem, we have belittled and concealed the effectiveness of our Government instead of demonstrating it.

RECOMMODATIONS WITH REGARD TO U.S. PROGRAM FOR FOREIGN STUDENTS, PARTICULARLY AFRICANS AND LATIN AMERICANS

We must:

1. Recognize that vocational and administrative training, though unpopular, are

really what most African and Latin American students can absorb and what will enable them to meet their countries' real needs.

2. Recognize that voluntary agencies in U.S. communities cannot cope with African and Latin American student influx unless these students and trainees are staged into the United States through control points in the United States where they will be evaluated and oriented.

3. Take advantage of summer vacation period to supplement academic experience by providing employment experience internship in Government and experience in agriculture, conservation, community development, social service; that is "Peace Corps—in reverse."

4. We need arrival centers to serve as staging areas and as orientation centers and special summer experience centers. Need one on west coast (Tongue Point), Middle West and east coast (Lincoln University).

5. Centers should be comparatively isolated so we control contacts with Americans and American community.

6. Failures and problem students are the special concern of the U.S. Government. They are no one's special concern today.

Mr. MORSE. Mr. President, in closing, I wish to say to my administration that I felt I owed it to the administration to make this detailed report on the possibility of the establishment of such a center to be devoted to courses of study for these two groups, in association. So I felt that I owed it to my administration to make this report on the Tongue Point issue, because I want the Tongue Point issue settled not only in the interests of the people of Oregon and in the interests of all the people of the United States, but also in the interest of having it serve as a symbol of the way in which many of these cases can best be handled, because I am satisfied that there are other examples of proposed waste of Federal facilities; and I believe this administration should take a careful look at its budget requests, and should assure Congress that it will not ask for a single dollar for the construction of a new installation anywhere, so long as there are in existence unused facilities, such as Tongue Point, which can be used to serve the purpose of any facility being proposed in the budget as a new installation to be constructed in order to meet the needs of that Department.

The American people are entitled to a sound economy program. I happen to be one who will continue to vote for the necessary appropriations to promote the general welfare of the people of this country. But I do not propose to vote for funds for new installations that would involve waste. I intend to scrutinize very carefully every dollar of appropriation request of this administration for any new installation anywhere or for any expansion of any Government service anywhere until the administration can give me assurance that we are not wasting existing facilities.

I hope that by making this record the administration will understand that I am doing it motivated only by a desire to be of help to my administration. I hope that I will receive from my administration the same cooperation that I am offering it in respect to this matter. But whatever course this administration follows in regard to Tongue Point or any other, if that course of action does not protect the financial interests of the American people, I shall oppose the position taken by the administration.

ADJOURNMENT UNTIL MONDAY, APRIL 15

Mr. MORSE. Mr. President, if there is no further business to come before the Senate at this time, I move, pursuant to the order previously entered, that the Senate adjourn until 12 o'clock noon on Monday.

The motion was agreed to; and (at 10 o'clock and 11 minutes p.m.) the Senate adjourned, under the order previously entered, until Monday, April 15, 1963, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate April 11, 1963:

POSTMASTERS

The following-named persons to be postmasters:

ALABAMA

John H. Cook, Dozier, Ala., in place of L. C. Sirmon, retired.

Carrie M. Mann, Pleasant Grove., Ala., in place of S. J. Green, resigned.

James T. Carroll, Stevenson, Ala., in place of E. O. Mann, retired.

ARIZONA

Oscar W. Schahn, Morenci, Ariz., in place of F. B. Moore, retired.

ARKANSAS

Roy L. Sharpe, Little Rock, Ark., in place of I. C. Bellville, retired.

Alph Herron, Mayflower, Ark., in place of L. P. Gentry, deceased.

Arnold B. Sikes, North Little Rock, Ark., in place of O. W. Neely, deceased.

CALIFORNIA

Richard L. Byington, Boron, Calif., in place of S. C. Slack, retired.

Irving A. Cleek, Chico, Calif., in place of R. C. Brown, retired.

Mary L. Johnson, Keyes, Calif., in place of L. M. Hinson, retired.

Rosalie L. Rhodes, Lakehead, Calif., in place of E. A. Ranney, resigned.

Irvin J. Burt, Roseville, Calif., in place of R. A. Bates, retired.

COLORADO

Clifford E. Anderson, Grover, Colo., in place of W. L. Robbins, transferred.

CONNECTICUT

Lolita C. Splaine, East Granby, Conn., in place of W. A. Wilcox, retired.

Charles E. Hatheway, Ellington, Conn., in place of E. F. Charter, deceased.

Charles W. Latimer, Pleasant Valley, Conn., in place of E. M. Norton, retired.

FLORIDA

Carl P. Geiger, Cocoa, Fla., in place of A. E. Booth, retired.

GEORGIA

Joseph R. Bowers, Fayetteville, Ga., in place of S. L. Morgan, retired.

C. Lawrence Mize, Toccoa, Ga., in place of G. H. Busha, retired.

HAWAII

Steven K. Kaneda, Wailuku, Hawaii, in place of J. T. Correa, resigned.

IDAHO

Donald W. Heath, Winchester, Idaho, in place of B. A. Roberts, retired.

ILLINOIS

John R. Frymire, Enfield, Ill., in place of C. M. Jordan, deceased.

Theodore C. Geocaris, Mount Prospect, Ill., in place of Joseph Knuth, retired.

Kenneth Cole, Norris City, Ill., in place of W. S. Smith, retired.

INDIANA

Robert H. Wilson, Albion, Ind., in place of C. A. Davis, retired.

Melville A. Mix, Jr., Brownsburg, Ind., in place of R. M. Huddleston, retired.

Virginia E. Ross, Brownsville, Ind., in place of W. J. Wissler, deceased.

Charles J. Murray, Jamestown, Ind., in place of J. L. Kincaid, retired.

James E. Rainford, Lake Village, Ind., in place of L. E. Rainford, retired.

Glendon R. Hinshaw, Mooresville, Ind., in place of Ruth Quillen, resigned.

Maurice G. Whitaker, Paragon, Ind., in place of A. K. Costin, retired.

Richard R. Conley, Rome City, Ind., in place of T. J. Conley, deceased.

Robert H. Meier, Westphalia, Ind., in place of Oscar Nierste, retired.

IOWA

Ronald L. Grant, Bondurant, Iowa, in place of L. L. Flannery, retired.

Leland J. Gorshe, Hornick, Iowa, in place of J. L. Harrison, retired.

Clarence E. Pittman, Morning Sun, Iowa, in place of C. F. Wunnenberg, retired.

Derrel D. Waring, Reasnor, Iowa, in place of Mabel Jones, retired.

Gordon L. Elwood, Silver City, Iowa, in place of F. A. Deitchler, retired.

KANSAS

Willis J. Ross, La Harpe, Kans., in place of A. A. Peterson, deceased.

KENTUCKY

Walter E. Burkhart, Cawood, Ky., in place of G. C. Cawood, retired.

John S. Humphrey, Jr., Jeffersontown, Ky., in place of R. H. Dickson, deceased.

Lester G. Nanny, Murray, Ky., in place of H. I. Sledd, retired.

Matthews Fletcher, Pewee Valley, Ky., in place of C. L. Snyder, retired.

Jean P. Crouch, Verona, Ky., in place of Mayro Hayden, resigned.

Kenneth E. Brock, Worthville, Ky., in place of Nellie Clubb, retired.

LOUISIANA

Edward W. Cruse, Alexandria, La., in place of J. W. Lewis, Jr., resigned.

Leslie C. Sutton, Baker, La., in place of N. M. Austen, retired.

William J. Broussard, Carencro, La., in place of J. H. Crouchet, retired.

MAINE

Thomas W. Adell, Readfield, Maine, in place of Charlene Adams, retired.

MARYLAND

George L. Hart, Sudlersville, Md., in place of E. W. Hart, retired.

MASSACHUSETTS

Lydia J. Hartnett, Millville, Mass., in place of A. M. Butler, retired.

John G. Barry, South Hadley, Mass., in place of R. A. Glesmann, Jr., deceased.

MICHIGAN

Noble G. Haver, Jr., Durand, Mich., in place of N. J. Morrow, retired.

John J. Cheney, Elmira, Mich., in place of W. R. Cremeans, transferred.

Leola A. Rugg, Shaftsburg, Mich., in place of A. F. Beers, retired.

Glenna A. Brooks, Somerset Center, Mich., in place of G. W. Fisher, retired.

MINNESOTA

Grant D. Vagle, Lake Bronson, Minn., in place of L. C. Locken, transferred.

John E. Murphy, Marshall, Minn., in place of W. C. Culhane, removed.

Eugene C. Howe, Palisade, Minn., in place of L. E. Johnson, transferred.

Darold J. Osterloh, St. Francis, Minn., in place of R. E. Leathers, retired.

John E. Patterson, Westbrook, Minn., in place of E. E. Flynn, retired.

MISSOURI

J. Warren Campbell, Edwards, Mo., in place of C. H. Babbitt, retired.

Allen E. Buetzer, Forest City, Mo., in place of P. B. France, retired.

Marcella F. Boyer, Herculaneum, Mo., in place of J. E. McDowell, deceased.

Amherst W. Maphies, Jericho Springs, Mo., in place of E. M. Gelsinger, retired.

Robert A. Woodward, Lamar, Mo., in place of C. E. Schreiner, retired.

MONTANA

William M. Dysart, Harlowton, Mont., in place of C. F. Walton, retired.

NEBRASKA

Eldon W. Marsh, Brunswick, Nebr., in place of G. E. Beltz, transferred.

Charles F. Obrist, Steinauer, Nebr., in place of P. R. Wenzl, transferred.

NEW JERSEY

John Cook, Florence N.J., in place of T. R. Boyle, deceased.

Harold R. Braun, Holmdel, N.J., in place of F. L. Pitcher, resigned.

Dominic J. Zambello, Lambertville, N.J., in place of E. J. Meskill, deceased.

NEW YORK

Laurence M. Sucher, Alton, N.Y., in place of E. F. DeZutter, deceased.

Frances W. Flynn, Burke, N.Y., in place of L. F. Sellers, deceased.

Clyde W. Barber, Castile, N.Y., in place of Martin Carey, retired.

Joseph A. Peckovitch, Cementon, N.Y., in place of H. W. Johnson, retired.

John J. Powers, Jr., Eagle Bridge, N.Y., in place of E. F. Curtis, retired.

Olga A. Mihanowich, Glenham, N.Y., in place of O. B. Timmons, retired.

Mildred H. Burd, Greenwood, N.Y., in place of Jerry Burd, retired.

Carl J. Barry, Kent, N.Y., in place of R. K. Fishbaugh, deceased.

Edwin D. Jennison, Sr., Milton, N.Y., in place of M. A. Jannelli, retired.

John G. Davis, Stone Ridge, N.Y., in place of S. C. Lounsbery, retired.

Raymond A. DuFour, Wynantskill, N.Y., in place of I. R. Puffer, deceased.

NORTH CAROLINA

Charlie O. Williams, Central Falls, N.C., in place of A. M. York, retired.

NORTH DAKOTA

Joseph R. Walter, Devils Lake, N. Dak., in place of F. W. Kelly, retired.

Gilbert W. Kessler, Martin, N. Dak., in place of D. M. Tofteland, transferred.

OHIO

Thomas F. Fenton, Chandlersville, Ohio, in place of Z. M. Wolfe, resigned.

Robert L. Lowry, Green Camp, Ohio, in place of C. A. Williams, retired.

John Karalius, Rock Creek, Ohio, in place of G. D. Keaney, retired.

Jack A. Pancher, Uhrichsville, Ohio, in place of W. P. Wilcoxon, deceased.

Marlin F. Gehres, Wren, Ohio, in place of R. D. Stewart, retired.

OKLAHOMA

Ward W. Newport, Cushing, Okla., in place of T. A. Holland, retired.

Finis Ward, Foyil, Okla., in place of I. M. Kehler, retired.

Ernest E. Buffington, Westville, Okla., in place of Fred Allison, retired.

OREGON

Richard J. Halverson, Garibaldi, Oreg., in place of S. S. Partridge, retired.

Susan H. Wick, Keno, Oreg., in place of A. E. Cecil, retired.

PENNSYLVANIA

Anthony J. Del Vecchio, Canonsburg, Pa., in place of S. J. Bondi, removed.

John A. Zoppetti, Darlington, Pa., in place of A. K. Hunt, retired.

Patrick J. Moran, Gladwyne, Pa., in place of W. C. Herbert, removed.

Emily T. McDaniel, Groveton, Pa., in place of S. J. Leonard, retired.

Blair I. Showalter, Huntingdon, Pa., in place of S. E. Resley, retired.

Robert G. O'Neill, Pleasant Mount, Pa., in place of J. A. O'Hara, retired.

Dorothy M. Sherbondy, Ruffs Dale, Pa., in place of E. B. Weaver, retired.

Myrtle E. Smith, Spinnerstown, Pa., in place of Rudolph Simitz, deceased.

John H. Stangarone, Springs, Pa., in place of F. M. Bittinger, retired.

Dawn M. Ressler, Talmage, Pa., in place of M. T. Hornberger, resigned.

Nicholas A. Morelli, Williamsburg, Pa., in place of J. G. Butler, resigned.

RHODE ISLAND

Katherine M. Purnell, Clayville, R.I., in place of P. C. Walker, resigned.

Francis M. Burns, Pawtucket, R.I., in place of F. L. Giard, retired.

SOUTH CAROLINA

Phillip C. Seigler, Batesburg, S.C., in place of R. G. Kennedy, retired.

James C. Riley, Piedmont, S.C., in place of W. F. Adkins, retired.

Margaret H. Leary, Troy, S.C., in place of R. A. Russell, transferred.

Thomas W. Suber, Whitmire, S.C., in place of T. P. Scott, retired.

SOUTH DAKOTA

Kathryn A. Hight, Deadwood, S. Dak., in place of Lyle Elward, retired.

Christian B. Jordan, Fort Meade, S. Dak., in place of R. B. Allen, retired.

Elmer T. Fitzgerald, Rapid City, S. Dak., in place of G. W. Lampert, retired.

TENNESSEE

Walter F. Church, Roan Mountain, Tenn., in place of C. F. Heston, resigned.

Betty S. Watkins, Talbott, Tenn., in place of B. T. Newman, retired.

Joseph W. Gore, Wartrace, Tenn., in place of A. S. Shriver, retired.

TEXAS

Michael M. McCully, Clarendon, Tex., in place of J. R. Moore, deceased.

Wilburn Piefer, Devers, Tex., in place of O. S. Cousins, retired.

Luther G. Pool, Garland, Tex., in place of F. B. Crush, resigned.

Grover C. Gibbs, Jr., Glen Rose, Tex., in place of W. E. Porter, retired.

Douglas L. Garrett, Hempstead, Tex., in place of G. V. Norman, retired.

John L. Boyd, Lake Dallas, Tex., in place of W. L. Hunter, retired.

Carlos I. Palacios, Laredo, Tex., in place of J. R. Goodman, retired.

Hiram C. Dubose, Port Arthur, Tex., in place of F. C. Toups, deceased.

Leopoldo Martinez, Jr., Zapata, Tex., in place of Peregrina Benavides, deceased.

VIRGINIA

Herman L. Bundick, Painter, Va., in place of A. H. LeCato, retired.

Joseph C. Rucker, Shenandoah, Va., in place of V. C. Griffith, retired.

Archibald E. Sutton, Tappahannock, Va., in place of Edward Ware, retired.

WASHINGTON

Arvith M. Christiansen, Belfair, Wash., in place of M. W. Newkirk, retired.

Paul B. Coffey, Chewelah, Wash., in place of D. P. Salisbury, resigned.

WEST VIRGINIA

Maurice B. Morrison, Charlton Heights, W. Va., in place of M. S. Robinson, resigned.

WISCONSIN

Robert A. Weinhold, Adell, Wis., in place of L. H. Dulmes, transferred.

John F. Rochon, Florence, Wis., in place of C. E. Rochon, retired.

Echo I. Fisk, Holcombe, Wis., in place of L. G. Bernier, retired.

Russell J. Myers, Monroe, Wis., in place of J. J. Burkhard, retired.

Cora D. Manthei, Pleasant Prairie, Wis., in place of A. J. Goff, retired.

Mary E. Suihkonen, Sheldon, Wis., in place of E. L. Grendahl, retired.

WYOMING

Orval Horton, Chugwater, Wyo., in place of E. N. Greff, retired.

IN THE COAST GUARD

The following-named persons to be lieutenants in the U.S. Coast Guard:

Wilhelm A. Wulff
Robert W. Miller
John M. Wypick
Robert D. St. Aubyn
Billy E. Murphy
George F. Merritt
Benjamin E. Joyce
Jarold C. Carlton

The following persons to be lieutenants (junior grade) in the U.S. Coast Guard:

James L. Haas
Robert I. Ivans
William E. Newland
John A. Blanchard
Robert A. Wombacher
Dom Degnon, Jr.
Marshall H. Shytle
Ralph O. Moore
Duane A. Coppock

The following-named persons to be chief warrant officers, W-4, in the U.S. Coast Guard:

Lavine Hubert
Eugene P. Farley
Eugene C. Colson
Harry A. Lessey
John W. Stamback
Arloy F. Jensen
Louie W. Stanley
Jack D. Rodgers
Arch "D" Grainger, Jr.
Artell B. Crowley, Jr.
Lloyd T. Twiford
Daniel W. Cluff
Robert C. Ashdon
Harry J. Backman
Morris J. Marshall
Hugo A. Cruz
William E. Hughes

WITHDRAWAL

Executive nomination withdrawn from the Senate April 11, 1963.

POSTMASTER

The nomination sent to the Senate on March 1, 1963, of Gary E. Helms to be postmaster at Stafford, in the State of Virginia.

EXTENSIONS OF REMARKS

African Freedom Day

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mrs. FRANCES P. BOLTON. Mr. Speaker, in 1961 this Congress designated April 15 as African Freedom Day. The emergence of the African Continent is one of the most spectacular and dramatic stories of our time. My very keen interest in this "continent God has held in reserve" goes back many years. During my service as delegate to the Eighth General Assembly of the U.N. my interest was greatly increased as we on the Fourth Committee debated the problems of the mandated and colonial areas.

In 1955 I undertook the first special study mission to Africa, south and east of the Sahara, on behalf of the House Foreign Affairs Committee. Those 3½ months of study and travel were most illuminating and beneficial. The African has come a long way and like all humanity has a long way to go. I cannot agree with all practices carried on in the name of democracy on the continent, just as many Africans would take exception to certain aspects of the American scene. But now is not the time to be discouraged, indeed, there is every good reason to be hopeful.

The Communists had hoped to take over Africa. Now they are not so sure. The Washington Post on April 6, 1963, carried an article entitled, "Soviet Reported Trying for African Comeback." As the intervening years have served to strengthen my first impressions rather than to change them, may I again cite what I set down in my report of the Special Study Mission to Africa 8 years ago.

> The United States, in its position of leadership in the free world, cannot sidestep its responsibility in the unfoldment of Africa. We must take a deep interest in the social, economic, and political changes taking place in that great continent since they affect our own national goals.
>
> I know that always there will be a great bond of interest and affection between the people of the United States who from colonialism became a great power and the people of Africa who so recently assumed the mantle of independence. We all rejoice in Africa's independence and pray that with the grace of God freemen will temper their freedom with responsibility and dignity.

Forecast for 1963

EXTENSION OF REMARKS

OF

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to bring to the attention of my colleagues an editorial from the Granville Sentinel newspaper, Granville, N.Y., one of the leading weekly newspapers in the 30th Congressional District. The new owner of the Granville Sentinel is Lt. Col. MacArthur Manchester, grandson of the late James L. Manchester, who, in 1875, established this newspaper, which today is an integral part of the village of Granville and its surrounding communities. While presently serving as regional field officer of the Selective Service System in Lebanon, N.H., Colonel Manchester, as the new editor and publisher of the Sentinel, has given unstintingly of his time and resources toward improving Granville's welfare and its esthetic standards.

As an indication of Colonel Manchester's determination to continue the Granville Sentinel in the same journalistic philosophy of its founder, I wish to include an enlightening editorial, written by the Honorable LEON H. GAVIN, of Pennsylvania, entitled "Forecast For 1963." As a top-ranking member of the powerful Armed Services Committee, Representative GAVIN is fully conversant with the tremendous armed thrust of America's might. Representative GAVIN's warm personality, firm patriotism, and dedication to the public interest is well reflected in his thoughts on the future of America's business.

The following guest editorial is one of many that has appeared from week to week under the new management of Lt. Col. MacArthur H. Manchester:

FORECAST FOR 1963

> The plain truth about the business outlook for the next few months is that it is shrouded in heavy fog. Seldom before have so many professional forecasters been so cautious. If they agree at all, it is that the economy is sluggish and will remain so in the immediate future. If this seems pessimistic, at least no serious recession is in sight. By some miracle we escaped what could have been a really sharp downturn after the market dropped so swiftly last May 28. That is to say, we have escaped it so far.
>
> Ignoring the spreaders of doom and gloom, some customers boosted retail sales in November to an annual rate of $235 billion, or about $15 billion higher than in 1961 (there was a 2 percent dip in department store sales during the last week of November and the first week of December). Durable goods are likely to reach a 1962 total of $75 billion, a comeback from the lackluster year of 1961 when the total was $67 billion. Auto sales, too, seem to be close to a big year, if not a record year.
>
> But it is not fair to imply that all consumers are easy spenders. Savings and the purchase of Government E and H bonds are up. A good part of this increase represents not only new savings, but money no doubt that was switched from the stock market during and after the drop in the market. This savings account and Government bond money now represent what the economists call "liquid funds." When and if public confidence in the market increases, these funds can quickly be reinvested in stocks—or used to purchase consumer goods. This is a definite plus sign.
>
> The fog arises almost entirely from the doubt about what the administration and Congress will do this year about spending and taxes.
>
> No one doubts the need for tax reductions. The big questions are: When should they be made? Can reduction be combined with tax reform? Will tax cuts really be accompanied by spending cuts? Will the administration at long last propose a really sound tax program?

If these problems can be resolved favorably, the whole economic outlook would change. The corporate and individual income taxes place a higher penalty on extra effort and incentives here than in any other modern country. They are among the major blocks to our moving ahead.

The question is: Should the larger share of tax cuts go to those fewer individuals who tend to invest in stocks or corporate bonds or to the lower income groups? The first kind of tax cuts would stimulate the economy over the long range by helping to set up new jobs. The latter would stimulate consumer spending, which is so greatly needed, and so act as a quick shot in the arm.

The administration has not committed itself to any meaningful reduction in spending. And there are many who do not believe that tax cuts alone, any kind of tax cut, will help the economy, if they bring more deficits, more inflation. There have been consecutive deficits in the last 3 years, totaling $18 billion, and the national debt now stands at $305 billion. Any tax cut, without a spending cut, would simply add to this deficit, diminishing confidence in the business outlook.

So there really is no magic formula to restore the kind of prosperity the country enjoyed during prior administration.

This is not to say that nothing can be done or that our economy is weak. If the administration presented a balanced budget with both spending and taxes reduced; if the huge deficits in our balance of international payments were cut; if the integrity of the dollar and our gold reserves were restored; if the administration's economic advisers show some understanding of the role of profits in a free enterprise economy, the economy would move ahead with vigor. Surely, these proposals are not unreasonable.

And in all honesty, it must be said that business itself has a role to play. Neither tax cuts nor spending cuts will restore full prosperity. They cannot take the place of imaginative management. The fact is that the great consumer rush to buy which followed World War II is gone. We are now in a buyers' market. The consumer is not simply looking for things to buy. He is looking for new things to buy. And he is beginning to look at the price tags again. American business has returned to the old law of survival of the fittest. Businessmen who are slow to recognize this cannot be rescued by tax cuts, nor pamphlets from the Department of Commerce.

To sum up, business will grow and prosper if Government will get out of its way, and if businessmen revive the old American tradition of pleasing the customer—who, by the way, is king once more.

The Honorable LEON H. GAVIN,
House of Representatives, U.S. Congress.

Re H.R. 5389, a Bill To Substitute Fiat, Nonconvertible Federal Reserve Notes for All $1 and $2 U.S. Currency Redeemable in Silver Dollars

EXTENSION OF REMARKS

OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. PILLION. Mr. Speaker, yesterday, on April 10, I addressed the House in opposition to the passage of H.R. 5389. The time allowed me expired before the conclusion of my criticism of this bill.

Although I was given permission to extend and revise my remarks at that point in the RECORD, the remaining portion of my statement was not added to the remarks that I made on the floor. The remaining portion of my statement, pointing out the irreparable damage that this action would cause follows:

This bill will result in a further run on, and a drain upon our subsidiary silver, 50-cent, 25-cent, and 10-cent pieces, where the silver content is 0.72 ounce per $1 of coins. It will become profitable to hoard or melt down silver coins—subsidiary—at $1.38 per ounce.

The best and most effective way to meet this problem is to balance our budget, retain our silver currency monetary system, and make silver currency freely available to the general public.

Our present silver redemption monetary policy reinforces our gold reserves.

The replacement of silver dollars by Federal Reserve notes would further dilute the monetary system. It would further weaken the faith and credit of our Nation, both domestically and internationally.

As of March 27, 1963, the Treasury's stock of gold was $15.88 billion.

The Federal Reserve currency outstanding was $29.89 billion.

The Federal Reserve deposits were $17.63 billion.

The Federal Reserve liabilities, requiring a 25-percent gold reserve were $47.52 billion.

The 25-percent gold reserve requirement was $11.88 billion.

The Treasury gold assets were $15.88 billion.

The U.S. gold available for meeting foreign-held dollars and short-term obligations was $4 billion.

The present bill would add $500 million to the required gold reserves by the substitution of $2 billion Federal Reserve notes for silver certificates. This would reduce U.S. gold available to meet foreign holdings to $3.5 billion.

The U.S. Government has borrowed $800 million of gold from the International Monetary Fund which should be deducted from our holdings. This leaves a net gold stock available to meet foreign holdings to $2.7 billion.

Our short-term banking liabilities to foreigners on March 30, 1964, was $24.9 billion.

Our short-term claims on foreigners as of March 30, 1964, was $4.9 billion.

Our net short-term liabilities to foreigners, payable in gold on demand was $20 billion.

The ratio of our liabilities to our free gold—$20 billion to $2.7 billion—is about $7 in liabilities to $1 in available gold. The United States could only pay off 14 cents for each dollar of our gold liabilities to foreigners.

Mr. Speaker, the passage of this bill will exert great pressures for the complete abandonment of our 25-percent gold reserve presently supporting $30 billion of Federal Reserve currency and $17 billion of Federal Reserve deposits.

This bill is a mere prelude to the repeal of the 25-percent gold reserve requirement for our currency. It is another major step toward devaluation, repudiation, and international bankruptcy.

ALTERNATIVE SOLUTION

There are a number of possible alternative solutions that would insure the retention of our silver redeemable currency and, at the same time, assure the Treasury of an adequate silver supply to meet coinage and silver reserve requirements.

The possible alternatives are—

First. Continue the minting of $1 silver coins with a reduction of silver content from 0.77 ounce to 0.72 ounce.

Second. Retain our $1 and $2 U.S. silver certificates redeemable in silver dollars with a content of 0.72 ounce of silver.

These two steps would equalize at $1.38 instead of at $1.29 per ounce the redemption monetary value of our silver certificates and dollars with that of our subsidiary silver coins of 10, 25, and 50 cents.

Third. Substitute U.S. Treasury notes for U.S. Treasury silver certificates and require a 60-percent reserve instead of a 100-percent reserve for silver notes.

This action would free 40 percent of our $1.6 billion ounces of silver and make it available for either normal or emergency needs.

The 60-percent reserve would be substantially higher than our 25-percent gold reserve for Federal Reserve notes and 45 percent for U.S. Treasury notes.

Fourth. Authorize the U.S. Treasury to protect our silver supply by the purchase or sale of free silver at a predetermined price between $1.29 and $1.38 per ounce.

Permit me to amplify my statement to the effect that we do have a sufficiency of silver to meet our coinage and currency requirements.

The April 3, 1963, Treasury statement states that we have on hand—

First. 1.633 billion ounces of silver on hand, valued at $1.29 per ounce, carried on the books at $2.111 billion.

Second. Against this silver, there are outstanding silver certificates, in face amount of $2.131 billion.

We have a 100 percent backing for our $1, $2, $5, and $10 silver certificates.

Third. We have $81 million of silver dollar coins.

Fourth. We have 37 million ounces of bullion, valued at $31 million.

Fifth. We have 64.7 million ounces stockpiled with the Atomic Energy Commission, having no present nor prospective use, valued at $85 million.

Sixth. About $300 million of silver will be freed and become available through the withdrawal and the substitution of Federal Reserve notes for $5 and $10 silver certificates.

The alleged purpose of this bill is to free silver, held as a reserve for U.S. silver currency, for coinage purposes.

Our coinage and currency requirements today are sufficient to last for at least 3 to 4 years. This does not include the additional purchase of U.S. production of about $30 to $40 million of silver per year.

This bill would cause irreparable damage to our monetary system. It would invite a disastrous run on our gold supply by foreign holders. This bill should be returned to the Banking and Currency Committee.

The Padre of the Americas

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. MATHIAS. Mr. Speaker, it may be interesting to my distinguished colleagues to know that Father Joseph F. Thorning, the world-renowned priest-scholar who offered the prayer today on the 19th annual celebration of Pan American Day is a citizen of the Free State of Maryland and a resident of my own community in the heart of Maryland. It may also be considered noteworthy that this friend of many Members of the U.S. Congress, including myself, was first described as "the padre of the Americas" by one of the great leaders of the legislative branch of our Government. I refer, of course, to the Honorable MIKE MANSFIELD, now the majority leader of the U.S. Senate. It was this gentleman, himself distinguished for his vision and valor in the development of the good-neighbor policy, who, speaking on the floor of this House many years ago, characterized Dr. Thorning as "The Padre of the Americas." The title became the popular characterization of my friend and constituent.

Indeed, in recent years, the achievements of this apostle of good will have added luster to his name and to his reputation. We in Maryland are happy to know that, each year, Dr. Thorning, by conscientious research, study, and writing, enriches our Maryland heritage by his devotion to religious principles, great American traditions, and the ideals of freedom. This is added evidence of his love of God and country. It also explains why numerous leaders of the Congress of both political parties and all religious faiths have welcomed this Maryland priest, educator, author, and diplomat to the House of Representatives for 19 consecutive years to invoke God's blessing upon us and our labors for the Commonwealth.

It is a privilege for me, as the Representative for the Sixth District of Maryland, to join my esteemed colleagues of both parties in expressing respect, admiration, and affection for a servant of God who has deserved well of the Republic. In the words of another friend and a distinguished colleague, the gentleman from Massachusetts, Speaker JOHN W. MCCORMACK, we can all believe that the Reverend Dr. Joseph F. Thorning, pastor of St. Joseph's Church, Carrollton Manor, Frederick County, Md., will be remembered in the history of the United States of America and the Western Hemisphere and throughout the Iberian Peninsula as "a great American and a man of God."

The archdiocese of Baltimore can be happy that such a faithful priest serves in its historic jurisdiction. And, as a Member of the Maryland congressional delegation, I would like to congratulate Father Thorning's archbishop, the Most Reverend Lawrence Joseph Shehan, D.D., LL.D., upon the contributions to the cause of inter-American amity which have been made by Father Thorning and other members of his archdiocese, both priests and lay leaders, at a time when such service to God is also national service.

Sir Winston Churchill: Honorary U.S. Citizen

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. BOLAND. Mr. Speaker, President Kennedy on Tuesday signed a proclamation declaring one of the greatest Englishmen of history, Sir Winston Churchill, to be an honorary citizen of the United States. As a Member of the 88th Congress, I was proud to cast my vote in favor of this honor bestowed upon Great Britain's wartime Prime Minister. His magnificent contributions to the cause of freemen assure him a place in history as one of the truly great leaders of all ages.

Under unanimous consent I wish to have Sir Winston's message to President Kennedy, the President's remarks at the ceremony, and the Presidential proclamation printed with my remarks at this point in the RECORD:

CHURCHILL'S MESSAGE TO THE PRESIDENT

Mr. President, I have been informed by Mr. David Bruce that it is your intention to sign a bill conferring upon me honorary citizenship of the United States.

I have received many kindnesses from the United States of America, but the honor which you now accord me is without parallel. I accept it with deep gratitude and affection.

I am also most sensible of the warm-hearted action of the individual States who accorded me the great compliment of their own honorary citizenships as a prelude to this act of Congress.

It is a remarkable comment on our affairs that the former Prime Minister of a great sovereign state should thus be received as an honorary citizen of another. I say "great sovereign state" with design and emphasis, for I reject the view that Britain and the Commonwealth should now be relegated to a tame and minor role in the world. Our past is the key to our future, which I firmly trust and believe will be no less fertile and glorious. Let no man underrate our energies, our potentialities, and our abiding power for good.

I am, as you know, half American by blood, and the story of my association with that mighty and benevolent Nation goes back nearly 90 years to the day of my father's marriage. In this century of storm and tragedy I contemplate with high satisfaction the constant factor of the interwoven and upward progress of our peoples. Our comradeship and our brotherhood in war were unexampled. We stood together, and because of that fact the free world now stands. Nor has our partnership any exclusive nature: the Atlantic community is a dream that can well be fulfilled to the detriment of none and to the enduring benefit and honor of the great democracies.

Mr. President, your action illuminates the theme of unity of the English-speaking peoples, to which I have devoted a large part of my life. I would ask you to accept yourself, and to convey to both Houses of Congress, and through them to the American people, my solemn and heartfelt thanks for this unique distinction, which will always be proudly remembered by my descendants.

KENNEDY'S REMARKS AT THE CEREMONY

We meet to honor a man whose honor requires no meeting—for he is the most honored and honorable man to walk the stage of human history in the time in which we live.

Whenever and wherever tyranny threatened, he has always championed liberty.

Facing firmly toward the future, he has never forgotten the past.

Serving six monarchs of his native Great Britain, he has served all men's freedom and dignity.

In the dark days and darker nights when Britain stood alone—and most men save Englishmen despaired of England's life—he mobilized the English language and sent it into battle. The incandescent quality of his words illuminated the courage of his countrymen.

Given unlimited powers by his citizens, he was ever vigilant to protect their rights.

Indifferent himself to danger, he wept over the sorrows of others.

A child of the House of Commons, he became in time its father.

Accustomed to the hardships of battle, he has no distaste for pleasure.

Now his stately Ship of Life, having weathered the severest storms of a troubled century, is anchored in tranquil waters, proof that courage and faith and the zest for freedom are truly indestructible. The record of his triumphant passage will inspire free hearts for all time.

By adding his name to our rolls, we mean to honor him—but his acceptance honors us far more. For no statement or proclamation can enrich his name—the name Sir Winston Churchill is already legend.

KENNEDY PROCLAMATION

Whereas Sir Winston Churchill, a son of America though a subject of Britain, has been throughout his life a firm and steadfast friend of the American people and the American Nation; and

Whereas he has freely offered his hand and his faith in days of adversity as well as triumph; and

Whereas his bravery, charity and valor, both in war and in peace, have been a flame of inspiration in freedom's darkest hour; and

Whereas his life has shown that no adversary can overcome, and no fear can deter, free men in the defense of their freedom; and

Whereas he has expressed with unsurpassed power and splendor the aspirations of peoples everywhere for dignity and freedom; and

Whereas he has by his art as an historian and his judgment as a statesman made the past the servant of the future;

Now, therefore, I, John F. Kennedy, President of the United States of America, under the authority contained in an act of the 88th Congress, do hereby declare Sir Winston Churchill an honorary citizen of the United States of America.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 9th day of April in the year of our Lord 1963, and of the independence of the United States of America the 187th.

Third Annual Questionnaire Results

EXTENSION OF REMARKS

OF

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. HARVEY of Michigan. Mr. Speaker, I am pleased to take this opportunity to call to the attention of other Members of the House the final results of the third annual questionnaire conducted in Michigan's Eighth Congressional District. I only regret that I am unable to also list the many additional notes and comments by many of the 6,000 persons who participated in the voting. These additional notes were most interesting and poignant. Exactly 5,794 replies were tabulated by Data Processing Services, an increase of over 500 from last year's return. The questionnaire was published in 18 weekly newspapers and in the 4 dailies that cover the Eighth District. In addition, it was mailed to approximately 30,000 persons in my district. I am still receiving returns today. I am most grateful for the wonderful cooperation of all news media in publicizing the questionnaire, and for the interest in their Government shown by the citizens who took time to make their views known.

The questionnaire results are as follows:

1. Do you favor placing medicare for the aged under social security and raising social security taxes in a sufficient amount to cover cost?

Occupation	Yes	No	No answer	Total
Hourly employee:				
Number	311	456	8	775

World Trade Club, San Francisco

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. SHELLEY. Mr. Speaker, on April 18, 1963, the World Trade Club of San Francisco will celebrate the third anniversary of the opening of its headquarters in the World Trade Center at the Ferry Building in San Francisco.

Dedicated to the promotion, encouragement, and expansion of international trade and world travel, as an adjunct and integral part of the San Francisco World Trade Center, the World Trade Club has grown in the past 3 years to a present membership of 1,380 firms and individuals who are associated either directly or indirectly with the field of international trade and world travel. During this period the club has gained international stature as a meeting place for the various organizations directly concerned with the basic purposes of the club, such as the San Francisco Area World Trade Association, the San Francisco Consular Corps, the Pan American Society, the Export Managers' Association, the Marine Exchange, the San Francisco Junior Chamber of Commerce Marine Committee, and others, and has also gained renown for its receptions and dinners honoring foreign trade delegations and other government representatives, both foreign and domestic, and has sponsored such special receptions and celebrations as Australia Day, New Zealand Day, India Day, and Philippine Day. One interesting recent event was the staging by the World Trade Club of a reception for the Commonwealth consuls general under joint sponsorship with International Business Week of Stanford University.

It is a matter of particular interest that the bylaws of the World Trade Club provide for the issuance of special memberships on an honorary basis to the heads of all foreign diplomatic corps located in the bay area, with the result that the other members of the club interested in world trade and travel may have direct and continuous contact with all of the representatives of the foreign countries around the world who necessarily have a similar interest.

The World Trade Club has been extremely fortunate in having for its president during the past 3 years George Killion, president of the American President Lines and a member of the National Export Expansion Council of the U.S. Department of Commerce. At the annual meeting of the board of directors of the club held on March 4, 1963, Mr. Killion was unanimously reelected as president of the club for the ensuing year, in recognition of the invaluable services he has rendered to the club and to the foreign trade community centered in San Francisco. J. Monroe Sullivan, the secretary of the World Trade Club, is executive director of the San Francisco World Trade Center Authority, a State agency, and is a member of the San Franciso Regional Export Expansion Council of the U.S. Department of Commerce.

Among the well-known individuals presently serving on the board of directors of the World Trade Club are Cyril Magnin, president of the San Francisco Port Authority, Adolph P. Schuman, chairman of the San Francisco World Trade Center Authority and an international figure in import and export trade, Albert L. Reeves, senior vice president of Utah Construction & Mining Co., and William A. Pomeroy, identified with J. H. Pomeroy & Co., both firms being favorably known and identified in the international contractor field, and Otto N. Miller, president of the Standard Oil Co. of California.

Additional Views of Mr. Wilson, Mr. Gubser, and Mr. Chamberlain to H.R. 5555

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. GUBSER. Mr. Speaker, on yesterday, the House Committee on Armed Services favorably reported H.R. 5555, the military pay bill. My colleague, the gentleman from California [Mr. WILSON] and I had serious reservations regarding the manner in which this bill treats members of the military services on the retired list. We have, therefore, filed additional views which will be a part of the committee report and have been joined in these views by the gentleman from Michigan [Mr. CHAMBERLAIN].

Under leave to extend my remarks, I submit our additional views herewith and commend them to the attention of all Members who are interested in fair treatment of those who have devoted a lifetime to military service:

ADDITIONAL VIEWS OF MR. WILSON, MR. GUBSER, AND MR. CHAMBERLAIN TO H.R. 5555

This bill contains a major inconsistency. While purporting to encourage competent members of our armed services to make lifetime careers of the military service, it breaks faith with those who have already devoted their lives to the service.

For more than 100 years, it has been traditional that retired military pay should be based on active duty pay. Some have stated that the right to recompute retired pay on the basis of new and increased active duty pay was only a moral obligation. However, just last year Secretary McNamara submitted a memorandum to the Senate Armed Services Committee which demonstrated beyond doubt that the authority for recomputation of pay is definitely based on clear provisions of law rather than on a mere practice. The Comptroller General, Secretary McNamara disclosed, has consistently held that section 6149 United States Code, title 10, and other laws establish this right. The abovementioned section reads in part, "* * * the retired pay to which the officer is entitled shall be recomputed on the basis of the new rates."

In 1922, Congress departed from the traditional principle of recomputation but promptly corrected its error in the next Congress. The principle prevailed until 1958. In a drastic and sudden action, with no warning to retired personnel, Congress provided that all officers who retired prior to June 1, 1958, would only receive a 6-percent "cost of living increase." Because the 1958 Pay Act corrected the situation where grades of lieutenant colonel and above had been underpaid for many years, this created a considerable injustice to officers on the retired list. Ironically, many of the officers affected by this repudiation of a long-standing commitment were those who served in two world wars.

At page 1577 of the hearings an experienced recruiting officer testified as follows:

"Every man on the retired rolls and on active duty has been told by the recruiting officials that his retired pay would be based upon the active duty pay scales."

We all know that fringe benefits, including retired pay, have always been offered as an inducement for servicemen to accept less money in the military than they would receive in civilian life.

We believe it is out of character for the U.S. Government to make a promise and then refuse to keep it. We do not believe that budgetary considerations can replace morality.

Former President Eisenhower urged Congress to correct the mistake it made in 1958, and on May 12, 1960, the House unanimously passed H.R. 11318 which would allow those retired after June 1, 1958, to recompute on the basis of the 1958 act. President Kennedy committed himself to the principle of recomputation in his campaign of 1960 and Defense Secretary McNamara recommended that the bill before you today allow recomputation on the basis of the 1958 act. Additionally, Subcommittee No. 1, after weeks of hearings on this bill, accepted the principle of recomputation and reported it to the full committee.

While we admit that the Department of Defense proposal and the subcommittee recommendations fall short of retaining the traditional concept of recomputation for the future, they at least overcame the wide discrepancy in retirement pay between those who retired May 31, 1958, and those who retired on the following day. We believe the full committee erred in not accepting the subcommittee recommendations.

According to established scales of comparability with civil service, active duty military personnel have always been underpaid. Part of this has been made up through noncontributory retirement, hospital benefits, commissary privileges, and other benefits. Even after decreasing comparable civil service pay by the 6½ percent retirement deduction and increasing military pay to include the taxes which are not paid on subsistence and quarters allowance, the pay of a colonel under this bill is almost $200 a month below that of his civil service counterpart. Certainly with such a differential, the military man should be able to look forward to the fulfillment of what he had been promised upon entering the service. Removing the right to recompute will be one fringe benefit gone. Already we have taken the practical benefit of commissaries away, and present policy is to eventually make it impossible for retirees to receive medical care and hospitalization. One by one, the fringe benefits are disappearing and the pay differential remains. How long can we expect our military people to feed their families on their great sense of duty and patriotism?

It is a common error to state that the military retiree does better than his civil service counterpart. The truth is that the military man who serves a full 30 years is not doing as well as the civil servant who gets longevity and can increase his "high 5" average years. After 30 years of service he can go up to as high as 80 percent of his "high 5" average. On the other hand, the military man gets only 75 percent of his basic pay and is not given retirement credit for his allowances. Figures clearly show that the civil servant draws more retirement pay than military men of equal rank and equal years of service. After 2½ to 3 years, the civilian has gotten back all of his contribution.

In fiscal year 1963 the Government's share of civil service retirement was $896 million. At present the civil service retirement fund is deficient actuarily by $36 billion.

Military retirees have generously contributed to their retirement through acceptance of substandard wages based upon comparability tables. Furthermore, military retired pay was not conceived as a pension and has never been considered as such. In the case of *United States* v. *Hooper* (U.S.C.M.A. 643–645) in 1958, the Court of Military Appeals held in part: "Officers on the retired list are not mere pensioners in any sense of the word * * * the salaries that they receive are not solely recompense for past services, but a means devised by Congress to assure their availability * * * in future contingencies." This is why members of the retired list are still subject to the Uniform Code of Military Justice.

Retired pay is different than civil service pensions and should not be compared with them. But if one insists upon making a comparison, then he should remember that it is not more of a financial drain on the Nation's future revenues than civil service retirement, it is not as generous, and it has been earned by the serviceman through the accptance of comparably lower rates of pay.

It is true that the retired list will be expanded dramatically in the near future. But this is the cost of World War II and the Korean conflict and the huge force levels required in the past 25 years. This is the fulfillment of a promise made to those who served their country during its period of greatest trial.

A good portion of the national debt is represented by the cost of our national defense in the past 25 years. No one would suggest that we repudiate our bonded indebtedness and refuse to pay interest to our bond holders. Why then should we repudiate our promise to the men and women who served in our military forces?

For the sake of $32 million, the cost of recomputation, a vital tradition has been destroyed and a solemn commitment has been violated. The $32 million cost would decrease each year as the numbers of those who retired prior to June 1, 1958, would deplete. It will eventually disappear as an annual cost.

The $32 million increase in the cost of this bill will still keep the total figure below that which has been requested by the President in his fiscal year 1964 budget.

Appropriations for veterans benefits continue to increase and the deficit in the civil service retirement fund increases. Always there is money to pay these increased costs. We believe we can find the money to keep our commitments to retired military men.

We strongly urge that as a matter of honor and justice, the Department of Defense recommendations allowing those on the retired list to recompute their retired pay on the basis of the 1958 act, should be adopted.

The Federal Reserve Board Should Immediately Reduce the Discount Rate to 2½ Percent—This Would Do as Much as a Tax Cut Toward Bringing About Economic Expansion and Reducing Unemployment

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1963

Mr. PATMAN. Mr. Speaker, when the Members return to their hometowns during the Easter recess, no doubt many well-meaning constituents will ask, in the style of the day, what they can do for their country.

My answer is that they can call upon the Federal Reserve Board to reduce the discount rate immediately from 3 to 2½ percent and, of course, follow through with the kind of monetary policy that such a reduction implies.

We are now witnessing some very encouraging signs of business expansion. It is entirely possible that, given half a chance, the economy will recover to something approaching reasonably full employment of our labor force and productive plant. It is even possible that, given half a chance through a congenial monetary policy, the economic system will generate a sufficient expansion, on its own, without our having to reduce taxes and expand the Federal deficit in order to pump purchasing power into the economy.

We have been treated to a long series of excuses, scares, and bugaboos to justify a tight credit, high interest rate policy. Throughout the Eisenhower administration, the bugaboo was inflation. Throughout the Kennedy administration, to date, the bugaboo has been balance of payments.

The Joint Economic Committee has considered very carefully, with continuous studies of more than 2 years, the role of interest rates, tight money, unemployment, and slow economic growth in the United States in the balance-of-payments picture; and it has not been able to find any justification for the tight-money policy. On the contrary, the evidence is extremely persuasive that the tight-money policy is actually worsening our balance-of-payments problem.

The Joint Economic Committee's report on this subject, filed on March 14 of this year, has not had, I believe, sufficient attention. Naturally the committee recognized that monetary and debt management policies go hand in hand and must be coordinated to bring about a level of interest rates conducive to economic expansion and continuing ecoomic growth. I urgently commend to the attention of the Members a brief section from this report of the Joint Economic Committee as follows:

MONETARY AND DEBT MANAGEMENT POLICIES

We do not agree with the Council of Economic Advisers that: "Monetary policy has remained favorable to economic expansion." The widespread urge for supplemental fiscal action is evidence of the general feeling that monetary policy has not been favorable enough to bring forth enough expansion. Since mid-1962 active consideration has, accordingly, been given by the executive departments, by Congress, and in public forums, to tax reduction and reform as necessary Federal moves for reducing unemployment and stimulating growth.

This shift in emphasis which has pushed fiscal policy to the forefront in current policy discussion in no way eases, however, the responsibility of the Federal Reserve authorities to do more than in the past to restore the desired growth pattern. Indeed, if there has ever been any uncertainty as to the force of the public mandate in calling upon the monetary authorities for stimulative measures, vigorously pursued, that uncertainty can no longer exist. The widespread demands for stimulative tax reductions are by the same token demands for stimulative monetary action. Monetary policy must now help fiscal policy to do the stimulative job which, unfortunately, the monetary authorities have not done. Similarly, in these circumstances debt management should be handled so as to reinforce expansionary fiscal policies.

"We recommend that the monetary authorities follow a policy of assuring that the money supply expands in line with the rising needs of an expanding economy. Such a policy will reinforce the proposed fiscal policies and at the same time spare the Federal Reserve System their perennial explanations of why monetary policy is blameless in the face of a lagging economy."

The failure of monetary measures, unaided, to bring about a satisfactory reduction in unemployment and an improved rate of growth stems in part from the policies which have been pursued. Increases in money supply have been allowed to lag behind the growth of the economy. Another aspect of recent policy involves the alleged constraints imposed by the balance of payments.

The adverse effects on the economy, when emerging from recession, of a tax system which operates to impose a drag upon the economy by rolling up a disproportionately large tax "bite" out of the increased activity are being recognized in current tax discussions. On the monetary side, the economy has had to contend with a similar institutional drag. The "money supply" has been allowed to level off with each weakness in the economy but is not permitted to expand to appropriate new high levels as the economy struggles to come out of the downswings.

As the volume of transactions of goods and services grows, something like a similar expansion in the media of exchange is necessary. Under our banking system, this means an expansion of the volume of credit. The Federal Reserve System was expressly designed—and is expected—continually to adjust the money supply to the increasing needs of the economy. If an expansion in available reserves is not forthcoming, either the volume of transactions must be curtailed or the existing money supply called upon to do extra duty. But money conservation measures are not costless. They are likely to be used only when the needs of expanding trade strain the available means of settlement. The upward trend in the turnover of demand deposits, most rapid in years of monetary restraint, is thus an indication that the public has not been supplied with sufficient amounts of new money in relation to transactions and income.

The ratio of money supply, that is, currency in circulation together with demand deposits, to gross national product, has steadily declined since 1950 (table 2). At the end of 1954, when the distortions of the Korean war had been liquidated, the money supply amounted to 35.9 percent of gross national product. As recently as 1958 it was 31.1 percent, down more than 10 percent, while in 1962 it was down to 26.4 percent, a decline of more than one-fourth in the decade.

TABLE 2.—*Money supply, total liquid assets, and gross national product with comparisons*

[Amounts in billions of dollars; ratios expressed as percentages]

Period	Gross national product	Demand deposits adjusted and currency outside banks	Total liquid assets held by the public [1]	Ratio to gross national product	
				Money supply	Total liquid assets [1]
1951	329.0	119.2	281.0	36.2	82.6
1952	347.0	125.2	296.0	36.1	81.8
1953	365.4	128.3	311.5	35.1	85.6
1954	363.1	130.3	320.3	35.9	85.9
1955	397.5	134.4	332.5	33.8	81.3
1956	419.2	136.0	343.2	32.4	79.6
1957	442.8	136.7	356.0	30.9	80.3
1958	444.5	138.4	373.1	31.1	80.2
1959	482.8	142.3	393.9	29.6	80.5
1960	503.4	140.9	399.2	28.0	79.0
1961	518.7	143.2	424.6	27.6	78.2
1962	553.6	146.0	458.3	26.4	80.9

[1] December each year, seasonally adjusted.

Source: Federal Reserve System data.

Stated another way, at the end of 1954 the money supply was called upon to support a gross national product 2.8 times its size. Eight years later it was being called upon to do one-third more; that is, the gross national product was 3.8 times the money supply.

If combined currency and demand deposits today had the same ratio to business activity as they did a decade ago, the money supply (demand deposits plus currency) would be over $200 billion instead of $146 billion. No one would suggest that the postwar lag in the money supply now dictates an immediate, or drastic, effort to catch up. Congress and the people have a right to insist, however, that in the decade ahead, the economy will not again have to make a 70-percent increase in gross national output of goods and services fit a 23-percent increase in money supply.

An expanded concept of money, including other so-called "liquid assets," is often used by the Board of Governors in its annual report discussions. The extent of the lagging financial means for carrying on business is less marked with this concept, but nonetheless real. Even when these other popular ways of holding substitute "money" balances are included, the liquid wherewithal for doing an enlarged volume business has been declining relatively. From 1954, after the Korean war, to 1961, total liquid assets held by the public have fallen from 85.9 percent to 78.2 percent of 1961 gross national product. It has been up somewhat in late 1962, returning to the 1957 levels. Recent evidence, coupled with the statement of the Chairman of the Board of Governors that some lessening of ease was decided upon in December 1962, shows that the authorities are already returning to the pattern which prevailed before this yearend increase in the ratio of liquid assets to gross national product.

"We again recommend that the monetary authorities provide the basis for secular increases in the money supply as the economy grows, through open market purchases of longer term Federal Securities, rather than by lowering reserve requirements."

We have in the past repeatedly recommended that the Federal Reserve provide the basis for an expanding money supply for our growing economy by open market purchases of longer term Federal securities. This policy gives the taxpayer a break through return to the Treasury of earnings of the Federal Reserve on such security holdings, instead of providing a free gift of earnings to the private banking system as occurs when expansion is provided through the lowering of reserve requirements. In addition, such open market purchases of longer term securities help the Treasury lengthen the debt, and tend to keep prices of longer term securities up and interest rates on these securities lower than would otherwise be the case. In turn, lower interest rates in the long end of the market tend to encourage investment, particularly in plant, equipment, and housing, which contributes to a higher rate of long-term economic growth. We can see no excuse for any other policy.

The monetary authorities have been going directly contrary to this committee's recommendation on this matter. They have reduced reserve requirements. The recent report of the Advisory Committee on Banking to the Comptroller of the Currency indicates that further reductions in reserve requirements are under consideration. The Joint Economic Committee, therefore, requests that the monetary authorities advise this committee before taking any further actions which run contrary to this committee's repeated recommendation that secular increases in the money supply be provided through open market purchases of longer term Federal securities rather than by lowering reserve requirements.

"We disapprove of the action of the Federal Reserve Open Market Committee in December 1962 when it moved to tighten monetary conditions. Tight money is not now needed either to fight inflation or to 'protect the dollar.'"

The hope that monetary policy will aid, rather than hinder, fiscal measures was vitiated by the ready confession of the Chairman of the Board of Governors to this committee on February 1, 1963, under questioning: "I will say to you now that you are correct in your analysis that the Federal Reserve is pursuing a slightly less easy policy." This statement was made in answer to a question as to whether policy had changed in December 1962, for the first time in 2½ years. The Chairman of the Board of Governors did not satisfactorily explain the grounds for even a slight deliberate tightening of credit. The change of policy was confirmed and reasons for the action were set forth in the record of the Open Market Committee's actions for 1962 that was made available to the committee after the hearings in response to our request. The action still seems to us both perplexing and premature.

It is thoroughly irrational to tighten monetary conditions while business activity is unsatisfactory, unemployment is high, large amounts of our capacity are idle, and the price level is stable. We hope that, if Congress should enact tax reduction measures, the monetary authorities will demonstrate enough faith in the judgment of Congress to lend their active aid and cooperation well in advance of the need for financing a deficit. They should not wait idly by while a tight credit situation is allowed to develop because of rising business credit requirements in an economy striving to grow.

Not even the balance-of-payments argument about "protecting the dollar" provides excuse for tighter money and higher interest rates. The extensive hearings of our Subcommittee on International Exchange and Payments provided no evidence that differentials in interest rates between United States and foreign countries provide any substantial stimulus to capital outflows and hence to gold losses and a deficit in our balance of payments. Indeed, evidence points to many other factors, such as the needs of trade, and so forth, as being of far greater importance.

A distinguished Swiss economist, amplifying views expressed to the committee by other international witnesses, emphasized that—

"In general, it must be recognized that international capital flows do not depend just on interest rates, but on interest rates plus the state of confidence in the currency concerned.

"If this confidence is high, a country may be able to sustain very low rates, thus Switzerland probably has about the lowest interest rates anywhere.

"If, on the other hand, this confidence is shaken, even rather high interest rates may be insufficient to stabilize capital flows. In fact, some of the money the United States has been losing in recent months was going to a country with even lower rates, that is, Switzerland. Conversely, Germany found in 1960–61 that low rates did not stop the influx of foreign money."

Additional evidence against the overemphasis on differential interest rates lies in the relative smallness of recent differentials. When the risks of foreign exchange are insured, rate differentials have at times been in favor of New York. In any case the advantage or disadvantage has been small and swinging back and forth, with major difference easily accounted for by the special circumstances, e.g., those involving Canadian exchange, which have tended to outweigh interest considerations.

Several empirical studies presented during the year likewise suggest that the needs of commerce for strategically placed working balances, tax considerations and other non-interest-rate factors are far more likely to be primary forces behind short-term capital movements than are modest opportunities for interest arbitrage.

The Nation has now been brought to the active consideration of tax reduction for economic stimulation. Even if such measures are adopted and succeed, we will nonetheless require domestic monetary expansion. Instead of continuing to rely upon an asserted need for relatively high interest rates, we think that trade expansion and other avenues offer the preferable approach to the serious balance-of-payments problem.

Raising interest rates for balance-of-payments reasons can also be ruled out because such action merely provides an opportunity for other countries to raise interest rates. A competitive race toward higher interest rates would not be in the interest of this country or of other economies abroad. In fact, with postwar inflationary pressures eliminated, the case for a somewhat lower structure of interest rates is overpowering. To the extent that international capital movements provide any basis for corrective action at this time, the appropriate remedy is to be found in a multilateral payments agreement of the type suggested later in this report. The alternative of stifling our economy through high interest rates is unconscionable.

"The Federal Reserve must either be persuaded or compelled by law to institute a better and more timely system of reporting to the Congress and the public the actions taken by the Open Market Committee and the Board of Governors, together with the specific reasons for such actions."

The Federal Reserve is a direct servant of the Congress. It acts solely as the agent of Congress in carrying out its functions of controlling the supply of money. This power is given to Congress by the Constitution and the Federal Reserve authorities merely act for Congress under delegated powers. By both law and sound principle, the Board of Governors and the Open Market Committee must report their actions to Congress, together with their reasons for taking these actions. This information must be so explicit and clear that Congress can reasonably judge whether the monetary authorities have exercised the delegated monetary powers in accord with congressional instructions and in the national interest. The reports also must be timely, and hence should be submitted to Congress in time for their review by this committee in connection with its annual hearings on the President's Economic Reports; that is, by January 20.

The report of actions, and the reasons for actions taken, as is set forth in the Board of Governors annual report, have been notoriously inadequate, uninformative, and confusing, as this committee has noted in the past. We are quite disappointed to discover in the record of actions for 1962 no significant improvement in this respect.

The meeting of December 18, 1962, at which a change in policy took place is typical. A few phrases from that record are illustrative of the unsatisfactory character of the record. At this meeting it will be remembered that while the country was talking about the need to stimulate the economy by tax reductions, the Open Market Committee was deciding upon a contrary program of less monetary ease. From the report of the meetings we learn what everyone knew, that "evidence of solid additional achievement was still limited," or, to use the words of the directive, "recognizes the unsatisfactory level of domestic activity, the continuing underutilization of resources, and the absence of inflationary pressures." In spite of these preponderant considerations, clearly dictating no less "ease" in the money markets, that committee voted 7 to 5 for "maintaining a firmer tone in the money markets while continuing to provide moderate reserve expansion in the banking system." The contradiction in this portion of the directive calling at once for a "firmer tone" and "moderate expansion," confusing as it is, does not obscure the fact, as Chairman Martin told this committee in his oral testimony, that a new policy of less ease had been instituted.

The most disturbing aspect of the problem is the conclusion implied by their 1962 report, if we can accept it as a complete, clear, and accurate record. The confused nature of their annual report and the vague words of the so-called "directives" suggest that the monetary authorities themselves have hazy and unclear concepts of what they are trying to do. When one undertakes to give operational significance to such expressions as "somewhat" less ease, "moderate" expansion or similar differences, the confusion is not necessarily that of the observers but more probably that of the actors. We would prefer to think that this is not the case but the alternative is to believe that the authorities are unable to make an effective report on their policies. This matter remains a troublesome issue involving the relationship of Congress with one of its own agents.

"Under present conditions of high unemployment and excess capacity, debt management should be handled so as generally to reinforce expansionary fiscal and monetary policies."

A Federal deficit of sizable proportions must be financed during 1963–64, regardless of whether action is taken to reduce taxes. Indeed, as we have earlier pointed out, the cumulative deficit to be financed over the next 3 fiscal years will be smaller if an effective tax reduction and reform program is adopted, than if no such action is taken.

Under present conditions of high unemployment and excess capacity, debt management must be handled in ways which generally reinforce the needed expansionary fiscal and monetary policies. Baseless fears of inflation or balance-of-payments considerations must not be allowed to constrain public debt operations occasioned by the transitional budget deficits.

These considerations dictate that "lengthening the debt" should be given less weight for a while. This is no occasion for large amounts of Treasury borrowing at long term, since this places the Treasury in competition with the demands of private businesses and individuals for investment funds. Furthermore, Treasury borrowing on short term under these conditions may actually aid the balance of payments by supporting domestic short-term interest rates while weakening long-term rates. To the extent that changes in short-term interest rates have any influence on international capital flows, such a policy would be all to the good.

On the other hand, there is no reason to pursue a policy of extreme shortening of the debt structure. To the extent that the Treasury enters the long end of the market, they should do so via the auction method of selling Government bonds. This is a policy we have urged repeatedly in the past. The Treasury is commended for its initial exploratory move in this direction, and for the success which attended the sale of the $250 million issue of bonds of 1988–93 on January 8, 1963. We recommend that the practice of offering longer and medium-term Treasury bonds at competitive bidding be employed regularly and be made an established part of debt management practices.

The United States has for some years faced the problem of bringing its balance of payments under control in a manner consistent with its objectives of maximum employment and a more rapid rate of growth of the domestic economy. We reject the notion that the United States must raise domestic interest rates or follow restrictive fiscal policies—causing a low growth rate and high domestic unemployment—in order to solve the U.S. balance-of-payments problem. Indeed, the strength of the dollar ultimately depends on the strength and growth of the underlying U.S. economy.

The committee is of the conviction—shared by responsible authorities in Europe—that the United States must move rapidly toward maximum employment, production, and more rapid growth.

Address by Senator Bayh at the Indiana Jefferson-Jackson Day Dinner

EXTENSION OF REMARKS

OF

HON. J. EDWARD ROUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1963

Mr. ROUSH. Mr. Speaker, I am inserting a speech recently delivered by the junior Senator from Indiana, BIRCH BAYH. It was delivered on the occasion of the Indiana Jefferson-Jackson Day dinner, April 6, 1963, in Indianapolis, Ind. The speech displays an appreciation for the accomplishments of President Kennedy's administration as well as an awareness of the opportunities we have for serving this generation. Senator BAYH is the pride of Indiana and we have every reason to believe that his service will be long and distinguished. The text of the Senator's speech follows:

ADDRESS BY SENATOR BAYH AT THE INDIANA JEFFERSON-JACKSON DAY DINNER

Tonight we meet to celebrate a victory—a victory most Hoosiers thought an impossible task only 12 short months ago. Through your faith and devotion, with your energy and dedication to purpose, together we won the good fight. Words are insufficient to express the deep gratitude which Marvella and I feel in our hearts for you who honored me by bestowing the honor of serving as your U.S. Senator from Indiana.

Yes, there were those who said Democratic victory in Indiana was impossible. There are those who utter this same sterile sounding slogan tonight. Let us here and now proclaim to those pitiful prophets of doom who declared it impossible to elect VANCE HARTKE to the U.S. Senate, who thought it impossible to seat Matthew Welsh in the Governor's chair, who pessimistically prophesied that a young State legislator from the city of Terre Haute was wasting his time—let us say to them at this very hour that the Democratic Party does not now nor will we ever again believe that the election of Democrats in Indiana is impossible.

Let us start now determined to elect and reelect Democratic mayors throughout this State. Let us decide now that a Democrat will be elected Governor, that Indiana will continue to have two Democratic Senators, that Democrats shall control the next general assembly and that Indiana shall cast its electoral votes for John Fitzgerald Kennedy in 1964.

The people of Indiana want good government and we are giving it to them. Hoosier citizens demand straight talk and solutions to complicated problems. This we pledge. This is our goal.

As Democrats we can be proud of the heritage to which we fall benefit. From the time the principles of the Democratic Party were laid down by Thomas Jefferson and Andrew Jackson, ours has been the party of the people—the defender of minority groups—the party of progress.

Shortly after the founding of our party, Thomas Jefferson defined its goals, characterized its philosophy and contrasted it with opposing forces when he said:

"Men by their constitutions are naturally divided into two parties; those who fear and distrust the people and wish to draw all powers from them into the hands of the high classes; and those who identify themselves with the people, have confidence in them, cherish and consider them as most honest and safe * * *."

In the span of nearly a century and a half from Jefferson to Kennedy, a great nation and the world's oldest democracy has sprung from the waiting lands of a continent and the hearts of a people and has spread around the world. And across this Nation is emblazened the record of the Democratic Party, its belief in the people, its belief in the dignity of every man, its belief that there is no more noble aspiration for a political party or government than to tend to the needs of its citizens and to promote the basic opportunities of each individual American.

The Democratic Party has pursued these goals with a concrete legislative program. Democrats have been responsible for the cornerstones of family security, the social security program, unemployment compensation, consideration for the aged, the blind, our children. Democrats established the minimum wage and throughout the years we have improved it and increased its coverage. We have made considerable progress in the field of civil rights.

But we need not dwell in the past to talk of Democratic accomplishments. The Democratic Party is a party of the present and the future. After 2 years of the New Frontier, at the quarter post of the Presidency of John F. Kennedy, we can see progress that has improved life here and around the world. Great progress has been made. Yet we are determined to solve problems still unsolved.

America has long been known for its Bill of Rights. Franklin Delano Roosevelt spoke eloquently of the Four Freedoms. Today a space-age America must echo these thoughts and must rededicate itself to insure certain basic opportunities for each American.

Each American must be given the opportunity to secure a job sufficient to provide for his family. Through the leadership of President Kennedy more Americans are gainfully employed today than at any other time in the history of our Nation.

Over 71 million American working men and women labor in the industries, shops, farms, and mines of this country. Yet the challenge remains as long as many American workers cannot find jobs; as long as young minds and bodies are not properly equipped to find employment in space-age occupations. We, as Democrats are determined to meet this challenge with tax reviews to spur lagging economic growth; with retraining programs to assist those with unneeded skills; with a special youth program to guide and assist our younger citizens.

We are equally determined to provide this opportunity for those who labor on the farms of America. The efforts of the present administration have brought about an increase in farm income of approximately 10 percent during the last 2 years. Yet we will not rest until the American farmer enjoys equal prosperity with the rest of America, and the abundance from American farms is utilized as a blessing to a hungry world rather than as a stumbling block to high farm income.

Those who labor in business, large and small, must be guaranteed the opportunity to trade in an atmosphere of freedom from unfair competition and domination by monopolies at home and abroad. We, as Democrats, believe in a truly free economy, free from government control and free from the oppression of monopolistic power. Ample opportunity for the small businessman is an important goal.

Each American, as a member of a family group, should be afforded the opportunity for compatible family living. The opportunities for jobs, for decent housing, and for adequate medical care during the twilight years of life are important steps toward attaining this goal. And we as Democrats must continue the efforts made in past years to see that adequate legislative programs are enacted in this important area.

Finally, each American child must have the opportunity for a good education. No investment we make as a nation is more important than that which we make in providing adequate training for our most valuable natural resource, our children. Every child must have the opportunity to develop fully his own potentiality. To be sure it takes classrooms, it takes teachers; and these take money. But investment in our Nation's future through education is our best guarantee of meeting the challenges of the space age and the future.

If these opportunities are to be provided for Americans today, each of us must be resolute in opposition to those few persons who would deprive them to some Americans because of race, religion, or national origin; for full American citizenship means freedom of worship, freedom of access to public places, freedom to speak without fear of reprisal, and freedom to vote one's own convictions in the privacy of a polling place.

The cold war struggle today finds communistic totalitarianism and democratic freedom locked in mortal combat.

A waiting world is watching the American response to the challenges of this age. Awakening nations, searching for a better way of life, are asking, Will democracy and freedom work?

Let us answer with a hearty chorus of yes. Let us answer by renewing our determination to keep the United States a land of opportunity—for all Americans—for each American.

SENATE

MONDAY, APRIL 15, 1963

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

Rev. E. Kendall Scouten, minister, First Methodist Church, Ogdensburg, N.Y., offered the following prayer:

Almighty God, before Thy throne of grace we offer our petition, though we do not know Thy name. We lift our voice through the maze of human concepts, knowing that in Thine eternal abode Thou dost hear and answer prayer. Upon the circle of the universe we sense the beauty of Thy majestic being. Within our conscience we feel the incisive edge of Thy truth. Both within and without Thou hast set Thine hand upon us. We cannot escape Thy tender concern. We cannot plumb the depth of Thy power and authority; nor can we flee the responsibility with which Thou hast characterized our existence as free spirits, made in Thine image.

We confess that the orders of the day have distracted us, that the pressure of programs and interests has bedeviled us, that we have sinned the sins of indifference, of things done and undone. Ours have been the errors of conscious guilt and unconscious blundering. We have in calculated fashion set ourselves first. We have unknowingly submitted to hidden forces that have shaken our purpose. Forgive us.

As the day of work goes forward, we implore the inspiration of Thy spirit. To Thee we commend our ways as a republic and as a democracy. We pray that this dedication may light a beacon for freedom that will warm the heart of a sick and dejected world. We pray that our proferred service to mankind may signal Thy love and intimately reflect our universal need of Thee.

Bless us and keep us for Thy name's sake. Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, April 11, 1963, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The **PRESIDENT** pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

CALL OF LEGISLATIVE CALENDAR DISPENSED WITH

On request of Mr. MANSFIELD, and by unanimous consent, the call of the Legislative Calendar was dispensed with.

LIMITATION OF DEBATE DURING MORNING HOUR

On request of Mr. MANSFIELD, and by unanimous consent, statements during the morning hour were ordered limited to 3 minutes.

REAPPOINTMENT OF JOHN N. BROWN TO BOARD OF REGENTS, SMITHSONIAN INSTITUTION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 126, House Joint Resolution 234, a measure which I understand is absolutely noncontroversial.

Mr. KUCHEL. Mr. President, I wish to say, for the record, that this item has been cleared by the minority.

Mr. MANSFIELD. I thank the Senator from California.

The PRESIDENT pro tempore. The joint resolution will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. A joint resolution (H.J. Res. 234) to provide for the reappointment of John Nicholas Brown as Citizen Regent of the Board of Regents of the Smithsonian Institution.

The PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to, and the Senate proceeded to consider the joint resolution.

The PRESIDENT pro tempore. If there be no amendment to be proposed, the question is on the third reading of the joint resolution.

The joint resolution (H.J. Res. 234) was ordered to a third reading, was read the third time, and passed.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

Report on Department of the Army Research and Development Contracts

A letter from the Assistant Secretary of the Army (R. & D.), transmitting, pursuant to law, a report of that Department on research and development contracts, for the 6-month period ended December 31, 1962 (with an accompanying report); to the Committee on Armed Services.

Audit Report on Exchange Stabilization Fund

A letter from the Secretary of the Treasury, transmitting, pursuant to law, an audit report on the Exchange Stabilization Fund, for the fiscal year ended June 30, 1962 (with an accompanying report); to the Committee on Banking and Currency.

Report of Securities and Exchange Commission

A letter from the Chairman, Securities and Exchange Commission, Washington, D.C., transmitting, pursuant to law, a report of that Commission, for the fiscal year ended June 30, 1962 (with an accompanying report); to the Committee on Banking and Currency.

Amendment of Section 4(b) of Communications Act of 1934, Relating to Applicability of Conflict-of-Interest Provisions

A letter from the Chairman, Federal Communications Commission, transmitting a draft of proposed legislation to amend section 4(b) of the Communications Act of 1934, as amended, with respect to the applicability of the conflict-of-interest provisions to persons serving in the Federal Communications Commission unit of the National Defense Executive Reserve (with accompanying papers); to the Committee on Commerce.

Amendment of Communications Act of 1934, With Respect to the Filing of Certain Schedules of Charges

A letter from the Chairman, Federal Communications Commission, Washington, D.C., transmitting a draft of proposed legislation to amend section 203(a) of the Communications Act of 1934, as amended, with respect to the filing of schedules of charges by connecting carriers (with accompanying papers); to the Committee on Commerce.

Drafts of Proposed Legislation Relating to the District of Columbia

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend section 13 of the District of Columbia Redevelopment Act of 1945, as amended (with an accompanying paper); to the Committee on the District of Columbia.

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to authorize the Commissioners of the District of Columbia to acquire, construct, operate, and regulate a public offstreet parking facility (with an accompanying paper); to the Committee on the District of Columbia.

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the act entitled, "An act to provide for commitments to, maintenance in, and discharges from, the District Training School, and for other purposes," approved March 3, 1925, as amended (with an accompanying paper); to the Committee on the District of Columbia.

A letter from the President, Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation to amend the Healing Arts Practice Act, District of Columbia, 1928, as amended, to exempt from licensing thereunder physicians employed by the Commissioners of the District of Columbia (with an accompanying paper); to the Committee on the District of Columbia.

Amendment of Section 152(b)(3) of Internal Revenue Code of 1954, Relating to Certain Nationals of the United States

A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation to amend section 152(b)(3) of the Internal Revenue Code of 1954 for the purpose of including nationals of the United States within the definition of the term "dependent" in connection with deductions for personal exemptions (with an accompanying paper); to the Committee on Finance.

Audit Report of Military Order of the Purple Heart of the U.S.A., Inc.

A letter from the National Adjutant, Military Order of the Purple Heart of the U.S.A., Inc., Daytona Beach, Fla., transmitting, pursuant to law, an audit report of that corporation, for the fiscal year ended July 31, 1962 (with an accompanying report); to the Committee on the Judiciary.

Report of Division of Coal Mine Inspection, Bureau of Mines

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a report of the Division of Coal Mine Inspection, Bureau of Mines, for the calendar year ended December 31, 1962 (with an accompanying report); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A concurrent resolution of the Legislature of the State of South Carolina; to the Committee on Finance:

"S. 289

"Concurrent resolution memorializing Congress to enact legislation which will provide additional income tax exemptions for persons attending institutions of higher learning

"Whereas as a college degree has become and is becoming more and more an absolute necessity to adequately prepare our youth to compete in our modern world of specialization; and

"Whereas the costs and expenses of attending institutions of higher learning are continually increasing; and

"Whereas the taxpayers are already overburdened with an alltime high in the cost of living and excessive taxation: Now, therefore, be it

"*Resolved by the senate, the house of representatives concurring,* That Congress be memorialized to enact legislation to provide that in addition to all other exemptions provided by law, a parent shall be allowed an additional Federal income tax exemption of $2,000 for each child of such parent who is regularly enrolled in and attending an accredited institution of higher learning, or if such child is emancipated and is paying the major portion of the costs and expenses of such education, then he or she shall be allowed such additional exemptions; and be it further

"*Resolved,* That a copy of this resolution be forwarded to the clerk of the U.S. Senate, the Clerk of the U.S. House of Representatives, and to each U.S. Senator and Congressman from South Carolina."

A joint resolution of the Legislature of the State of Alaska; to the Committee on Labor and Public Welfare:

"SENATE JOINT RESOLUTION 28

"Joint resolution relating to encouraging passage of the National Education Improvement Act of 1963

"*Be it resolved by the Legislature of the State of Alaska:*

"Whereas the proposed National Education Act of 1963 expands the opportunities of persons interested in attending institutions of higher education and graduate schools by increasing the number of student loan benefits; and

"Whereas the National Education Act will expand and improve higher education by providing funds for construction loans and funds for the expansion of other facilities; and

"Whereas the National Education Act will improve the educational quality of all schools by expanding the institute program of the National Defense Education Act; and

"Whereas the National Education Act will expand and improve vocational and special education programs by providing increased allotments for States in need of special and vocational education programs; and

"Whereas the National Education Act will strengthen elementary and secondary education programs by providing grants to States for needed improvements in teacher salaries, classroom construction, and classroom equipment; and

"Whereas the National Education Act provides for the expansion of extended education by authorizing grants to States for expansion of university extension courses in land-grant colleges and State universities; and

"Whereas Federal assistance to education, properly authorized and implemented, does not require or imply Federal control of public education, and such assistance may render State control more effective by expanding and implementing State policy: Now, be it

"*Resolved,* That Congress is respectfully urged to favorably consider the National Education Act of 1963; and be it further

"*Resolved,* That copies of this resolution be sent to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable Anthony Celebrezze, Secretary, Department of Health, Education, and Welfare; the Honorable Lister Hill, chairman, Senate Labor and Public Welfare Committee; the Honorable Harry Flood Byrd, chairman, Senate Finance Committee; the Honorable Adam Powell, chairman, House Committee on Education and Labor; the Honorable Wilbur Mills, chairman, House

Committee on Ways and Means; and the Members of the Alaska delegation in Congress.

"Passed by the senate March 12, 1963.

"Frank Peratrovich,
"President of the Senate.

"Attest:

"Evelyn K. Stevenson,
"Secretary of the Senate.

"Passed by the house April 2, 1963.

"Bruce Kendall,
"Speaker of the House.

"Attest:

"Patricia R. Slack,
"Chief Clerk of the House.
"William A. Egan,
"Governor of Alaska."

Two resolutions of the Senate of the State of Alaska; to the Committee on Commerce:

"Senate Resolution 57

"Resolution relating to the need for remedial action in connection with Alaska's air transportation problems

"Be it resolved by the senate:

"Whereas the State of Alaska encompasses an area one-fifth the size of the older 48 States; and

"Whereas the State of Alaska with approximately 5,000 miles of road within its boundaries is dependent on air service for the prompt dispatch of its inter- and intrastate mail, for travel inside and outside the State, and for the transportation of freight, items of food and clothing, and building materials and such; and

"Whereas the State of Alaska is an area as wide and as deep as the 48 States, stretching 2,700 miles from east to west, and 1,400 miles from north to south and extending into the Eastern Hemisphere and into the Arctic; and

"Whereas air carriers supply virtually the only transportation for people and airmail between the lower 48 States and Alaska; and

"Whereas on intra-Alaska routes the intent of the Civil Aeronautics Board seems to be to curtail service, leaving many communities with no transportation at all: Now, be it

"Resolved, That the legislature of the State of Alaska strongly objects to the curtailing of air service to Alaska and respectfully urges that the Honorable John F. Kennedy, President of the United States, appoint an Alaskan to the next vacancy on the Board in order to facilitate a better understanding of Alaska's air needs; and be it further

"Resolved, That copies of this resolution be directed to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Warren G. Magnuson, chairman, Senate Commerce Committee; the Honorable Oren Harris, chairman, House Interstate and Foreign Commerce Committee; the Members of the Alaska delegation in Congress; and the members of the Civil Aeronautics Board.

"Passed by the senate April 4, 1963.

"Frank Peratrovich,
"President of the Senate.

"Attest:

"Evelyn K. Stevenson,
"Secretary of the Senate."

"Senate Resolution 58

"Resolution relating to medical care for persons employed or engaged on vessels

"Be it resolved by the senate:

"Whereas the right to medical care of operators of vessels and self-employed seamen under Federal law has been denied by administrative ruling; and

"Whereas the restoration of these Federal medical care rights has been proposed by the U.S. Representative from Alaska, the Honorable Ralph J. Rivers, through the introduction of H.R. 2108; and

"Whereas the restoration of this right is not only equitable but essential to the revival of the vital maritime industry: Now, therefore, be it

"Resolved, That the Congress is urged to approve the restoration of medical care rights to owner-operators of vessels and self-employed seamen by the passage of H.R. 2108; and be it further

"Resolved, That copies of this resolution be sent to the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable Warren G. Magnuson, chairman of Senate Commerce Committee; the Honorable Herbert Bonner, chairman of the House Merchant Marine and Fisheries Committee; and the Members of the Alaska delegation in Congress.

"Passed by the senate April 4, 1963.

"Frank Peratrovich,
"President of the Senate.

"Attest:

"Evelyn K. Stevenson,
"Secretary of the Senate."

Two resolutions of the Senate of the State of Alaska; to the Committee on Interior and Insular Affairs:

"Senate Resolution 61

"Resolution relating to the safeguarding of homesteader rights through the establishment of an independent Board of Public Lands Appeals

"Be it resolved by the Senate:

"Whereas there exists no effective right to appeal decisions by the Bureau of Land Management and the Geological Survey concerning the uses of or claims to public lands under the jurisdiction of the Department of the Interior; and

"Whereas the lack of such an effective right of appeal adversely affects many actual and potential public land users in Alaska; and

"Whereas the lack of such an effective right of appeal thwarts the carrying out of the acts of Congress governing the uses of the public lands; and

"Whereas this lack of an effective right to appeal has existed for too many years and should be promptly remedied; and

"Whereas a bill to correct these inequities has been introduced in the Senate of the United States by Alaska's Senators, the Honorable Ernest Gruening and the Honorable E. L. Bartlett, and other Senators; and

"Whereas this corrective legislation would establish a Board of Public Lands Appeals to hear locally appeals from decisions by the Bureau of Land Management and the Geological Survey concerning the uses or claims to public lands; and

"Whereas untold numbers of homesteaders in Alaska, in making original application for land patents, have been advised of the alleged proper procedure to follow by representatives of the Bureau of Land Management only to discover at a later date that such procedure was not proper and that as a result their patent application is invalid; and

"Whereas such careless actions have caused homesteaders in Alaska to experience undue hardships and mental anguish; and

"Whereas such hardships have cost said homesteaders wasted hours of labor and wasted expenditures of money; and

"Whereas such action by a Federal agency is intolerable, unnecessary, and inexcusable; and

"Whereas such irresponsible actions point up the long overdue need for corrective measures: Now, therefore, be it

"Resolved, That the senate supports legislation establishing a Board of Public Lands Appeals established as an independent agency outside the jurisdiction of the Department of the Interior to hear appeals from decisions rendered by the Bureau of Land Management and the Geological Survey concerning the uses or claims to public lands under the jurisdiction of the Department of the Interior; and be it further

"Resolved, That copies of this resolution be sent to the President of the United States, the Department of the Interior, the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, and the Members of the Alaska congressional delegation.

"Passed by the senate April 4, 1963.

"Frank Peratrovich,
"President of the Senate.

"Attest:

"Evelyn K. Stevenson,
"Secretary of the Senate.

"Certified true, full, and correct.

"Evelyn K. Stevenson,
"Secretary of the Senate."

"Senate Resolution 65

"Resolution relating to legislation pending in Congress authorizing compensation to the Yakutat community of Tlingit Indians for the extinction of their original Indian title

"Be it resolved by the senate:

"Whereas it has been the traditional policy of the United States to perfect its title to its public domain by purchase of any outstanding original Indian title, or to provide for appropriate compensation to the Indians where land has been taken without its full title having been so cleared; and

"Whereas the United States during the past ten years has granted hundreds of oil and gas leases upon federally owned land (outside the Tongass National Forest) in that coastal area of Alaska which extends along the Gulf of Alaska from Cape Fairweather to the Copper River, without first having purchased the original Indian title to said land; and

"Whereas under the provisions of a special jurisdictional act, the Court of Claims on October 7, 1959, authorized further proceedings for determination of compensation for the 1909 taking by the United States of such part of the aforesaid coastal area as lies within the boundaries of the Tongass National Forest, there being, however, no statutory or other provision for compensation for the more recent taking of the above-referenced part of that area which is exterior to that forest; and

"Whereas it appears that the United States still retains approximately $500,000 of the rentals which it has received from the above-described leases over and above the percentage thereof which it has remitted to the Territory of Alaska and the State of Alaska; and

"Whereas there is presently pending in the Congress of the United States, House Joint Resolution 273 which would have the effect of compensating the Yakutat community of Tlingit Indians with at least the full amount of revenues from leases presently held by the Federal Government; and

"Whereas it is altogether fitting and proper that the original inhabitants of Alaska receive full and adequate compensation for land which was exclusively theirs from time immemorial but which are now necessary for the full development of the State of Alaska; be it

"Resolved, That the Legislature of the State of Alaska urges prompt consideration and adoption of House Joint Resolution 273 by the Congress of the United States; and be it further

"Resolved, That a copy of this resolution be sent to the Honorable Lyndon B. Johnson, President of the Senate; the Honorable John W. McCormack, Speaker of the House of Representatives; the Honorable

Stewart L. Udall, Secretary of the Interior; the Honorable Wayne N. Aspinall, chairman of the Committee on Interior and Insular Affairs; the Honorable Philleo Nash, Commissioner of the Bureau of Indian Affairs; and to the Members of the Alaska delegation in Congress.

"Passed by the senate April 10, 1963.

"FRANK PERATROVICH,
"*President of the Senate.*

"Attest:

"EVELYN K. STEVENSON,
"*Secretary of the Senate.*

"Certified true, full, and correct.

"EVELYN K. STEVENSON,
"*Secretary of the Senate.*"

A resolution of the Senate of the State of Alaska; to the Committee on Public Works:

"SENATE RESOLUTION 60

"Resolution relating to the completion of studies on the Rampart Dam project

"*Be it resolved by the senate:*

"Whereas a sound and vigorous development of Alaska's resources is desirable, and indeed essential, not only from the standpoint of the people of Alaska but of the Nation whose great northernmost and westernmost outpost and underdeveloped dominion and potential is the State of Alaska; and

"Whereas a diversification and enlargement of Alaska's economy is need for the above declared objective; and

"Whereas the resources on which the people of Alaska depended when their numbers were far fewer in territorial days, namely gold mining and fishing—both now diminished in quantity and in economic impact—will not suffice to create a vigorous, thriving, and expanding economy; and

"Whereas for years the Federal Government has developed the hydroelectric resources of the 48 older States with such projects as the Tennessee Valley Authority, Hoover Dam, Grand Coulee Dam, Bonneville Dam, Hungry Horse Dam, and others, and is now engaged in the continuance of this sound utilization of our water resources with Glen Canyon, Arkansas Frying-Pan, and other hydroelectric projects; and

"Whereas the greatest hydroelectric project on the North American Continent, and indeed in the free world, is available on the Yukon River in Alaska, which can generate power at 2 mills a kilowatt-hour, which will be the lowest cost power under the American flag; and

"Whereas studies by the Corps of Engineers of the U.S. Army have already established the engineering feasibility of the dam at Rampart on the Yukon; and

"Whereas the marketability of its low-cost power and the consequent attraction to Alaska of diverse industries and the utilization thereby of Alaskan and other raw materials not practically exploitable without low-cost power has been determined in the authoritative study by the Development and Resources Corp. of New York, a qualified agency retained by the Corps of Engineers for that purpose; and

"Whereas the United States, through its foreign aid program, is financing hydroelectric projects in many parts of the world among people who pay no taxes to the United States, and the products derived from them will be competitive with our own U.S. products; be it

"*Resolved,* That the Alaska Senate strongly urges the Federal agencies involved to speed the conclusion of the remaining Rampart and other Yukon River studies, and to report promptly to the Congress, and make possible the early request by the Alaska delegation in Congress for legislation providing authorization and appropriation for the Rampart Canyon Dam; and be it further

"*Resolved,* That copies of this resolution be sent to the Honorable John F. Kennedy, President of the United States; the Honorable Lyndon B. Johnson, Vice President of the United States and President of the Senate; the Honorable Robert S. McNamara, Secretary of Defense; the Honorable Stewart L. Udall, Secretary of the Interior; the Honorable Cyrus R. Vance, Secretary of the Army; the Honorable Lt. Gen. W. K. Wilson, Jr., Chief of the Corps of Engineers, U.S. Army; the Honorable John W. McCormack, Speaker of the House of Representatives; and to the Members of the Alaska delegation in Congress.

"Passed by the senate April 4, 1963.

"FRANK PERATROVICH,
"*President of the Senate.*

"Attest:

"EVELYN K. STEVENSON,
"*Secretary of the Senate.*

"Certified true, full, and correct.

"EVELYN K. STEVENSON,
"*Secretary of the Senate.*"

Two concurrent resolutions of the Legislature of the State of Hawaii; to the Committee on Labor and Public Welfare:

"HOUSE CONCURRENT RESOLUTION 3

"Whereas a democratic nation requires an enlightened citizenry; and

"Whereas the current shortage of teachers and the lag in school construction seriously threaten the quality of education and the equality of educational opportunity in the United States; and

"Whereas local and State governments are unable to provide adequate finances for public education at a time when enrollments are rapidly increasing and when national survival depends on the quality of public education: Now, therefore, be it

"*Resolved by the House of Representatives of the Second Legislature of the State of Hawaii, General Session of 1963, the Senate concurring,* That the Congress of the United States be and it is hereby respectfully requested to enact legislation which will provide Federal aid to education, leaving to States the right to determine whether such funds are to be spent for teacher salaries or for school construction; and be it further

"*Resolved,* That certified copies of this concurrent resolution be forwarded to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, to the chairman of the U.S. Senate Committee on Labor and Public Welfare, the chairman of the U.S. House Committee on Education and Labor, and to the Members of Hawaii's congressional delegation.

"ELMER F. CRAVALHO,
"*Speaker, House of Representatives.*
"SHIGETO KANEMOTO,
"*Clerk, House of Representatives.*
"NELSON K. DOI,
"*President of the Senate.*
"SEICHI HIRAI,
"*Clerk of the Senate.*"

"HOUSE CONCURRENT RESOLUTION 21

"Whereas the veterans education program established by the Federal Government has provided for the training and education of thousands of veterans of World War II and the Korean conflict; and

"Whereas the education of these veterans has increased the educational level of the citizens of our great Nation and has contributed greatly to the strength, well-being and economy of this Nation; and

"Whereas since February 1, 1955, educational benefits provided for persons serving in the Armed Forces have not been available; and

"Whereas thousands of our veterans have been deprived of the educational opportunities once available under the veterans education program; and

"Whereas it is believed that the benefits enjoyed by veterans under the veterans education program should be extended to apply to all qualified veterans of the Armed Forces for such time as the selective service law remains in effect: Now, therefore, be it

"*Resolved by the House of Representatives of the Second State Legislature, regular session of 1963, the Senate concurring,* That the Congress of the United States be and it is hereby respectfully requested to extend educational benefits to all persons who have entered military service since February 1, 1955, and that such educational benefits be continued for as long as the selective service law remains in effect; and be it further

"*Resolved,* That certified copies of this concurrent resolution be forwarded to the President of the Senate and Speaker of the House of Representatives of the Congress of the United States and to the Members of Hawaii's delegation to the Congress of the United States.

"ELMER F. CRAVALHO,
"*Speaker, House of Representatives.*
"SHIGETO KANEMOTO,
"*Clerk, House of Representatives.*
"NELSON K. DOI,
"*President of the Senate.*
"SEICHI HIRAI,
"*Clerk of the Senate.*"

A joint resolution of the Legislature of the State of California; to the Committee on Banking and Currency:

"SENATE JOINT RESOLUTION 9

"Joint resolution relative to memorializing Congress to aid the San Francisco Bay Area Rapid Transit District

"Whereas the people in the counties of Alameda, Contra Costa, and San Francisco in November 1962 approved construction of a three-county rapid transit system and authorized general obligation bonds to cover the cost of such project in the amount of $792 million; and

"Whereas these bonds and bond service will be supported in part out of a uniform property tax levied throughout the three counties comprising the San Francisco Bay Area Rapid Transit District; and

"Whereas certain financial provisions will make it necessary to extend the construction period over an 8½-year period; and

"Whereas the Board of Supervisors of Alameda County and other public agencies have indicated their desire to supplement the property tax base as a means of financing construction of the rapid transit system; and

"Whereas the Congress of the United States has recognized the importance of Federal participation in the financing of transportation systems in order to provide better balance and has provided certain funds and Federal aid for urban mass transportation; and

"Whereas Federal financial aid for the bay area rapid transit system would have the dual beneficial effect of reducing the property tax rate which bay area property owners would otherwise be required to pay, and would make it possible to reduce the construction period by at least 3 years, thus bringing the benefit of rapid transit to the bay area populace many years earlier than otherwise would be possible: Now, therefore, be it

"*Resolved by the Senate and Assembly of the State of California (jointly),* That the Legislature of the State of California respectfully urges Congress to enact Federal legislation to provide Federal grants and low-interest loans in sufficient amounts to substantially help construct and develop new transit facilities and to expand existing systems in the national metropolitan areas, and in the San Francisco Bay area in particular; and be it further

"*Resolved,* That the secretary of the senate transmit copies of this resolution to the President and Vice President of the United States, the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Finance:

"ASSEMBLY JOINT RESOLUTION 13

"Joint resolution relative to pensions for veterans of World War I

"Whereas Congressman DENTON has introduced H.R. 2332 which would provide a pension for World War I veterans whose income is under $2,400 annually, if they are single, and $3,600 annually, if they have dependents; and

"Whereas one of the principal domestic problems in all areas of the Nation is the care of the aged, the importance of which is emphasized by the fact that there are now approximately 16 million men and women over the age of 65 years; and

"Whereas, of this number, about 2 million are those who served in the Armed Forces of the United States during the First World War, and whose present circumstances are below the average for the Nation, which fact may be traced in part to the service rendered their country during that war; and

"Whereas these veterans have not enjoyed the extensive benefits accorded their younger brethren who served during World War II and who were given the opportunity for training at Government expense and assistance in securing home and business loans; and

"Whereas the Government of the United States has not given any general pension to the veterans of World War I: Now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California, jointly,* That the Congress of the United States is urged to enact H.R. 2332 to alleviate the dire conditions in which those who made the sacrifices for this country, in their youth, now find themselves; and be it further

"*Resolved,* That the chief clerk of the assembly is directed to send copies of this resolution to the President of the United States, the President pro tempore of the Senate, the Speaker of the House of Representatives and each Member of the California delegation in the Congress of the United States."

Three joint resolutions of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"SENATE JOINT RESOLUTION 8

"Joint resolution relative to the economic development of California tide and submerged lands

"Whereas there is a controversy between the United States of America and the State of California as to the title to, the ownership of, and the right and power to manage, administer, lease, develop and use large and important areas lying off the California shore; and

"Whereas significant portions of these areas are believed to contain commercially valuable deposits of oil, gas, and other hydrocarbon substances and other minerals; and

"Whereas the exploration and economic development of these areas is in the best interests of both the United States and the State of California; and

"Whereas the existence of said controversy tends to impede or delay such exploration and development: Now, therefore, be it

"*Resolved by the Senate and Assembly of the State of California, jointly,* That the Legislature of the State of California strongly urges the responsible officials of both the United States of America and the State of California, as a joint venture, to take all measures necessary or expedient to promote the early and efficient exploration and economic development of these offshore areas regardless of the pendency of this controversy; and be it further

"*Resolved,* That the said officials are hereby strongly urged to agree on leasing methods permitting such exploration and economic development and providing for a royalty or rental which is a fair return to the State and adequate safeguards for the protection of marine life, the coastline, and aesthetics and for the protection of existing activities of this sort along the coast; and be it further

"*Resolved,* That said officials are hereby strongly urged to seek and explore methods of resolving said controversy, if possible by means of negotiation, agreement, or federal and state legislation; and be it further

"*Resolved,* that the secretary of the senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, and the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, to the Attorney General of the United States, to the Secretary of the Interior of the United States, to the Solicitor General of the United States, to the attorney general of the State of California, and to the California State Lands Commission."

"ASSEMBLY JOINT RESOLUTION 8

"Joint resolution relative to the Auburn Dam and Folsom South Canal

"Whereas there has been submitted to the Congress of the United States legislation to authorize construction by the Secretary of Interior, as part of the Central Valley project, of both the Auburn Dam on the American River and the Folsom South Canal; and

"Whereas this proposed development is known to be economically justified, and has been determined to be engineeringly feasible; and

"Whereas the multiple-purpose project of the Auburn Dam will furnish additional water which can be used in the American River watershed, the Sacramento-San Joaquin Delta region, the San Joaquin Valley, and areas to the south, and will produce additional electric power which would be available for pumping water to areas of deficiency in California's statewide water program; and

"Whereas the Folsom South Canal will serve to bring urgently needed supplemental water supplies to areas in the Sacramento-San Joaquin Delta region and the northern San Joaquin Valley area, which supplies would be made available from storage of water in Folsom Reservoir, as supplemented by the proposed Auburn Dam and Reservoir; and

"Whereas both the proposed Auburn Dam and the Folsom South Canal are part of the California water plan and would complement the State's efforts to meet the water requirements of California's rapidly expanding population: Now, therefore, be it

"*Resolved by the Assembly and the Senate of the State of California (jointly)*, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to enact into law, at the earliest possible time, the necessary legislation to authorize the construction of the Auburn Dam and the Folsom South Canal, including authorization to include in such canal and related operating structures such additional works or capacity as the Secretary of Interior deems necessary and economically justified to provide for the future construction of the east side division of the Central Valley project, provided that the incremental cost of providing additional works or capacity in the Folsom South Canal to serve the east side division of the Central Valley project shall be assigned to deferred use for repayment from Central Valley project revenues; and be it further

"*Resolved,* That the chief clerk of the assembly is hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

"ASSEMBLY JOINT RESOLUTION 14

"Joint resolution relating to Red Bluff diversion dam boat bypass

"Whereas the U.S. Department of the Army permit to the Bureau of Reclamation authorizing the construction of the Red Bluff Diversion Dam contains a proviso that 'if at any time in the future the interests of navigation shall require it, such alteration in the structure, or construction of lockage facilities, as may be required by the Secretary of the Army in the interest of navigation, shall be promptly executed by the permittee at its expense, so as to render means for navigation to pass the damsite'; and

"Whereas the recent report of the Bureau of Reclamation entitled 'Passage of Small Boats, Red Bluff Diversion Dam, Sacramento Canals Unit, Central Valley Project,' contains a study of three alternative plans, two incorporating methods to lift or carry boats over or around the dam at the damsite, and plan C including a 4-mile channel through Paynes Creek Slough to transfer the boats from below the dam to the river above the dam; and

"Whereas plan C would give boaters on the river much better utilization of the river and avoid the hindrance and delay caused by a lift or ramp which would be manually operated; and

"Whereas plan C would provide an excellent means of preserving the existing salmon and steelhead fishery which otherwise would be endangered by the dam even with a fish ladder, since many of such fish will not use a fish ladder, but under plan C, since the fish could use a natural waterway, these fish would be allowed free migration; and

"Whereas the initial cost of plan C would be higher than the cost of plans A or B; but in the long run plan C, which does not require daily maintenance or supervision as do plans A or B, would cost no more, and in fact may even be less expensive than the other plans; and

"Whereas the local interests are heartily in support of plan C for this project: Now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California, jointly,* That the Bureau of Reclamation, the Secretary of the Army and all other persons or agencies involved are respectfully requested to approve plan C for the passage of small boats at the Red Bluff Diversion Dam; and be it further

"*Resolved,* That the chief clerk of the assembly is directed to transmit copies of this resolution to the Bureau of Reclamation, the Secretary of the Army, the President and Vice President of the United States, the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

The petition of the Yakima Indian Association of Washington State, praying for a redress of grievances; to the Committee on Interior and Insular Affairs.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McCLELLAN, from the Committee on Government Operations, without amendment:

S. 537. A bill to amend the Legislative Reorganization Act of 1946 to provide for more effective evaluation of the fiscal requirements of the executive agencies of the Government of the United States (Rept. No. 141).

REPORT ON DISPOSITION OF EXECUTIVE PAPERS

Mr. JOHNSTON, from the Joint Select Committee on the Disposition of Papers in the Executive Departments, to which was referred for examination and recommendation a list of records transmitted to the Senate by the Acting Archivist of the United States, dated April 8, 1963, that appeared to have no permanent value or historical interest, submitted a report thereon, pursuant to law.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HAYDEN:

S. 1323. A bill for the relief of Wilbur G. Leary; to the Committee on the Judiciary.

By Mr. SPARKMAN:

S. 1324. A bill to change the name of the Small Business Administration to the "Federal Small Business Administration"; to the Committee on Banking and Currency.

S. 1325. A bill to provide a deduction for income tax purposes, in the case of a disabled individual, for expenses for transportation to and from work; and to provide an additional exemption for income tax purposes for a taxpayer or spouse who is physically or mentally incapable of caring for himself; to the Committee on Finance.

By Mr. THURMOND:

S. 1326. A bill to provide for the conveyance of certain mineral interests of the United States in property in South Carolina to the record owners of the surface of that property; to the Committee on Interior and Insular Affairs.

By Mr. SMATHERS:

S. 1327. A bill to amend the Internal Revenue Code of 1954 to correct certain inequities with respect to the taxation of life insurance companies; to the Committee on Finance.

(See the remarks of Mr. Smathers when he introduced the above bill, which appear under a separate heading.)

AMENDMENT OF INTERNAL REVENUE CODE OF 1954, RELATING TO TAXATION OF LIFE INSURANCE COMPANIES

Mr. SMATHERS. Mr. President, I introduce, for appropriate reference, proposed amendments to the Life Insurance Income Tax Act of 1959, designed to give equitable relief by providing that the 8-year carryover of operating losses to new life insurance companies be made of general application; and exempting life insurance companies from paying a phase 3 tax upon the equivalent of a loss instead of a profit.

Under existing law, new life insurance companies as defined in section 812(e) are entitled to an 8-year carryover of operating losses whereas in the ordinary case a 5-year carryover is allowed. The existing operating loss provisions of the law dealing with life insurance companies were a part of the Life Insurance Company Income Tax Act of 1959. That act as amended provides that a new life insurance company otherwise eligible is denied the 8-year carryover if it is affiliated with another corporation through stock ownership of 50 percent of the voting stock. In 1962, this was changed to permit a life company affiliated with a casualty insurance company taxable under part 3 or part 2 of the insurance tax provisions to be considered as a "new" company. This change in 1962 is of extremely limited application and should be broadened to permit any life insurance company which is organized and owned by another corporation to get the 8-year carryover.

The legislative history in connection with section 812(e) is not very satisfactory in that it is impossible to determine exactly why stock ownership with another corporation would be considered undesirable for operating loss purposes. There would appear to be no real reason why a bona fide life insurance company which incurs operating losses should not be entitled to the same 8-year carryover as other new life insurance companies even though its stock is owned or it is affiliated through stock ownership with another corporation.

The second proposed amendment was adopted by the Finance Committee as part of H.R. 8952 and deals with the effect of operating losses on policyholder surplus. This amendment was dropped in conference primarily because it had not been previously considered by the Committee on Ways and Means.

In substance, the provision would reduce the policyholders' surplus by an amount equal to that portion of the unused loss carryforward that occurred as a result of the nonpar deduction. Its effect would be to prevent life companies from paying an ultimate phase 3 tax upon the equivalent of a loss instead of a profit.

Under existing law, a young company would have a loss carryforward artificially increased by the nonpar deduction; a sum equal to this deduction would go into the policyholders' surplus; eventually, when withdrawn to meet losses, this would be subjected to taxation under phase 3.

The proposed amendment would eliminate future phase 3 taxation upon an artificially created loss carryover that was not used. The Treasury Department had no objection to this amendment last year, and it is my understanding that it has no objection to either of these proposed changes now.

The PRESIDING OFFICER (Mr. Nelson in the chair). The bill will be received and appropriately referred.

The bill (S. 1327) to amend the Internal Revenue Code of 1954 to correct certain inequities with respect to the taxation of life insurance companies, introduced by Mr. Smathers, was received, read twice by its title, and referred to the Committee on Finance.

AMENDMENT OF SECTION 64(a)(2) OF BANKRUPTCY ACT—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of April 9, 1963, the names of Mr. Bible, Mr. Ervin, Mr. Hartke, Mr. Long of Missouri, Mr. Carlson, and Mr. Randolph were added as additional cosponsors of the bill (S. 1295) to amend section 64(a)(2) of the Bankruptcy Act, introduced by Mr. Johnston, by request, on April 9, 1963.

NOTICE OF A HEARING ON PROPOSED LEGISLATION PERTAINING TO THE REPEAL OF THE SILVER PURCHASE ACTS

Mr. SMATHERS. Mr. President, on behalf of the Senator from Virginia [Mr. Robertson], I desire to give notice that on April 29, 1963, the Committee on Banking and Currency will hold a public hearing on H.R. 5389, a bill to repeal certain legislation relating to the purchase of silver, and for other purposes.

We shall begin the hearing at 10 a.m., and it will be held in room 5302, New Senate Office Building.

All persons who desire to appear and testify at the hearing are requested to notify Mr. Matthew Hale, chief of staff, Committee on Banking and Currency, room 5300, New Senate Office Building, telephone Capital 4-3121, extension, 3921.

NOTICE OF HEARINGS ON SMALL BUSINESS LEGISLATION

Mr. SMATHERS. Mr. President, on behalf of the Senator from Wisconsin [Mr. Proxmire] I desire to give notice that the Small Business Subcommittee of the Committee on Banking and Currency will hold public hearings commencing May 7, 1963, on S. 757, a bill to amend the Small Business Act to provide that the program under which Government contracts are set aside for small-business concerns shall not apply in the case of contracts for maintenance, repair, or construction.

Commencing May 14, 1963, the Small Business Subcommittee will hold hearings on S. 298, a bill to amend the Small Business Investment Act of 1958, and S. 1309, a bill to amend the Small Business Act, and for other purposes.

We shall begin at 10 a.m. in each case, and the hearings will be held in room 5302 New Senate Office Building.

All persons who desire to appear and testify at the hearings are requested to notify Mr. Reginald W. Barnes, counsel, Small Business Subcommittee, room 5300 New Senate Office Building, telephone Capital 4-3121, extension 3921.

NOTICE OF HEARINGS ON S. 935 RELATING TO THE CONSTITUTIONAL RIGHTS OF THE MENTALLY ILL

Mr. ERVIN. Mr. President, as chairman of the Subcommittee on Constitutional Rights, I wish to announce that hearings will be held on May 2, 3, and 8, 1963, on S. 935, a bill to protect the constitutional rights of certain individuals who are mentally ill, to provide for their care, treatment, and hospitalization, and for other purposes.

The hearings will begin at 10:30 a.m. in room 457 of the Old Senate Office

Building. Any person who wishes to appear and testify on this bill is requested to notify the subcommittee by letter.

NOTICE OF HEARINGS ON S. 1117 AND S. 1219, BILLS RELATING TO THE COMMISSION ON CIVIL RIGHTS

Mr. ERVIN. Mr. President, as chairman of the Subcommittee on Constitutional Rights, I wish to announce that hearings will be held on May 21, 22, and 23, 1963, on S. 1117, a bill to extend for 4 years the Commission on Civil Rights as an agency in the executive branch of the Government, to broaden the scope of the duties of the Commission, and for other purposes; and S. 1219, a bill to make the Commission on Civil Rights a permanent agency in the executive branch of the Government, to broaden the scope of the duties of the Commission, and for other purposes.

The hearings will begin at 10:30 a.m. in room 2228 of the New Senate Office Building. Any person who wishes to appear and testify on these bills is requested to notify the subcommittee by letter.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the Record, as follows:

By Mr. THURMOND:

Article on U.S. foreign policy with regard to Cuban communism, prepared by Mr. Hugh J. Boyd, principal of Lake View High School, Lake View, S.C.; column entitled "Broken Treaties," written by Robert Morris, and published recently; and newsletter by him dated April 8, 1963.

BERLIN AND GERMANY

Mr. MANSFIELD. Mr. President, on April 10 the Senator from Rhode Island [Mr. Pell] delivered an address on the subject of Berlin and Germany and our foreign policy with respect thereto. It was a most thoughtful and distinguished statement, and represented an exceptional contribution to public understanding of the realities of the German situation and the constructive possibilities which may exist for an improvement in the Western position.

I am delighted that the distinguished and learned journalist of the New York Times, Mr. Arthur Krock, has perceived immediately the importance of the statement of the Senator from Rhode Island, and has seen fit to comment on it at length in his column in the April 12 issue of the Times. I would underscore his observation that it would be useful if copies of the speech were among the papers called to the attention of the Secretary of State and the Soviet Ambassador, in connection with their discussions of Berlin.

Mr. President, I ask unanimous consent that the column by Arthur Krock and an editorial from the Washington Star of April 14, 1963, be printed at this point in the Record.

There being no objection, the article and the editorial were ordered to be printed in the Record, as follows:

[From the New York Times of Apr. 12, 1963]

In the Nation—What Was and Is Commonsense About Berlin

(By Arthur Krock)

Washington.—It is too much to hope that, instead of coming to the conference table on the Berlin problem tomorrow with "position papers" reextracted from the deep freeze, Secretary of State Rusk and Soviet Ambassador Dobrynin will put at the top of the agenda a speech on the subject made in the Senate today by Claiborne Pell of Rhode Island. But it would be a day to celebrate if the commonsense and the honorable, practical policy proposals which distinguish this speech from tired diplomacy could somehow penetrate the Rusk-Dobrynin discussions.

In the late summer of 1961, Senator Pell made his first notable exposition of the hard facts of the Berlin problem that both Washington and Moscow must acknowledge before any real progress toward the kind of agreement he outlined—the only one possible—can be made. The speech was largely submerged in the clamor over Soviet Russia's unilateral violation of the moratorium on nuclear weapons testing. But President Kennedy mentioned Pell's viewpoint and proposals favorably, to one of his visitors at the time, and today's updated version did not alter these fundamentals.

The key to Pell's door of escape from one of those "frozen foreign policy positions" he described as typical of democracies is furnished by the following passage in the speech:

"The recollection that Germany has engaged in three agressive wars in the last 100 years * * * is a fact very much in the European mind. It is one of the reasons * * * for the general acceptance of the fact that Germany should not have nuclear weapons. * * * This is perhaps the most important single policy that we and the Soviets share * * *."

Accordingly, I think we should give our present policy toward Germany a critical reexamination with a view toward acceptance of the fact that Germany is divided as long as we have not reached the millennium of a world and a time when we can achieve a unified, unarmed Germany * * *. Nor does * * * de facto acceptance of a divided Germany give the Communists control over a single additional person or square inch * * * (but) what we must gain in any resolution of the Berlin problem is a clearly defined corridor of land access to West Berlin * * * a gain of what we have never had * * *, backed up by ironclad guarantees for the freedom of West Berlin, together with the West's complete freedom to garrison West Berlin. To achieve these ends, we can afford to acknowledge the continuing existence of the two German Governments and agree upon the Oder-Neisse frontier * * *."

OTHER U.S. GAINS

There would be another gain for the United States, Pell told the Senate, because "our present policy has led us to the ironic position that we want the Russians to stay in East Germany," the consequence of a refusal to deal with the government of the area that "makes it impossible" for the Soviets to withdraw. And, he contended, a realistic new policy also would "legitimize" the annual $500 million in trade current between West and East Germany; and clear the path for "efforts the West German Government is now making to normalize its trading relations with the various (Soviet) satellite nations."

A broader beneficial effect, he predicted, would be a "a considerable reduction in the U.S. present adverse balance-of-payments position, since at this time we are spending more than $50 billion a year in defense and supporting more than 400,000 men in Europe."

Among the other realistic steps the Senator proposed, in the belief that Moscow—confronted with the rising threat of Communist China and the steady increases in nuclear arsenals—"genuinely desires an easing of the tensions in Berlin" were these: transferring the European headquarters of the United Nations from Paris and Geneva to Berlin; internationalizing the access highway into West Berlin from Helmstedt in West Germany; and revising the allied status-of-forces whereby they would be present in West Berlin at the invitation of that city government.

The speech should, but won't, be read aloud as prolog at the Rusk-Dobrynin conversations.

[From the Washington (D.C.) Evening Star, Apr. 14, 1963]

Bargaining on Berlin

It is noteworthy that Rhode Island's Democratic Senator Pell, one of the President's close social and political friends, has spoken out as he has in connection with the resumed talks between Secretary of State Rusk and Soviet Ambassador Dobrynin. In the Senator's view, the talks should not be allowed to bog down in futility. Instead, he hopes that our country "will at long last take the diplomatic initiative" in seeking "some sort of resolution of the Berlin problem."

The Senator has his own prescription for the situation. He holds that both the United States and the Soviet Union have reason to feel that the time has come to thaw their frozen bargaining positions. As far as our own country is concerned, he holds as follows: "What we must gain * * * is a clearly defined corridor of land access to West Berlin, backed up by ironclad guarantees for the freedom of West Berlin together with the West's complete freedom to garrison West Berlin. To achieve these ends, we can afford to acknowledge the continuing existence of two German governments and agree upon the Oder-Neisse frontier" between Poland and Germany.

In sum, it would seem that Senator Pell, whether or not he reflects or has influence on Mr. Kennedy's thinking, is in favor of some down-to-earth Soviet-American horsetrading. Thus, pending the eventual creation of a unified, neutral, disarmed, and democratic Germany, he would have the United States extend de facto recognition to the East Germany regime and do business with it in exchange for the ironclad guarantees on Berlin. As he put it, "It is very much in our national interests to do so, since there is no situation in the world today where our forces and our flag occupy a more vulnerable position than in this island of freedom surrounded by Communist East Germany."

The Senator feels that there are many steps that can be taken toward a genuinely trustworthy settlement of the issue. By way of example, he has suggested that certain key agencies of the United Nations be transferred from Geneva and Paris to East Berlin, and he has also called for "a mutual slacking off of propaganda and intelligence operations" in the cruelly divided city. Further, to quote him again, "Along the lines of the cooling-down of temperatures and the amelioration of relations between East and West would be the legitimization of today's almost half billion dollars worth of annual trade that exists between Western Germany and Eastern Germany."

In some respects, Senator Pell's views seem to involve a lot of wishful thinking. He himself does not deny the mild impeachement, but he has made an effective point in declaring that "we should bear in mind what Lord Palmerston once said, 'We have no eternal allies and we have no perpetual enemies. Our interests are eternal and perpetual and those interests it is our duty to follow.' This means that policies must be determined by national interest, that national interests can and do change in a changing world * * * and that the policies in themselves are not immutable."

Well said. The gentleman from Rhode Island has addressed a thought-provoking speech to the Senate, and Mr. Rusk and Mr. Dobrynin could do worse than read and mull over the text of it.

TRIBUTE TO JOSEPH PEW, JR.

Mr. GOLDWATER. Mr. President, probably the most difficult times of a man's life are those when it seems an abundance of words should pour forth but none can come for none can be found. Those are the moments of despair when a close personal friend passes on and one suddenly discovers that the pressure of a hand or the tear in the eye says far more than any word could ever do. It may be then that silence would be the greatest expression, but there are some of these friends whose passing cannot stand for silence even though the spoken word will never be adequate.

Last Thursday such a man was laid to rest in Pennsylvania. His name was Joseph Pew, Jr. His faith was pegged on his God and his country, and his every action throughout a successful life reflected this. The only thing he ever asked was a chance to do good for people and his country, and he did both in an abundance matched by few men. His interest in politics was only an interest in good government at all levels; but this characteristic shows the material sides of a good man.

What was equally important, if not more so, was his devotion to his wife Alberta and to his children and grandchildren. His great concern for them was, in my opinion, a strong reason why he always worked for a better America.

He had a deep understanding of the importance of history, so he knew that with man being the weakling he is and has always been, there could come a time in this country's history when men seeking only power for their own uses might come forth into leadership through the refusal of the many to be strong. He devoted himself, therefore, to doing his part in the prevention of any lessening of the greatness of freedom, so that his family, his children and grandchildren, and the children and grandchildren of all of us, might enjoy freedom's blessings forever more.

He was a friend, and I shall miss him. But he was a devoted American, and I shall remember him.

HENRY N. TAYLOR

Mr. MANSFIELD. Mr. President, in the April 11 issue of the Washington Daily News appears an article concerning the placing at the University of Virginia of a bronze plaque in honor of the memory of Henry N. Taylor. Mr. Taylor, a Scripps-Howard correspondent, was killed in action in the Congo in 1960, while reporting the fighting in Kasai Province. His death was a tragic loss to the Nation, for it cut down an exceptional newspaperman of great courage, integrity, and professional competence. It is most fitting to have his memory honored at the University of Virginia, where he was educated, and where his ties had remained close and intimate until his untimely death. Mr. President, I ask unanimous consent that the article in the Daily News, which contains a brief sketch of Mr. Taylor's career, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, Apr. 11, 1963]

HENRY TAYLOR HONORED BY VIRGINIA UNIVERSITY

CHARLOTTESVILLE, VA.—Henry N. Taylor, Scripps-Howard correspondent killed in 1960 on assignment in the Congo, was honored here today at the University of Virginia's Thomas Jefferson birthday celebrations.

President Edgar Finley Shannon, Jr., announced that the institution's Seven Society has presented a bronze plaque in Mr. Taylor's memory, for placement in the entrance of alumni hall.

The plaque is headed by the words: "He died to find and tell the truth." It is an enlargement of the Pulitzer School of Journalism Medal annually awarded by Columbia University as a memorial to the correspondent's standards.

Mr. Taylor was a member of the Seven Society, whose members are unknown until their death. He attended the University of Virginia from 1947 to 1951, played varsity baseball and edited the college newspaper. On graduation Mr. Taylor received the Algernon Sidney Sullivan Award as the student who contributed most to the university while here.

He served as a naval intelligence officer in London from 1951 to 1954, became a Cincinnati Post reporter in 1954 and won the American Political Science Association's Award for State and local political coverage in 1956.

Mr. Taylor won the 1959 Ernie Pyle Memorial Award for reporting "most nearly exemplifying the style and craftsmanship" of war correspondent Ernie Pyle, killed in World War II, and was given posthumously the George Polk Tablet, the highest recognition of the Overseas Press Club, New York.

He was killed by machinegun fire while covering the fighting between Congolese Army and secessionist troops in the interior of Kasai Province on September 4, 1960. He was 32.

INCREASE IN STEEL PRICES

Mr. MANSFIELD. Mr. President, Wheeling Steel and now Lukens have both announced selective price increases in steel, ranging in the neighborhood of 6 percent. The question now is: What will the rest of the steel industry do, and what will the reopening of contract negotiations by labor on May 1 or 90 days thereafter result in?

The question which steel has to answer is this: Will an increase in price, even though selective, be able to prevent inflation at home and stop competition from abroad and the import of steel products from Japan, West Germany, South Africa, and elsewhere?

Steel also has to recognize and labor, too, that wage rates abroad are much lower, and that efficiency in foreign production, based to a large extent on modern steel plants, is increasing. The question is, therefore, can, or will, this country remain competitive in the field of international steel economics? Profits in the steel industry last year, so I am informed, amounted to $567 million, which I understand is the lowest in 10 years. If steel raises its prices, labor will seek a wage increase; a wage increase will increase costs; and it may well be that with increases in prices and in wages, the steel industry will find itself in difficulties in competition with steel imports, and also may bring about an increase in the use of substitute metals, or plastics.

The questions facing steel and steel labor are many and difficult. What they do will be a demonstration—or a lack of it—of business and economic statesmanship, because what is done will be felt here at home, not only through increased costs, but perhaps by increased low-cost import competition, as well.

Because of the bellwether aspect of the steel industry, what it does in relation to the whole economy will be of the greatest significance. The times call for industry statesmanship of the highest order.

ECONOMIC POLICIES OF THE ADMINISTRATION

Mr. GOLDWATER. Mr. President, two influences, among many, have had a detrimental effect on the economy of this Nation since 1961. One has been the lack of confidence of the businessman in the theoretical and wrong philosophies advocated by the professional economists advising the President. It has become more and more obvious that these men, imbued as they are with an affection for Lord Keynes, have never understood the operation of our economic system; and the suggestions they have advanced as New Frontier economic positions have constantly troubled those who must make the economy go. It is heartening, therefore, to read that the President has asked Henry Ford, Jr., to head a group of businessmen whose purpose will be to recommend a more sensible way to achieve tax correction and tax reduction. It is to be hoped that a sensible and workable plan will evolve. It is also hoped that in the future the President will give more and more attention to the recognizable problems, and less and less to the theoretical ones, so that all business may participate in the achieving of a rate of economic growth consistent with the unlimited possibilities of this country.

The other depressing influence has been the generally held feeling that the present administration is antibusiness. This started in earnest with the uncalled for intervention in the steel price adjustment. The excessive use of power at that time and the ugly language going with it naturally caused fear among the businessmen of America. The laws of supply and demand are inflexible; and to tamper with any facet of those laws is to call down disaster. Labor cannot be given every advance asked for and not have those advances be demonstrated in higher prices, unless those increases are called for by productivity advances. Likewise, prices cannot be advanced without market justification and still have stability prevail.

The President's present attitude toward the announced steel price increases is commendable; and it is to be hoped that he will continue on this enlightened trail. I ask that his entire statement be printed in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

The White House: Statement by the President

This administration is watching closely the possibilities of a general across-the-board price increase in steel. I opposed such an increase last year—I oppose such an increase now.

This administration is not interested in determining the appropriate price or profit levels of any particular industry. We are interested in protecting the American public, and it is the American public which would suffer most from a general increase in steel prices.

It would invite another inflationary spiral in place of the present wage price stability. It would hamper our export expansion and increase import competition. It would adversely affect our balance-of-payments position on which our worldwide commitments depend. It would reduce the gains of our economic growth and reduce job opportunities in this country.

This Government in the past year has taken major steps to improve the economic position of the steel industry and assist in its modernization. Depreciation and investment tax benefits of some $100 million were provided in 1962 to the steel industry alone; and its increased cash flow has made possible a planned increase in plant and equipment investment more than twice the national average. Additional tax gains will be realized in this year's tax reduction program.

I therefore strongly urge the leaders of the steel industry to refrain from any across-the-board price increases which will aggravate their competitive position and injure the public interest. The steel industry—which has been hard hit by competition from lower priced substitute products and foreign producers—has been operating far below capacity. What it needs is more business at competitive prices not less business at higher prices.

I urge similar restraint on the Steel Workers Union. With over 100,000 steelworkers still unemployed, their need is for more jobs with job security, not fewer jobs at higher wages. Across-the-board price increases could precipitate labor demands and unrest that would cause great difficulties for the country.

I realize that price and wage controls in this one industry while all others are unrestrained would be unfair and inconsistent with our free competitive market—that unlike last year the Government's good faith has not been engaged in talks with industry and union representatives—and that selected price adjustments, up or down, as prompted by changes in supply and demand, as opposed to across-the-board increases, are not incompatible with a framework of general stability and steel price stability and are characteristic of any healthy economy.

In a free society both management and labor are free to do voluntarily what we are unwilling to impose by law, and I urge the steel industry and the steel union to avoid any action which would lead to a general across-the-board increase. I urge this in their own enlightened self-interest and in the public interest as well.

DISARMAMENT STORIES

Mr. GOLDWATER. Mr. President, several weeks ago I asked a question of the Disarmament and Arms Control Agency relative to a plan I had heard discussed that would cause the United States to contribute 30 B-47's to an equal number of Badgers by the Russians, all planes to be destroyed, as a gesture toward disarmament. At first the Agency denied there was this plan, then under questioning by the Foreign Relations Committee of the Senate, Secretary Rusk admitted it existed. I have been thinking about it since that time, and the more I pondered it, the less important 30 airplanes became, so I began to wonder if it might not involve a plan of broader dimension, say 30 of these aircraft a month for 30 of the Russians. Sure enough, the New York Times of April 3, under the byline of Hedrick Smith, stated that the proposition, which is still in "study stage," calls for United States to burn 30 B-47's a month in return for the destruction by the Russians of an equal number of their Badgers.

Now once again I must ask the Disarmament and Controls Agency if the Times is correct and, if it is, could they spell out for the Congress and for the American people just what the total is that they have in mind. If this continues for 2 years there would not be enough of a B-47 fleet left to call it by that name, and we would have gotten rid of this weapon 2 or 3 years before the phasing out would call for their final removal.

I have often stated that we are engaged in unilateral disarmament, and if this proposed action as reported by the Times is true, it once again confirms it. Once we have destroyed our manned bombers we will be on a parity with Russia when her superior ground forces, and at least equal missile forces will put the balance of power on her side. If we were planning new manned aircraft into our inventory, the Agency's proposal might make sense, but because we are not, it makes nonsense.

Mr. President, I ask unanimous consent that there be printed at this point in my remarks the article from the New York Times to which I referred, and an editorial from the Dallas Morning News.

There being no objection, the article and editorial were ordered to be printed in the Record, as follows:

[From the New York Times, Apr. 3, 1963]

Arms Plan Draws Goldwater Scorn—Proposal To Burn Obsolete Bombers Is Assailed

(By Hedrick Smith)

Washington, April 2.—Senator Barry Goldwater of Arizona has criticized the U.S. Disarmament Agency for a plan to propose to the Russians the joint burning of obsolete bombers.

The agency was carefully checking out the "bomber bonfire" plan with other agencies and key leaders on Capitol Hill, when the Arizona Republican assailed it.

The proposal, which is still in the study stage, calls for the United States to burn 30 B-47 bombers a month in return for the destruction by the Russians of an equal number of their TU-16 Badger bombers.

Officials conceived the idea to head off Soviet "dumping" of such obsolescent aircraft in trouble spots such as Middle East and southeast Asia. The United States, they observed, is already phasing out its B-47 fleet, so the exchange would not involve a sacrifice.

"CRAZY" PLANS DECRIED

Initially, Senator Goldwater's criticism in a speech at Aurora, Ill., on March 9 brought carefully phrased denials that such a proposal was being offered the Russians.

Later, there was acknowledgment from Secretary of State Dean Rusk that such a plan "has been discussed inside the Disarmament Agency and with the [other] departments as one possible step which might at some stage be seriously considered."

Senator Goldwater followed up with a speech on the Senate floor March 21 asserting that public's "right to know about any and all crazy disarmament plans that are being hatched within this Government."

The Senator's attacks have baffled disarmament officials, who felt they had come up with a reasonable suggestion that was winning favor on Capitol Hill.

"It's pretty rough to be attacked on something that may not even see the light of day," said Nedville E. Nordness, public affairs spokesman for the Disarmament Agency.

"It seemed like a good idea. It would not be a gimmick or a phony. We felt it was a measure consistent with national security which might create some movement in the field of disarmament."

NEUTRALS' SUPERVISION WEIGHED

The idea was that since the United States and Soviet Union are phasing out their medium range B-47 and Badger bombers, they might conceivably agree to fly them to a neutral site and destroy them at a given rate under the supervision of neutral observers.

"One of the elements of this sort of an idea," Secretary Rusk told Senators, "is to be sure to limit the extent which weapons which are highly sophisticated, but which become obsolete [between the major powers] * * * do not find themselves spread all over the world and become a part of other arms races * * * and do not feed out into a lot of countries which would find them a burden and would stimulate the dangers elsewhere."

Officials said they had checked out the plan with such Senators as William Fulbright, Democrat, of Arkansas, Richard Russell, Democrat, of Georgia, and Republican Joseph S. Clark of Pennsylvania without running into opposition.

Already the Soviet Union is reported to have begun selling Badgers, twin-jet medium bombers, to the United Arab Republic, Indonesia and Iraq. Informed sources report that each of the first 2 countries have received fewer than 10 of the planes and that Iraq may have received 2 with more to come.

The Soviet Union has sold other aircraft, such as Mig-15, Mig-17, Mig-19, and Mig-21 fighters and IL-26 bombers to Cuba and to several countries in the Middle East and Asia.

[From the Dallas Morning News, Apr. 5, 1963]

Bomber Bonfires

Several weeks ago, Senator Barry Goldwater, Republican, of Arizona, thought he had a big one. In a speech he delivered in Aurora, Ill., the Senator said that he had been informed the U.S. Arms Control and Disarmament Agency was preparing a proposal calling for the joint destruction by fire of American and Russian bombers.

In the Illinois speech, and later on the floor of the Senate, Goldwater described the "bomber bonfire" plan as "crazy" and demanded that the American people had the right to know about such idiotic schemes being hatched by the administration.

No sooner had Goldwater stepped down from the rostrum than half a dozen administration officials began issuing denials. "No such plan has ever been considered," they said. "It's all in the Senator's mind. Mr. Goldwater is imagining things."

It seems now that the story wasn't just a figment of the Arizona Senator's imagination. A story in the New York Times discloses that Secretary of State Dean Rusk has now admitted there has indeed been such a proposal for "bomber bonfires." He also confessed that the proposal was not merely discussed within the disarmament agency, but that it had been making the rounds of other departments and was being seriously considered as a step to break through the deadlock in arms negotiations with the Soviets.

The specific plan calls for the United States to burn 30 B-47 bombers per month, in return for the destruction by the Russians of 30 TU-16 Badger bombers. An embellishment on the idea was for both nations to fly the planes to some neutral site and to destroy them under the supervision of observers from neutral nations.

A spokesman for the disarmament agency has defended the plan by saying: "It seemed like a good idea." He went on to say that it was felt the move at least would "create some movement in the field of disarmament."

There you have it, in a nutshell. These frustrated disarmament negotiators haven't got the heart to admit that it is highly improbable that the Soviet Union will ever agree to any workable disarmament proposal which contains solid guarantees protecting the security of this country.

Of course, these people have jobs and a lot of spare time on their hands. And so they have been turning to the old pastime of straw grasping, coming up with gimmicks and trying desperately to "create some movement" for the sake of movement.

That's not what we need. If we are ever going to reach any kind of acceptable disarmament agreement with the Soviets, our negotiators have to be as tough and stubborn as theirs. They will have to outline our minimum terms and stick to them, not run helter-skelter in search of new gimmicks and concessions whenever the Russians say "Nyet."

The "bomber bonfire" proposal—as silly as it is—stands out as a symptom of decay in our national will to win. It ranks with the "study" reportedly undertaken a few years ago in the Pentagon to determine methods and procedures by which the United States would surrender to a conquering enemy, when and if we should lose our next war.

Senator Goldwater deserves credit for smoking out the arsonists on this one and putting out their little bonfire. He has illustrated that we not only have to keep our powder dry these days, but we also have to keep the firehose ready.

Mr. KUCHEL. Mr. President, will the distinguished Senator from Arizona yield?

Mr. GOLDWATER. I am happy to yield.

Mr. KUCHEL. I ask the Senator if there is anything in the newspaper article to which he has referred which would indicate that, as a part of the rumored undertaking, an agreement would be made which would be subject to approval or rejection in the Senate?

Mr. GOLDWATER. I read the article twice, but I did not see anything in it on that point. However, I am convinced that under the powers that we have given the Arms Control and Disarmament Agency, such a proposal would not have to meet with the customary Senate approval. I hope I am wrong, but I believe the Executive does have those powers.

Mr. KUCHEL. I hope, too, that my friend is wrong on that point. While we all know that the so-called theory of Executive agreements has been indulged in for the past three decades as a basis for agreements of presumedly slight importance or of temporary concern, I still do not like them. In any event, I do not want any agreement resulting from any part of any disarmament or arms control negotiation to bypass the Senate in any fashion whatsoever. In my judgment, the American people are passionately devoted to the constitutional responsibility of the Senate of the United States. They believe, as I believe, that the Senate should have the opportunity to approve or reject agreements entered into between our Government and foreign nations no matter what President is in the White House.

Mr. GOLDWATER. Mr. President, to quickly sum up——

The PRESIDING OFFICER (Mr. Nelson in the chair). The time of the Senator from Arizona has expired.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that I may have 1 additional minute.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. Our Government did not seek the advice and consent of the Senate on the question of the removal of missiles from Turkey or Italy. I am not sure that we were consulted in the instance of their being put into those countries. Also I understand that, contrary to an existing agreement and understanding, our Government did not confer with the governments of NATO before that action was taken. So I am glad that the Senator from California has injected a constitutional warning.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. GOLDWATER. My time has expired. I do not have the floor.

Mr. KUCHEL. Mr. President, I ask unanimous consent that the Senator may have an additional 2 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. I yield 2 minutes to the Senator from Kentucky.

Mr. COOPER. The Senator from Arizona and the Senator from California have raised an important question. The disposition of defense forces, unconnected with an agreement between the Soviet Union or any other country and our own, is within the power of the President as Commander in Chief. The President might very well withdraw or commit forces any place in the world.

However, the Senator from California is absolutely correct that if the disposition, change, or a destruction of our forces, planes or other elements of our defense is connected with an agreement with the Soviet Union bearing upon disarmament, then I certainly would say that would be an agreement which I believe would have to be submitted to the Senate for a two-thirds vote.

RECLAMATION BENEFITS STILL TO COME

Mr. HAYDEN. Mr. President, there appeared in the Arizona Daily Star of Thursday, April 4, an editorial entitled "Reclamation Benefits Still To Come."

The editorial quotes the U.S. Commissioner of Reclamation, Mr. Floyd E. Dominy, concerning the extraordinary benefits which Federal Reclamation developments have brought to the Lower Colorado River Basin.

More importantly, the article points up the growing and critical situation which we, in water-short areas of the Nation, face, and the measures which we must anticipate to solve it.

Because this same situation also exists in other parts of the Nation as the result of expanding population and increased per capita use of water, I ask unanimous consent that the editorial be printed in the body of the Record, that all may read how we are facing up to our water problems in Arizona.

The editorial is also appropriate to the bill S. 2, which is now unfinished business of the Senate.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Reclamation Benefits Still To Come

The U.S. Commissioner of Reclamation is authority for the statement that developments under the Bureau of Reclamation on the Colorado River and its tributaries serve 2,212,000 acres of arable land producing crops worth $345.6 million last year. The past benefits are undeniable; the future can be made just as sure.

Reclamation means not only building large dams, such as Hoover, Davis and Glen Canyon—there are few such sites left anywhere in the United States, and only a couple on the lower Colorado River. Reclamation also means studies aimed at controlling evaporation, desalting brackish or salton water and doing many other things to protect and preserve the water supply for the wisest of human use.

Tucson has a tremendous stake in this because this city presently is using pumped water—water that comes from a considerable distance underground. The basin may be vast; no one knows exactly how vast. But pumping is almost always a mining operation, and Tucson's water to a large share is fossil water, laid down in the basin eons ago. A new source of water will be needed before many years pass.

A PROPOSAL FOR LIBERATING CUBA

Mr. SMATHERS. Mr. President, last week the esteemed David Lawrence wrote an article, which appeared in the Washington Evening Star, entitled "A Proposal for Liberating Cuba." In his article he outlines a program for liberating Cuba which someone has suggested to him.

In the course of the article, Mr. Lawrence implies that there has yet not been anybody who has recommended a course for the liberation of Cuba. I wish to invite the attention of this very esteemed writer to the fact that on the 22d of last month I made a rather lengthy, and I thought rather logical, speech outlining what I considered to be a sensible course of action for this Government to follow if it really thought Cuba should be liberated—which I think it does. I urge an examination of what I recommended, in the behalf that it is the only logical and practical way we shall ever accomplish getting rid of communism and Fidel Castro from Cuba.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PROPOSAL FOR LIBERATING CUBA: U.S. OFFER OF COMPLETE REHABILITATION IS URGED TO WIN SUPPORT OF PEOPLE

(By David Lawrence)

Strangely enough, a comprehensive plan that could really help to overthrow Fidel Castro and liberate Cuba has never been formally presented to the world by the United States.

In conformity with international law, and without involving in any way the use of American troops or invading armies from the outside, a plan could be devised that would appeal today to every man and woman on the island of Cuba. The expression of their concerted will could end the Castro regime.

The plan would cost money—maybe a half billion dollars a year for 5 years or more. But that's a lot less expensive than the loss of human lives in even a limited war. Besides, it could hardly provoke that awful nuclear war which is so often cited as the reason for American forebearance, if not timidity.

The liberation plan would require, first of all, the appointment by President Kennedy of a special commission of Americans familiar with the economic capacity and potential of Cuba. The Commission would make a detailed report recommending a broad-scale program for the rehabilitation of Cuba. This would spell out exactly how many new jobs would be created and what the probable range of wages would be for various types of workmen in Cuba.

The program would, of course, be basically agricultural and would outline the ways by which the whole Cuban farm industry could be rehabilitated and what this could mean to the average farmer. Cost figures, however, would be included for each segment of the economy. The whole thing is in line with the fundamental principles of the Alliance for Progress scheme that has been so widely publicized.

When the "liberation" plan for Cuba is ready for announcement, it can be turned over to the U.S. Information Agency and its numerous outlets for radio broadcasting. A detailed report, covering as many phases of Cuban economic life as possible, should be presented in Spanish to the Cuban people. It should be expressed in the simplest phrases, so that the average person in Cuba could quickly grasp what is really meant. The mere announcement of the plan would cause a sensation inside Cuba, and the news of it would spread quickly over the island by word of mouth.

But, it will be asserted, the Cuban army has been trained by the Russians, and is estimated at a strength of about 200,000. No revolutionist group is strong enough, it will be contended, nor in possession of adequate arms to do the job of defeating the Castro army. But this kind of argument assumes that a revolution in Cuba has to start with an organized revolutionary movement of substantial size. Actually, the most successful and far-reaching revolutions against autocracy in Europe and Latin America and Asia in recent years have come from inside the armed forces.

In Cuba, the 200,000-man army is an integral part of a large population, and its members have relatives and friends throughout the island. They are all aware of the suffering that prevails and the hopelessness of the future under Mr. Castro. Given a chance to rescue their countrymen, this same standing army could quickly take charge and get rid of Mr. Castro. A whole army can suddenly shift its allegiance at the behest of a few officers.

Unfortunately, in recent months the Washington Government's policies have created the impression inside Cuba that the United States is afraid to give Cubans any substantial help. It is true that more than $50 million was raised to ransom the patriots who invaded Cuba in the Bay of Pigs episode, but the Cuban people now have been told that no raiders are to be permitted to go from American shores into Cuba. All this implies that there will be no help of a military nature forthcoming, either directly or indirectly. It creates discouragement and certainly doesn't make Cubans feel they will be helped if they do rise against Mr. Castro.

The only way to take over the government of Cuba is from within, and this depends on an aroused and unified public sentiment. Since economic difficulties are the most pressing at present, it is logical to expect that the Cuban people will be attracted by the publicized pledges of financial and economic assistance from the United States which the proposed plan would give them. It would open up a new era of hope for everybody.

As every individual translated the American economic plan into what it would mean to him and his family—the chance to earn decent wages and have a free government—public sentiment under a barrage of publicity would grow to such an extent that thousands in the army would themselves privately embrace it and seek ways to get a new government so that the American plan could be put into effect.

But without any plan at all for the future, and without any concrete offer of assistance of any kind from the United States—except some vague phrases in official utterances—the people of Cuba, and particularly the 200,000 men in the Cuban army, can see no future for their country. That's why a plan that is repeated over the radio day after day could become the very weapon that would get rid of Mr. Castro as well as the Soviet troops. The revolution would restore Cuba's place in the Organization of American States and give her an opportunity to become a participant with the other Latin American countries in the Alliance for Progress.

FEDERAL FINANCE

Mr. SMATHERS. Mr. President, in today's Washington Post and Times Herald there is an article written by Mr. Harold B. Dorsey which is entitled "Critics Miss Point on Federal Finance," which I ask unanimous consent to have printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRITICS MISS POINT ON FEDERAL FINANCE

(By Harold B. Dorsey)

There is a propensity among critics of government expenditures and taxes to concentrate on the Federal Government's financial operations and to ignore those of the State and local governments. There have been instances where the word "government" has been used so loosely that the Federal Government tends to be criticized for State and local government actions.

In the 5 years through 1962, the number of workers on the Federal Government payroll increased 124,000 (5.6 percent). The number of employees on the payrolls of State and local governments increased by 1,435,000 (26 percent). State and local government workers outnumbered Federal employees by 2.9 times last year.

Federal Government debt in the same 5-year period increased about 14 percent. The debt of State and local governments increased by about 55 percent. On a cash basis, Federal Government expenditures in the same period increased about 34 percent and the State and local government expenditures increased 43 percent. Furthermore, the increase in the Federal expenditures includes substantially larger grants-in-aid to the State and local governments.

When we think of government levies siphoning off an increasing proportion of the productive efforts of the nongovernment economy, perhaps we should note that, on a cash basis, Federal receipts increased by approximately 27 percent in the 5 years through 1962, whereas the State and local government receipts increased by about 43 percent.

Five years ago (1957), Federal Government purchases of goods and services accounted for 11.8 percent of total gross national product and last year the proportion was 11.3 percent. The proportion for similar State and local government purchases was 8.3 percent in 1957 and increased to 10.3 percent last year.

It is quite clear then that in all of these measurements of employment and fiscal operations, the State and local government figures have been rising much more rapidly than those of the Federal Government. I doubt that there is a broad comprehension of these facts. This is unfortunate because it leads to many misunderstandings in the interpretation of business and government statistics.

For example, the Federal tax burden is not difficult to follow—and to criticize—because the bulk of it consists rather simply of income and social insurance taxes. The bulk of the States revenues comes from property taxes and from various types of sales and excise taxes, and license fees. Most of the sales and excise taxes are directly added to the price of goods and services sold and tend to be overlooked. Some portion of the increase in the cost-of-living index is caused directly by these taxes.

The rising importance of State and local government activities vis-a-vis the Federal Government deserves more attention in the projections of business prospects. Business analysts labor over the economic effects of Federal receipts and expenditures, but usually do not have a proportionate interest in the same figures for the State and local governments.

Similarly, the effect of Federal debt on the banking structure is analyzed carefully with little thought being given to the effects of State and local government deficit financing. In the past 18 months there has been little change in the commercial bank holdings of Federal securities whereas their holdings of State and local government issues have been rising quite sharply.

There is not enough space here to even tabulate the economic, sociological and political interpretations that are distorted by a failure to comprehend the rapidly changing relationship between the Federal Government's financial operations and those of the State and local governments.

One small item occurs to me that may be germane to the current situation. The beneficial effects of a reduction of, let us say, $10 billion in Federal income taxes are likely to be offset, in part, by the steady increase in the tax burden of State and local governments, even though these latter levies may be fairly well hidden in sales and excise taxes that increase the prices of commodities and services.

Mr. SMATHERS. Mr. President, I think the article is worthy of the attention of Members of Congress, because it points out in a clear fashion how the cost of State and local governments has risen over the past 5 years, until it is much greater than the cost of the Federal Government; and how it is entirely possible, if the State and local governments continue this increased cost, this might well negate the proposed $10½ billion tax cut which Congress currently is considering.

I commend the article to the attention of all Members of Congress.

EYES OPEN ON CUBA

Mr. SPARKMAN. Mr. President, a few days ago there was published in the Birmingham News an unusually thoughtful editorial. In fact, I think it is one of the best thought-out statements on the Cuban situation I have yet read. It is entitled "Eyes Open on Cuba." I invite the attention of Senators to the editorial; and I ask unanimous consent that it may be printed in the Record at this point.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Eyes Open on Cuba

> Barry Goldwater said over the weekend that he favors an economic blockade of Cuba and U.S. support of Cuban exile raids—active support, including airdrops, for example, if an exile invasion of Cuba were undertaken—in preference to the Kennedy administration's position that blockade would run a war risk and the exile raids can do more harm than good.
>
> As a last resort, Senator Goldwater said, he favors an invasion to rid the island of Communists. He thinks the effort should be multilateral—that is, involving the Organization of American States—instead of purely a U.S. undertaking.
>
> This sort of talk will find a wide sympathetic audience among Americans chafing under a feeling of relative do-nothingism about Castro. The administration's policy is not do-nothing—it is simply do-something-else, the "something else" being diplomatic and economic pressure as alternative to direct action.
>
> The indirect approach may or may not work, we may or may not have to resort to direct action sooner or later—but should that time come, we should make our decision in full knowledge of what it involves, not as a result of political haranguing.
>
> This becomes especially pertinent as time for the more formal kind of campaigning approaches. As weeks and months pass toward 1964, abstract arguments will evolve into solid campaign issues. We should be careful not to paint ourselves into a corner—either corner—with the brush of political oratory.
>
> It would not be wise to limit ourselves to any particular strategy and advertise the fact of our limitation to our adversaries. Our policy should remain flexible, as it might not if politics makes us choose up sides with the winner bound to one approach to the exclusion of all others. David Lawrence in his column on this page today gives an example of fresh thinking about Cuba approaches. His suggestion merits study.
>
> It may well be that indirect action will fail to bring about Castro's downfall in Cuba or the removal of Russian troops. But when we set out to do so directly, as Senator Goldwater suggests, let us not fool ourselves about what we're getting into.
>
> If it comes to invasion, it would be foolish to proceed in belief that "we can accomplish it without having to commit our own troops," as the Arizonian says he believes. We might get some help from Latin American OAS members, but by no stretch of the imagination could they be expected to carry the load alone. Neither should we smugly assume that we can send a division of marines ashore and have matters neatly tidied up by sundown. If we commit ourselves militarily, let's do so in full awareness that it's going to cost us dearly.
>
> Senator Goldwater also shrugs off any idea such action on our part would bring on a world war—"Russia is not going to risk losing her world empire over a tiny island in the Caribbean," he said Sunday. Maybe not. But there is a risk, at least, that the Senator is wrong. We would have to be aware of that.
>
> None of this is to say that direct action will not become necessary sometime in the future, or that we should avoid it for fear of what it might bring. It is only to suggest that we keep our eyes—and our minds—wide open and act accordingly.

THE INCENTIVE OF THE INVESTMENT CREDIT FOR TAX PURPOSES

Mr. SMATHERS. Mr. President, last week I made some comments about the wisdom of the administration in recommending the investment credit and the manner in which the adoption of that investment credit in our tax laws has served to encourage manufacturers to make capital expenditures of large sums of money, which, of course, have the result of strengthening our economy and providing additional jobs for the people in our economy.

I should like to add to what I said on that occasion by reading some excerpts from a column which appeared in the Wall Street Journal last Friday:

> Allis-Chalmers Manufacturing Co. reports orders received in the first quarter were a full 42 percent higher than in the like 1962 period. The spurt reflects "a more promising capital goods climate, due partly to more favorable depreciation rules and tax credits," says a spokesman for the Milwaukee producer of construction equipment, farm machinery and other industrial equipment.
>
> Bookings of International Harvester Co. were up substantially in March from the previous month and from March 1962, reports an official. Recently introduced models of trucks and construction machinery are spurring the rise, he says.
>
> "March was a banner month for incoming orders," says Galen Smith, president of Towmotor Corp., a Cleveland manufacturer of lift trucks and other materials handling equipment. Towmotor's orders in the first 1963 quarter topped the previous record set in the first 3 months of 1962, Mr. Smith notes, despite the fact orders in the 1962 period were inflated by strikes in competitors' plants.

I could read further, though I shall not, to cite all the other companies listed in the article, each of which indicates that the additional orders being placed by them and being placed with them are a direct result of the administration's highly fought over tax incentive credit of last year, as a result of which the 7-percent incentive credit was provided. This demonstrates, of course, the wisdom of the administration in recommending that particular proposal.

THE PRESENT AND FUTURE OF THE STATE OF FLORIDA IN THE DEFENSE OF THE NATION

Mr. SMATHERS. Mr. President, the national defense importance of the State of Florida was clear to the Nation during the Cuban crisis, and the people of the State responded, as freedom-loving Americans would be expected, to the unprecedented demand for the emergency buildup of military forces.

The Nation is also aware of the generosity and continuing sacrifice of the people of Florida in the handling of the Cuban refugee problem.

But Florida plays another role in the defense of the country, for both today and the future. In a recent speech to the officers of Patrick Air Force Base and the Atlantic Missile Range about the future of the Air Force in space, the Secretary of the Air Force, Hon. Eugene Zuckert, also talked about the present and future of the State of Florida in the defense of the Nation.

Everyone knows that Cape Canaveral is the principal launch site for the National Aeronautics and Space Administration. But the complex of facilities along Florida's central east coast is also "the primary NASA-Air Force interface," in the words of the Secretary, where the foundations of defense capability of the free world in space are being laid.

Mr. Zuckert said the Air Force has two objectives in its space program. The first is to "acquire the capability to utilize space in support of military forces operating in the familiar environment of land, sea, and air," through improvements in observation, warning, military geodesy and meteorology. The second objective is to "acquire the necessary defense capability for the aerospace regions themselves."

Secretary of the Air Force said that both manned and unmanned systems will be required to "protect the peaceful activities in space of the nations of the free world."

The people of Florida are part of the great program at the Cape to assure freedom in space, and their contribution is important. Floridians are also equally proud of their contribution to and support of defense activities on Florida's west coast.

Mr. Zuckert explained the purpose of President Kennedy's expansion of our general purpose forces, to give the Nation a broader basis of deterrence of Communist aggression and a greater range of response to the Communist use of military force.

This calls for the combining of ground and air power through the new Strike Command, headquartered at MacDill Air Force Base on Florida's gulf coast.

Mr. Zuckert said we must maintain our superiority of forces at the top, with strategic bomber and missile forces, but we "must also have it at levels of war more likely to be brought against us." What the Secretary of the Air Force had to say on this subject goes a long way toward clearing up U.S. policy with respect to the use of nuclear weapons.

And for the levels of warfare even below the type of conflict in which STRICOM forces would be employed, for what we know as counterinsurgency, Florida again is the center of developmental activity.

Mr. Zuckert pointed out that at the Air Force Special Warfare Center at Eglin Air Force Base, also on Florida's gulf coast, "the accumulated experience of four decades of air operations is being applied to the job of developing airpower techniques for the very low rungs on the ladders of war's intensity."
